§ 787.4 Responsibilities.

(a) The regulatory authority and persons attempting to obtain permits under regulatory programs shall fully involve the public throughout the permit process of regulatory programs.

(b) The regulatory authority shall insure that the requirements of this Part are implemented under regulatory programs.

§ 787.11 Public notices of filing of permit applications.

(a) An applicant for a permit shall place an advertisement in a local newspaper of general circulation in the locality of the proposed surface mine, at least once a week for four consecutive weeks. The applicant shall place the advertisement in the newspaper at the same time the permit application is filed with the regulatory authority. The advertisement shall contain, at a minimum, the following information:

(1) the name and business address of the applicant, and

(2) a map describing the exact location and boundaries of the proposed site, which shall—

(i) Identify the area of the proposed operation to correspond with the area proposed under the permit application;

(ii) Be large enough to allow local residents to readily identify the proposed permit area;

(iii) Indicate the north point for the U.S. Geological Survey Quadrangle map in which the proposed operation is contained, and the precise location of the proposed operations; and

(iv) Indicate the names and locations of all streams or other bodies of surface water, roads, and communities shown in the U.S. Geological Survey Quadrangle map for the area in which the proposed operation will occur; and

(3) The location where a copy of the application is available for public inspection under paragraph (c) of this Section; and

(4) The name and address of the regulatory authority to which written comments, objections, or requests for informal conferences on the application may be submitted under Section 787.14.

(5) If an applicant seeks a permit to mine within 100 feet of the outside right-of-way of a public road or to relocate such a road under 30 CFR 761.12(d), the advertisement shall contain a concise statement describing the public road, the particular part to be relocated, where the relocation is to occur, and the duration of the relocation.

(b) Upon receipt of an application for a permit, the regulatory authority shall issue written notification of—

(1) The applicant's intention to surface mine a particularly described tract land,

(2) The application number,

(3) Where a copy of the application may be inspected, and

(4) Where comments on the application may be submitted under Section 787.12 of this Part.

(c) The written notifications shall be sent to—

(1) Federal, State and local government agencies with jurisdiction over or an interest in the area of the proposed operations, including, but not limited to, general governmental entities and fish and wildlife and historic preservation agencies;

(2) Governmental planning agencies with jurisdiction to act with regard to land use, air or water quality planning in the area of the proposed operations;

(3) Sewage and water treatment authorities and water companies, either providing sewage or water services to users in the area of the proposed operations or having water sources or collection, treatment, or distribution facilities located in these areas;

(4) The Federal or State Governmental agencies with authority to issue all other permits and licenses needed by the applicant in connection with operations proposed in the application; and

(5) Other persons who have requested, in writing, that the regulatory authority provide notice of proposed surface coal mining and reclamation operations in the area involved.

(d)(1) The applicant shall make a full copy of his application for a permit available for the public to inspect and copy. This can be done by filing a copy of the application submitted to the regulatory authority with the recorder at the courthouse of the county where the mining is proposed to occur. The regulatory authority may approve filing at another equivalent public office.

(2) The applicant shall file the copy by the last date of newspaper advertisement of the application. The applicant shall file any subsequent revision with the public office at the same time the revision is submitted to the regulatory authority.

(3) The copy filed in the public office does not have to include that information which pertains solely to analysis of the chemical and physical properties of the coal to be mined (except information regarding such mineral or elemental content which is potentially toxic in the environment).

§ 787.12 Opportunity for submission of written comments on permit applications.

(a) Written comments on permit applications may be submitted to the regulatory authority by—

(1) The public entities to whom notification is provided under Section 787.11(c)(1)-(5), with respect to the effects of the proposed mining operations on the environment within their area of responsibility; and,

(2) Other persons to whom notification has been provided under Subsection 787.11(a) and 787.11(c)(6).

(b) These comments shall be submitted to the regulatory authority in the manner and within the reasonable time provided for in the regulatory program.

(c) The regulatory authority shall immediately transmit a copy of all such comments for filing and public inspection at the public office where the applicant filed a copy of the application for permit under Section 787.11(d).

§ 787.13 Right to file written objections.

(a) Any person including an officer or head of any Federal, State, or local government agency or authority shall have the right to file written objections to an initial or revised application for a permit with the regulatory authority, within 30 days after the last publication of the newspaper notice required by Section 787.11(a).

(b) The regulatory authority shall, immediately upon receipt of any written objections—

(1) Transmit a copy of them to the applicant; and,

(2) File a copy for public inspection at the public office where the applicant filed a copy of the application for permit under Section 787.11(d).

§ 787.14 Informal conferences.

(a) *Procedure for requests.* Any person including the officer or head of any Federal, State or local government agency or authority may, in writing, request that the regulatory authority hold an informal conference on any application for a permit. The request shall—

(1) Briefly summarize the issues to be raised by the requestor at the conference;

(2) State whether the requestor desires to have the conference conducted in the locality of the proposed mining;

(3) Be filed not later than 30 days after the last publication of the newspaper advertisement placed by the applicant under Section 787.11(a).

(b) Except as provided in (c) below, if an informal conference is requested in accordance with paragraph (a) of this Section, the regulatory authority shall hold an informal conference within a reasonable time following the receipt of such objections and request. The informal conference shall be conducted according to the following requirements:

(1) If requested under paragraph (a) of this section, it shall be held in the locality of the proposed mining.

(2) The date, time and location of the informal conference shall be advertised by the regulatory authority in a newspaper of general circulation in the locality of the mine at least two weeks prior to the scheduled conference.

(3) If requested, in writing, by a conference requestor in a reasonable time prior to the conference, the regulatory authority may arrange with the applicant to grant parties to the conference access to the mine area for the purpose of gathering information relevant to the conference.

(4) The purpose of the informal conference shall be the examination of issues raised in the written objections, comments, and requests for conferences filed with the regulatory authority on the permit application.

(5) The requirements of Section 554 of Title V of the United States Code shall not apply to the conduct of the informal conference. The conference shall be conducted by a representative of a State regulatory authority, who may accept oral or written statements and any other relevant information from any party to the conference. An electronic or stenographic record shall be made of the conference proceeding, unless waived by all the parties. The record shall be maintained and shall be accessible to the parties to the conference until final release of the applicant's performance bond pursuant to Subchapter J.

(c) If all parties requesting the informal conference stipulate agreement before the requested informal conference and withdraw their request, the informal conference need not be held.

(d) Informal conferences held in accordance with this Section may be used by the regulatory authority as the public hearing on proposed uses of public roads or relocation thereof by the applicant under 30 CFR 761.12(d).

§ 787.15 Public availability of information in permit applications on file with the regulatory authority.

(a) Information contained in permit applications on file with the regulatory authority shall be open for public inspection and copying at reasonable times: *Provided,* That—

(1) Information pertaining to coal seams, test borings, core samplings, or soil samples in permit applications shall be made available for inspection and copying to any person with an interest which is or may be adversely affected; and

(2) Information in permit applications which pertains only to the analysis of the chemical and physical properties of the coal to be mined (excepting information regarding mineral or elemental contents of such coal, which are potentially toxic in the environment) shall, upon the written request of the applicant, be kept confidential and not made a matter of public record; and

(3) Information in the reclamation plan portions of the application, which is required to be filed with the regulatory authority under Section 508 of the Act and which is not on public file pursuant to State law, shall be held in confidence by the regulatory authority upon the written request of the applicant.

(b) The regulatory authority shall provide for procedures to maintain information required to be kept confidential under paragraph (a) separately from other portions of the permit application. This information shall be clearly identified by the applicant and submitted separately from other portions of the application.

PART 788—REGULATORY AUTHORITY REVIEW AND DECISIONS ON PERMIT APPLICATIONS

Sec.
788.1 Scope.
788.2 Objectives.
788.3 Responsibilities.
788.12 Review of permit applications.
788.13 Permit approval or denial actions.

AUTHORITY: Secs. 102(i), 201, 501, 503, 506, 507, 508, 509, 510, 511, 513, 514, 517, and 522(e), Pub. L. 95-87 (U.S.C. Sections 1202(i), 1211, 1251, 1253, 1256, 1257, 1258, 1259, 1260, 1261, 1263, 1264, 1267, and 1277(e)).

§ 788.1 Scope.

This Part establishes the minimum requirements for the Secretary's approval of the provisions of regulatory programs for the review of permit applications and decisions on these applications by regulatory authorities under these programs.

§ 788.2 Objective.

The objective of this Part is to insure timely and thorough review by the regulatory authority of each permit application under a regulatory program.

§ 788.3 Responsibilities.

(a) The applicant has the responsibility of insuring that all information is provided in a complete permit application for the review by the regulatory authority in accordance with this Part and a regulatory program.

(b) The regulatory authority shall conduct timely and thorough reviews of each complete permit application under a State program.

§ 788.12 Review of permit applications.

(a) The regulatory authority shall review the complete application, written comments, written objections submitted and records of any informal conference held under 30 CFR Part 787.

(b) If the regulatory authority decides to approve the application, it shall require that the applicant file the performance bond or provide other equivalent guarantee before the permit is issued, in accordance with the provisions of 30 CFR Subchapter J.

(c) If the regulatory authority determines from either the schedule submitted as part of the application under 30 CFR 778.14(c) or 782.14(c) of this Subchapter, or from other available information, that any surface mining operations owned or controlled by the applicant is currently in violation of the Act, or of any law, rule, or regulation of the United States, or of any State or Federal department or agency pertaining to soil or water environmental protection, the regulatory authority shall require the applicant to submit proof, satisfactory to the regulatory authority, department, or agency which has jurisdiction over such violation, before the issuance of the permit, that the violation—

(1) Has been corrected; or

(2) Is in the process of being corrected.

(d) Before any final determination by the regulatory authority that the applicant, or the operator specified in the application, controls or has con-

trolled mining operations with a demonstrated pattern of willful violation

sions for the processing time in the regulatory program, taking into ac-

AUTHORITY: Secs. 102(i), 201, 501, 503, 514, and 526, Pub. L. 95-87 (30 U.S.C. Sections

operations carried on by the applicant in the general vicinity of the proposed

AUTHORITY: Secs. 102(i), 201, 501, 506, 507, 508, 509, 510, 511, 513, 514, 515, 516, 522(c) and 526(f), Pub. L. 95-87 (30 U.S.C. Secs.

duction of the liability insurance policy the capability of self-insurance, the performance bond or other equiva-

trolled mining operations with a demonstrated pattern of willful violation of the Act of such nature, duration, and with such resulting irreparable damage to the environment that indicates an intent not to comply with the provision of the Act, the applicant or operator shall be afforded an opportunity for an adjudicatory hearing on the determination as provided for in the regulatory program.

§ 788.13 Permit approval or denial actions.

(a) The regulatory authority shall grant, require modification of, or deny all applications for permits under State programs according to the requirements of 30 CFR 786 and on the basis of—

(1) Complete applications for permits and revisions or renewals thereof;

(2) Public participation as provided for by Part 787 of this Subchapter;

(3) Compliance with any applicable provisions of Part 785 of this Subchapter; and

(4) Processing and review of applications as required by this Part.

(b) The regulatory authority shall take action as required under paragraph (a) of this Section, within the following times—

(1) *Initiation of regulatory programs.* Except as provided for in subparagraph (b)(3), a complete application submitted to the regulatory authority within the time required by 30 CFR 771.19(b)(1) shall be processed by the regulatory authority so that a permit is granted or denied—

(i) Within eight months after the date of approval of a regulatory program, unless a State or its regulatory authority is specifically enjoined from submitting a State program, or the regulatory authority is specifically enjoined from implementing a regulatory program but in no case later than February 3, 1981; and,

(ii) If an informal conference has been held pursuant to Part 787 of this Subchapter, within 60 days from the close of the conference.

(2) *Subsequent operation of regulatory programs.* A complete application submitted to the regulatory authority after the time required in 30 CFR 771.19 (b) (1) shall be processed by the regulatory authority, so that a permit is granted or denied within the following times:

(i) If an informal conference has been held under Part 787 of this Subchapter, within 60 days of the close of the conference; or

(ii) If no informal conference has been held under Part 787, then within a reasonable time after the receipt by the regulatory authority of the complete application. The regulatory authority shall determine the time for processing and shall establish provisions for the processing time in the regulatory program, taking into account—

(i) The time needed for proper investigation of the proposed permit and adjacent areas;

(ii) The complexity of the application; and

(iii) Whether written objections or comments to the complete application have been filed with the regulatory authority.

(3) Notwithstanding any of the foregoing provisions of this Section, no time limit under the Act or this Section requiring the regulatory authority to act is considered expired from the time the regulatory authority initiates a proceeding under 30 CFR 788.12(d) until the final decision of the hearing body.

(c) If an informal conference is held under 30 CFR Part 787 the regulatory authority shall, give its written findings to the permit applicant and to each person who is a party to the conference, granting or denying the permit in whole, or in part, and stating the reasons therefor in the decision. The regulatory authority shall simultaneously transmit a copy of such findings and any permit issued to the Regional Director.

(d) If no such informal conference has been held, the regulatory authority shall give its written decision to the permit applicant, granting or denying the permit in whole, or in part, and stating the reasons in the decision. Simultaneously, the regulatory authority shall—

(1) Give a copy of its decision to:

(i) Each person and government official who filed a written objection or comment with respect to the application; and

(ii) Together with a copy of any permit issued, to the Regional Director; and

(2) Publish a summary of its decision in a newspaper or similar periodical of general circulation in the general area of the proposed operation.

(e) Within 10 days after the granting of a permit, the regulatory authority shall notify the local government officials in the local political subdivision in which the area of land to be affected is located that a permit has been issued and shall describe the location of the lands within the permit area.

PART 789—ADMINISTRATIVE AND JUDICIAL REVIEW OF DECISIONS BY REGULATORY AUTHORITY ON PERMIT APPLICATIONS

Sec.
789.1 Scope.
789.2 Objectives.
789.11 Administrative review.
789.12 Judicial review.

AUTHORITY: Secs. 102(i), 201, 501, 503, 514, and 526, Pub. L. 95-87 (30 U.S.C. Sections 1202(i), 1211, 1251, 1253, 1264 and 1276).

§ 789.1 Scope.

This Part provides the minimum requirements for the Secretary's approval of regulatory program provisions for administrative and judicial review of decisions by, or the failure of the regulatory authority to act, on applications for permits.

§ 789.2 Objectives.

The objectives of this Part are to provide for timely and thorough review by administrative and judicial bodies under regulatory programs on decisions of and failures to act by regulatory authorities on permit applications.

§ 789.11 Administrative review.

(a) Within 30 days after the applicant is notified of the final decision of the regulatory authority on the permit application, the applicant or any person with an interest which is or may be adversely affected may request a hearing on the reasons for the final determination.

(b) The regulatory authority shall hold the hearing within 30 days of such request. This hearing shall be of record, adjudicatory in nature, and no person who presided at an informal conference under Section 787.14 of this Subchapter shall either preside at the hearing, or participate in the decision thereon, or in any administrative appeal therefrom.

(c) The hearing authority may, under such conditions as it may prescribe, grant such temporary relief as it deems appropriate, pending final determination of the proceeding, if:

(1) All parties to the proceeding have been notified and given an opportunity to be heard on a request for temporary relief;

(2) The person requesting such relief shows that there is a substantial likelihood that he will prevail on the merits of the final determination of the proceeding; and

(3) The relief is not to adversely affect the public health or safety or cause significant, imminent environmental harm to land, air or water resources; and

(4) The relief sought is not the issuance of a permit where a permit has been denied, in whole or in part, by the regulatory authority.

(d) For the purpose of such hearing, the regulatory authority may administer oaths and affirmations, subpoena witnesses, or written, or printed materials, compel attendance of witnesses, or production of the materials, and take evidence, including, but not limited to, site inspections of the land to be affected and other surface coal mining operations carried on by the applicant in the general vicinity of the proposed operation. A verbatim record of each public hearing required by this Section shall be made, and a transcript made available on the motion of any party or by order of the regulatory authority.

(e) Within 30 days after the hearing, the regulatory authority shall issue and furnish the applicant, and each person who participated in the hearing, with the written decision of the regulatory authority granting or denying the permit, in whole or in part, and stating the reasons for the decision.

§ 789.12 Judicial review.

(a) Any applicant or any person with an interest which is or may be adversely affected and who has participated in the administrative proceedings as an objector shall have the right to appeal as provided in paragraph (b) of this Section, if—

(1) The applicant or person is aggrieved by the decision of the hearing authority in an administrative review proceeding conducted pursuant to Section 789.11 of this Part; or,

(2) If either the regulatory authority or the hearing authority for administrative review under Section 789.11 fails to act within time limits specified in the Act, this Part, or the regulatory program.

(b) (1) *State programs.* Action of the regulatory authority or hearing authority identified in paragraph (a) of this Section shall be subject to judicial review by a court of competent jurisdiction, as provided for in the State program, but the availability of such review is not to be construed to limit the operation of the rights established in Section 520 of the Act.

(2) *Federal programs.* The action of the regulatory authority or hearing authority identified in paragraph (a) of this section is subject to judicial review by the United States District Court for the district in which the surface coal mining and reclamation operations is or would be located, in the time and manner provided for in section 526 (a)(2) and (b) of the Act. The availibility of such review is not to be considered to limit the operations of rights established in Section 520 of the Act.

PART 790—PERMIT REVISIONS AND REGULATORY AUTHORITY REVIEW OF OUTSTANDING PERMITS

Sec.
790.1 Scope.
790.2 Objectives.
790.11 Regulatory authority review of outstanding permits.
790.12 Permit revisions.

AUTHORITY: Secs. 102(i), 201, 501, 506, 507, 508, 509, 510, 511, 513, 514, 515, 516, 522(c) and 526(f), Pub. L. 95-87 (30 U.S.C. Secs. 1202(i), 1211, 1251, 1256, 1257, 1258, 1259, 1260, 1261, 1263, 1264, 1265, 1266, 1272(e) and 1276(f)).

§ 790.1 Scope.

This Part establishes the minimum requirements for the Secretary's approval of regulatory program procedures for revisions to permits previously issued by the regulatory authority under regulatory programs and for affirmative periodic review by the regulatory authority of all permits previously issued under such programs.

§ 790.2 Objectives.

The objectives of this Part are to:

(a) Ensure that all permits for surface coal mining and reclamation operations are efficiently revised, prior to changes in such operations; and

(b) Ensure that all permits issued under regulatory programs are regularly reviewed by the regulatory authority to determine that surface coal mining and reclamation operations under these permits are conducted in compliance with the Act, this Chapter and the regulatory program.

§ 790.11 Regulatory authority review of outstanding permits.

(a) The regulatory authority shall review each permit issued and outstanding under an approved regulatory program during the term of the permit. This review shall occur not later than the middle of the permit term and as required by 30 CFR 785.13, 785.15, 785.16 and 785.18.

(b) After this review, the regulatory authority may, by order, require reasonable revisions or modification of the permit provisions to ensure compliance with the Act, this Chapter and the regulatory program. The permit revision or modification shall be based upon written findings and subject to notice and hearing requirements established under the regulatory program.

§ 790.12 Permit revisions.

(a) During the term of the permit, and within the time prescribed by 30 CFR 771.19(b)(4), the permittee may submit an application for a revision of the permit, together with a revised mining reclamation operations plan, to the regulatory authority.

(b) A revision to a permit shall be obtained—

(1) For changes in the surface coal mining and reclamation operations described in the original application and approved under the original permit;

(2) When required by an order issued under 30 CFR 790.11;

(3) In order to continue operation after the cancellation or material reduction of the liability insurance policy the capability of self-insurance, the performance bond or other equivalent guarantee upon which the original permit was approved; or

(4) As otherwise required under the State program.

(c) The permit revision application shall be filed in accordance with the following:

(1) The permittee shall submit the application to the regulatory authority within the time provided for by 30 CFR 771.19(b)(4);

(2) The scale or extent of permit application information requirements and procedures, including notice and hearings, applicable to revision requests shall be as provided in the State program. Any application for a revision which proposes significant alterations in the operations described in the materials submitted in the application for the original permit under Parts 778, 779, 780, 781, 782, 783, or 785 of this Subchapter or in the conditions of the original permit, shall, at a minimum, be subject to the requirements of Parts 787 and 789 of this Subchapter.

(d) The regulatory authority shall approve or disapprove the complete application for revision, in accordance with the requirements of Parts 786 and 788, within a reasonable time as established in the regulations for the regulatory program.

(e) Any extensions to the area covered by a permit, except for incidental boundary revisions, shall be made by application for a new permit and shall not be approved under this Part.

PART 791—RENEWALS OF PERMITS

Sec.
791.1 Scope.
791.2 Objectives.
791.11 General requirements.
791.12 Applications for renewals.
791.13 Terms of renewals.
791.14 Approval or denial of renewals.

AUTHORITY: Secs. 201, 501, 506, 507, 508, 509, 510, 515, and 516, Pub. L. 95-87 (30 U.S.C. Secs. 1211, 1251, 1256, 1257, 1258, 1259, 1260, 1265 and 1266).

§ 791.1 Scope.

This Part establishes the minimum requirements for the Secretary's approval of regulatory program procedures for the renewal by the regulatory authority of permits previously issued under such programs.

§ 791.2 Objectives.

The objectives of this Part are to provide for the timely and effective review of applications for renewal of permits previously issued by the regulatory programs. This is necessary to allow surface coal mining and reclamation operations under these programs

V 4 3 / 1 8 1 SE 18 78

to continue, if they comply with the Act, this Chapter and the regulatory program.

§ 791.11 General requirements.

Any valid permit issued pursuant to a regulatory program shall carry with it the right of successive renewal upon expiration, with respect to areas within the boundaries of the existing permit, in accordance with the requirements of this Part.

§ 791.12 Applications for renewals.

(a) *Contents.* Applications for renewals of a permit shall be made within the time prescribed by 30 CFR 771.19(b)(2). Renewal applications shall be in a form and with contents required by the regulatory authority under the regulatory program and in accordance with subparagraph (b)(2) of this Section, including at a minimum, the following:

(1) A statement of the name and address of the permittee, the term of the renewal requested, the permit number, and a description of any changes to the matters set forth in the original application for a permit or prior permit renewals;

(2) A copy of the newspaper notice and proof of publication of same required under Section 787.11(a) of this Subchapter; and,

(3) Evidence that liability insurance policy or adequate self-insurance 30 CFR will be provided by the applicant for the proposed period of renewal.

(b) *Processing and review.*

(1) Application for renewal shall be subject to the requirements of public notification contained in 30 CFR 787.11.

(2) If an application for renewal of a permit includes a proposal to extend the mining and reclamation operation beyond the boundaries authorized in the existing permit, the portion of the application for renewal of a valid permit which addresses any new land areas shall be subject to the full standards applicable to new permit applications under the Act, Parts 771, 778, 779, 780, 782, 783, 784, 785, 786, 787, 788, and 789 of this Subchapter, Subchapter J, and the State program.

(3) If the surface coal mining operations authorized under the original permit were not subject to the standards contained in Sections 510(b)(5)(A) and (B) of the Act and Section 785.19(e) of this Subchapter, because the permittee complies with the exceptions to Section 510(b)(5) of the Act, the portion of the application for renewal of the permit which addresses any new land areas previously identified in the reclamation plan submitted pursuant to Parts 780 or 784 of this Subchapter for the original permit shall not be subject to the standards contained in Sections 501(b)(5)(A) and (B) of the Act and Section 785.19(e) of this Subchapter.

(4) Before finally acting to grant the permit renewal, the regulatory authority shall require any additonal performance bond needed by the permittee to comply with the requirements of 30 CFR 791.14(a)(4) to be filed with the authority.

§ 791.13 Terms of renewals.

Any permit renewal shall be for a term not to exceed the maximum period of 5 years for the original permit established under Section 786.11 of this Subchapter.

§ 791.14 Approval or denial of renewals.

(a) The regulatory authority shall, upon the basis of a complete application for renewal and completion of all procedures required under this Part, issue a renewal of a permit, unless it is established and written findings by the regulatory authority are made that—

(1) The terms and conditions of the existing permit are not being satisfactorily met;

(2) The present surface coal mining and reclamation operation is not in compliance with the environmental protection standards under the Act, Subchapter K of this Chapter, and the regulatory program;

(3) The requested renewal substantially jeopardizes the operator's continuing responsibility on existing permit areas;

(4) The operator has not provided evidence that the performance bond in effect for such operation will continue in full force and effect for any renewal requested in such application, as well as any additional bond the regulatory authority might require pursuant to Subchapter J of this Chapter; or

(5) Any additional revised or updated information required by the regulatory authority has not been provided.

(b) In determining whether to approve or deny a renewal, the burden shall be on the opponents of renewal.

PART 792—TRANSFER, SALE OR ASSIGNMENT OF RIGHTS GRANTED UNDER PERMITS

Sec.
792.1 Scope.
792.2 Objectives.
792.11 General requirements.
792.12 Obtaining approval for transfer, assignment or sale of rights.
792.13 Requirements for new permits for persons succeeding to rights granted under a permit.

AUTHORITY: Secs. 101, 201, 501, 506, 509, 510, and 511, Pub. L. 95-87 (30 U.S.C. Secs. 1201, 1211, 1251, 1256, 1257, 1260, and 1261).

§ 792.1 Scope.

This Part establishes the minimum requirements for the Secretary's approval of regulatory program provisions for the transfer, sale or assignment of rights granted under permits issued under such programs and continuation of operations covered by such permits.

§ 792.2 Objectives.

The objective of this Part is to ensure that no person conducts surface coal mining and reclamation operations through the transfer, sale or assignment of rights granted under regulatory program permits without the prior approval of the regulatory authority. This is necessary to ensure that the environment is fully protected at all times.

§ 792.11 General requirements.

(a) No transfer, assignment, or sale of the rights granted under any permit issued pursuant to a regulatory program shall be made without the prior written approval of the regulatory authority, in accordance with this Part.

(b) Any person who has obtained the prior written approval of the regulatory authority under this Part for the transfer, sale or assignments of rights granted under permits issued to State programs, shall—

(1) If required by Sections 792.12(c)(2)(4), file a complete application with the regulatory authority for a new permit for the surface coal mining and reclamation operation covered by the existing permit within the time prescribed by Section 771.19(b)(3) of this Subchapter, and,

(2) Pending the decision of the regulatory authority on such application; conduct such operation in compliance with the Act, this chapter, the regulatory program, and the terms and conditions of the existing permit.

§ 792.12 Obtaining approval for transfer, assignment or sale of rights.

(a) Any person succeeding by transfer, assignment, or sale to the rights granted by a permit issued under this Subchapter shall, prior to the date of such transfer, assignment or sale—

(1) Obtain the bond coverage of the original permittee; and

(2) Provide the regulatory authority with an application for approval of such proposed transfer, assignment, or sale, including—

(i) The name and address of the existing permittee;

(ii) The name and address of the person, proposing to succeed by such transfer, assignment or sale and the name and address of that person's resident agent;

(iii) For surface mining activities, the same information as is required by 30 CFR 778.13, 778.14, 778.15, 778.16(c), 778.18 and 778.19 for applications for new permits for those activities; or

(iv) For underground mining activities, the same information as is required by 30 CFR 782.13, 782.14, 782.15, 782.16(c), 782.18 and 782.19 for applications for new permits for those activities.

(3) Obtain the written approval of the regulatory authority for transfer, assignment, or sale of rights, according to the criteria of paragraph (c) of this Section.

(b)(1) The person applying for the transfer, assignment or sale of rights granted by a permit shall advertise the filing of the application in a newspaper of general circulation in the locality of the operations involved, indicating the name and address of the applicant, the original permittee, the number and particular geographic location of the permit, and the address of which written comments may be sent under Subsection (b)(2).

(2) Any person including the head of any local, State or Federal government agency may submit written comments on the application for approval to the regulatory authority, within the time required by the regulations of the particular program.

(c) The regulatory authority may, upon the basis of the applicant's compliance with the requirements of paragraph (a) and (b) of this Section, grant written approval for the transfer, sale, or assignment of rights under a permit, if it first finds, in writing, that—

(1) The person seeking approval will conduct the operations covered by the permit in accordance with the criteria specified in 30 CFR 786.15 and 786.17 and the requirements of the Act, this Chapter and the regulatory program;

(2) The applicant for approval will not conduct the operation differently from those approved under the original permit, unless the applicant has applied for and received approval of a new permit from the regulatory authority, in accordance with the requirements of this Subchapter;

(3) The applicant has submitted a performance bond or other guarantee as required by Subchapter J and at least equivalent to the bond or other guarantee of the original permittee; and

(4) The applicant will continue to conduct the operations involved in full compliance with the terms and conditions of the original permit, unless and until it has obtained a new permit in accordance with this Subchapter.

§ 792.12 Requirements for new permits for persons succeeding to rights granted under a permit.

Any person conducting surface coal mining and reclamation operations by approval of the regulatory authority under this Part shall continue to conduct the operations involved according to the terms and conditions of the original permit, until that person has obtained a new or revised permit from the regulatory authority, in accordance with the requirements of this Subchapter.

SUBCHAPTER J—BOND AND INSURANCE REQUIREMENTS FOR COAL SURFACE MINING AND RECLAMATION OPERATIONS

PART 800—GENERAL REQUIREMENTS FOR BONDING OF SURFACE COAL MINING AND OPERATIONS UNDER STATE AND FEDERAL PROGRAMS

Sec.
800.1 Scope.
800.2 Objective.
800.11 Requirement to file a bond.
800.12 Requirement to file a certificate of liability insurance.
800.13 Regulatory authority responsibilities.

AUTHORITY: Secs. 102, 201(c), 501(b), 507, 509, and 519, Pub. L. 95-87, 91 Stat. 448, 449, 468, 474, 477, 479, and 501 (30 U.S.C. 1201, 1211, 1251, 1257, 1259, and 1269).

§ 800.1 Scope.

This Part sets forth the minimum requirements for bonding and insuring surface coal mining and reclamation operations on non-Indian and non-Federal lands under a State program or a Federal program adopted in a State.

§ 800.2 Objective.

The objective of this Part is to set forth the minimum requirements and responsibilities for filing bonds and insurance in accordance with the Act.

§ 800.11 Requirement to file a bond.

(a) After a coal mining and reclamation permit application has been approved but before a permit is issued, the applicant shall file with the regulatory authority a bond for performance payable to the regulatory authority. The performance bond will be conditioned upon the faithful performance of all the requirements of the Act, the regulations of this Chapter, or a State or Federal program, the rules and regulations issued under a State or Federal program and the provisions of its permit. The amount, duration, form, conditions and terms of the performance bond shall conform to Parts 805 and 806 of this Subchapter.

(b) The initial bond shall cover liability for the area of land to be affected within the first year of conducting surface coal mining and reclamation operations under the permit. Incremental bonds for 1-year periods within the term of the permit shall be filed with the regulatory authority on or before 30 days before beginning additional surface coal mining and reclamation operations.

(c) The amount, duration, form, conditions and terms of the performance bond shall conform to 30 CFR 805 and 806.

§ 800.12 Requirement to file a certificate of liability insurance.

(a) Each applicant for a permit shall submit to the regulatory authority, as part of the permit application, a certificate issued by an insurance company authorized to do business in the United States. The certificate shall certify that the applicant has a public liability insurance policy in force for the surface mining and reclamation operations for which the permit is sought. The amount, duration, form, conditions and terms of such insurance shall conform to 30 CFR 806.

(b) The applicant may, instead of purchasing liability insurance, submit evidence that it satisfies applicable State or Federal self-insurance requirements and that self-insurance for liability is otherwise consistent with § 806.14.

§ 800.13 Regulatory authority responsibilities.

(a) The regulatory authority shall prescribe and furnish the form for filing a performance bond.

(b) The regulatory authority shall prescribe terms and conditions for bonds and insurance by regulation. The regulatory authority shall meet, at a minimum, those provisions of 30 CFR 805 and 806.

(c) The regulatory authority shall determine the amount of the bond required for each part of the permit area to be bonded, including adjustments to the initial amount from time to time as affected land acreages are increased or decreased or where the cost of future reclamation changes, according to the minimum requirements of § 805.11(a).

(d) The regulatory authority may accept the bond of the applicant in lieu of a surety or collateral bond if the applicant meets the requirements of § 806.11(b).

(e) The regulatory authority shall release the permittee from his bond and insurance requirements consistent with §§ 807.11, 807.12, and 807.13(a).

(f) The regulatory authority shall cause all or part of a bond to be forfeited consistent with 30 CFR 808.

PART 805—AMOUNT AND DURATION OF PERFORMANCE BOND

Sec.
805.1 Scope.
805.11 Determination of bond amount.
805.12 Minimum amount.
805.13 Period of liability.
805.14 Adjustment of amount.

AUTHORITY: Secs. 102, 201(c), 501(b), 509, and 515, Pub. L. 95-87, 91 Stat. 448, 449, 468, 479, and 491 (30 U.S.C. 1201, 1211, 1251,

cient to assure performance of all the requirements of the Act, the performance standards of 30 CFR 810-828 or a

§ 805.14 Adjustment of amount.

(a) The amount of the bond shall be adjusted by the regulatory authority

AUTHORITY: Secs. 102, 201(c), 501(b), 507(f) and 509, Pub. L. 95-87, 91 Stat. 448, 449, 468, 477 and 479 (30 U.S.C. 1202, 1211, 1251,

(iv) Are delinquent in payment of either the reclamation fee required under Subchapter R of this Chapter

(1) The alternative must assure that the regulatory authority will have available sufficient money to complete

AUTHORITY: Secs. 102, 201(c), 501(b), 509, and 515, Pub. L. 95-87, 91 Stat. 448, 449, 468, 479, and 491 (30 U.S.C. 1201, 1211, 1251, 1259, and 1265).

§ 805.1 Scope.

This Part sets forth the minimum requirements for determining the amounts of performance bonds and the time periods of liability for surface coal mining and reclamation operations.

§ 805.11 Determination of bond amount.

(a) The standard applied by the regulatory authority in determining the amount shall be the estimated actual cost to the regulatory authority if it had to perform the reclamation, restoration and abatement work required, under the Act, the regulations of this Chapter, or a State or Federal program, all regulations promulgated under that State or Federal program and the provisions of the permit.

(b) The amount of a bond required for each permit area, or increments within these areas, shall be determined by the regulatory authority and based upon but not limited to the following:

(1) The estimated cost to the regulatory authority of completing the reclamation plan, the performance standards in 30 CFR 810–828 and the approved permit;

(2) In determining the estimated cost for underground coal mining operations, the following criteria shall be used in addition to those in § 805.11(b)(1):

(i) Estimated cost of replacement of ponds and stream linings; and

(ii) Estimated cost of repair to structures and facilities within the permit area based on history of damage, incidence and repair costs within the region;

(3) The additional cost to the regulatory authority which may arise from applicable public contracting requirements or the requirement to bring personnel and equipment to the permit area after abandonment by the permittee;

(4) All costs necessary, expedient and incident to the satisfactory completion of the requirements of the permit and the performance standards in Subchapter K of this Chapter;

(5) A factor based on cost increases during the preceding 5 years for the types of activities or costs associated with the reclamation to be performed; and

(6) Such other cost information that may be acquired by the regulatory authority.

§ 805.12 Minimum amount.

(a) The amount of the bond for surface coal mining and reclamation operations shall, at a minimum, be sufficient to assure performance of all the requirements of the Act, the performance standards of 30 CFR 810–828 or a State or Federal program, all regulations under a State or Federal program and the provisions of the permit if the work had to be performed by the regulatory authority in the event of forfeiture.

(b) The bond for surface coal mining and reclamation operation shall not be less than $10,000 for the entire area under one permit.

§ 805.13 Period of liability.

(a) *All coal mining operations.* At a minimum, liability under a bond shall continue until all reclamation requirements of the Act, this Chapter and the provisions of the permit have been met.

(b) *Surface coal mining activities.* In addition to the requirement of paragraph (a) of this section, liability under the bond for revegetation shall continue for a period of 5 full years after the last year of augmented seeding, fertilizing, irrigation, or other work required under the performance standards of 30 CFR 810–828 which has achieved compliance with the standards for successful revegetation under 30 CFR 816.55(f), where the average annual precipitation is more than 26 inches or for 10 years where the average annual precipitation is 26 inches or less.

(1) If the regulatory authority approves a long-term intensive agricultural postmining land use in accord with the performance standards of 30 CFR 810–828, the applicable 5- or 10-year period of liability shall commence at the date of initial planting for such long-term intensive agricultural land use.

(2) The regulatory authority may, upon a written finding approving a long-term intensive agricultural land use, grant an exception to the revegetation requirements of 30 CFR 816, but shall not grant exception to the period of liability in § 805.13 (a) or (b).

(c) *Underground coal mining activities.* The period of liability for an underground mine shall continue for a sufficient period to ensure that the requirements of the reclamation plan and approved permit have been successfully met. The regulatory authority shall determine the duration of bond liability based on—

(1) The life of the mine,

(2) The period of time to install any facilities or structures to meet the requirements of the approved permit; and

(3) A period of time to ensure the success of any facilities or structures installed to meet the requirements of the approved permit.

§ 805.14 Adjustment of amount.

(a) The amount of the bond shall be adjusted by the regulatory authority as surface or underground affected area under the permit is increased or decreased, methods of mining operation change, standards of reclamation change, or when the cost of future reclamation changes. The regulatory authority shall notify the permittee of any proposed bond adjustment and provide the opportunity for an informal conference. The regulatory authority shall review each outstanding bond at the time that permit reviews are conducted under 30 CFR 790.3, and re-evaluate those bonds in accordance with the standards in § 805.11.

(b) A permittee may request reduction of the required bond amount upon production of evidence submitted to the regulatory authority proving that the permittee's method of operation or other circumstances will reduce the maximum estimated cost to the regulatory authority to complete the reclamation responsibilities and therefore warrant a reduction of the bond amount.

(c) Any person with a valid legal interest which may be affected by adjustment of the bond or the continued operation of surface coal mining and reclamation operation currently under bond may petition the regulatory authority to alter the bond amount by the submission of evidence that the bond may be insufficient and that review of the bond is warranted.

(d) Upon receipt of a request for reduction or petition for adjustment, the regulatory authority shall hold a hearing, after notice in a newspaper serving the locale of the bonded area for which an adjustment is sought, providing the permittee and persons whose interests are or may be adversely affected an opportunity to comment on the request. The regulatory authority shall notify the permittee and participants at the hearing of its decision within 30 days from the close of the hearing.

(e) The notice shall be in writing, stating the reasons for the decision and informing the permittee or any person whose interests may be adversely affected by the decision and who participated in the hearing of any rights of appeal.

PART 806—FORM, CONDITIONS AND TERMS OF PERFORMANCE BONDS AND LIABILITY INSURANCE

Sec.
806.1 Scope.
806.11 Form of the performance bond.
806.12 Terms and conditions of the bond.
806.13 Replacement of bonds.
806.14 Terms and conditions for liability insurance.

AUTHORITY: Secs. 102, 201(c), 501(b), 507(f) and 509, Pub. L. 95-87, 91 Stat. 448, 449, 468, 477 and 479 (30 U.S.C. 1202, 1211, 1251, 1257, and 1259).

§ 806.1 Scope.

This Part establishes the minimum standards for the form of the bond for surface coal mining and reclamation operations, and the terms and conditions applicable to bonds and liability insurance.

§ 806.11 Form of the performance bond.

(a) The form for the performance bond shall be prescribed by the regulatory authority. The regulatory authority shall offer either of the following forms:

(1) An indemnity agreement executed by the applicant and a corporate surety licensed to do business in the State where the surface or underground coal mining operation is located and payable to the regulatory authority; or

(2) An indemnity agreement executed by the applicant and payable to the regulatory authority pledging cash deposits, negotiable bonds of the United States, State or municipalities, or negotiable certificates of deposit of any bank organized or transacting business in the United States, if the applicant so chooses.

(b) *Self-bond instead of surety or collateral bond.* The regulatory authority may accept an indemnity agreement from the applicant payable to the regulatory authority without separate surety guarantee or pledge of specific collateral, considering the following conditions:

(1) The applicant shall designate a suitable agent to receive service of process.

(2) The applicant shall have demonstrated a history of compliance with the Act, the regulations of this Chapter, or a State or Federal program, rules and regulations promulgated thereunder and the conditions of all permits. For purposes of this subparagraph, an applicant shall be unable to demonstrate a history of compliance if the applicant controls or has controlled surface coal mining and reclamation operations that—

(i) Have forfeited a performance bond which was posted to insure reclamation of a coal surface mining and reclamation operation;

(ii) Have notices of violation or orders of cessation that have not been abated;

(iii) Have demonstrated a pattern of willful violations of the Act of such a nature, duration, and with such resulting irreparable damage to the environment as to indicate an intent not to comply with the provisions of the act as described in § 843.13 of this Chapter; or

(iv) Are delinquent in payment of either the reclamation fee required under Subchapter R of this Chapter or a civil penalty assessment under 30 CFR, if a State has adopted it as part of its State program, or if the regulatory authority is the Office.

(3) The applicant has a net worth, certified by a certified public accountant, of no less than twice the total amount of bond obligations on all permits issued to the applicant.

(4)(i) The indemnity agreement shall be executed by the applicant and by—

(A) If the applicant is a publicly held corporation, its principal executive officer or officers, its principal financial officer, its controller or principal accounting officer and by at least the majority of the board of directors or persons performing similar functions;

(B) If the applicant is a foreign person, the indemnity agreement shall also be signed by its authorized representative in the United States, if any;

(C) Its parent corporation and every parent of which it is a subsidiary, whether first-tier, second-tier, or further removed, if any;

(D) If the applicant is a partnership, all of its general partners and their parents;

(E) If the applicant is a married individual, the applicant's spouse; and

(F) If the applicant is a closely held corporation, all of its principal investors, its principal executive officer or officers, its principal financial officer, its controller or principal accounting officer and by at least the majority of the board of directors or persons performing similar functions.

(ii) The name of each person who signs the indemnity agreement shall be typed or printed beneath the signature. Any person who occupies more than one of the specified positions shall indicate each capacity in which he or she signs the indemnity agreement.

(iii) The indemnity agreement shall be a binding obligation, jointly and severally, on all who execute it.

(iv) For purposes of paragraph (4)(b) of this section, principal investor means anyone with a 10 percent or more beneficial ownership interest, directly or indirectly, in the applicant.

(v) For the purposes of paragraph (4), parent means owner, direct or indirect, of a 10 percent or more beneficial interest in the applicant or any corporation, partnership or individual which has a 10 percent or more beneficial ownership in the applicant.

(c) The Secretary may approve, as part of a State or Federal program, an alternative bonding system, if it will achieve the following objectives and purposes of the bonding program:

(1) The alternative must assure that the regulatory authority will have available sufficient money to complete the reclamation provisions for all permit areas which may be in default at any time; and

(2) The alternative must provide a substantial economic incentive for the permittee to comply with all reclamation provisions.

§ 806.12 Terms and conditions of the bond.

(a) The bond shall be in an amount determined by the regulatory authority as provided in 30 CFR 805.11 and 805.12.

(b) The bond shall be payable to the regulatory authority.

(c) The bond shall be conditioned upon faithful performance of all of the requirements of the Act, or State law adopted pursuant to a State regulatory program, the rules and regulations promulgated thereunder and the conditions of the permit and shall cover the permit area.

(d) The duration of the bond shall be for the time period provided in 30 CFR 805.13.

(e) Surety bonds shall be subject to the following conditions:

(1) The regulatory authority shall not accept a surety company's bond unless it is agreed that the bond shall not be cancellable by the surety at any time during the period of liability, for any reason including non-payment of premium or bankruptcy of the permittee.

(2) The regulatory authority shall not accept a surety company's bond in excess of the company's maximum single obligation as provided by State law in the State where the permit area is located, unless the surety company satisfies State law for exceeding such limit. In States where no maximum single obligation limit is established by State law, the regulatory authority shall not accept surety bonds in excess of 10 percent of the surety company's capital surplus account as shown on a balance sheet certified by a certified public accountant.

(3) The regulatory authority shall not accept surety bonds from a surety company for any permittee on all permits in excess of three times the company's maximum single obligation as provided by State law or, in the absence of State law, as provided in paragraph (e)(2) of this section.

(4) The regulatory authority may provide in the bond that the amount shall be confessed to judgment upon forfeiture if such procedure is authorized by State law.

(5) The bond shall provide that the surety and the permittee shall be jointly and severally liable.

(f) Collateral bonds shall be subject to the following conditions:

(1) The regulatory authority shall obtain possession of and keep in custody all collateral pledged by the applicant and damage to water wells, and entitled to compensation under the applicable provisions of State law. Minimum requirements shall be established by the regulatory authority.

(2) The bond release application

(d) If no public hearing is requested under paragraph (e) of this section and the regulatory authority disapproves the application for release of

public hearing. The regulatory authority shall:

(1) Inform the permittee, local gov-

filing of the request, if no public hearing or conference has been held.

(2) If there has been a public hear-

(1) The regulatory authority shall obtain possession of and keep in custody all collateral pledged by the applicant until authorized for release or replacement as provided in this Subchapter.

(2) The regulatory authority shall value collateral at its current market value, not face value.

(3) The regulatory authority shall require that certificates of deposit be assigned to the regulatory authority, in writing, and upon the books of the bank issuing such certificates.

(4) The regulatory authority shall not accept an individual certificate for a denomination in excess of $40,000.

(5) The regulatory authority shall require the banks issuing such certificates to waive all rights of setoff or liens which it has or might have against such certificates.

(6) The regulatory authority shall only accept automatically renewable certificates of deposit.

(7) The regulatory authority shall require the applicant to deposit sufficient amounts of certificates of deposit to assure that the regulatory authority will be able to liquidate such certificates prior to maturity, upon forfeiture, for the amount of the bond required by the provisions of this Subchapter.

§ 806.13 Replacement of bonds.

(a) The regulatory authority may allow permittees to replace existing surety or collateral bonds with other surety or collateral bonds, provided, however, that the liability which has accrued against the permittee on the permit area shall be transferred to such replacement bonds.

(b) The regulatory authority shall not allow permittees to replace existing surety or collateral bonds with a self-bond provided in 30 CFR 806.11(b).

(c) The regulatory authority shall not release existing bonds until the permittee has submitted acceptable and approved replacement bonds. A replacement of bonds pursuant to this section shall not constitute a release of bond under 30 CFR 807.

§ 806.14 Terms and conditions for liability insurance.

(a) The regulatory authority shall require the applicant to submit at the time of permit application, a certificate certifying that the applicant has a public liability insurance policy in force for the surface coal mining and reclamation operation for which the permit is sought. The certificate shall provide for personal injury and property damage protection in an amount adequate to compensate all persons injured or property damaged as a result of surface coal mining and reclamation operations, including use of explosives and damage to water wells, and entitled to compensation under the applicable provisions of State law. Minimum insurance coverage for personal injury shall be $300,000 for each injury and $500,000 for each accident. Minimum insurance coverage for property damage shall be $300,000 per accident and $500,000 aggregate.

(b) The policy shall be maintained in full force during the life of the permit or any renewal or extension thereof, including completion of all reclamation and restoration operations under this Chapter.

(c) The policy shall include a rider requiring that the insuror notify the regulatory authority whenever substantive changes are made in the policy, including any termination or failure to renew.

(d) The regulatory authority may accept from the applicant, in lieu of a certificate for a public liability insurance policy, satisfactory evidence from the applicant that it satisfies applicable State self-insurance requirements and the requirements of this section.

PART 807—PROCEDURES, CRITERIA AND SCHEDULE FOR RELEASE OF FERFORMANCE BOND

Sec.
807.1 Scope.
807.11 Procedures for seeking release of bond.
807.12 Criteria for release of bond.
807.13 Schedule for release of bond.

AUTHORITY: Secs. 102, 201(c), 501(b), 507(b)(16), 515(b)(8), (10), and (20), and 519, Pub. L. 95-87, 91 Stat. 440, 449, 468, 477, 488, 489, 491, and 501 (30 U.S.C. 1202, 1211, 1251, 1257, 1265, and 1269)

§ 807.1 Scope.

This Part sets forth the procedures and criteria for release of performance bonds for both surface and underground coal mining activities. This includes the filing, notice and hearing requirements, and the standards by which the application for release shall be evaluated.

§ 807.11 Procedures for seeking release of bond.

(a) The permittee may file a request for release of all or part of the performance bond(s) on deposit with the regulatory authority after reclamation and restoration operations under this Subchapter and Subchapter K of this Chapter have been completed.

(1) Bond release applications may only be filed at times or seasons that allow the regulatory authority to properly evaluate the reclamation alleged to have been completed. The times or seasons appropriate for the evaluation of certain types of reclamation shall be identified in the reclamation plan and approved by the regulatory authority.

(2) The bond release application shall include copies of letters sent to adjoining property owners, surface owners, local governmental bodies, planning agencies, and sewage and water treatment facilities or water companies in the locality of the mine notifying them of his intention to seek release from the bond. These letters shall be sent before the permittee files a request for release of bond.

(b) Within 30 days after filing a request for bond release, the permittee shall advertise the request for release in a newspaper of general circulation in the city or town nearest the mine. A proof of publication of the advertisement shall be submitted to the regulatory authority. The advertisement shall—

(1) Be placed in the newspaper at least once a week for four (4) consecutive weeks;

(2) Show the name of the permittee, including the number and date of the permit;

(3) Show the precise location and the number of acres of the land affected;

(4) Show the total amount of bond in effect and the amount for which release is sought;

(5) Summarize the reclamation and restoration work done, including any back stowing or mine sealing, if applicable, and give the dates of completion;

(6) Describe the reclamation and restoration results achieved as they relate to the approved mining and reclamation plan; and

(7) State that written comments may be submitted to the office of the regulatory authority and provide the address of the office.

(c) The regulatory authority shall inspect and evaluate the reclamation work involved within 30 days after receiving a copy of the newspaper advertisement, or as soon thereafter as weather conditions permit.

(1) The surface owner, agent, or lessee may participate with the regulatory authority in making the bond release inspection.

(2) The regulatory authority shall consider, when making its inspection and evaluation—

(i) Whether the permittee has met the criteria for release of the bond under § 807.12 of this Part;

(ii) The degree of difficulty in completing any remaining reclamation;

(iii) Whether pollution of surface and subsurface water is occurring;

(iv) The probability of future pollution or the continuance of any present pollution of surface and subsurface water; and

(v) The estimated cost of abating any pollution.

(d) If no public hearing is requested under paragraph (e) of this section and the regulatory authority disapproves the application for release of the bond or any portion of it, the regulatory authority shall notify the permittee, in writing, stating the reasons for disapproval consistent with paragraph (c) of this section.

(1) The notice shall recommend corrective actions necessary to secure release of the bond. The notice shall also provide the permittee with an opportunity for a public hearing before the regulatory authority.

(i) If the permittee requests a public hearing, the regulatory authority shall publish notice in the FEDERAL REGISTER or the official State publication, whichever is applicable. The notice shall advertise the date, time and location in the newspaper of general circulation in the locality of the area under bond for which release is sought.

(ii) The hearing shall be held within thirty (30) days of the request in the town or city nearest the area under bond for which release is proposed.

(iii) The hearing shall be legislative in type and conform to the applicable requirements of 5 U.S.C. Section 553 if the regulatory authority is the Office, or the applicable requirements of State law governing administrative hearings if the regulatory authority is the State.

(iv) The regulatory authority shall conduct the hearing and allow all participants an opportunity to comment on the disapproval.

(2) If a public hearing is held at the request of the permittee following disapproval of its request, the permittee shall have the burden of presenting a preponderance of evidence to persuade the regulatory authority that its decision disapproving the request cannot be supported by the reasons given.

(e) Written objections to the proposed bond release and a request for a public hearing may be filed with the regulatory authority by affected persons within thirty (30) days of the last advertisement of the bond release. Affected persons are—

(1) Any person with a valid legal interest which might be adversely affected by bond release; and

(2) The responsible officer or head of any Federal, State or local government agency which—

(i) Has jurisdiction by law or special expertise with respect to any environmental, social or economic impact involved; or

(ii) Is authorized to develop and enforce environmental standards with respect to surface or underground coal mining.

(f) If written objections are filed and a public hearing is requested the regulatory authority shall schedule a public hearing. The regulatory authority shall:

(i) Inform the permittee, local government and the objecting party of the time and place of the hearing;

(ii) Publish notice in the FEDERAL REGISTER or the official State publication and advertise the date, time, and location in a newspaper of general circulation in the locality of the mine twice a week for two (2) consecutive weeks before the hearing; and

(iii) Hold the public hearing within thirty (30) days of the request in the town or city nearest to the area under bond for which release is sought or the State capital, at the option of the objector.

(2) The regulatory authority may subpoena witnesses, and written and printed materials; and compel attendance of witnesses and production of the materials for a hearing. A verbatim record of each public hearing shall be made and the transcript made available on the motion of any party or by order of the regulatory authority.

(3) The hearing, if requested, shall otherwise conform to the applicable requirements of 5 U.S.C. Section 554 if the regulatory authority is the Office, or to the applicable requirements of the State law governing administrative hearings if the regulatory authority is the State.

(g) The applicant and any of the objecting parties may agree to an informal conference to resolve such written objections instead of the hearing under paragraph (e) of this section. The informal conference shall be held in the locality of the permit area for which bond release is sought. The decision to conduct an informal conference shall not prejudice the right of any objecting party who has not agreed to the informal conference instead of a hearing to demand a formal hearing under paragraph (f) of this section

(1) Notice of the informal conference shall be published in the FEDERAL REGISTER or the official State publication, and a newspaper of general circulation in the locality of the scheduled conference at least two weeks before the conference date.

(2) The informal conference shall be held 30 days from the date of notice.

(3) An electronic or stenographic record shall be made of the conference and the record maintained for access by the parties until final release of the bond unless recording is waived by the parties.

(h)(1) The regulatory authority shall notify the permittee and any other interested parties in writing of its decision to release or not to release all or part of the performance bond or deposit within sixty (60) days from the filing of the request, if no public hearing or conference has been held.

(2) If there has been a public hearing or conference held, the notification shall be made to all interested parties within thirty days after conclusion of the conference.

(3) A notice of disapproval shall state reasons for the disapproval, recommend corrective actions necessary to secure the release and notify the applicant of his right to appeal the decision of the regulatory authority.

(4) A notice of approval shall state the reasons for approval and notify interested parties of their right to appeal the decision of the regulatory authority.

(i) The regulatory authority shall notify the town or city nearest to and the county in which the operation is located by certified mail at least thirty (30) days prior to release of all or part of the bond.

§ 807.12 Criteria for release of bond.

(a) The regulatory authority shall not release the bond or any part of it under § 807.13 until it finds that the permittee has met the applicable performance standards under 30 CFR 810-827 for the surface coal mining and reclamation operation, the requirements of its permit and the approved State program.

(b) The regulatory authority shall, at all times until final completion of the permittee's obligations under paragraph (a) of this section and final release of all bonding, retain at least $10,000 in bond amount, and such additional amounts determined by the regulatory authority to be necessary to—

(1) Cover the cost of uncompleted reclamation operations; and

(2) Other uncompleted requirements of the permit, the Act or this Chapter.

§ 807.13 Schedule for release of bond.

The regulatory authority may release the bond or deposit for the area of land affected within each year of the permit term according to the following schedule:

(a) Sixty (60) percent of the bond may be released when the permittee completes backfilling, topsoil replacement, regrading and drainage control of the bonded area in accordance with the approved mining and reclamation plan.

(b) After revegetation has been established according to the approved mining and reclamation plan and the standards for measuring the success of revegetation are met, the regulatory authority may release an additional twenty-five (25) percent of the bond. No part of this remaining portion of bond may be released:

(1) As long as the lands are contributing suspended solids to stream flow

or runoff outside the permit area in excess of the requirements in section 515(b)(10) of the Act and 30 CFR

agrees to a compliance schedule to comply with the violations of the permit or bond conditions.

(2) A creditor of the permittee has attached or executed a judgment against the permittee's equipment,

coal mining and reclamation operations under Section 529(a) of the Act.

AUTHORITY: Secs. 102, 201, 501(b), 503, 504, 512, 515, 516 and 517 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 471, 483, 486, 495,

performance standards applicable under a State or Federal program.

or runoff outside the permit area in excess of the requirements in section 515(b)(10) of the Act and 30 CFR 816.49(b);

(2) Until soil productivity on prime farmlands is returned to equivalent levels of yield for non-mined prime farmland in the surrounding area under equivalent management practices as determined from the soil survey performed under section 507(b)(16) of the Act; and

(3) Unless satisfactory provision in the approved mining and reclamation plan is made for the sound future maintenance by the operator or landowner of any permanent impoundment, which provision is also authorized by the regulatory authority.

(c) The regulatory authority shall not partially release the bond as provided in this section if the remaining bond amount will fall below $10,000.

(d) The regulatory authority shall release the remainder of the bond when the permittee has successfully completed all surface coal mining and reclamation operations in accordance with the approved mining and reclamation plan, the requirements of this Subchapter and 30 CFR parts 810–827 and the applicable liability period under paragraph (a) of this section has expired.

PART 808—PERFORMANCE BOND FORFEITURE CRITERIA AND PROCEDURES

Sec.
808.1 Scope.
808.11 General.
808.12 Procedures.
808.13 Criteria for forfeiture.
808.14 Determination of forfeiture amount.

AUTHORITY: Secs. 102, 201(c), 501(b), 509(a), and 519, Pub. L. 95-87, 91 Stat. 448, 449, 468, 480, and 501 (30 U.S.C. 1202, 1211, 1251, 1259, and 1269).

§ 808.1 Scope.

This Part sets forth the criteria and procedures applicable whenever the regulatory authority initiates a proceeding for the forfeiture of a bond or any part of a bond as a result of the permittee's failure to meet the conditions upon the bond.

§ 808.11 General.

(a) The regulatory authority shall forfeit all or part of a bond for any permit which—

(1) Has not been mined, reclaimed and restored consistent with applicable performance standards of 30 CFR 810–827, the approved reclamation plan, and requirements of the permit; or

(2) Is in violation of any other condition upon the bond.

(b) The regulatory authority may withhold forfeiture if the permittee agrees to a compliance schedule to comply with the violations of the permit or bond conditions.

§ 808.12 Procedures.

(a) In the event forfeiture of the bond is required by § 808.11, the regulatory authority shall—

(1) Send written notification to the permittee, and the surety on the bond, if applicable, of the regulatory authority's determination to forfeit all or part of the bond and all reasons for such forfeiture, including a finding of the amount to be forfeited;

(2) Advise the permittee of any rights of appeal that may be available for that determination under local law if the regulatory authority is the State, or under Federal law, if the regulatory authority is the Office; and

(3) If an appeal is not filed within a time established by the regulatory authority or is unsuccessful, proceed in an action for collection on the bond as provided by applicable laws for the collection of defaulted bonds or other debts, consistent with this section for the amount of the estimated actual costs to the regulatory authority to carry out the performance standards and reclamation requirements for a surface or underground coal mining operation; and

(4) If an appeal is filed, defend the action.

(b) The written determination to forfeit all or part of the bond, including the reasons for forfeiture and the amount to be forfeited, shall be a final decision by the regulatory authority.

(c) The regulatory authority may forfeit any or all bond deposited for an entire permit area in order to satisfy the obligations of section 808.11 and Section 808.14.

§ 808.13 Criteria for forfeiture.

(a) A bond shall be forfeited if the regulatory authority finds that—

(1) The permittee has violated any of the terms or conditions of the bond; or

(2) The permittee has failed to conduct the surface mining and relcamation operation in accordance with the Act, the conditions of the permit within the time periods required by the approved reclamation plan, the State or Federal program, the regulations issued under a State or Federal program or required by the approved reclamation plan; or

(3) The permit for the area under bond has been revoked.

(b) A bond may be forfeited if the regulatory authority finds that—

(1) The permittee has become insolvent, failed in business, filed a petition in bankruptcy or for a receiver, or had a petition in bankruptcy or for a receiver filed against it in any court; or

(2) A creditor of the permittee has attached or executed a judgment against the permittee's equipment, materials, facilities at the permit area or on the collateral pledged to the regulatory authority; and

(3) The permittee cannot demonstrate or prove that it will be able to continue to operate in compliance with the Act.

§ 808.14 Determination of forfeiture amount.

The regulatory authority shall either—

(a) Determine the amount of the bond to be forfeited on the basis of the estimated actal cost to the regulatory authority or its contractor to complete the reclamation plan and other regulatory requirements in accordance with the Act, the regulations of this Chapter, a State or Federal program, and the rules and regulations issued under a State or Federal program, and the requirements of the permit; or

(b) Forfeit the entire amount of the bond for which liability is outstanding, deposit the proceeds thereof in an interest-bearing escrow account for use in the payment of all costs and administrative expenses associated with the completion of reclamation by the authority. Following completion of reclamation by the regulatory authority, the principal balance and accrued interest remaining in the account shall be returned.

PART 809—BONDING AND INSURANCE REQUIREMENTS FOR ANTHRACITE SURFACE COAL MINING AND RECLAMATION OPERATIONS

Sec.
809.1 Scope.
809.2 Objective.
809.3 Responsibilities.
809.11 Applicability.
809.12 Requirements.

AUTHORITY: Sections 102, 201(c), 501(b), 507(f), 507(b)(16), 509, 515(b)(8) and (10), 519 and 529, Pub. L. 95-87, 91 Stat. 445, 449, 468, 477, 479, 488, 489, 501 and 514 (30 U.S.C. 1202, 1211, 1251, 1257, 1259, 1265, 1269 and 1279).

§ 809.1 Scope.

This Part sets forth the applicability and general requirements for bonding and insuring anthracite surface coal mining and reclamation operations where such operations were regulated by environmental protection standards of the State in which they are located on or before August 2, 1977.

§ 809.2 Objective.

The objective of this Part is to provide minimum standards for bonds and insurance for anthracite surface coal mining and reclamation operations under Section 529(a) of the Act.

§ 809.3 Responsibilities.

All persons seeking to engage in or engaging in anthracite surface coal mining and reclamation operations subject to Section 785.11 and Part 820 of this Chapter and every regulatory authority regulating anthracite surface coal mining and reclamation operations shall comply with the bonding and insurance requirements of this Part.

§ 809.11 Applicability.

This Part applies to any person seeking to engage in or engaging in anthracite surface coal mining and reclamation operations in Pennsylvania.

§ 809.12 Requirements.

(a) All of the provisions of this Subchapter shall apply to bonding and insuring anthracite surface coal mining and reclamation operations in Pennsylvania, provided that:

(1) Specified bond limits shall be determined by the regulatory authority in accordance with applicable provisions of Pennsylvania law, rules and regulations promulgated thereunder, and implementing policies of the Department of Environmental Resources, State of Pennsylvania.

(2) The period of liability for responsibility under each bond shall be established for those operations in accordance with applicable laws of the State of Pennsylvania, rules and regulations promulgated thereunder, and implementing policies of Pennsylvania's Department of Environmental Resources.

(b) Upon amendment of the Pennsylvania permanent regulatory program with respect to specified bond limits and period of revegetation responsibility for anthracite surface coal mining and reclamation operations, any person engaging in or seeking to engage in those operations shall comply with additional regulations the Secretary may issue as are necessary to meet the purposes of the Act.

(c) Nothing in this Part shall exempt anthracite surface coal mining and reclamation operations from the requirements under this chapter, except as set forth in Section 785.11 and Part 820 of this Chapter.

SUBCHAPTER K—PERMANENT PROGRAM PERFORMANCE STANDARDS

PART 810—PERMANENT PROGRAM PERFORMANCE STANDARDS—GENERAL PROVISIONS

Sec.
810.1 Scope.
810.2 Objectives.
810.3 Authority.
810.4 Responsibility.

AUTHORITY: Secs. 102, 201, 501(b), 503, 504, 512, 515, 516 and 517 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 471, 483, 486, 495, and 498 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1262, 1265, 1266, and 1267).

§ 810.1 Scope.

(a) This Subchapter sets forth the minimum performance standards to be implemented under a regulatory program before it will be approved by the Secretary; and

(b) This Subchapter sets forth requirements to be used in developing regulatory programs for coal exploration operations and surface coal mining and reclamation operations.

§ 810.2 Objectives.

The objective of this Subchapter is to ensure that coal exploration operations and surface coal mining and reclamation operations are conducted in a manner which is compatible with the environmental, social, and esthetic needs of the Nation. This requires—

(a) Protection of the health, safety, and general welfare of mine workers and the public;

(b) Maximum use and conservation of the solid fuel resource being recovered so that reaffecting the land through future surface coal mining operations can be minimized;

(c) Prompt reclamation of all disturbed areas to conditions that are capable of supporting the premining land uses or higher or better land uses;

(d) Reclamation of land disturbed by surface coal mining operations as contemporaneously as practicable with mining operations;

(e) Minimizing, to the extent possible using the best technology currently available, of disturbances and adverse impacts on fish, wildlife, and other related environmental values, and enhancement of such resources where practicable;

(f) Revegetation which achieves a prompt vegetative cover and recovery of productivity levels compatible with approved land uses;

(g) Minimum disturbance to the prevailing hydrologic balance at the minesite and in associated off-site areas, and to the quality and quantity of water in surface and groundwater systems;

(h) Protection of fragile and historic lands where surface coal mining operations could result in significant damage to important historic, cultural, scientific, or esthetic values; and

(i) Confinement of surface coal mining and reclamation operations and spoil disposal areas within the permit area.

§ 810.3 Authority.

The Secretary shall promulgate minimum coal exploration and surface mining and reclamation operations performance standards applicable under a State or Federal program.

§ 810.4 Responsibility.

(a) Under the general direction of the Assistant Secretary, Energy and Minerals, the Director shall ensure that performance standards at least as stringent as the standards established by the Secretary are implemented and enforced under every State and Federal program.

(b) Each regulatory authority under an approved State program is responsible for implementing and enforcing performance standards which are at least as stringent as the standards in this Subchapter.

(c) Each person conducting surface coal mining and reclamation operations is responsible for complying with performance standards which are at least as stringent as the standards in this Subchapter.

PART 811—PERMANENT PROGRAM PERFORMANCE STANDARDS—APPLICABILITY TO STATE AND FEDERAL PROGRAMS

Sec.
811.1 Scope.
811.2 Objective.
811.10 Applicability to State programs.
811.11 Applicability to Federal Programs.

AUTHORITY: Secs. 102, 201, 501(b), 503, 504, 505, 512, 515, 516 and 517 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 471, 473, 483, 486, 495, and 498 (30 USC 1202, 1211, 1251, 1253, 1254, 1255, 1262, 1265, 1266, and 1267).

§ 811.1 Scope.

This Part sets forth how the performance standards of this Subchapter are to be used in the development of every regulatory program.

§ 811.2 Objective.

The objective of this Part is to explain the manner in which the performance standards contained in this Subchapter are to be used as the basis for developing the performance standards applicable under each regulatory program.

§ 811.10 Applicability to State programs.

To be eligible for approval by the Secretary, a State program must contain performance standards at least as stringent as the performance standards of this Subchapter and must comply with all the requirements of 30 CFR 730–734.

§ 811.11 Applicability to Federal programs.

(a) If a State fails to submit a program for approval or to implement or maintain an approved State program, the Secretary shall implement a Federal program which shall include performance standards at least as strin-

gent as the minimum performance standards of this Subchapter.

(b) A Federal program for a State shall take into consideration the nature of that State's terrain, climate, biological, chemical, and other relevant physical conditions and shall be promulgated in accordance with Part 736 of this Title.

(c) If a Federal program is implemented for a State which has existing statutes or regulations that interfere with the achievement of the purposes and requirements of the Act and the Federal program, those statutes or regulations shall, so far as they interfere with the achievement of the purposes and requirements of the Act and Federal program, be preempted and superceded by the Federal program. The Secretary shall set forth those State statutes or regulations in accordance with 30 CFR 736.23.

PART 812—PERMANENT PROGRAM PERFORMANCE STANDARDS—INDEX

Sec.
812.1 Scope.
812.2 Objectives.
812.11 Parts containing performance standards.
812.12 Alphabetic index to performance standards.

AUTHORITY: Secs. 102, 201, 501(b), 515 and 516 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 486, and 495 (30 USC 1202, 1211, 1251, 1265 and 1266).

§ 812.1 Scope.

This Part contains an index to the minimum performance standards of this Subchapter.

§ 812.2 Objectives.

The objectives of this Part are to—

(a) Assist any person who conducts or intends to conduct coal exploration or surface coal mining and reclamation operations in determining which performance standards apply to the operations.

(b) Improve the understanding of these minimum performance standards to increase compliance; and

(c) Provide interested parties with a simple reference system to this Subchapter.

§ 812.11 Parts containing performance standards.

(a) Coal exploration—Part 815

(b) General extraction methods:

(1) Surface—Part 816

(2) Underground—Part 817

(c) Geographical locations:

(1) Alaska—Part 821

(2) Alluvial valley floors—Part 822

(3) Special bituminous coal mines in Wyoming—Part 825

(d) Chemical properties of coal: Anthracite mines—Part 820

(e) Combination of general extraction methods: Concurrent surface and underground—Part 818

(f) Special surface mining methods:

(1) Auger mining—Part 819

(2) Mountaintop removal—Part 824

(3) Steep slope mining—Part 826

(g) Soil quality: Prime farmland—Part 823

(h) Other activities:

(1) Coal processing off the mine permit area—Part 827

(2) In situ processing—Part 828

§ 812.12 Alphabetic index to performances.

The subjects addressed in the minimum performance standards of this Subchapter are discussed in the Parts or Sections indicated in the following index.

Item	Regulation			
Abandonment	816.53	816.133	817.131	817.133

PART 815—PERMANENT PROGRAM PERFORMANCE STANDARDS—COAL EXPLORATION

Sec.
815.1 Scope.
815.2 Objectives.
815.4 Responsibility of persons conducting coal exploration.
815.11 Required documents.
815.12 Performance standards for coal exploration operations.
815.13 Requirement for a permit.

AUTHORITY: Secs. 102, 201, 503, 504, 506, 512, 515, 516 and 517 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 471, 473, 483, 486, 495 and 498 (30 USC 1202, 1211, 1251, 1253, 1254, 1256, 1262, 1265, 1266, 1267).

§ 815.1 Scope.

This Part sets forth minimum performance standards required for coal exploration operations which are not conducted within an area covered by a permit issued for surface coal mining and reclamation operations.

§ 815.2 Objectives.

The objectives of this Part are to:

(a) Provide any person who conducts or intends to conduct coal exploration with the minimum performance standards under a State or Federal program; and

(b) Prevent degradation of the environmental quality during and following the conduct of coal exploration operations.

§ 815.4 Responsibility of persons conducting coal exploration.

At least 30 days prior to commencing exploration, each person who conducts or intends to conduct coal exploration operations shall file with the regulatory authority a notice of intention to explore. If more than 250 tons of coal are to be removed during exploration, the person engaged in the coal exploration shall obtain the written approval from the regulatory authority for the notice of intention to explore. Each person who conducts exploration activities shall comply with the reclamation procedures described in the notice of intention.

§ 815.11 Required documents.

(a) Each person who conducts any coal exploration operation shall, while in the exploration area, possess the following:

(1) If 250 or less tons of coal are removed during exploration, a receipt from the regulatory authority as evidence of the filing of a notice of intention to explore as required by CFR 776.11(a); or

(2) If more than 250 tons are to be removed during exploration, written approval of the regulatory authority for the activities granted under 30 CFR 776.11.

(b) Upon the request of any agent or employee of the regulatory authority, each person who conducts coal exploration operations shall immediately present the receipt or necessary written approval to the agent or employee so that the agent or employee may read and copy the contents of the receipt or approval.

§ 815.12 Performance standards for coal exploration operations.

Any exploration activity shall comply at a minimum with the performance standards of this Subchapter.

(a) The person who conducts exploration shall record the cumulative amount of coal removed during coal exploration by drilling, coring, trenching, mining or other techniques. This record shall be kept up to date and available to the regulatory authority at the exploration site.

(b) The person who conducts exploration shall not remove more than 250 tons of coal during exploration without the specific written approval of the regulatory authority.

(c) Vehicular travel on other than established public or private graded and surfaced roads shall be limited by the person who conducts coal exploration to that absolutely necessary to conduct the exploration. Travel shall be confined to graded and surfaced roads during and following periods of precipitation when vehicles would cause excessive damage to vegetation or rutting of the land surface, or when vehicles could become immobilized in soft earth materials and cause excessive disturbance.

(d) Any new road in the exploration area shall be constructed, utilized, maintained and restored in accordance with the following requirements:

(1) Roads shall be located, so far as possible, on the flattest and most stable available slopes to minimize erosion.

(2) Vehicles shall not enter an active stream channel unless specific crossing locations are first approved by the regulatory authority as temporary routes across small streams and they do not adversely affect sedimentation. All other stream crossings shall be made using bridges, culverts, or other structures designed, constructed, and maintained to minimize disturbance to water quality and quantity.

(3) Topsoil shall be removed, under paragraph (e) of this section, before use of a surface area as a road if that use may cause substantial damage to fish, wildlife and related environmental values or to site productivity.

(4) Each new road shall be designed, constructed, and maintained to prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow or runoff outside the permit area. Permanent roads constructed or modified during exploration and remaining after exploration activities are completed shall be designed, constructed, and maintained in accordance with 30 CFR 816.31-816.38.

(5) Each existing road affected by exploration shall be used and maintained by the person who conducts exploration only in compliance with applicable Federal, State and local requirements.

(e)(1) The entire "A" horizon of the soil and as much other subsoil and unconsolidated earth materials as are necessary to meet the revegetation requirement of paragraph (m) of this section shall be removed before:

(i) Disturbance of an area by off-road travel which may cause substantial damage to fish, wildlife and related environmental values or to site productivity;

(ii) Construction of roads;

(iii) Any drilling that involves construction of a drill pad or flat surface and disposal of large amounts of drilling fluid or cuttings; and

(iv) Establishment of office facilities, storage facilities, repair facilities, or testing facilities.

(2) Removed topsoil shall be stored under the requirements of Section 816.23 and shall be redistributed under the requirements of 30 CFR 816.24, as soon as the coal exploration is complete. If the person engaged in exploration submits a permit application under 30 CFR 778-791, topsoil redistribution may be deferred until action is taken on the application by the regulatory authority.

(f) With the exception of small and temporary diversions of overland flow of water around new roads, drill pads, and support facilities, no ephemeral, intermittent or perennial streams shall be diverted during coal exploration. Overland flow of water shall be diverted in a manner that prevents, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow or runoff outside the permit area and which causes no violations of applicable State or Federal requirements.

(g) Each drill hole, borehole, well, or other drilled excavation created during the exploration shall either be plugged and capped with at least 10 feet of cement or shall be managed to prevent water pollution and mixing of ground and surface waters and to ensure the safety of people, livestock, wildlife, and machinery in each area where these openings could be a hazard. If a mining permit that requires compliance with 30 CFR 816.13 and 816.14 has not been approved the person who conducts coal exploration shall not leave any open holes. Each excavation encountering ground water shall be filled, plugged, or otherwise

closed to prevent adverse changes in water quality or quantity, in accordance with a plan approved by the regulatory authority before the exploration operation begins.

(h) The person who conducts coal exploration shall, to the maximum extent practicable, measure important environmental characteristics of the exploration area during coal exploration so as to minimize environmental damage and to provide adequate information for a mining permit application if the person submits an application under 30 CFR 778-791. The measurements to be considered include, but are not limited to, overburden characteristics that could affect water quality and revegetation, soils characteristics, vegetation, hydrogeologic conditions, aquifer characteristics, important hydrologic, biologic and geologic characteristics of stream valleys west of the 100th meridian west longitude, air quality, meteorological data where necessary, surface water flow data, and biological data.

(i) The person who conducts exploration shall make available to the regulatory authority all environmental monitoring data collected during coal exploration.

(j) No habitats of unique value for fish, wildlife and other related environmental values shall be disturbed during exploration activities.

(k) All water discharged or affected by coal exploration shall use treatment facilities approved by the regulatory authority and shall meet the effluent limitations of 30 CFR 816.42(a) upon leaving the exploration site.

(l) All facilities and equipment shall be removed from the exploration area promptly after they are no longer needed for exploration activities with the exception of those facilities and equipment that the regulatory authority determines shall remain to:

(1) Provide additional environmental quality data;

(2) Reduce or control the on- and off-site effects of the exploration activities;

(3) Facilitate future mining under an approved mining and reclamation plan and permit.

(m) Revegetation of areas disturbed by coal exploration operations shall be performed by the person who conducts exploration in accordance with 30 CFR 816.111-816.115.

§ 815.13 Requirement for a permit.

If coal extracted during exploration is sold commercially, the person who conducts in the operation must have obtained a permit for the operation under 30 CFR 778-791 unless the person who conducts the exploration has demonstrated, and the regulatory authority has determined, that the sale is to test coal properties necessary for the development of operations for which a permit application may be submitted.

PART 816—PERMANENT PROGRAM ENVIRONMENTAL PERFORMANCE STANDARDS—SURFACE MINING ACTIVITIES

Sec.
816.1 Scope.
816.2 Objectives.
816.11 Signs and markers.
816.13 Casing and sealing of drilled holes: General requirements.
816.14 Casing and sealing of drilled holes: Temporary.
816.15 Casing and sealing of drilled holes: Permanent
816.21 Topsoil: General requirements.
816.22 Topsoil: Removal.
816.23 Topsoil: Storage.
816.24 Topsoil: Redistribution.
816.25 Topsoil: Nutrients and soil amendments.
816.31 Roads and associated structures: General requirements.
816.32 Road construction: Location.
816.33 Road construction: Erosion control.
816.34 Road construction: Drainage.
816.35 Road construction: Surfacing.
816.36 Other transportation facilities.
816.38 Restoration of roads.
816.39 Support facilities and utility installation.
816.41 Hydrologic balance: General requirements.
816.42 Hydrologic balance: Water quality standards and effluent limitations.
816.43 Hydrologic balance: Diversion and conveyance of overland flow and shallow ground water flow.
816.44 Hydrologic balance: Stream channel diversions.
816.45 Hydrologic balance: Sediment control measures.
816.46 Hydrologic balance: Sedimentation ponds.
816.47 Hydrologic balance: Discharge structures.
816.48 Hydrologic balance: Acid-forming and toxic-forming spoil.
816.49 Hydrologic balance: Permanent and temporary impoundments.
816.50 Hydrologic balance: Ground water protection.
816.51—Hydrologic balance: Protection of ground water recharge capacity.
816.52 Hydrologic balance: Surface and ground water monitoring.
816.53 Hydrologic balance: Transfer of wells.
816.54 Hydrologic balance: Water rights and replacement.
816.55 Hydrologic balance: Discharge of water into underground mines.
816.56 Hydrologic balance: Postmining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.
816.57 Hydrologic balance: Stream buffer zones.
816.59 Coal recovery.
816.61 Use of explosives: General requirements.
816.62 Use of explosives: Preblasting survey.
816.64 Use of explosives: Public notice of blasting schedule.
816.65 Use of explosives: Surface blasting requirements.
816.67 Use of explosives: Seismograph measurements.
816.68 Use of explosives: Records of blasting operations.
816.71 Disposal of excess spoil: General requirements.
816.72 Disposal of excess spoil: Valley fills.
816.73 Disposal of excess spoil: Head-of-hollow fills.
816.79 Protection of underground mining.
816.81 Coal processing waste: General requirements.
816.82 Coal processing waste banks: Site inspection.
816.83 Coal processing waste banks: Water control measures.
816.85 Coal processing waste banks: Construction requirements.
816.86 Coal processing waste: Burning.
816.87 Coal processing waste: Burned waste utilization.
816.88 Coal processing waste: Return to underground workings.
816.89 Disposal of non-coal wastes.
816.91 Coal processing waste: Dams and embankments: General requirements.
816.92 Coal processing waste: Dams and embankments: Site preparation.
816.93 Coal processing waste: Dams and embankments: Construction.
816.95 Air resources protection.
816.97 Protection of fish, wildlife and related environmental values.
816.99 Slides and other damage.
816.100 Contemporaneous reclamation.
816.101 Backfilling and grading: General requirements.
816.102 Backfilling and grading: General grading requirements.
816.103 Backfilling and grading: Covering coal and acid- and toxic-forming materials.
816.104 Backfilling and grading: Thin overburden.
816.105 Backfilling and grading: Thick overburden.
816.106 Regrading or stabilizing rills and gullies.
816.111 Revegetation: General requirements.
816.112 Revegetation: Use of introduced species.
816.113 Revegetation: Timing.
816.114 Revegetation: Mulching.
816.115 Revegetation: Grading.
816.116 Revegetation: Standards for success.
816.117 Revegetation: Tree stocking for forest land.
816.131 Cessation of operations: Temporary.
816.132 Cessation of operations: Permanent.
816.133 Post-mining land use.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 508, 515, 517, 519, 701, 717, and 719 of Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 478, 486, 498, 501, 516, 526 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1258, 1265, 1267, 1269, 1291, 1307, 1309).

§ 816.1 Scope.

This Part sets forth the minimum performance standards for surface mining activities. Performance standards for other mining activities are set forth in Parts 817-828 of this Subchapter.

§ 816.2 Objectives.

This Part is intended to ensure that all surface mining activities are conducted in a manner which preserves

§ 816.13 Casing and sealing of drilled holes: General requirements.

Each exploration hole, other borehole, well or other exposed under-

mining, or other surface disturbance of the areas.

(b) *Materials to be removed.* All topsoil shall be removed unless use of al-

best available material to support the vegetation, and that the tests and analyses were conducted under his or

mining activities shows, through appropriate tests, and the regulatory authority approves, that no harm will be

§ 816.32 Road construction: Location.

(a) All roads shall be located insofar as possible on ridges or on the flattest

§ 816.2 Objectives.

This Part is intended to ensure that all surface mining activities are conducted in a manner which preserves and enhances environmental and other values in accordance with the Act.

§ 816.11 Signs and markers.

(a) *Specifications.* Each sign and marker required to be posted under this Part shall—

(1) Be of a uniform design throughout the operation that can be seen and read easily;

(2) Be made of durable material; and

(3) Conform to each local ordinance and code.

(b) *Duration of maintenance.* Each person who conducts surface mining activities shall maintain each sign and marker during all activities to which they pertain.

(c) *Mine and permit identification signs.*

(1) Each person who conducts surface mining activities shall display identification signs at each point of access to the permit area from public roads.

(2) The signs shall show the name, business address, and telephone number of the person who conducts the surface mining activities and the identification number of each current permit authorizing surface mining activities.

(3) Each sign shall not be removed until after the release of all bonds.

(d) *Perimeter markers.* Each person who conducts surface mining activities shall clearly mark the perimeter of the permit area before submitting a permit application.

(e) *Buffer zone markers.* Each person who conducts surface mining activities shall mark each buffer zone, as required by Section 816.57 of this Part. Each buffer zone marker shall be designed and placed in the same manner as the perimeter markers. Each buffer zone marker shall be located along the boundary of the buffer zone.

(f) *Blasting signs.* If blasting is conducted incident to surface mining activities, the person who conducts these activities shall conspicuously display—

(1) Signs reading "Blasting Area" at the edge of blasting areas along roads within the permit area; and

(2) Signs clearly explaining the blasting warning and all-clear signals at all entrances to the permit area from a public road or highway.

(g) *Topsoil markers.* Where topsoil or other vegetation-supporting material is required to be segregated and stockpiled under Section 816.23, the person who conducts the surface mining activities shall clearly mark the stockpiled material.

§ 816.13 Casing and sealing of drilled holes: General requirements.

Each exploration hole, other borehole, well, or other exposed underground opening shall be cased, sealed, or otherwise managed to prevent pollution and mixing of surface or ground water, and to ensure the safety of people, livestock, wildlife, and machinery in the area where these openings could be a hazard. Each exploration hole, borehole, well, or other underground opening that is uncovered or exposed by mining activities within the permit area shall be permanently closed, in a manner approved by the regulatory authority, unless the opening is approved for monitoring. This Section does not apply to holes drilled and used for blasting.

§ 816.14 Casing and sealing of drilled holes: Temporary.

Each exploration hole, other borehole, well and other exposed underground opening which has been identified in the approved mining and reclamation plan to be used for return of coal processing waste or water to underground workings or to be used to monitor ground water conditions shall be temporarily sealed before use and shall be protected during use by barricades or fences or other protective devices approved by the regulatory authority. Any barricade, fence, or other protective device shall be periodically inspected and maintained in good operating condition by the person who conducts the surface mining activities.

§ 816.15 Casing and sealing of drilled holes: Permanent.

Each exploration hole, other borehole, well, and other exposed underground opening to the surface shall be capped, sealed, or backfilled, as required by the regulatory authority consistent with 30 CFR 75.1711. Closure measures shall be of a permanent design to prevent access to the mine workings by people and animals and to prevent the flow of water.

§ 816.21 Topsoil: General requirements.

(a) Before disturbance of an area, topsoil and subsoils to be saved under Section 816.22 shall be removed from the area as a separate operation and segregated from other material.

(b) After removal, topsoil shall either be immediately redistributed in accordance with Section 816.24 or stockpiled pending redistribution, if permissible under Section 816.23.

§ 816.22 Topsoil: Removal.

(a) *Timing.* Topsoil shall be removed after the vegetative cover that would interfere with the use of the topsoil is cleared from all areas to be affected but before any drilling, blasting, mining, or other surface disturbance of the areas.

(b) *Materials to be removed.* All topsoil shall be removed unless use of alternative materials is approved by the regulatory authority to be segregated in accordance with paragraph (e) of this Section. If use of alternative materials is approved, all materials to be redistributed shall be removed.

(c) *Additional material to be removed in thin topsoil situations.* If the topsoil is less than 6 inches, a 6 inch layer that includes the A horizon and the unconsolidated materials immediately below the A horizon, or the A horizon and all unconsolidated material if the total available is less than 6 inches, shall be removed and the mixture segregated and replaced as the surface soil layer.

(d) *Subsoil segregation.* The B horizon and portions of the C horizon or other underlying layers demonstrated to have qualities for root development comparable to the B or C horizons shall be segregated and replaced as subsoil if the regulatory authority determines that this segregation and replacement is necessary or desirable to ensure soil productivity consistent with the approved post-mining land use.

(e) *Topsoil substitutes and supplements.* Selected overburden materials may be substituted for, or used as a supplement to, topsoil where the resulting soil medium is equal to or more suitable for vegetation, and if all the following requirements have been met:

(1) It is demonstrated to the regulatory authority by the results of chemical and physical analyses of overburden and topsoil that the selected overburden materials or an overburden and topsoil mixture is more suitable for restoring land capability and productivity and that it is the best available material to support and sustain the approved vegetation. These analyses shall include determinations of pH, sulfide content that when oxidized will lower the pH, percent organic material, nitrogen, phosphorus, potassium, texture class, water-holding capacity, and such other analyses as required by the regulatory authority. The regulatory authority may also require that results of field-site trials or greenhouse tests be used to demonstrate the feasibility of using such overburden materials.

(2) The chemical and physical analyses and the results of field-site trials and greenhouse tests submitted to the regulatory authority shall be accompanied by a certification from a qualified soil scientist or agronomist, stating, on the basis of the test results, that the proposed substitute material is equal to or more suitable for sustaining the vegetation than is the available topsoil, that the substitute material is the best available material to support the vegetation, and that the tests and analyses were conducted under his or her supervision and used standard testing procedures.

(3) The tests and analyses shall be conducted by a laboratory approved by the regulatory authority.

(4) The alternative material shall be removed, segregated, and replaced in compliance with the requirements for topsoil under this Section.

(f) *Limits on topsoil removal area.* Where the removal of vegetative material, topsoil or other materials may result in erosion which may cause air or water pollution, the person who conducts surface mining activities shall—

(1) Limit the size of the area from which topsoil is removed at any one time;

(2) Redistribute the surface soil layer at a time when the physical and chemical properties of topsoil can be protected and erosion can be minimized; and

(3) Take such other measures as the regulatory authority may approve or require to control erosion.

§ 816.23 Topsoil: Storage.

(a) The topsoil and other materials removed under Section 816.22 shall be stockpiled only when it is impractical to promptly redistribute such materials on regraded areas.

(b) The stockpiled materials shall be placed on a stable area within the permit area where the materials shall not be disturbed or exposed to excessive water or wind erosion, or to contaminants which lessen the capability to support vegetation before they can be redistributed.

(1) Stockpiles shall be selectively placed and protected from wind and water erosion, unnecessary compaction, and contamination by undesirable materials either by—

(i) An effective cover of nonnoxious, quick-growing annual and perennial plants, seeded or planted during the first normal period for favorable planting conditions; or

(ii) Other methods demonstrated to and approved by the regulatory authority to provide equal protection.

(2) Unless approved by the regulatory authority, stockpiled topsoil and other materials shall not be moved until required for redistribution on a regraded area.

§ 816.24 Topsoil: Redistribution.

(a) After final grading and before the replacement of topsoil and other materials segregated in accordance with Section 816.23, regraded land shall be scarified or otherwise treated to eliminate slippage surfaces and to promote root penetration. If the person who conducts the surface mining activities shows, through appropriate tests, and the regulatory authority approves, that no harm will be caused to the topsoil and vegetation, the scarification may be conducted after topsoiling.

(b) Topsoil and other materials shall be redistributed in a manner that—

(1) Achieves an approximate uniform, stable thickness consistent with the post-mining land uses, slopes, agricultural aspects and surface drainage system;

(2) Prevents excess compaction of the topsoil; and

(3) Protects the topsoil from wind and water erosion before and after it is seeded and planted.

§ 816.25 Topsoil: Nutrients and soil amendments.

Nutrients and soil amendments in the amounts determined by soil tests shall be applied to the redistributed surface soil layer so that it supports the post-mining land use approved by the regulatory authority, and meets the revegetation requirements of Sections 816.111–816.117. All soil tests shall be conducted by a laboratory approved by the regulatory authority and certified by a qualified agronomist or soil scientist.

§ 816.31 Roads and associated structures: General requirements.

(a) Each person who conducts surface mining activities shall design, construct, utilize, maintain, and reclaim all roads, road rights-of-way, and associated structures to meet the requirements of Sections 816.32–816.35, 816.38, and 816.95 to control or prevent erosion and siltation, air and water pollution, and damage to public or private property.

(1) To the extent possible using the best technology currently available, roads, road rights-of-way, associated structures, and other transportation facilities shall not cause damage to fish, wildlife, and related environmental values and shall not cause additional contributions of suspended solids to streamflow, or to runoff outside the permit area. In no event shall contributions of suspended solids be in excess of limitations set by applicable State or Federal law.

(2) All roads shall be removed and the land affected regraded and revegetated in accordance with the requirements of Section 816.38 unless—

(i) Retention of the road is approved as part of the approved post-mining land use or as being necessary to control erosion adequately;

(ii) The necessary maintenance is assured; and

(iii) All drainage shall be controlled according to Section 816.34.

§ 816.32 Road construction: Location.

(a) All roads shall be located insofar as possible on ridges or on the flattest and most stable available slopes to minimize erosion. Except as otherwise specifically authorized in this Section, no part of any road shall be located in the channel of a perennial stream. Stream fords are prohibited unless they are specifically approved by the regulatory authority as temporary routes across non-flowing streams that will not adversely affect sedimentation or fish, wildlife and related environmental values and that will not be used for coal haulage. All other stream crossings shall be made using bridges, culverts, or other structures designed, constructed, and maintained to meet the requirements of this Section. Roads shall not be constructed in a manner that increases erosion or causes additional downstream sedimentation or flooding.

§ 816.33 Road construction: Erosion control.

In order to control erosion and subsequent disturbance of the hydrologic balance, roads shall be designed, constructed, and maintained in compliance with the following:

(a) *Vertical alinement.* Except where the regulatory authority requires lesser grades to control erosion, road grades shall be as follows:

(1) The overall grade shall not exceed 1*v*:10*h* (10 percent).

(2) The maximum grade shall not exceed 1*v*:6.5*h* (15 percent).

(3) There shall not be more than 300 feet of grade exceeding 10 percent within any consecutive 1,000 feet of road constructed.

(4) The road surface shall be sloped toward the ditch line at the minimum rate of one-half inch per foot of surface width or crowned at the minimum rate of one-half inch per foot of surface width as measured from the centerline of the road.

(b) *Road cuts.* This paragraph applies to roads that are to remain in place and be used for more than 5 years or that are to remain as part of the approved post-mining land use. Cut slopes shall not be steeper than specifically authorized by the regulatory authority. The regulatory authority shall not authorize slopes steeper than 1*v*:1.5*h* in unconsolidated materials or 1*v*:0.25*h* in rock except that steeper slopes may be specifically authorized by the regulatory authority if geotechnical analysis demonstrates that a minimum safety factor of 1.5 can be maintained.

(c) *Road embankments.* This paragraph applies to roads that are to remain in place and be used for more than 5 years or that are to remain as part of the approved post-mining land use. Embankment sections shall be

constructed in accordance with the following provisions:

(1) All vegetative materials and top-

content is within 4 percent of the optimum moisture content determined in accordance with AASHTO T-99

In percent	Spacing of culverts, in

limitations set by applicable State or Federal law.

(b) Control and minimize diminution

under, or through the permit area, unless otherwise approved by the owner and the regulatory authority.

maintained until drainage from the disturbed area has met the ambient surface water quality requirements of

constructed in accordance with the following provisions:

(1) All vegetative materials and topsoil shall be removed from the embankment foundation to ensure stability and no vegetative materials or topsoil shall be placed beneath or in any road embankment.

(2) When an embankment is to be placed on side slopes exceeding 1*v*:5*h* (20 percent) the existing ground shall be plowed, stepped, and keyed in a manner which ensures the stability of the fill. The minimum dimensions of the keyway shall be 10 feet wide and 2 feet deep below the toe of fill. No material shall be placed, or allowed to slide, below the toe.

(3) Material containing by volume less than 25 percent of rock larger than 6 inches in greatest dimension shall be spread in successive horizontal layers not exceeding 12 inches in thickness before compaction.

(4) Where the material for an embankment consists of rock, broken stone, or fragmented material of a size that makes placing in 12-inch layers impossible under paragraph (c)(3) of this section, the embankment shall be constructed in layers less than 24 inches in thickness, provided the individual pieces are placed so that there is no nesting and all the voids are filled with finer material.

(5) Each layer of the embankment shall be completed, leveled, and compacted before the succeeding layer is placed. Loads of material shall be leveled as placed and kept smooth. The successive layers shall be compacted evenly by routing the hauling and leveling equipment over the layers already in place and by distributing the travel over the entire width of the embankment. This routine shall be continued until no visual horizontal movement of the embankment material is apparent.

(6) Successive lifts shall not be placed until the previous layer is compacted to achieve a density throughout the preceeding lift of at least 90 percent of the maximum dry density determined in accordance with the American Association of State Highway and Traffic Officers (AASHTO) T-99. The AASHTO technical specification T-99 mentioned in this paragraph is hereby incorporated by reference. This work is incorporated as it exists on the date of adoption of this Part and notices of changes made in these materials will periodically be published in the FEDERAL REGISTER. AASHTO technical specification T-99 is available for inspection at OSM's office in OSM regional offices and in OSM's office in the Department of the Interior, 18th and C Streets, NW., Washington, D.C. 20240.

(7) Material shall be placed in an embankment only when its moisture content is within 4 percent of the optimum moisture content determined in accordance with AASHTO T-99.

(8) Embankment slopes shall not be steeper than 1*v*:2*h* (50 percent).

(9) The minimum safety factor for all embankments shall be 1.25, or such higher safety factor as the regulatory authority may specify.

(d) *Natural drainage.* Natural drainways shall not be altered or relocated for the purposes of road construction without the prior approval of the regulatory authority. The regulatory authority may approve alterations and relocations only if—

(1) The natural drainage is not blocked;

(2) No damage occurs to the hydrologic balance; and

(3) There is no adverse impact on adjoining landowners.

§ 816.34 Road construction: Drainage.

(a) *General.*

(1) Each road shall be designed, constructed, and maintained to have adequate drainage using structures such as, but not limited to, ditches, cross drains, and ditch relief drains. For roads that are to be maintained for more than 1 year, the water-control system shall be designed to safely pass the peak runoff from a 10-year 24-hour precipitation event or greater if required by the regulatory authority. Drainage pipes and culverts shall be constructed to avoid plugging or collapse and erosion at inlets and outlets. Drainage ditches shall be placed at the toe of all cut slopes formed by construction of roads. Trash racks and debris basins shall be installed in the drainage ditches wherever debris from the drainage area could impair the functions of drainage and sediment control structures.

(2) All drainage from roads and associated drainage structures shall pass through sediment control devices such as sediment ponds, sediment traps, vegetation filter strips, vegetated drains, straw dikes, mulches, check dams, and dugout ponds.

(b) *Ditches.* A ditch shall be provided on both sides of a through-cut and on the inside shoulder of a cut-fill section, with ditch relief cross-drains being spaced according to grade. Water shall be intercepted before reaching a switchback or large fill and drained safely away in accordance with this Section. Water on a fill or switchback shall be released below the fill, using conduit or riprapped channels, and shall not be discharged onto the fill.

(c) *Culverts.* Ditch relief culverts shall be installed according to the following provisions:

(1) Road grade:

In percent	Spacing of culverts, in ft, not more than—
2 to 5	800
6 to 10	300
11 to 15	200

(2) Each culvert shall be adequate to safely pass the peak runoff from a 10-year 24-hour precipitation event and shall cross the road at not less than a 30° angle downgrade. The culvert may be designed to carry less than the peak runoff if the ditch will remain stable.

(3) The inlet end shall be protected by a rock headwall or other material approved by the regulatory authority and the outlet end shall be placed below the toe of the fill with an apron of rock riprap or other approved material.

(4) The culvert shall be covered by compacted fill to a minimum depth of 1 foot or half the culvert diameter, whichever is greater.

(5) The culvert shall be capable of sustaining design loads.

(d) *Stream crossings.* Drainage structures are required for stream channel crossings. Drainage structures shall not affect the normal flow or gradient of the stream. In designing drainage structures consideration shall be given to the time of year the stream is crossed and the length of time the structure is used. Embankments constructed across streams shall not exceed 15 feet in height, measured on the upstream side, unless approved by the regulatory authority. Stream crossings which have drainage areas greater than 100 acres shall be designed to safely pass the 100-year storm or larger event as specified by the regulatory authority.

§ 816.35 Road construction: Surfacing.

Roads shall be surfaced with rock or other material approved by the regulatory authority as sufficiently durable. Toxic or acid-forming substances shall not be used. Vegetation shall not be cleared for more than the width necessary for road and associated ditch construction, to serve traffic needs and for utilities.

§ 816.36 Other transportation facilities.

Railroad loops, spurs, sidings, or other transport facilities shall be designed, constructed, maintained, and reclaimed to—

(a) Prevent, to the extent possible using the best technology currently available—

(1) Damage to fish, wildlife and related environmental values; and

(2) Additional contributions of suspended solids to streamflow or runoff outside the permit area. In no event shall contributions be in excess of

limitations set by applicable State or Federal law.

(b) Control and minimize diminution or degradation of water quality and quantity.

(c) Control and minimize erosion and siltation.

(d) Control and minimize air pollution.

(e) Prevent damage to public or private property.

§ 816.38 Restoration of roads.

(a) Unless the regulatory authority approves retention of the road as suitable for the approved post-mining land use, immediately after a road becomes no longer needed for operations, reclamation, or monitoring—

(1) The road shall be closed to vehicular traffic;

(2) All bridges and culverts shall be removed;

(3) Cross drains, dikes, and water bars shall be constructed to prevent erosion;

(4) Road surfaces shall be scarified and covered with topsoil; and

(5) The area affected shall be returned to approximate original contour and revegetated in accordance with Sections 816.111–816.117.

(b) Unless otherwise authorized by the regulatory authority, all road surfacing materials shall be removed and handled or conveyed and disposed of in accordance with Section 816.89.

§ 816.39 Support facilities and utility installations.

(a) The support facilities required for or used incidental to the operation of the mine, including but not limited to mine buildings, coal loading facilities at or near the mine site, coal storage facilities, equipment storage facilities, sheds, shops, and other buildings, shall be designed, constructed, and located to prevent or control erosion and siltation, water pollution, or damage to public or private property and shall comply with all the environmental and other performance standards of this Part. Support facilities shall be designed, constructed, maintained, and used in a manner which prevents, to the extent possible using the best technology currently available—

(1) Damage to fish, wildlife and related environmental values;

(2) Additional contributions of suspended solids to streamflow or runoff outside the permit area. In no event shall such contributions be in excess of limitations set by applicable State or Federal law.

(b) All surface mining activities shall be conducted in a manner which prevents damage, destruction, or disruption of services provided by oil, gas, and water wells; oil, gas, and coal-slurry pipelines; railroads; and electric and telephone lines which pass over, under, or through the permit area, unless otherwise approved by the owner and the regulatory authority.

§ 816.41 Hydrologic balance: General requirements.

(a) Surface mining activities shall be planned and conducted to minimize disturbance to the prevailing hydrologic balance in order to prevent long-term adverse changes in the hydrologic balance that could result from those activities, on both the mine plan and affected areas.

(b) Changes in water quality and quantity, in the depth to ground water, and in the location of surface water drainage channels shall be minimized so that the approved post-mining land use of the disturbed land is not adversely affected.

(c) In no case shall applicable Federal and State water quality statutes, regulations, standards, or effluent limitations be violated.

(d) Operations shall be conducted to minimize water pollution and, where necessary, treatment methods shall be used to control water pollution.

(1) A person who conducts surface mining activities shall emphasize mining and reclamation practices that will prevent or minimize water pollution and changes in flow in preference to the use of water treatment facilities.

(2) Practices to control and minimize pollution include, but are not limited to—

(i) Stabilizing disturbed areas through land shaping;

(ii) Diverting runoff;

(iii) Achieving quickly germinating and growing stands of temporary vegetation;

(iv) Regulating channel velocity of water;

(v) Lining drainage channels with rock or vegetation;

(vi) Mulching;

(vii) Selectively placing and sealing acid-forming and toxic-forming materials; and

(viii) Selectively placing waste materials in backfill areas.

(3) If these practices are not adequate to meet the hydrologic requirements of this Part, the person who conducts the surface mining activities shall operate and maintain the necessary water treatment facilities for as long as treatment is required.

§ 816.42 Hydrologic balance: Water quality standards and effluent limitations.

(a) All surface drainage from the disturbed area, including disturbed areas that have been graded, seeded, or planted, shall be passed through a sedimentation pond or a series of sedimentation ponds before leaving the permit area. Sedimentation ponds and other treatment facilities shall be maintained until drainage from the disturbed area has met the ambient surface water quality requirements of Section 816.52 and the revegetation requirements of Sections 816.111–816.117. The regulatory authority may grant exemptions from this requirement only when the disturbed drainage area within the total disturbed area is small and if the person who conducts the surface mining activities demonstrates to the regulatory authority that sedimentation ponds and treatment facilities are not necessary to meet the effluent limitations of this Section and maintain water quality in downstream receiving waters. For the purposes of this Section, disturbed area shall not include those areas in which only diversion ditches, sedimentation ponds, or roads are installed in accordance with this Part and the upstream area is not otherwise disturbed by the person who conducts the surface mining activities. Sedimentation ponds required by this Section shall be constructed in accordance with Section 816.46 in appropriate locations before beginning any surface mining activities in the affected drainage area. Discharges from areas disturbed by surface mining activities shall comply with all applicable Federal and State laws and regulations and, at a minimum, the following numerical effluent limitations:

Effluent limitations, in milligrams per liter (mg/l) except for pH

Effluent characteristics[1]	Maximum allowable[2]	Average of daily values for 30 consecutive discharge days[2]
Iron, total	7.0	3.5
Manganese, total[3]	4.0	2.0
Total suspended solids[4]	70.0	35.0
pH	Within range of 6.0 to 9.0[5]	

[1] To be determined according to collection and analytical procedures adopted by the Environmental Protection Agency's regulations for wastewater analyses (40 CFR 136).

[2] Based on representative sampling.

[3] The manganese limitations shall not apply to untreated discharges which are alkaline as defined by the Environmental Protection Agency (40 CFR 434).

[4] In Arizona, Colorado, Montana, New Mexico, North Dakota, South Dakota, Utah, and Wyoming, total suspended solids limitations will be determined on a case-by-case basis, but they must not be greater than 45 mg/l (maximum allowable) and 30 mg/l (average of daily value for 30 consecutive discharge days) based on a representative sampling.

[5] Where the application of neutralization and sedimentation treatment technology results in inability to comply with the manganese limitations set forth, the regulatory authority may allow the pH level in the discharge to exceed to a small extent the upper limit of 9.0 in order that the manganese limitations will be achieved.

(b) A discharge from the disturbed areas is not subject to the effluent limitations of this Section if—

ilar linings shall not be used unless specifically required by the regulatory authority to prevent seepage or to protect the stability of the embankment.

moved in accordance with the following requirements:

(1) The longitudinal profile of the

proper mining and reclamation methods and sediment control practices, singly or in combination. Sediment

equal to the reduction in sediment storage volume.

(c) *Detention time.* Sedimentation

rate to achieve and maintain the required theoretical detention time. The dewatering device shall not be located

(b) A discharge from the disturbed areas is not subject to the effluent limitations of this Section if—

(1) The discharge is demonstrated by the discharger to have resulted from a precipitation event larger than a 10-year 24-hour precipitation event or from a snowmelt of equivalent volume; and

(2) The discharge is from facilities designed, constructed, and maintained in accordance with the requirements of this Part.

(c) Adequate facilities shall be installed, operated, and maintained to treat any water discharged from the disturbed area so that it complies with applicable Federal and State laws or regulations and the limitations of this Section. If the pH of water to be discharged from the disturbed area is less than 6.0, an automatic lime feeder or other automatic neutralization process approved by the regulatory authority shall be installed, operated, and maintained. The regulatory authority may authorize the use of a manual system if it finds that—

(1) Small and infrequent treatment requirements to meet applicable standards do not require use of an automatic neutralization process;

(2) The mine normally produces less than 500 tons of run-of-mine coal per day; and

(3) Timely and consistent treatment is ensured.

§ 816.43 Hydrologic balance: Diversions and conveyance of overland flow and shallow ground water flow.

Overland flow including flow through litter, and shallow ground water flow from undisturbed areas may be diverted away from disturbed areas by means of temporary or permanent diversions if required or approved by the regulatory authority as necessary to minimize erosion and to prevent or remove water from contact with acid-forming or toxic-forming materials. The following requirements shall be met for all diversions and for all collection drains that are used to transport water into water-treatment facilities.

(a) Temporary diversions shall be constructed to pass safely the peak runoff from a precipitation event with a 3-year recurrence interval, or a larger event if specified by the regulatory authority.

(b) To protect fills and property and to avoid danger to public health and safety, permanent diversions shall be constructed to pass safely the peak runoff from a precipitation event with a 10-year recurrence interval, or a larger event if specified by the regulatory authority. Permanent diversions shall be constructed with gently sloping banks that are stabilized by vegetation. Asphalt, concrete, or other similar linings shall not be used unless specifically required by the regulatory authority to prevent seepage or to provide stability.

(c) Diversions shall be designed, constructed, and maintained in a manner which prevents additional contributions of suspended solids to streamflow and to runoff outside the permit area, to the extent possible using the best technology currently available. Appropriate sediment control measures for these diversions shall include, but not be limited to, maintenance of appropriate gradients, channel lining, revegetation, roughness structures, and detention basins.

(d) No diversion shall be constructed on or pass through existing slides or located so as to increase the potential for slides.

(e) When no longer needed, each temporary diversion shall be removed and the affected land regraded, topsoiled, and revegetated in accordance with Sections 816.24, 816.25, 816.101, and 816.111–816.117.

(f) Diversion design shall incorporate the following:

(1) Any channel lining shall be designed using standard engineering practices to safely pass the design velocities. Riprap shall comply with the requirements of Section 816.72(b)(5).

(2) The design freeboard shall be no less than calculated using the following equation:

$$f=1+(0.025\times v\times d)$$

Where f=freeboard, in feet, v=design velocity, in feet per second, and d=depth of flow, in feet. Additional freeboard protection shall be provided for transition of flows and for critical areas such as swales and curves.

(3) Energy dissipators shall be installed at discharge points where diversions intersect with natural streams.

(4) Excess excavated material not necessary for diversion channel geometry or regrading of the channel shall be disposed of in accordance with 30 CFR 816.71–816.73.

(5) Topsoil shall be handled in compliance with 30 CFR 816.21–816.25.

§ 816.44 Hydrologic balance: Stream channel diversions.

(a) Flow from perennial and intermittent streams within the permit area may be diverted if—

(1) The diversions are approved by the regulatory authority as necessary to comply with other performance standards in this Subchapter; and

(2) The diversions comply with local, State, and Federal statutes and regulations.

(b) When streamflow is allowed to be diverted, the new stream channel shall be designed, constructed, and removed in accordance with the following requirements:

(1) The longitudinal profile of the stream, the channel and the floodplain shall be designed and constructed to remain stable and to prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow or to runoff outside the permit area. In no event shall the contributions be in excess of requirements set by applicable State or Federal law. Erosion control structures such as channel lining structures, retention basins, and artificial channel roughness structures shall be used in diversions only when approved by the regulatory authority as being necessary to control erosion. These structures shall be approved for permanent diversions only where they are stable and will require infrequent maintenance.

(2) Channel, bank, and flood-plain configurations shall be adequate to pass safely the peak runoff of a 24-hour precipitation event with a 10-year recurrence interval for temporary diversions and a 100-year recurrence interval for permanent diversions, or larger events as specified by the regulatory authority.

(c) When no longer needed to achieve the purpose for which they were authorized, all temporary stream channel diversions shall be removed and the affected land regraded and revegetated in accordance with the requirements of Sections 816.24, 816.25, 816.101, and 816.111–816.117. At the time diversions are removed, downstream water treatment facilities previously protected by the diversion shall be modified or removed to prevent overtopping or failure of the facilities. In no case shall this requirement relieve the person who conducts the surface mining activities from maintenance of the treatment facility if otherwise required under this Part or the permit.

§ 816.45 Hydrologic balance: Sediment control measures.

Appropriate sediment control measures shall be designed, constructed, and maintained to prevent additional contributions of sediment to streamflow or to runoff outside the permit area and to minimize erosion to the extent possible using the best technology currently available. Sediment control measures include practices carried out within and adjacent to the disturbed area. The sedimentation storage capacity of practices in and downstream from the disturbed area shall reflect the degree to which successful mining and reclamation techniques are applied to reduce erosion and control sediment. Sediment control measures consist of the utilization of proper mining and reclamation methods and sediment control practices, singly or in combination. Sediment control methods include but are not limited to—

(a) Disturbing the smallest practicable area at any one time during the mining operation through progressive backfilling, grading, and timely revegetation;

(b) Shaping the backfill material to promote a reduction in the rate and volume of runoff, in accordance with the requirements of Section 816.101;

(c) Retaining sediment within disturbed areas;

(d) Diverting runoff away from disturbed areas;

(e) Diverting runoff using protected channels or pipes through disturbed areas so as not to cause additional erosion;

(f) Using straw dikes, riprap, check dams, mulches, vegetative sediment filters, dugout ponds, and other measures that reduce overland flow velocity, reduce runoff volume, or trap sediment;

(g) Building and maintaining sedimentation ponds; and

(h) Treating with chemicals.

§ 816.46 Hydrologic balance: Sedimentation ponds.

(a) *General requirements.* Sedimentation ponds shall be used individually or in series and shall—

(1) Be constructed before any disturbance of the disturbed area to be drained into the pond;

(2) Be located as near as possible to the disturbed area and out of perennial streams; and

(3) Meet all the criteria of this Section.

(b) *Sediment storage volume.* Sedimentation ponds shall provide a sediment storage volume equal to—

(1) The accumulated sediment volume from the drainage area to the pond for a minimum of 3 years. Sediment storage volume shall be determined using the Universal Soil Loss Equation, gully erosion rates, and sediment delivery ratio converted to sediment volume using the sediment density, or other empirical methods established by the regulatory authority and based upon actual sedimentation pond studies; or

(2) 0.1 acre-foot for each acre of disturbed area within the upstream drainage area or a greater amount based upon sediment yield to the pond if required by the regulatory authority. The regulatory authority may approve a sediment storage volume of no less than .035 acre-foot for each acre of disturbed area within the upstream drainage area if the person who conducts the surface mining activities demonstrates that sediment removed by other sediment control measures is equal to the reduction in sediment storage volume.

(c) *Detention time.* Sedimentation ponds shall provide a 24 hour theoretical detention time for the water inflow or runoff entering the pond from a 10 year 24-hour precipitation event. Runoff diverted in accordance with Sections 816.43 and 816.44, away from the disturbed drainage areas and not passed through the sedimentation pond need not be considered in sedimentation pond design. In determining the runoff volume, the characteristics of the mine site, reclamation procedures, and onsite sediment control practices shall be considered.

(1) The regulatory authority may approve a theoretical detention time of not less than 10 hours, when the person who conducts the surface mining activities demonstrates that—

(i) The improvement in sediment removal efficiency is equivalent to the reduction in detention time as a result of pond design. Improvements in pond design may include but are not limited to pond configuration, in-flow and outflow facility locations, baffles to decrease in-flow velocity and short-circuiting, and surface areas; and

(ii) The pond effluent is shown to achieve and maintain applicable effluent limitations.

(2) The regulatory authority may approve a theoretical detention time of not less than 10 hours when the person who conducts the surface mining activities demonstrates that the size distribution or the specific gravity of the suspended matter is such that applicable effluent limitations are achieved and maintained.

(3) The regulatory authority may approve a theoretical detention time of less than 24 hours to any level of detention time when the person who conducts the surface mining activities demonstrates to the regulatory authority that the chemical treatment process to be used—

(i) Will achieve and maintain the effluent limitations;

(ii) Is harmless to fish, wildlife and related environmental values;

(iii) Is planned under the supervision of a registered professional engineer; and

(iv) Shall be operated by a qualified person approved by the regulatory authority.

(4) The calculated theoretical detention time and all supporting documentation and drawings used to establish the required detention times under paragraphs (c)(1)–(3) of this section shall be included in the permit application.

(d) *Dewatering.* The water storage resulting from inflow shall be removed by a nonclogging dewatering device or a spillway approved by the regulatory authority, and shall have a discharge rate to achieve and maintain the required theoretical detention time. The dewatering device shall not be located at a lower elevation than the maximum elevation of the design sedimentation storage volume.

(e) Each person who conducts surface mining activities shall design, construct, and maintain sedimentation ponds to prevent short-circuiting.

(f) The design, construction, and maintenance of a sedimentation pond or other sediment control measures in accordance with this Section shall not relieve the person from compliance with applicable effluent limitations.

(g) There shall be no out-flow through the emergency spillway during the passage of the runoff resulting from the 10 year 24-hour precipitation event through the sedimentation pond.

(h) Sediment shall be removed from sedimentation ponds when the volume of sediment accumulates to 60 percent of the required sediment storage volume. With the approval of the regulatory authority, additional permanent water storage may be provided above that required for sediment storage if the person who conducts the surface mining activities demonstrates that applicable effluent limitations will be achieved and maintained. Upon the approval of the regulatory authority for those cases where additional permanent water storage is provided above that required for sediment under paragraph (b) of this Section, sediment removal may be delayed until the remaining volume of permanent storage has decreased to 40 percent of the required sediment storage provided the theoretical detention time is maintained.

(i) An appropriate combination of principal and emergency spillways shall be provided to discharge safely the runoff from a 25-year 24-hour precipitation event, or larger event as specified by the regulatory authority. The elevation of the crest of the emergency spillway shall be a minimum of 1.0 foot above the crest of the principal spillway. Emergency spillway grades and allowable velocities shall be as specified by the regulatory authority.

(j) The minimum elevation at the top of the settled embankment shall be 1.0 foot above the water surface in the reservoir with the emergency spillway flowing at design depth.

(k) The constructed height of the dam shall be increased a minimum of 5 percent over the design height to allow for settlement unless it has been demonstrated to the regulatory authority that the material used and the design will ensure against all settlement.

(l) The minimum top width of the embankment shall not be less than the

V 43 / 181 SE 18 78

quotient of $(H+35)/5$ where H is the height of the embankment as measured from the upstream toe of the embankment.

(m) The upstream and downstream side slopes of the settled embankment shall not be less than 1*v*:5*h* with neither slope steeper than 1*v*:2*h*. Slopes shall be designed to be stable in all cases, even if flatter side slopes are required.

(n) The embankment foundation area shall be cleared of all organic matter, all surfaces sloped to no steeper than 1*v*:1*h*, and the entire foundation surface scarified.

(o) The fill material shall be free of sod, large roots, other large vegetative matter, and frozen soil, and in no case shall coal-processing waste be used.

(p) The placing and spreading of fill material shall be started at the lowest point of the foundation and the fill brought up in horizontal layers of such thickness as required by the regulatory authority to facilitate compaction. Compaction shall be conducted as specified by the regulatory authority in order to achieve stability.

(q) If a sedimentation pond has an embankment that is more than 20 feet in height, as measured from the upstream toe of the embankment to the crest of the emergency spillway, or has a storage volume of 20 acre-feet or more, the following additional requirements shall be met:

(1) An appropriate combination of principal and emergency spillways shall be provided to safely discharge the runoff resulting from a 100-year 24-hour precipitation event, or a larger event if specified by the regulatory authority.

(2) The embankment shall be designed and constructed with a static safety factor of at least 1.5 or such higher safety factor as designated by the regulatory authority to ensure stability.

(3) Appropriate barriers shall be provided to control seepage along conduits that extend through the embankment.

(r) Each pond shall be designed and inspected during construction under the supervision of, and certified after construction by, a registered professional engineer.

(s) The entire embankment including the surrounding areas disturbed by construction shall be graded, fertilized, seeded, and mulched in accordance with Sections 816.111–816.117 immediately after the embankment is completed, provided that the active, upstream face of the embankment where water will be impounded may be riprapped or otherwise stabilized. Areas in which the vegetation is not successful or where rills and gullies develop shall be repaired and revegetated in accordance with Sections 816.106 and 816.111–816.117.

(t) All ponds, including those not meeting the size or other criteria of 30 CFR 77.216(a), shall be examined for structural weakness, erosion, and other hazardous conditions in accordance with the inspection requirements contained in 30 CFR 77.216–3. Each person who conducts surface mining activities shall deliver to the regulatory authority any report or notification required under 30 CFR 77.216–3 whether or not the pond meets the criteria of 30 CFR 77.216(a).

(u) Each sedimentation pond shall be removed and the affected land regraded and revegetated in accordance with Sections 816.101, 816.102, and 816.111–816.117, unless approved by the regulatory authority for retention as being compatible with the approved postmining land use. If the regulatory authority approves retention, the sedimentation pond shall meet all the requirements for permanent impoundments in Section 816.49.

§ 816.47 Hydrologic balance: Discharge structures.

Discharges from sedimentation ponds and diversions shall be controlled, using energy dissipators, surge ponds, riprap channels, and other devices where necessary, to reduce erosion and prevent deepening or enlargement of stream channels and to minimize disturbances to the hydrologic balance. Discharge structures shall be designed according to standard engineering design procedures.

§ 816.48 Hydrologic balance: Acid-forming and toxic-forming spoil.

Drainage from acid-forming and toxic-forming spoil into ground and surface water shall be avoided by—

(a) Identifying, burying, and treating where necessary, spoil which, in the judgment of the regulatory authority, may be detrimental to vegetation or that may adversely affect water quality if not treated or buried. This material shall be buried, treated, or disposed of in accordance with the provisions of paragraph (c) of this Section;

(b) Preventing water from coming into contact with acid-forming and toxic-forming spoil in accordance with Section 816.103, or such other measures as the regulatory authority may require; and

(c) Burying or otherwise treating all acid-forming or toxic-forming spoil within 30 days after it is first exposed on the mine site, or within a lesser period if required by the regulatory authority. Temporary storage of the spoil may be approved by the regulatory authority upon a finding that burial or treatment within 30 days is not feasible and that storage will not result in any material risk of water pollution or other environmental damage. If storage is approved it shall be limited to the period until burial or treatment first becomes feasible. Stored acid-forming or toxic-forming spoil shall be placed on impermeable material and protected from erosion and contact with surface water.

§ 816.49 Hydrologic balance: Permanent and temporary impoundments.

(a) Permanent impoundments are prohibited unless authorized by the regulatory authority. Each person who conducts surface mining activities shall demonstrate to the regulatory authority that each permanent impoundment meets the following requirements:

(1) The quality of the impounded water is suitable on a permanent basis for its intended use and discharges from the impoundment will not degrade the quality of receiving waters below the water quality standards under applicable State and Federal law.

(2) The level of water will be adequately stable so as to support the intended use.

(3) Adequate safety and access to the impounded water will be provided for proposed water users.

(4) Water impoundments will not result in the diminution of the quality or quantity of water used by adjacent or surrounding landowners for agricultural, industrial, recreational or domestic uses.

(5) The impoundment dam construction plan and maintenance program shall be designed to achieve stability with an adequate factor of safety compatible with that of structures constructed and maintained under 16 U.S.C. 1006 Pub. L. 83-566 Standards for structures built under this law are contained in the Soil Conservation Service Practice Standard 378, "Ponds," and Technical Release No. 60, "Earth Dams and Reservoirs," and are hereby incorporated by reference. These standards are available in all OSM offices. These materials are incorporated as they exist on the adoption of this Part, and notices of changes in these materials will be published periodically in the FEDERAL REGISTER.

(6) The size of the impoundment is adequate for its intended purposes.

(7) The impoundment will be suitable for the approved post-mining land use.

(b) Temporary impoundments of water in which the water is impounded by a dam shall meet the requirements of Section 816.46 (e)–(u).

§ 816.50 Hydrologic balance: Ground water protection.

(a) Backfilled materials shall be placed so as to minimize contamination of ground water systems with acid, toxic, or otherwise harmful mine drainage, to minimize adverse off-site, effects of mining on ground water systems, and to support approved postmining land uses.

(b) To control the effects of mine drainage, pits, cuts, and other mine excavation or disturbances shall be located, designed, constructed, and utilized in such manner as to prevent or control discharge of acid, toxic, or otherwise harmful mine drainage waters into ground water systems and to prevent adverse impacts on such ground water systems or on approved postmining land uses.

(c) The regulatory authority may require physical, chemical and mineralogical and chemical analyses of proposed backfill materials, spoil, aquifers, overburden, mine waters, surface waters, ground waters, or other materials.

§ 816.51 Hydrologic balance: Protection of ground water recharge capacity.

Surface mining activities shall be conducted in a manner that facilitates reclamation which will restore approximate pre-mining recharge capacity through restoration of the capability of the reclaimed areas as a whole, excluding coal processing waste and refuse disposal areas and fills, to transmit water to the ground water system. The recharge capacity shall be restored to a condition which—

(a) Supports the approved postmining land use;

(b) Minimizes disturbances to the prevailing hydrologic balance in the permit area and in adjacent areas; and

(c) Provides a rate of recharge at least equal to the pre-mining recharge rate.

§ 816.52 Hydrologic balance: Surface and ground water monitoring.

(a) *Ground water.*

(1) Ground water levels, infiltration rates, subsurface flow and storage characteristics, and the quality of ground water shall be monitored in the manner required by the regulatory authority to determine the effects of surface mining activities on the recharge capacity of reclaimed lands and on the quantity and quality of water in ground water systems at the minesite and in adjacent areas.

(2) When operations may affect the ground water system, ground water levels and ground water quality shall be periodically monitored using measurements from a sufficient number of wells and mineralogical and chemical analyses of aquifer, overburden, and spoil material adequate to reflect changes in ground water quantity and quality resulting from these operations. The monitoring shall be adequate to plan for modification of surface mining activities if necessary to minimize disturbance of the hydrologic balance.

(3) As specified and approved by the regulatory authority, the person who conducts surface mining activities shall conduct additional hydrologic tests, including drilling, infiltration tests, and aquifer tests and the results shall be submitted to the regulatory authority to demonstrate compliance with Section 816.51.

(b) *Surface water.*

(1) Surface water monitoring shall be conducted in accordance with the monitoring program submitted under 30 CFR 780.21 (b)(4) and approved by the regulatory authority. Monitoring shall—

(i) Be adequate to measure accurately and record water quantity and quality of the discharges from the permit area;

(ii) In all cases in which analytical results of the sample collections indicate a violation of a permit condition or applicable standard has occured, result in the operator notifying the regulatory authority immediately. Where a National Pollutant Discharge Elimination System (NPDES) permit effluent limitation has been violated, the person who conducts the surface mining activities shall forward a copy of the Discharge Monitoring Report, EPA Form 3320–1, concurrently with notification of the violation;

(iii) Result in regular reports of all samples to the regulatory authority within 60 days of the end of each 60 day sample collection period; or

(iv) If the discharge for which water monitoring reports are required, is subject to regulation by a National Pollutant Discharge Elimination System (NPDES) permit issued under the Clean Water Act of 1977 (30 U.S.C. 1251–1378) which includes equivalent reporting requirements and requires filing of the water monitoring reports within 90 days or less of sample collection, the person who conducts the surface mining activities shall submit to the regulatory authority on the same time schedule as required by the NPDES permit or within 90 days following sample collection, whichever is earlier, either—

(A) A copy of the completed reporting form filed to meet NPDES permit requirements; or

(B) A letter identifying the State or Federal government official with whom the reporting form was filed to meet NPDES permit requirements and the date of filing.

(2) After disturbed areas have been regraded and stabilized according to this Part, the person who conducts surface mining activities shall monitor surface water flow and quality. Data from this monitoring shall be used to demonstrate that the quality and quantity of runoff without treatment is consistent with the requirement of this Section to minimize disturbance to the prevailing hydrologic balance and with the requirements of this Part to attain the approved post-mining land use. These data shall provide a basis for approval by the regulatory authority for removal of water quality or flow control systems and for determining when the requirements of this Section are met. The regulatory authority shall determine the nature of data, frequency of collection, and reporting requirements.

(3) Equipment, structures, and other devices necessary to measure and sample accurately the quality and quantity of surface water discharges from the affected area shall be properly installed, maintained, and operated and shall be removed when no longer required.

§ 816.53 Hydrologic balance: Transfer of wells.

(a) An exploratory or monitoring well may only be transferred for further use as a water well with the prior approval of the regulatory authority. The surface owner shall submit a written request to the regulatory authority for approval of any well transfer.

(b) Upon an approved transfer of a well, the transferee shall—

(1) Assume primary liability for damages to persons or property from the well;

(2) Plug the well when necessary, but in no case later than abandonment of the well; and

(3) Assume primary responsibility for compliance with Sections 816.13-816.15 with respect to the well.

(c) Upon an approved transfer of a well, the transferor shall—

(1) Be secondarily liable for damages;

(2) Be secondarily liable for plugging the well; and

(3) Be secondarily liable for compliance with Section 816.13-816.15 with respect to the well.

(d) Nothing in this Section shall be deemed to supersede or affect the applicability of any State law requirements with respect to a well transfer.

§ 816.54 Hydrologic balance: Water rights and replacement.

Any person who conducts surface mining activities shall replace the water supply of an owner of interest in real property who obtains all or part of his supply of water for domestic, agricultural, industrial, or other legitimate use from an underground or surface source where the water supply has been affected by contamination,

diminution, or interruption resulting from the surface coal mining activities.

§ 816.59 Coal recovery.

Surface mining activities shall be conducted so as to maximize the utili-

and other water systems used for human, animal, or agricultural purposes and to the quantity and quality

(c) *Public notice of changes to blasting schedules.* Before blasting in areas or at times not in a previous schedule,

Lower frequency limit of measuring system, Hz (+3dB)	Maximum level in dB

(4) These restrictions shall apply to material which travels along the ground surface as well as that which travels through the air.

diminution, or interruption resulting from the surface coal mining activities.

§ 816.55 Hydrologic balance: Discharge of water into an underground mine.

Surface water shall not be diverted into underground mine workings unless the person who conducts the surface mining activities demonstrates to the satisfaction of the regulatory authority that the diversion will—

(a) Abate water pollution or otherwise eliminate public hazards resulting from underground mining; and

(b) Be discharged as a controlled flow meeting the water quality requirements of Section 816.52 for pH and total suspended solids except that the total suspended solid concentrations may be exceeded only if the suspended material is approved by the regulatory authority or is limited to—

(1) Coal processing waste;

(2) Fly ash from a coal-fired facility;

(3) Sludge from acid drainage treatment facility;

(4) Flue gas desulfurization sludge;

(5) Inert materials used for stabilizing underground mines or;

(c) Underground mine development wastes; and

(7) The discharge will not cause, result in or contribute to a violation of applicable water quality standards; and

(d) Minimize disturbance to the hydrologic balance.

§ 816.56 Hydrologic balance: Post-mining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.

Before abandoning the permit area, the person who conducts the surface mining activities shall restore all permanent sedimentation ponds, diversions, impoundments, and treatment facilities to meet the original design criteria for the permanent structures and impoundments.

§ 816.57 Hydrologic balance: Stream buffer zones.

(a) No land within 100 feet of a perennial stream or a stream with a macro-invertebrate biological community shall be disturbed by surface mining activities except in accordance with Section 816.44 unless the regulatory authority specifically authorizes surface mining activities closer to or through such a stream upon finding—

(1) That the original stream channel will be restored; and

(2) During and after the mining, the water quantity and quality from the stream section within 100 feet of the surface mining activities shall not be adversely affected.

(b) The area not to be disturbed shall be designated a buffer zone and marked as specified in Section 816.11.

§ 816.59 Coal recovery.

Surface mining activities shall be conducted so as to maximize the utilization and conservation of the coal so that reaffecting the land in the future through surface coal mining operations is minimized.

§ 816.61 Use of explosives: General requirements.

(a) Each person who conducts surface mining activities shall comply with all applicable local, State, and Federal laws and regulations and the requirements of Sections 816.61-816.68 in the storage, handling, preparation, and use of explosives.

(b) Blasting operations that use more than the equivalent of 5 pounds of TNT shall be conducted according to a time schedule approved by the regulatory authority.

(c) All blasting operations shall be conducted by experienced, trained, and competent persons who understand the hazards involved. Each person responsible for blasting operations shall—

(1) Have demonstrated a knowledge of, and shall comply with, MSHA safety requirements and U.S. Department of Treasury security requirements;

(2) Be capable of using mature judgment in all situations;

(3) Be in good physical condition and not addicted to intoxicants, narcotics, or other similar types of drugs;

(4) Possess current knowledge of the local, State, and Federal laws and regulations applicable to the work; and

(5) Possess a valid certificate of completion of training and qualification as required by 30 CFR 850 and 851.

§ 816.62 Use of explosives: Pre-blasting survey.

(a) On the request to the regulatory authority by a resident or owner of a man-made dwelling or structure that is located within one-half mile of any part of the permit area, the person who conducts the surface mining activities shall conduct a pre-blasting survey of the dwelling or structure and submit a report of the survey to the regulatory authority and to the person requesting the survey.

(b) Each person who conducts surface mining activities shall utilize personnel approved by the regulatory authority to conduct the survey to determine the condition of the dwelling or structure and to document any pre-blasting damage and other physical factors that could reasonably be affected by the blasting. Assessments of structures such as pipes, cables, transmission lines, and wells and other water systems shall be limited to surface condition and readily available data. Special attention shall be given to the pre-blasting condition of wells and other water systems used for human, animal, or agricultural purposes and to the quantity and quality of the water.

(c) A written report of the survey shall be prepared and signed by the person who conducted the survey. The report shall include recommendations of any special conditions or proposed adjustments to the blasting procedure which should be incorporated into the blasting plan to prevent damage. Copies of the report shall be provided to the person requesting the survey and to the regulatory authority.

§ 816.64 Use of explosives: Public notice of blasting schedule.

(a) *Blasting schedule publication.* (1) Each person who conducts surface mining activities shall publish a blasting schedule at least 10 days, but not more than 20 days, before beginning a blasting program in which explosives that use more than the equivalent of 5 pounds of TNT are detonated. The blasting schedule shall be published in a newspaper of general circulation in the locality of the blasting site.

(2) Copies of the schedule shall be distributed by mail to local governments and public utilities and by mail or delivered to each residence within one-half mile of the permit area described in the schedule. Copies sent to residences shall be accompanied by information advising the owner or resident how to request a pre-blasting survey.

(3) The person who conducts the surface mining activities shall republish and redistribute the schedule by mail at least every 3 months.

(b) *Blasting schedule contents.* (1) A blasting schedule shall not be so general as to cover all working hours but shall identify as accurately as possible the location of the blasting sites and the time periods when blasting will occur.

(2) The blasting schedule shall contain at a minimum—

(i) Identification of the specific areas in which blasting will take place. Each specific blasting area described shall be reasonably compact and not larger than 300 acres;

(ii) Dates and time periods when explosives are to be detonated. That such periods shall not exceed an aggregate of 4 hours in any one day;

(iii) Methods to be used to control access to the blasting area;

(iv) Types of audible warnings and all-clear signals to be used before and after blasting; and

(v) A description of emergency situations referred to in Section 816.65(a)(2) which have been approved by the regulatory authority for blasting at times other than those described in the schedule.

(c) *Public notice of changes to blasting schedules.* Before blasting in areas or at times not in a previous schedule, the person who conducts the surface mining activities shall prepare a revised blasting schedule according to the procedures in paragraphs (a) and (b) of this Section.

§ 816.65 Use of explosives: Surface blasting requirements.

(a) All blasting shall be conducted between sunrise and sunset. The regulatory authority may specify more restrictive time periods based on public requests or other considerations including the proximity to residential areas.

(b) Blasting shall be conducted at times announced in the blasting schedule, except in those emergency situations approved by the regulatory authority where rain, lightning, other atmospheric conditions, or operator or public safety require unscheduled detonation.

(c) Warning and all-clear signals of different character that are audible within a range of one-half mile from the point of the blast shall be given. Each person within the permit area and each person who resides or regularly works within one-half mile of the permit area shall be notified of the meaning of the signals through appropriate instructions. These instructions shall be periodically delivered or otherwise communicated in a manner which can be reasonably expected to inform such persons of the meaning of the signals. Each person who conducts surface mining activities shall maintain signs in accordance with Section 816.11(f).

(d) Access to the blasting area shall be regulated to protect the public and livestock from the effects of blasting. Access to the blasting area shall be controlled to prevent unauthorized entry at least 10 minutes before each blast and until an authorized representative of the person who conducts the surface mining activities has reasonably determined—

(1) That no unusual circumstances, such as imminent slides or undetonated charges, exist; and

(2) That access to and travel in or through the area can safely resume.

(e) Areas in which charged holes are awaiting firing shall be guarded, barricaded and either posted or flagged against unauthorized entry.

(f)(1) Airblast shall be controlled so that it does not exceed the values specified below at any dwelling, public building, school, church, or commercial or institutional building, unless such building is owned by the person who conducts the surface mining activities, is not leased to any other person and is located within the permit area:

Lower frequency limit of measuring system, Hz (+3dB)	Maximum level in dB
0.1 Hz or lower—flat response	135peak.
2 Hz or lower—flat response	132 peak.
6Hz or lower—flat response	130 peak.
C=weighted, slow response	109 C.

(2) In all cases except the C-weighted slow, the systems used shall have a flat frequency response of at least 500 Hz at the upper end. The C-weighted shall meet the standard American National Standards Institute (ANSI) S1.4-1971 specifications. The ANSI S1.4-1971 is hereby incorporated by reference. This work is incorporated as it exists on the date of adoption of this Part, and notice of changes made in these materials will periodically be published in the FEDERAL REGISTER. ANSI S1.4-1971 is available for inspection in OSM regional offices and in OSM's office in the Department of Interior, 18th and C Streets, N.W., Washington, D.C. 20240.

(3) The person who conducts blasting may satisfy the provisions of this Section by meeting any of the four specifications in the chart in paragraph (f)(1) of this Section.

(g) Except where lesser distances are approved by the regulatory authority, based upon a pre-blasting survey or other appropriate investigation, blasting shall not be conducted within—

(1) 1,000 feet of any building used as a dwelling, school, church, hospital, or nursing facility;

(2) 500 feet of facilities including, but not limited to, disposal wells, petroleum or gas-storage facilities, municipal water-storage facilities, fluid-transmission pipelines, gas or oil-collection lines, or water and sewage lines; and

(3) 500 feet of the active workings of an underground mine except with the concurrence of the Mine Safety and Health Administration.

(h) Flyrock from blasting shall be restricted as follows:

(1) No flyrock shall be cast beyond the line of property owned or leased by the person who conducts the surface mining activities without the consent of the landowners of adjacent areas.

(2) No flyrock shall be cast more than half the distance from the blast to the nearest dwelling, public building, school, church, commercial or institutional building, road or railroad. This shall not apply to any structure or right-of-way on land owned by the person who conducts the surface mining activities and not leased to any other person.

(3) No flyrock shall be cast beyond the area of regulated access required under paragraph (d) of this Section.

(4) These restrictions shall apply to material which travels along the ground surface as well as that which travels through the air.

(i) Blasting shall be conducted to prevent injury to persons, damage to public or private property outside the permit area, adverse impacts on any underground mine, and change in the course, channel, or availability of ground or surface waters outside the permit area.

(j) In all blasting operations, except as otherwise authorized in this Section, the maximum peak particle velocity shall not exceed 1 inch per second at the location of any dwelling, public building, school, church, or commercial or institutional building. The regulatory authority may reduce the maximum peak particle velocity allowed if it determines that a lower standard is required because of density of population or land use, age or type of structure, geology or hydrology of the area, frequency of blasts, or other factors.

(k) The maximum peak particle velocity does not apply to property within the permit area that is owned by the person who conducts the surface mining activities and is not leased to any other person.

(l) An equation for determining the maximum weight of explosives that can be detonated within any 8-millisecond period is in paragraph (m) of this Section. If the blasting is conducted in accordance with this equation, the velocity is deemed to be within the 1-inch-per-second limit.

(m) (1) The maximum weight of explosives to be detonated within any 8 millisecond period may be determined by the formula $W = (D/60)^2$ where W = the maximum weight of explosives, in pounds, that can be detonated in any 8-millisecond period, and D = the distance, in feet, to the nearest dwelling, school, church, or commercial or institutional building.

(2) For distances between 300 and 5,000 feet, solution of the equation results in the following maximum weight:

Distance, in feet (D)	Maximum weight in pounds (W)
300	25
350	34
400	44
500	69
600	100
700	136
800	178
900	225
1,000	278
1,100	336
1,200	400
1,300	469
1,400	544
1,500	625
1,600	711
1,700	803
1,800	900
1,900	1,002
2,000	1,111

Distance, in feet (D)	Maximum weight in pounds (W)

(2) Not owned nor leased by the person who conducts the surface mining activities.

the site. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon com-

(iii) Demonstrated to be consistent with the design stability of the fill.

(2) Wastes other than coal process-

Rock used in underdrains shall meet the requirements of paragraph (a)(5) of this section. The minimum size of

(e) The tops of the fill and any terrace constructed to stabilize the face shall be graded no steeper than 1v:20h

Distance, in feet (D)	Maximum weight in pounds (W)
2,500	1,736
3,000	2,500
3,500	3,403
4,000	4,444
4,500	5,625
5,000	6,944

(n) If on a particular site the peak particle velocity exceeds one-half inch per second after a period of 1 second following the maximum ground particle velocity, the blasting procedures shall be revised to limit the ground motion.

(o) Electric or non-electric delay systems combining surface delays with in-hole delays may be used to reduce vibrations if approved by the regulatory authority. Requests to use such systems shall be accompanied by blasting reports and seismograph records of test blasting on the site showing that the delay pattern does not produce peak particle velocities in violation of this Section.

§ 816.67 Use of explosives: Seismographic measurements.

(a) Where a seismograph is used to monitor the velocity of ground motion and the peak particle velocity limit of 1 inch per second is not exceeded, the equation in Section 816.66(m) need not be used. If the equation is not being used, a seismograph record shall be obtained for each shot.

(b) The use of a modified equation to determine maximum weight of explosives for blasting operations at a particular site may be approved by the regulatory authority on receipt of a petition accompanied by reports including seismograph records of test blasting on the site. In no case shall the regulatory authority approve the use of a modified equation where the peak particle velocity of 1 inch per second required in Section 816.66(j) would be exceeded.

(c) The regulatory authority may require a seismograph record of any or all blasts.

§ 816.68 Use of explosives: Records of blasting operations.

A record of each blast, including seismograph reports, shall be retained for at least 3 years and shall be available for inspection by the regulatory authority and the public on request. The record shall contain the following data:

(a) Name of the person conducting the blast.

(b) Location, date, and time of blast.

(c) Name, signature, and license number of blaster-in-charge.

(d) Direction and distance, in feet, to the nearest dwelling, school, church, or commercial or insitutional building either—

(1) Not located in the permit area; or

(2) Not owned nor leased by the person who conducts the surface mining activities.

(e) Weather conditions.

(f) Type of material blasted.

(g) Number of holes, burden, and spacing.

(h) Diameter and depth of holes.

(i) Types of explosives used.

(j) Total weight of explosives used.

(k) Maximum weight of explosives detonated within any 8 millisecond period.

(l) Maximum number of holes detonated within any 8 millisecond period.

(m) Methods of firing and type of circuit.

(n) Type and length of stemming.

(o) Mats or other protections used.

(p) Type of delay detonator and delay periods used.

(q) Seismographic records, where required, including the calibration signal of the gain setting and—

(1) Seismographic reading, including exact location of seismograph and its distance from the blast;

(2) Name of the person taking the seismograph reading; and

(3) Name of the person and firm analyzing the seismographic record.

§ 816.71 Disposal of excess spoil: General requirements.

(a) Spoil not required to achieve the approximate original contour shall be hauled or conveyed to and placed in designated disposal areas within a permit area other than mine working or excavations, only if the disposal areas are authorized for such purposes in the approved mining and reclamation permit and only in accordance with Sections 816.71-816.73. The spoil shall be placed in a controlled manner to ensure—

(1) That leachate and surface runoff will not degrade surface or ground waters or exceed the effluent limitations of Section 816.42;

(2) Stability of the fill; and

(3) That the land mass is suitable for reclamation and revegetation compatible with the natural surroundings.

(b) The fill shall be designed using recognized professional standards, certified by a registered professional engineer, and approved by the regulatory authority.

(c) All vegetative and organic materials shall be removed from the disposal area and the topsoil shall be removed, segregated, and replaced under Sections 816.21-816.23 before spoil is placed in the disposal area. If approved by the regulatory authority, organic material may be used as mulch or may be included in the topsoil to control erosion, to promote growth of vegetation, or to increase the moisture retention of the soil.

(d) Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

(e) The disposal areas shall be located on the most moderately sloping and naturally stable areas available as approved by the regulatory authority. If such placement provides additional stability and prevents mass movement, fill materials suitable for disposal shall be placed upon or above a natural terrace, bench, or berm.

(f) The spoil shall be hauled or conveyed and placed in a controlled manner, concurrently compacted as necessary to ensure mass stability and prevent mass movement, covered, and graded to allow surface and subsurface drainage to be compatible with the natural surroundings, to ensure long-term stability.

(g) The final configuration of the fill must be suitable for postmining land uses approved in accordance with Section 816.124 except that no depressions or impoundments shall be allowed on the completed fill.

(h) Terraces shall not be constructed unless approved by the regulatory authority.

(i) Where the slope in the disposal area exceeds $1v:2.8h$ (36 percent), or such lesser slope as may be designated by the regulatory authority based on local conditions, keyway cuts (excavations to stable bedrock), or rock toe buttresses shall be constructed to stabilize the fill. The slope of original ground at the toe of the fill shall not exceed $1v:5h$ (20 percent).

(j) The fill shall be inspected for stability by a registered engineer or other professional specialist approved by the regulatory authority during critical construction periods and at least quarterly throughout construction to ensure removal of all organic material and topsoil, placement of underdrainage systems, proper installation of surface drainage systems, proper placement and compaction of fill materials, and proper revegetation. The registered engineer or other qualified professional specialist shall provide to the regulatory authority a certified report within 2 weeks after each inspection that the fill has been constructed as specified in the design approved by the regulatory authority, and a copy of the report shall be retained at the minesite by the person who conducts the surface mining activities.

(k) (1) Coal processing wastes shall not be disposed of in head-of-hollow fills, and may only be disposed of in other excess spoil fills if such waste is—

(i) Placed in accordance with section 816.85;

(ii) Demonstrated to be nontoxic and nonacid forming; and

(iii) Demonstrated to be consistent with the design stability of the fill.

(2) Wastes other than coal processing wastes shall be disposed of in accordance with section 816.89.

(l) The disposal area shall not contain springs, natural watercourses, or wet-weather seeps unless lateral drains are constructed from the wet areas to the underdrains in a manner that prevents infiltration of the water into the spoil pile.

(m) If any portion of the fill interrupts, obstructs, or encroaches upon any natural drainage channel, the entire fill is classified as a valley or head-of-hollow fill and must be designed and constructed in accordance with the requirements of sections 816.72 and 816.73, respectively.

(n) The foundation and abutments of the fill shall be stable under all conditions of construction and operation. Sufficient foundation investigation and laboratory testing of foundation materials shall be performed in order to determine the design requirements for stability of the foundation. Analyses of foundation conditions shall include the effect of underground mine workings, if any, upon the stability of the structure.

• • • • • •

(q) Excess spoil may be returned to underground workings only in accordance with a spoil disposal program approved by the regulatory authority under 30 CFR 784.14.

§ 816.72 Disposal of excess spoil: Valley fills.

Valley fills shall meet all of the requirements of section 816.71 and the additional requirements of this section.

(a) The fill shall be designed to attain a long-term static factor of safety of 1.5 based upon data obtained from subsurface exploration, geotechnical testing, foundation design, and accepted engineering analyses.

(b) A subdrainage system for the fill shall be constructed in accordance with the following:

(1) A system of underdrains constructed of durable rock shall—

(i) Be installed along the natural drainage system;

(ii) Extend from the toe to the head of the fill; and

(iii) Contain lateral drains to each area of potential drainage or seepage.

(2) A filter system to insure the proper functioning of the rock underdrain system shall be designed and constructed using standard geotechnical engineering.

(3) In constructing the underdrains, no more than 10 percent of the rock may be less than 12 inches in size and no single rock may be larger than 25 percent of the width of the drain. Rock used in underdrains shall meet the requirements of paragraph (a)(5) of this section. The minimum size of the main underdrain shall be:

Total amount of fill material	Predominant type of fill material	Minimum size of drain, in feet	
		Width	Height
Less than 1,000,000 yd³	Sandstone	10	4
Do.	Shale	16	8
More than 1,000,000 yd³	Sandstone	16	8
Do.	Shale	16	

(5) Rock used shall not have less than 50 percent wear in 500 revolutions in the Los Angeles Rattler Test (AASHTO T-96-70), shall not have less than 15-percent weight loss in 5 cycles of the Sodium Sulfate Test (ASTM C088, AASHTO T-1-4), and shall not contain less than 30 percent by volume of clay or clay minerals as determined by standard petrologic analytical tests, and shall not be acid-forming or toxic-forming.

(c) (1) Spoil shall be hauled or conveyed and placed in a controlled manner and concurrently compacted as specified by the regulatory authority in lifts no thicker than 18 inches in order to—

(i) Achieve the densities designed to ensure mass stability;

(ii) Prevent mass movement;

(iii) Avoid contamination of the rock underdrain or rock core; and

(iv) Prevent formation of voids.

(2) The person who conducts the surface mining activities may use lifts of greater thickness than required under paragraph (c)(1) of this section if he has demonstrated to the regulatory authority by density monitoring tests that the density throughout the thickness of the lift is equal to or greater than the density specified in the design referred to in paragraph (a) of this section, except that in no event shall lift thickness exceed 4 feet.

(d) Surface water runoff from the area above the fill shall be diverted away from the fill and into stabilized diversion channels designed to pass safely the runoff from the 24-hour duration 100-year frequency storm or larger event specified by the regulatory authority. Sediment control structures shall be provided at the discharge of the diversion ditch before entry into the natural watercourse in accordance with section 816.46. Surface runoff from the fill surface shall be diverted to stabilized channels off the fill which will safely pass runoff from a 24-hour duration, 100-year frequency storm. Diversion design shall comply with the requirements of section 816.43(f).

(e) The tops of the fill and any terrace constructed to stabilize the face shall be graded no steeper than $1v:20h$ (5 percent). The vertical distance between terraces shall not exceed 50 feet.

(f) Drainage shall not be directed over the outslope of the fill.

(g) The outslope of the fill shall not exceed $1v:2h$ (50 percent). The regulatory authority may require a flatter slope.

§ 816.73 Disposal of excess spoil: Head-of-hollow fills.

Disposal of spoil in the head-of-hollow fill shall meet all standards set forth in sections 816.71 and 816.72 and the additional requirements of this section.

(a) The fill shall be designed to completely fill the disposal site approved by the regulatory authority to the approximate elevation of the ridgeline. A rock-core chimney drain may be utilized instead of the subdrain and surface diversion system required for valley fills. If the crest of the fill is not approximately at the same elevation as the low point of the adjacent ridgeline, the fill must be designed as specified in section 816.72, with diversion of runoff around the fill.

(b) The alternative rock-core chimney drain system shall be designed and incorporated into the construction of head-of-hollow fills as follows:

(1) The fill shall have along the vertical projection of the main buried stream channel or rill a vertical core of durable rock at least 16 feet thick which shall extend from the toe of the fill to the head of the fill and from the base of the fill to the surface of the fill. A system of lateral rock underdrains shall connect this rock core to each area of potential drainage or seepage in the disposal area. Rocks used in the rock core and underdrains shall meet the requirements of section 816.72(b).

(2) A filter system to ensure the proper functioning of the rock core shall be designed and constructed using standard geotechnical engineering methods.

(3) The grading may drain surface water away from the outslope of the fill and toward the rock core. The maximum slope of the top of the fill shall be $1v:33h$ (3 percent). Instead of the requirements of section 816.71(g), a drainage pocket may be maintained at the head of the fill during and after construction to intercept surface runoff and discharge the runoff through or over the rock drain if stability of the fill is not impaired. In no case shall this pocket or sump have a potential for impounding more than 10,000 cubic feet of water. Terraces on the fill shall be graded with a 3- to 5-

percent grade toward the fill and a 1-percent slope toward the rock core.

(c) The drainage control system shall be capable of safely passing the runoff from a 24-hour 100-year storm, or larger event, as specified by the regulatory authority.

§ 816.79 Protection of underground mining.

(a) No surface coal mining activities shall be conducted within 500 feet of active or abandoned underground mines except to the extent that—

(1) The nature, timing, and sequence of the operations are jointly approved by the regulatory authority and the Mine Safety and Health Administration and the State agency, if any, responsible for the safety of mine workers; and

(2) The activities result in improved resource recovery, abatement of water pollution, or elimination of hazards to the health and safety of the public.

(b) The vertical distance between surface and underground mines working separate seams shall be sufficient to protect the health and safety of the workers and to prevent surface water from entering the underground workings.

(c) All mines plans shall be designed to protect the disturbed surface areas, including spoil disposal sites so as not to endanger any present or future operations of either surface or underground mines.

§ 816.81 Coal processing waste: General requirements.

(a) All coal processing waste shall be hauled or conveyed and placed in new and existing disposal areas which shall be within the permit area and which are approved by the regulatory authority for this purpose. The coal processing waste disposal area shall be designed, constructed, and maintained—

(1) In accordance with sections 816.71 and 816.72, the provisions of this section and sections 816.82-816.88; and

(2) To prevent combustion.

(b) Coal processing waste materials from activities outside the permit area such as other mines or abandoned mine waste piles may be disposed of in permit areas only if approved by the regulatory authority. The approval shall be based on a showing by the person who conducts surface mining activities, using hydrologic, geologic physical, and chemical analysis, that disposal of these materials does not—

(1) Adversely affect water quality, water flow, or vegetation;

(2) Create public health hazards; or

(3) Cause instability in the disposal areas.

§ 816.82 Coal processing waste banks: Site inspection.

(a) All coal processing waste disposal sites shall be inspected by an engineer or other person approved by the regulatory authority.

(1) The inspection shall occur at least once each week beginning within 7 days after preparation of the disposal area begins and terminating when the coal processing waste bank has been graded, covered in accordance with section 816.85 and topsoil has been distributed on the bank in accordance with section 816.24 or for such longer period as the regulatory authority may require.

(2) The inspections shall include such observations and tests as may be necessary to evaluate the potential hazard to human life and property, and to ensure that all organic material and topsoil have been removed and that proper construction and maintenance are occurring in accordance with the plan submitted under 30 CFR 780.35 and approved by the regulatory authority.

(3) The engineer or other approved inspector shall consider steepness of slopes, seepage, and other visible factors which could indicate potential failure and shall consider the results of failure with respect to the threat to human life and property.

(4) Copies of the inspection findings shall be maintained at the mine site.

(b) If any inspection discloses that a potential hazard exists, the regulatory authority shall be informed promptly of the finding and of the procedures formulated for public protection and remedial action in the event of an emergency. If adequate emergency procedures cannot, for any reason, be formulated or implemented, the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate emergency agencies that emergency procedures are required for the coal processing waste area.

§ 816.83 Coal processing waste banks: Water control measures.

(a) A properly designed subdrainage system shall be provided and shall—

(1) Comply with the provisions of sections 816.71 and 816.72; and

(2) Be covered so as to protect against the entrance of surface water or leachate from the coal processing waste.

(b) All surface drainage from the area above the coal processing waste bank and from the crest and face of the waste disposal area shall be diverted in accordance with section 816.72(d).

(c) Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

(d) All water discharged from a coal processing waste bank shall comply with section 816.42.

§ 816.85 Coal processing waste banks: Construction requirements.

(a) The coal processing waste banks shall be constructed in compliance with sections 816.71 and 816.72 and this section.

(b) Coal processing waste banks shall have a minimum static factor of safety of 1.5.

(c) Compaction requirements during construction or modification of all coal processing waste banks shall meet the requirements of this paragraph, instead of those specified in section 816.72(c). The coal processing waste shall be—

(1) Spread in layers no more than 8 inches in thickness; and

(2) Compacted to attain 90 percent of the maximum dry density to prevent spontaneous combustion and to provide the strength required for stability of the coal processing waste bank. Dry densities shall be determined in accordance with AASHTO T-99, or equivalent.

(d) Following grading of the coal processing waste bank, the site shall be covered with a minimum of 4 feet of the best available non-toxic and non-combustible material in accordance with section 816.22(e) and in a manner that does not impede flow from subdrainage systems.

§ 816.86 Coal processing waste: Burning.

(a) Coal processing waste fires shall be extinguished by the person who conducts the surface mining activities in accordance with a plan approved by the regulatory authority.

(b) Extreme caution shall be taken in all attempts to extinguish burning wastes to insure that no hazards will exist to equipment operators or other persons working or living in the vicinity of the site.

(c) Acceptable techniques for extinguishing burning wastes, include, but are not limited, to the following—

(1) Quenching with surface applications of water;

(2) Isolation of burning wastes by excavation;

(3) Exclusion of oxygen by blanketing or sealing with water, foam or other materials; and

(4) Injecting water or slurry to isolate and quench the wastes.

§ 816.87 Coal processing waste: Burned waste utilization.

(a) Before the person who conducts the surface mining activities may remove burned coal processing waste or other materials from a disposal area, approval shall be obtained from the regulatory authority. A plan regarding the method of removal, with maps and appropriate drawings to illustrate the proposed sequence of the operation and method of compliance with this part, shall be submitted to the regulatory authority. Consideration shall be given in the plan to potential hazards which may be created to persons working or living in the vicinity of the structure. The plan shall be certified by a qualified engineer.

(b) Burned coal processing waste may be utilized for off-site construction purposes with the approval of the regulatory authority.

§ 816.88 Coal processing waste: Return to underground workings.

Coal processing waste may be returned to underground mine workings only in accordance with the waste disposal program approved by the regulatory authority under 30 CFR 780.35.

§ 816.89 Disposal of noncoal wastes.

(a) Noncoal wastes including, but not limited to, grease, lubricants, paints, flammable liquids, garbage, abandoned mining machinery, timber and other combustibles generated during surface mining activities shall be placed and stored in a controlled manner in a designated area to insure that leachate and surface runoff do not degrade surface or ground water, fires are prevented, and the area remains stable and is suitable for reclamation and revegetation compatible with the natural surroundings.

(b) The final disposal of noncoal wastes shall be in a designated disposal site. The solid waste disposal site shall be designed and constructed with appropriate water barriers on the bottom and sides of the designated site. The wastes shall be routinely compacted and covered to prevent combustion and wind born waste. When the disposal is completed or when the surface mining activities are completed, a minimum of 2 feet of soil cover shall be placed over the site. The operation of the disposal site shall be conducted in accordance with all local, State, and Federal requirements.

(c) At no time shall the person who conducts the surface mining activities allow any solid waste material to be deposited at refuse embankments or impoundment sites nor shall the person who conducts surface mining activities allow any excavation for solid waste disposal to be located within 8 feet of any coal outcrop or coal storage area.

§ 816.91 Coal processing waste: Dams and embankments: General requirements.

Sections 816.91-816.93 apply to existing and proposed dams and embankments constructed of coal processing waste or intended to impound coal processing waste.

(a) All dams and embankments including those not meeting the size or other criteria of 30 CFR 77.216(a), shall be routinely inspected by a registered professional engineer, or someone under the supervision of a registered professional engineer, in accordance with Mine Safety and Health Review Commission regulations in 30 CFR 77.316-3.

(b) All dams and embankments subject to this section shall be routinely maintained. Vegetative growth shall be cut where necessary to facilitate inspection and repairs. Ditches and spillways shall be cleaned. Any combustible materials present on the surface, other than that used for surface stability such as mulch or dry vegetation, shall be removed and any other appropriate maintenance procedures followed.

(c) All dams and embankments subject to this section shall be inspected and certified annually as having been constructed and modified in accordance with current prudent engineering practices to minimize the possibility of failures. Any changes in the geometry of the dam or embankment shall be highlighted and included in the annual certification report. These certifications shall include a report on—

(1) Existing and required monitoring procedures and instrumentation;

(2) The average and maximum depths and elevations of any impounded waters over the past year;

(3) Existing storage capacity of the dam or embankment;

(4) Any fires occurring in the material over the past year; and

(5) Any other aspects of the dam or embankment affecting stability.

(d) A person who conducts surface mining activities shall submit to the regulatory authority plans for any enlargements, reductions in size, reconstruction, or other modification of impounding structures. The regulatory authority shall have approved the plans before alterations begin.

§ 816.92 Coal processing waste: Dams and embankments: Site preparation.

Before coal processing waste is placed at a dam or embankment:

(a) Clearing and grubbing of all trees, shrubs, grasses, and other organic material shall be performed and all combustibles shall be removed and stockpiled in accordance with the requirements of this part.

(b) All surface drainage shall be diverted away from the crest and downstream face of the dam or embankment. Diversion ditches shall be designed, constructed, utilized, and maintained to prevent blockage and to pass the peak runoff from a 24-hour precipitation event with a 100-year recurrence interval unless greater event is specified by the regulatory authority. Sediment control structures shall be provided at each discharge of each diversion ditch before entry into natural watercourses in accordance with sections 816.41-816.55.

(c) Slope protection shall be provided to minimize surface erosion at the site and sediment control structures shall be required. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

§ 816.93 Coal processing waste: Dams and embankments: Construction.

(a) Waste shall not be used in the construction of dams and embankments unless demonstrated through appropriate engineering analysis to have no adverse effect on stability, and approved by the regulatory authority.

(b) The design of the dam or embankment shall be based on the flood from the probable maximum precipitation event unless the person who conducts the surface mining activities shows that the failure of the dam or embankment would not cause loss of life or severely damage property or the environment, in which case and depending on site conditions, a design to safely pass the flow from a 100-year precipitation event may be specified by the regulatory authority.

(c) One or more spillways shall be provided for the dam or embankment to pass that portion of the design storm that cannot be safely stored. Spillways and outlet works shall be designed to provide adequate protection against erosion. Inlets shall be protected against blockage.

(d) The design freeboard distance between the lowest point on the embankment crest and the maximum water elevations shall be at least 3 feet.

(e) Dams and embankments shall have minimum safety factors as follows:

Case	Loading condition	Minimum safety factor
I	End of construction	1.3
II	Partial pool with steady seepage saturation.	1.5
III	Steady seepage from spillway or decant crest.	1.5
IV	Earthquake (cases II and III with seismic loading).	1.0

(f) The dam or embankment foundation and abutments shall be stable under all conditions of construction and operation of the impoundment. Sufficient foundation investigations and laboratory testing shall be performed to determine the factors of safety of the dam or embankment for all loading conditions in paragraph (e)

of this section and for all increments of construction.

and railroad cars to reduce loss of material to wind and spillage;

(9) Substituting of conveyor systems

hancement of such resources where practicable.

(b) A person who conducts surface

(7) Avoid perennial stream channels or restore them to their former longitudinal profile and cross section con-

mining activities shall notify the regulatory authority by the fastest available means and shall comply with any

that have not been restored to the standards of this part and sufficient spoil is not available. The person who

of this section and for all increments of construction.

(g) Allowances shall be made for settlement of the dam or embankment and the foundation so that the freeboard will be maintained.

(h) Dams or embankments created for impounding waste materials shall be subject to a minimum drawdown criteria that allows the facility to be evacuated by spillways or decants of 90 percent of the volume of water stored during the designed precipitation event within 10 days.

(i) For each dam and embankment a permanent identification sign, at least 6 feet high shall—

(1) Show the permit number for the surface coal mining and reclamation operations;

(2) Show the name of the person operating or controlling the dam; and

(3) Be located on or immediately adjacent to each dam.

§ 816.95 Air resources protection.

(a) *Fugitive dust.* Each person who conducts surface mining activities shall plan and employ fugitive dust control measures as an integral part of site preparation, coal mining, and reclamation operations. The regulatory authority shall specify the control measures appropriate for use in planning, according to applicable Federal and State air quality standards, climate, existing air quality in the area affected by mining, and the available control technology.

(b) *Control measures.* The fugitive dust control measures to be used, depending on applicable Federal and State air quality standards, the climate, existing air quality, size of the operation, and type of operation shall include, but not be limited to—

(1) Periodic watering of unpaved roads with the minimum frequency of watering specified according to quantitative standard approved by the regulatory authority;

(2) Chemical stabilization of unpaved roads with nontoxic soil cement or dust palliatives mixed into the upper 1 or 2 inches or more of the road surface;

(3) Paving of roads;

(4) Prompt removal of coal, rock, soil, and other dust-forming debris from roads and frequent scraping and compaction of unpaved roads to stabilize the road surface;

(5) Restricting the speed of vehicles to reduce the length and size of any fugitive dust caused by travel;

(6) Revegetating, mulching, or otherwise stabilizing the surface of all areas adjoining roads that are sources of fugitive dust;

(7) Restricting the travel of vehicles on other than established roads;

(8) Enclosing, covering, watering or otherwise treating loaded haul trucks and railroad cars to reduce loss of material to wind and spillage;

(9) Substituting of conveyor systems for haul trucks and covering of conveyor systems when conveyed loads are subjected to wind erosion;

(10) Minimizing the area of disturbed land;

(11) Prompt revegetation of regraded lands;

(12) Use of alternatives for coal-handling methods, restriction of dumping procedures, wetting of disturbed materials during handling, and compaction of disturbed areas;

(13) Orienting mining operations so as to place temporary spoil piles or ridges perpendicular to prevailing winds to reduce wind erosion;

(14) Planting of special windbreak vegetation at critical points in the permit area;

(15) Control of dust from drilling using water sprays, hoods, dust collectors, or other controls;

(16) Restricting the areas to be blasted at any one time to reduce fugitive dust;

(17) Restricting activities causing fugitive dust during periods of air stagnation;

(18) Extinguishing any areas of burning or smoldering coal and periodically inspecting for burning areas whenever the potential for spontaneous combustion is high;

(19) Reducing the period of time between initially disturbing the soil and revegetating or other surface stabilization; and

(20) Restricting fugitive dust at spoil and coal transfer and loading points with water sprays, negative pressure systems and baghouse filters, chemicals, or other practices.

(c) *Additional measures.* Where the regulatory authority determines that application of fugitive dust control measures listed in paragraph (b) of this section is insufficient to achieve and maintain applicable Federal and State air-quality standards, the regulatory authority may require additional measures and practices as necessary to insure compliance with all applicable air-quality standards.

(d) *Monitoring.* Air monitoring equipment shall be installed and monitoring shall be conducted in accordance with the air quality monitoring program submitted under 30 CFR 780.14(a)(2) and as approved by the regulatory authority.

§ 816.97 Protection of fish, wildlife, and related environmental values.

(a) Any person conducting surface mining activities shall, to the extent possible using the best technology currently available, minimize disturbances and adverse impacts of the operation on fish, wildlife, and related environmental values, and achieve enhancement of such resources where practicable.

(b) A person who conducts surface mining activities shall promptly report to the regulatory authority the presence in the permit area of any critical habitat of a threatened or endangered species listed by the Secretary, any plant or animal listed as threatened or endangered by the State, or any bald or golden eagle, of which the person engaged in surface mining activities becomes aware and which was not previously reported to the regulatory authority.

(c) A person who conducts surface mining activities shall insure that the design and construction of telephone lines, electric power lines, distribution lines, and other transmission facilities on the permit area are in accordance with the guideline set forth in "Environmental Criteria for Electric Transmission System" (USDI, USDA (1970)) or in such alternative guidance manuals as may be approved by the regulatory authority. Distribution lines shall be designed and constructed in accordance with REA Bulletin 61-10 "Powerline Contracts by Eagles and Other Large Birds" or in such alternative guidance manuals as may be approved by the regulatory authority. The two works named in this paragraph are hereby incorporated by reference. These materials are incorporated as they exist on the date of adoption of this part, and notices of changes in these materials will periodically be published in the FEDERAL REGISTER. These two works are available at all OSM regional offices and at the OSM office in Washington, D.C. and on file at the Office of the Federal Register.

(d) Each person who conducts surface mining activities shall to the extent possible using the best technology currently available—

(1) Locate and operate haul and access roads so as to avoid or minimize impacts to important fauna species or other species protected by State or Federal law;

(2) Fence roadways where specified by the regulatory authority to guide locally important wildlife to roadway underpasses or overpasses and construct the necessary passages. No new barrier shall be created in known and important fauna migration routes;

(3) Fence, cover, or use other appropriate methods to exclude fauna from ponds which contain hazardous concentrations of toxic-forming materials;

(4) Restore, enhance, or avoid habitats of unique value for fauna;

(5) Restore, enhance, or maintain natural riparian vegetation on the banks of streams, lakes, and other wetland areas;

(6) Avoid intermittent stream channels or restore them to natural, meandering shapes of the same gradient;

(7) Avoid perennial stream channels or restore them to their former longitudinal profile and cross section considering fauna habitats (usually a pattern of riffles, pools, and drops rather than a uniform depth);

(8) Advise all permanent and contractual personnel of pertinent State and Federal laws and regulations pertaining to fauna resources;

(9) Not use persistent pesticides on the area during surface mining and reclamation activities;

(10) Make every effort to prevent, control, and suppress range, forest, and coal fires;

(11) If fauna habitat is to be a primary or secondary postmining land use, the operator shall in addition to the requirements of 30 CFR 816.111-816.117—

(i) Select plant species to be used on reclaimed areas based on the following criteria—

(A) Their proven nutritional value for fauna,

(B) Their uses as cover for fauna, and

(C) Their ability to support and enhance fauna habitat after release of bonds; and

(ii) Distribute flora groupings to maximize benefit to fauna. Flora should be grouped and distributed in a manner which optimizes edge effect, cover, and other benefits for fauna;

(12) Where row crops are to be the primary land use, surround fields with rows of trees or hedges suitable for reducing wind, retaining moisture, and providing habitat for birds and other small animals and where desirable, intersperse trees, other vegetation types, and fence rows, throughout the harvested area to break up large blocks of monoculture and to diversify habitat types to make them more suitable for small animals. Wetlands shall be preserved or created rather than drained or otherwise permanently abolished; and

(13) Where the primary land use is to be residential, public service, or industrial land use, intersperse reclaimed lands with greenbelts utilizing species of grass, shrubs and trees useful as food and cover for birds and small animals.

§ 816.99 Slides and other damage.

(a) An undisturbed natural barrier shall be provided beginning at the elevation of the lowest coal seam to be mined and extending from the outslope for such distance as determined by the regulatory authority to assure stability. The barrier shall be retained in place to prevent slides and erosion.

(b) At any time a slide occurs which may have a potential adverse affect on life, property, health, safety, or the environment in the permit area, the person who conducts the surface mining activities shall notify the regulatory authority by the fastest available means and shall comply with any remedial measures required by the regulatory authority.

§ 816.100 Contemporaneous reclamation.

Reclamation efforts including backfilling, grading, topsoil replacement and revegetation, on all land that is disturbed by surface mining activities shall occur as contemporaneously as practicable with mining operations.

§ 816.101 Backfilling and grading: General requirements.

(a) *Timing of backfilling and grading.*

(1) *Contour mining.* Rough backfilling and grading shall follow coal removal by not more than 60 days or 1,000 linear feet.

(2) *Open pit mining with thin overburden.* Rough backfilling and grading shall occur in accordance with the time schedule approved by the regulatory authority.

(3) *Area strip mining.* Rough backfilling and grading shall be completed within 90 days and shall not be more than four spoil ridges behind the pit being worked, the spoil from the active pit being considered the first ridge.

(b) *Method for backfilling and grading.*

(1) Except as specifically exempted in this subchapter, all disturbed areas shall be returned to approximate original contour. Each person who conducts surface mining activities shall haul or convey, backfill, compact (where advisable to insure stability or to prevent leaching) and grade all spoil to eliminate all highwalls, spoil piles, and depressions.

(2) Backfilled material shall be placed to minimize adverse effects on ground water, to minimize off-site effects and to support the approved postmining land use.

(3) The postmining graded slope need not be of uniform slope.

(4) Cut-and-fill terraces may be used only in those situations expressly identified in section 816.102.

§ 816.102 Backfilling and grading: Grading requirements.

(a) The final graded slopes shall not exceed in grade either the approximate premining slopes or any lesser slopes approved by the regulatory authority based on consideration of soil, climate, or other characteristics of the surrounding area. Postmining final graded slopes need not be uniform but shall approximate the general nature of the premining topography. The requirements of this section may be modified by the regulatory authority where the surface mining activities are reaffecting previously mined lands that have not been restored to the standards of this part and sufficient spoil is not available. The person who conducts surface mining activities shall, at a minimum—

(1) Retain all overburden and spoil on the solid portion of existing or new benches; and

(2) Backfill and grade to the most moderate slope possible to eliminate the highwall which does not exceed the angle of repose or such lesser slope as is necessary to achieve a minimum static safety factor of 1.3. In all cases the highwall shall be eliminated.

(b) On approval by the regulatory authority in order to conserve soil moisture, ensure stability, and control erosion on final graded slopes, cut-and-fill terraces may be allowed if the terraces are compatible with the approved postmining land use and are appropriate substitutes for construction of lower grades on the reclaimed lands. The terraces shall meet the following requirements:

(1) The width of the individual terrace bench shall not exceed 20 feet unless specifically approved by the regulatory authority as necessary for stability, erosion control, or roads included in the approved post-mining land use plan.

(2) The vertical distance between terraces shall be as specified by the regulatory authority to prevent excessive erosion and to provide long-term stability.

(3) The slope of the terrace outslope shall not exceed $1v:2h$ (50 percent). Outslopes which exceed $1v:2h$ (50 percent) may be approved if they have a minimum static safety factor of more than 1.3 and provide adequate control over erosion and closely resemble the surface configuration of the land prior to mining. In no case may highwalls be left as part of terraces.

(4) Culverts and underground rock drains shall be used on the terrace only when approved by the regulatory authority.

(c) Small depressions may be constructed if they—

(1) Are approved by the regulatory authority to minimize erosion, conserve soil moisture, or promote vegetation;

(2) Do not restrict normal access; and

(3) Are not inappropriate substitutes for lower grades on the reclaimed lands.

(d) All operations on slopes above 20 or on lesser slopes that the regulatory authority defines as steep slopes shall meet the provisions of 30 CFR Part 826.

(e) All final grading, preparation of overburden before replacement of topsoil, and placement of topsoil, in accordance with section 816.24, shall be done along the contour to minimize

subsequent erosion and instability. If such grading, preparation, or placement along the contour is hazardous to equipment operators, then grading, preparation, or placement in a direction other than generally parallel to the contour may be used. In all cases, grading, preparation, or placement shall be conducted in a manner which minimizes erosion and provides a surface for replacement of topsoil which will minimize slippage.

§ 816.103 Backfilling and grading: Covering coal and acid- and toxic-forming materials.

(a) *Cover.*

(1) A person who conducts surface mining activities shall cover, with a minimum of 4 feet of the best available nontoxic and noncombustible material, all exposed coal seams remaining after mining and any acid forming or toxic forming combustible materials, or any other materials identified by the regulatory authority, that are exposed, used, or produced during mining;

(2) If necessary, these materials shall be treated to neutralize toxicity in order to prevent water pollution and sustained combustion, and to minimize adverse effects on plant growth and land uses;

(3) Where necessary to protect against upward migration of salts, exposure by erosion, to provide an adequate depth for plant growth, or otherwise to meet local conditions, the regulatory authority shall specify thicker amounts of cover using nontoxic material; or

(4) Acid-forming or toxic-forming material shall not be buried or stored in proximity to a drainage course so as to cause or pose a threat of water pollution.

(b) *Stabilization.* Backfilled materials shall be selectively hauled or conveyed and compacted wherever necessary to prevent leaching of acid-forming and toxic-forming materials into surface or ground waters and wherever necessary to insure the stability of the backfilled materials. The method of compacting material and the design specifications shall be approved by the regulatory authority before the acid-forming or toxic-forming materials are covered.

§ 816.104 Backfilling and grading: Thin overburden.

(a) The provisions of this section apply only where the final thickness is less than 0.8 of the initial thickness. Initial thickness is the sum of the overburden thickness and coal thickness. Final thickness is the product of the overburden thickness times the bulking factor to be determined for each mine area. The provisions of this section apply only when operations cannot be carried out to comply with the requirements of section 816.101 to achieve the approximate original contour.

(b) In surface mining activities carried out continuously in the same limited pit area for more than 1 year from the day coal-removal operations begin and where the volume of all available spoil and suitable waste materials over the mine plan area is demonstrated to be insufficient to achieve approximate original contour, surface mining activities shall be conducted to meet, at a minimum, the following standards—

(1) Haul or convey, backfill, and grade, using all available spoil and suitable waste materials from the entire mine area, to attain the lowest practicable stable grade, to achieve a static safety factor of 1.3, and to provide adequate drainage and long-term stability of the regraded areas and to cover all acid-forming and toxic-forming materials.

(2) Eliminate highwalls by grading or backfilling to stable slopes not exceeding $1v:2h$ (50 percent), or such lesser slopes as the regulatory authority may specify to reduce erosion, maintain the hydrologic balance, or allow the approved postmining land use.

(3) Haul or convey, backfill, grade, and revegetate in accordance with sections 816.111–816.117 to achieve an ecologically sound land use compatible with the prevailing land use in unmined areas surrounding the permit area; and

(4) Haul or convey, backfill, and grade to ensure the impoundments are constructed only where—

(i) It has been demonstrated to the regulatory authority's satisfaction that all requirements of sections 816.41–816.56 have been met; and

(ii) The impoundments have been approved by the regulatory authority as suitable for the approved postmining land use and as meeting the requirements of this part and all other applicable Federal and State laws and regulations.

§ 816.105 Backfilling and grading: Thick overburden.

(a) The provisions of this section apply only where the final thickness is greater than 1.2 of the initial thickness. Initial thickness is the sum of the overburden thickness and coal thickness. Final thickness is the product of the overburden thickness times the bulking factor to be determined for each mine area. The provisions of this section apply only when operations cannot be carried out to comply with the requirements of section 816.101 to achieve the approximate original contour.

(b) In surface mining activities where the volume of spoil over the mine plan area is demonstrated to be more than sufficient to achieve the approximate original contour surface coal mining operations shall be conducted to meet at a minimum the following standards—

(1) Haul or convey, backfill, and grade all spoil and wastes not required to achieve approximate original contour in the permit area to the lowest practicable grade but not more than the angle of repose and to cover all acid-forming and other toxic materials;

(2) Haul or convey, backfill, and grade excess spoil and wastes only within the permit area and dispose of such materials in conformance with sections 816.71–816.73;

(3) Haul or convey, backfill, and grade excess spoil and wastes to maintain the hydrologic balance in accordance with sections 816.41–816.57 and to provide long-term stability by preventing slides, erosion and water pollution.

(4) Haul or convey, backfill, grade, and revegetate wastes and excess spoil to achieve an ecologically sound land use approved by the regulatory authority as compatible with the prevailing land uses in unmined areas surrounding the permit area.

(5) Eliminate all highwalls and depressions by backfilling with spoil and suitable waste materials; and

(6) Meet the revegetation requirements of sections 816.111–816.117 for all disturbed areas.

§ 816.106 Regrading or stabilizing rills and gullies.

When rills or gullies deeper than 9 inches form in areas that have been regraded and topsoiled, the rills and gullies shall be filled, graded, or otherwise stabilized and the area reseeded or replanted according to sections 816.111–816.117. The regulatory authority shall specify that rills or gullies of lesser size be stabilized if the rills or gullies are disruptive to the approved postmining land use or may result in additional erosion and sedimentation.

§ 816.111 Revegetation: General requirements.

(a) Each person who conducts surface mining activities shall establish on all affected land a diverse, effective, and permanent vegetative cover of species native to the area of disturbed land or species that supports the approved postmining land use. For areas designated as prime farmland, the reclamation requirements of 30 CFR Part 823 shall apply.

(b) All revegetation shall be in compliance with the plan approved by the regulatory authority and shall be carried out in a manner that encourages a prompt vegetative cover and recovery of productivity levels compatible with the approved postmining land use.

(1) All disturbed land, except water areas and surface areas of roads that are approved as a part of the postmining land use, shall be seeded or planted to achieve a vegetative cover of the same seasonal variety native to the area of disturbed land.

(2) The vegetative cover shall be capable of stabilizing the soil surface with respect to erosion.

(3) Vegetative cover shall be considered of the same seasonal variety when it consists of a mixture of species of equal or superior utility for the intended land use when compared with the utility of naturally occurring vegetation during each season of the year.

(4) If both the premining and postmining land use is intensive agriculture, planting of the crops normally grown will meet the requirement of paragraph (b)(1) of this section.

§ 816.112 Revegetation: Use of introduced species.

Introduced species may be substituted for native species only if approved by the regulatory authority after appropriate field trials have demonstrated that the introduced species are of equal or superior utility for the approved postmining land use, or are necessary to achieve a quick, temporary, and stabilizing cover. Introduced species shall meet the requirements of applicable State and Federal seed or introduced species statutes, and shall not include poisonous or toxic species.

§ 816.113 Revegetation: Timing.

Seeding and planting of disturbed areas shall be conducted during the first normal period for favorable planting conditions after final preparation. The normal period for favorable planting shall be that planting time generally accepted locally for the type of plant materials selected. Any disturbed areas, except water areas and surface areas of roads approved for the post-mining land use, which have been final graded and topsoiled shall be mulched as required by section 816.114 and seeded, if required by the regulatory authority, with a temporary cover of small grains, grasses, or legumes to control erosion until an adequate permanent cover is established.

§ 816.114 Revegetation: Mulching.

(a) Suitable mulch shall be used on all regraded and topsoiled areas to control erosion, to promote germination of seeds, and to increase the moisture retention of the soil. Mulch shall be anchored to the soil surface to ensure effective protection of the soil and vegetation.

(b) Annual grasses and grains such as oats, rye, and wheat may be used instead of mulch when the regulatory authority determines that they will provide adequate stability and that they will later be replaced by species approved for the post-mining land use.

§ 816.115 Revegetation: Grazing.

When the approved post-mining land use is range or pasture land, the reclaimed land shall be used for livestock grazing at a stocking rate equal to or less than approved by the regulatory authority for at least the last two full years of liability required under section 816.116 (b).

§ 816.116 Revegetation: Standards for success.

(a) Success of revegetation shall be measured by techniques approved by the regulatory authority on the basis of reference areas approved by the regulatory authority. This is to adjust for natural differences between the pre-mining years and post-mining years. Management of the reference area shall be comparable to that which is required for the approved post-mining land use of the mine plan area.

(b) (1) The ground cover and productivity of living plants on the revegetated area shall be equal to the ground cover and productivity of living plants on the same approved reference area before mining for—

(i) Each year of a period of 5 full consecutive years after the last year of augumented seeding, fertilizing, irrigation, or other major work that ensures success in areas of more than 26.0 inches average annual precipitation; or

(ii) Each year of a period of 10 full consecutive years after the last year of augumented seeding, fertilizing, irrigation, or other major work that ensures success in areas of less than or equal to 26.0 inches average annual precipitation.

(2) For purposes of paragraph (b)(1)(i) and (ii) of this section, the average annual precipitation shall be determined either—

(i) By interpolation, using standard interpolation techniques, from "Mean Annual Precipitations," Map, p. 97, The National Atlas of the United States, U.S. Department of the Interior, Geological Survey, 1970. This work is hereby incorporated by reference as it exists on the date of adoption of this Subchapter. Notices of changes in this Atlas will periodically be published in the FEDERAL REGISTER. The Atlas is available at all OSM offices and is on file in the Office of the Federal Register; or

(ii) Based on 10 years of continuous and reliable precipitation records from stations located in or adjacent to the permit area.

(3) The ground cover or productivity shall be considered equal if it is at least 90 percent of the ground cover or productivity of the reference area with 90 percent statistical confidence and with 80 percent statistical confidence on shrublands for any significant portion of the mined area. A lower percentage of ground cover and productivity may be authorized by the regulatory authority under the following standards:

(i) For previously mined areas that are not reclaimed to the performance standards in this Subchapter, the ground cover of living plants for the areas shall not be less than can be supported by the best available topsoil and overburden in the mine plan area and in no case less than that existing before redisturbance;

(ii) For areas to be developed for industrial or residential use less than 2 years after regrading is completed the ground cover of living plants shall not be less than required to control erosion; and

(iii) Success in revegetation of cropland shall be determined on the basis of crop production from the mined area compared to the reference area. Crop production from the mined area shall be equal to that of the approved reference area for a minimum of two growing seasons. Production shall not be considered equal if it is less than 90 percent of the production of the reference area for any significant portion of the mined area.

(c) The person who conducts surface mining activities shall—

(1) Maintain any necessary fences and proper management practices; and

(2) Conduct periodic measurements of vegetation, soils, and water prescribed or approved by the regulatory authority to identify conditions during the applicable period of liability specified in paragraph (b) of this section.

(d) For permit areas 40 acres or less in size in locations with an average annual precipitation of more than 26 inches, the following performance standards, when approved by the regulatory authority, may be used instead of reference areas to measure success of revegetation on sites that are disturbed. These standards shall be met for a minimum of 5 full consecutive years.

(1) Areas planted only in herbaceous species shall sustain a vegetative ground cover of 70 percent for 5 full consecutive years.

(2) Areas planted with a mixture of herbaceous and woody species shall sustain a herbaceous vegetative ground cover of 50 percent for 5 full consecutive years and 400 woody plants per acre after 5 years. On steep slopes, the minimum number of woody plants shall be 600 per acre.

(3) For purposes of this section, herbaceous species means grasses, legumes, and nonleguminous forbs;

(ii) Stand size;
(iii) Stand condition;
(iv) Site and species relations; and

§ 816.132 Cessation of operations: Permanent.

(a) Each person who intends to per-

policies and plans is submitted to the regulatory authority before surface

post-mining cropland use, where the cropland would require continuous

817.54 Hydrologic balance: Water rights and replacement.
817.55 Hydrologic balance: Discharge of

(3) For purposes of this section, herbaceous species means grasses, legumes, and nonleguminous forbs; woody plants means woody shrubs, trees and vines; and ground cover means the area of ground covered by the combined aerial parts of vegetation and the litter that is produced naturally onsite, expressed as a percentage of the total area of measurement.

§ 816.117 Revegetation: Tree stocking for forest land.

This section sets forth forest resource conservation standards for reforested operations to ensure that a cover of trees of commercial species, sufficient to adequately use the available growing space, is established after surface mining activities.

(a) The following are the minimum acceptable stocking standards for areas east of the 100th meridian west longitude as measured 5 years after planting:

(1) The area shall contain an average point count of 600 trees per acre, to be computed as follows:

(i) 600 established trees of commercial species per acre at least 3 years of age each one to count as one toward meeting the stocking requirement; and

(ii) Root crown or root sprouts over 1 foot in height shall count as one toward meeting the stocking requirement.

(2) Rock areas, permanent roads, and surface water drainage ways in forest land shall not require stocking.

(3) A "countable tree" means a tree that can be used in calculating the degree of stocking under the following criteria:

(i) The tree shall be in place at least 3 growing seasons.

(ii) The tree shall be alive and healthy.

(iii) The tree shall have at least one-third of its length in live crown.

(iv) The tree shall be a commercial species which the regulatory authority determines will produce commercial trees physiologically suited for the area.

(4) Stocking means a measure of the degree to which space is occupied by well-distributed countable trees.

(b) The following are the minimum performance standards for areas west of the 100th meridian west longitude where shelterbelts, wildlife habitat, commercial forest land, or other forest land are the approved post-mining land use.

(1) A pre-mining- and post-mining vegetation inventory of trees, shrubs, and half-shrubs shall be conducted on established reference areas according to methods approved by the regulatory authority. This inventory shall contain, but not be limited to—

(i) Site quality;

(ii) Stand size;

(iii) Stand condition;

(iv) Site and species relations; and

(v) Appropriate forest land utilization considerations.

(2) Appropriate trees, shrubs, and half-shrubs on the revegetated area shall be measured using the approved methods after the vegetation has been established according to the approved mining and reclamation plan. The density, number per unit area, of live woody plants which have been in place at least 3 years on the rehabilitated area shall be equal to or greater than 90 percent of the density of live woody plants of the same life form (trees vs. shrubs and half-shrubs) on the reference area with 90 percent statistical confidence. When this ground cover requirement is met, the 5 or 10 year responsibility period required in section 816.116 shall begin.

(3) Upon expiration of the 5 or 10 year responsibility period and at the time of request for bond release, each person who conducts surface mining activities shall provide documentation required in paragraph (b)(2) of this section showing that the woody plants established on the rehabilitated site meet the requirements of the approved mining and reclamation plan. Species diversity, distribution, seasonal variety, vigor, and regenerative capacity of the vegetation of the revegetated area shall be evaluated on the basis of the results which could reasonably be expected using the methods of revegetation in the approved mining and reclamation plan.

§ 816.131 Cessation of operations: Temporary.

(a) Each person who conducts surface mining activities shall, in areas in which there are no current operations, but in which operations are to be resumed under an approved plan, effectively support and close all surface access openings to underground operations, and secure surface facilities. Temporary abandonment shall not relieve a person of his obligation to comply with provisions of the approved mining and reclamation operations permit.

(b) Before temporary cessation of operations and reclamation, each person who conducts surface mining activities shall submit to the regulatory authority a notice of intention to cease or abandon operations and reclamation. This notice shall include a statement of the exact number of acres affected in the permit area, the extent and kind of reclamation accomplished, and identification of the regrading, revegetation, environmental monitoring, and water treatment activities that will continue during the temporary cessation.

§ 816.132 Cessation of operations: Permanent.

(a) Each person who intends to permanently cease surface mining activities shall close or backfill or otherwise permanently reclaim all affected areas in accordance with this Chapter and the plan approved by the regulatory authority.

(b) All equipment, structures, or other facilites not required for continued surface mining activities and monitoring unless approved as suitable for the post-mining land use, shall be removed and the affected land reclaimed.

§ 816.133 Post-mining land use.

(a) *General.* All affected areas shall be restored in a timely manner—

(1) To conditions that are capable of supporting the uses which they were capable of supporting before any mining; or

(2) To higher or better uses achievable under criteria and procedures of this section.

(b) *Determining pre-mining use of land.* The pre-mining uses of land to which the post-mining land use is compared shall be those uses which the land previously supported if the land had not been previously mined and had been properly managed.

(1) The post-mining land use for land that has been previously mined and not reclaimed shall be judged on the basis of the highest and best use that can be achieved and is compatible with surrounding areas.

(2) The post-mining land use for land that has received improper management shall be judged on the basis of the pre-mining use of surrounding lands that have received proper management.

(3) If the premining use of the land was changed within 5 years of the beginning of mining, the comparison of post-mining use to pre-mining use shall include a comparison with the historic use of the land as well as its use immediately preceding mining.

(c) Before permanent abandonment, the permit area shall be restored, in a timely manner, either to conditions capable of supporting the uses they were capable of supporting before any mining or to conditions capable of supporting approved alternative land uses. Alternative land uses may be approved by the regulatory authority after consultation with the landowner or the land-management agency having jurisdiction over the lands, if the following criteria are met:

(1) The proposed post-mining land use is compatible with adjacent land use and, where applicable, with existing local, State, or Federal land use policies and plans; a written statement of the views of the authorities with statutory responsibilities for land use

policies and plans is submitted to the regulatory authority before surface mining activities began; any required approval of local, State, or Federal land management agencies, including any necessary zoning or other changes required for the land use, is obtained and remains valid throughout the surface mining activities;

(2) Specific plans are prepared and submitted to the regulatory authority which show the feasibility of the post-mining land use as related to needs, projected land use trends, and markets and that include a schedule showing how the proposed use will be developed and achieved within a reasonable time after mining and be sustained. The regulatory authority may require appropriate demonstrations to show that the planned procedures are feasible, reasonable, and integrated with mining and reclamation, and that the plans will result in successful reclamation;

(3) Provision of any necessary public facilities is ensured as evidenced by letters of commitment from parties other than the person who conducts surface mining activities, as appropriate, to provide the public facilities in a manner compatible with the plans submitted under 30 CFR 780.23. The letters shall be submitted to the regulatory authority before surface mining activities begin;

(4) Specific and feasible plans are submitted to the regulatory authority which show that financing and attainment and maintenance of the post-mining land use are feasible and are supported by letters of commitment from parties other than the person who conducts the surface mining activities;

(5) Plans for the post-mining land use are designed under the general supervision of a registered professional engineer, or other appropriate professional, who will ensure that the plans conform to applicable accepted standards for adequate land stability, drainage, and vegetative cover, and esthetic design appropriate for the post-mining use of the site;

(6) The proposed use will neither present actual or probable hazard to public health or safety nor will it pose any actual or probable threat of water flow diminution or pollution;

(7) The use will not involve unreasonable delays in reclamation;

(8) Necessary approval of measures to prevent or mitigate adverse effects on fish, wildlife and related environmental values is obtained from the regulatory authority and appropriate State and Federal fish and wildlife management agencies before surface mining activities begin; and

(9) Proposals to change pre-mining land uses of range, fish and wildlife forest land, hayland, or pasture to a post-mining cropland use, where the cropland would require continuous maintenance such as seeding, plowing, cultivation, fertilization, or other similar practices to be practicable or to comply with applicable Federal, State, and local laws, are reviewed by the regulatory authority to ensure that—

(i) There is a firm written commitment by the person who conducts surface mining activities or by the landowner or land manager to provide sufficient crop management after release of applicable performance bonds to assure that the proposed post-mining cropland use remains practical and reasonable;

(ii) There is sufficient water available and committed to maintain crop production; and

(iii) Topsoil quality and depth are sufficient to support the proposed use.

PART 817—PERMANENT PROGRAM PERFORMANCE STANDARDS—UNDERGROUND MINING ACTIVITIES

Sec.
817.1 Scope.
817.2 Objectives.
817.11 Signs and markers.
817.13 Casing and sealing of underground openings: General requirements.
817.14 Casing and sealing of underground openings: Temporary.
817.15 Casing and sealing of underground openings: Permanent.
817.21 Topsoil: General requirements.
817.22 Topsoil: Removal.
817.23 Topsoil: Storage.
817.24 Topsoil: Redistribution.
817.25 Topsoil: Nutrients and soil amendments.
817.31 Roads and associated structures: General requirements.
817.32 Road construction: Location.
817.33 Road construction: Erosion control.
817.34 Road construction: Drainage.
817.35 Road construction: Surfacing.
817.36 Other transportation facilities.
817.38 Restoration of roads.
817.39 Support facilities and utility installations.
817.41 Hydrologic balance: General requirements.
817.42 Hydrologic balance: Water quality standards and effluent limitations.
817.43 Hydrologic balance: Diversions and conveyance of overland flow and shallow ground water flow.
817.44 Hydrologic balance: Stream channel diversions.
817.45 Hydrologic balance: Sediment control measures.
817.46 Hydrologic balance: Sedimentation ponds.
817.47 Hydrologic balance: Discharge structures.
817.48 Hydrologic balance: Acid-forming and toxic-forming materials.
817.49 Hydrologic balance: Permanent and temporary impoundments.
817.50 Hydrologic balance: Ground water protection.
817.52 Hydrologic balance: Surface and ground water monitoring.
817.53 Hydrologic balance: Transfer of wells.
817.54 Hydrologic balance: Water rights and replacement.
817.55 Hydrologic balance: Discharge of water into an underground mine.
817.56 Hydrologic balance: Post-mining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.
817.57 Hydrologic balance: Stream buffer zones.
817.59 Coal recovery.
817.61 Use of explosives: General requirements.
817.62 Use of explosives: Preblasting survey.
817.65 Use of explosives: Surface blasting requirements.
817.67 Use of explosives: Seismograph measurements.
817.68 Use of explosives: Records of blasting operations.
817.71 Disposal of underground development waste and excess spoil: General requirements.
817.72 Disposal of underground development waste and excess spoil: Valley fills.
817.73 Disposal of underground development waste and excess spoil: Head-of-hollow fills.
817.81 Coal processing waste: General requirements.
817.82 Coal processing waste banks: Site inspection.
817.83 Coal processing waste banks: Water control measures.
817.85 Coal processing waste banks: Construction requirements.
817.86 Coal processing waste: Burning.
817.87 Coal processing waste: Burned waste utilization.
817.88 Coal processing waste: Return to underground workings.
817.89 Disposal of non-coal wastes.
817.91 Coal processing waste: Dams and embankments: General requirements.
817.92 Coal processing waste: dams and embankments. Site preparation.
817.93 Coal processing waste: Dams and embankments: Construction.
817.95 Air resources protection.
817.97 Protection of fish, wildlife and related environmental values.
817.99 Slides and other damage.
817.100 Contemporaneous reclamation.
817.101 Backfilling and grading: General requirements.
817.102 Backfilling and grading: General. grading requirements.
817.103 Backfilling and grading: Covering coal and acid- and toxic-forming materials.
817.106 Regrading or stabilizing rills and gullies.
817.111 Revegetation: General requirements.
817.112 Revegetation: Use of introduced species.
817.113 Revegetation: Timing.
817.114 Revegetation: Mulching.
817.115 Revegetation: Grazing.
817.116 Revegetation: Standards for success.
817.117 Revegetation: Tree stocking for forest land.
817.121 Subsidence control: General requirements.
817.122 Subsidence control: Public notice.
817.123 Subsidence control: Pre-mining survey.
817.124 Subsidence control: Surface owner protection.
817.125 Subsidence control: Monitoring.

817.126 Subsidence control: Buffer zones.
817.131 Cessation of operations: Temporary.

(f) *Blasting signs.* If blasting is conducted incident to underground mining activities, the person who conducts surface mining activities shall, at each entrance to the permit area from a public road or highway, place conspicuous signs which state that explosives are in use and which state the meaning of the audible blast warning signal and the location where a copy of the regulatory authority's blasting schedule is available.

(g) *Records of blasting operations.* A record of each blast shall be retained for a period of at least 3 years and shall be available for inspection by the regulatory authority upon request. The record shall contain the following data:

(1) Name of the operator conducting the blast.

(2) Location, date, and time of the blast.

(3) Name, signature, and certification number of the blaster conducting the blast.

(4) Direction and distance in feet to the nearest dwelling, school, church or commercial or institutional building neither owned nor leased by the person who conducts the surface mining activities.

(5) Weather conditions, including those which may cause possible adverse blasting effects.

(6) Type of material blasted.

(7) Number of holes, burden and spacing.

(8) Diameter and depth of holes.

(9) Types of explosives used.

(10) Total weight of explosives used per hole.

(11) Maximum weight of explosives detonated within any 8 millisecond period.

(12) Initiation system.

(13) Type and length of stemming.

(14) Mats or other protections used.

(15) Seismograph records, where required, including reference point and distance to the nearest dwelling, school, church or commercial or institutional building neither owned nor leased by the person who conducts the surface mining activities, and the maximum particle velocity and the seismograph system frequency range recorded in each component.

(16) Type of detonation.

(17) Remarks, including any unusual occurrences noted during blasting.

(h) *Seismographic measurements.* (1) Seismographic measurements shall be made for each blast, except as provided in paragraph (h)(2) of this section, unless the regulatory authority requires a different procedure based on the proximity of the blasting to structures and the geology of the site.

(2) A seismograph record shall be obtained for each blast that is conducted within 1,000 feet of any dwelling, school, church or commercial or institutional building neither owned nor leased by the person who conducts the surface mining activities. If the regulatory authority determines that a greater distance than 1,000 feet is necessary to protect such structures from damage, a seismograph record shall be obtained for each blast that is conducted within the greater distance specified by the regulatory authority.

(3) The seismograph shall be operated and located so as to record the particle velocity of the ground motion caused by the blasting at the nearest dwelling, school, church or commercial or institutional building neither owned nor leased by the person who conducts the surface mining activities, or at any other location specified by the regulatory authority.

(4) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(5) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(6) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(7) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(8) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(9) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(10) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(11) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(12) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(13) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(14) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(15) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(16) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(17) The seismograph shall be operated and located so as to record particle velocity in each component direction.

(1) It is demonstrated to the regulatory authority by the results of chemical and physical analyses of overburden and by the results of trial backfilling that the proposed backfilling and grading operations will not cause the formation of toxic drainage;

(2) All toxic-forming materials will be adequately covered with nontoxic material; and

(3) The backfilling and grading will not create a hydrologic regime that will adversely affect the water quality or quantity of surface water drainage or ground water supplies.

(b) *Cut-and-fill terraces.* Cut-and-fill terraces may be allowed by the regulatory authority only in those areas where the operator demonstrates that the terraces are needed to conserve soil moisture, control erosion, or to facilitate the functional use of the land after reclamation.

(c) *Final highwalls.* Final highwalls may be left in place after mining is completed only if the operator demonstrates that it is impossible to reclaim the highwall by backfilling and grading to the approximate original contour. The highwall shall be covered with nontoxic and nonacid-forming material, and the highwall shall be stable.

§ 817.106 Regrading or stabilizing rills and gullies.

Rills and gullies which form in areas that have been regraded and topsoiled and which exceed 9 inches in depth shall be filled, regraded, or otherwise stabilized and the area retopsoiled and revegetated in accordance with §§ 817.22 and 817.111-817.116. Rills and gullies which form in areas that have been regraded and topsoiled and which are nine inches or less in depth shall be stabilized and the topsoil shall be redistributed and revegetated in accordance with §§ 817.22 and 817.111-817.116.

§ 817.111 Revegetation: General requirements.

(a) Each person who conducts surface mining activities shall establish on all areas affected by surface mining activities a vegetative cover that is in accordance with this section and sufficient for the approved post-mining land use, except that areas to be used for industrial, commercial, residential, or public purposes shall be stabilized and protected from erosion.

(b) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(c) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(d) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.112 Revegetation: Use of introduced species.

(a) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(b) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(c) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.113 Revegetation: Timing.

(a) Each person who conducts surface mining activities shall establish on all areas affected by surface mining activities a vegetative cover that is in accordance with this section and sufficient for the approved post-mining land use, except that areas to be used for industrial, commercial, residential, or public purposes shall be stabilized and protected from erosion.

(b) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(c) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(d) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.114 Revegetation: Mulching.

(a) Each person who conducts surface mining activities shall establish on all areas affected by surface mining activities a vegetative cover that is in accordance with this section and sufficient for the approved post-mining land use, except that areas to be used for industrial, commercial, residential, or public purposes shall be stabilized and protected from erosion.

(b) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(c) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(d) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.115 Revegetation: Grazing.

(a) Each person who conducts surface mining activities shall establish on all areas affected by surface mining activities a vegetative cover that is in accordance with this section and sufficient for the approved post-mining land use, except that areas to be used for industrial, commercial, residential, or public purposes shall be stabilized and protected from erosion.

(b) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(c) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(d) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.116 Revegetation: Standards for success.

(a) Each person who conducts surface mining activities shall establish on all areas affected by surface mining activities a vegetative cover that is in accordance with this section and sufficient for the approved post-mining land use, except that areas to be used for industrial, commercial, residential, or public purposes shall be stabilized and protected from erosion.

(b) Introduced species may be planted in mixture with native species to diversify revegetation, provide for wildlife habitat, control erosion, or stabilize the area during the period of establishment. Introduced species shall be compatible with the approved post-mining land use.

(c) Each person who conducts surface mining activities shall select, prepare, and plant the vegetative species in accordance with the approved mining and reclamation plan. The species and amounts per acre of seeds and seedlings shall be those approved by the regulatory authority.

(d) Each person who conducts surface mining activities shall protect vegetation from excessive fire, insects, disease, and grazing.

§ 817.117 Revegetation: Tree stocking for forest land.

This section sets forth forest resource conservation standards for reforested operations to ensure that a cover of trees of commercial species, sufficient to adequately use the available growing space, is established after surface mining activities.

(a) The following are the minimum acceptable stocking standards for areas east of the 100th meridian west longitude as measured 5 years after planting:

(1) The area shall contain an average point count of 600 trees per acre, to be computed as follows:

(i) 600 established trees of commercial species per acre at least 3 years of age each one to count as one toward meeting the stocking requirement; and

(ii) Root crown or root sprouts over 1 foot in height shall count as one toward meeting the stocking requirement.

(2) Rock areas, permanent roads, and surface water drainage ways in forest land shall not require stocking.

(3) A "countable tree" means a tree that can be used in calculating the degree of stocking under the following criteria:

(i) The tree shall be in place at least 3 growing seasons.

(ii) The tree shall be alive and healthy.

(iii) The tree shall have at least one-third of its length in live crown.

(iv) The tree shall be a commercial species which the regulatory authority determines will produce commercial trees physiologically suited for the area.

(4) Stocking means a measure of the degree to which space is occupied by well-distributed countable trees.

(b) The following are the minimum performance standards for areas west of the 100th meridian west longitude where shelterbelts, wildlife habitat, commercial forest land, or other forest land are the approved post-mining land use.

(1) A pre-mining- and post-mining vegetation inventory of trees, shrubs, and half-shrubs shall be conducted on established reference areas according to methods approved by the regulatory authority. This inventory shall contain, but not be limited to—

(i) Site quality;

(ii) Stand size;

(iii) Stand condition;

(iv) Site and species relations; and

(v) Appropriate forest land utilization considerations.

(2) Appropriate trees, shrubs, and half-shrubs on the revegetated area shall be measured using the approved methods after the vegetation has been established according to the approved mining and reclamation plan. The density, number per unit area, of live woody plants which have been in place at least 3 years on the rehabilitated area shall be equal to or greater than 90 percent of the density of live woody plants of the same life form (trees vs. shrubs and half-shrubs) on the reference area with 90 percent statistical confidence. When this ground cover requirement is met, the 5 or 10 year responsibility period required in section 816.116 shall begin.

(3) Upon expiration of the 5 or 10 year responsibility period and at the time of request for bond release, each person who conducts surface mining activities shall provide documentation required in paragraph (b)(2) of this section showing that the woody plants established on the rehabilitated site meet the requirements of the approved mining and reclamation plan. Species diversity, distribution, seasonal variety, vigor, and regenerative capacity of the vegetation of the revegetated area shall be evaluated on the basis of the results which could reasonably be expected using the methods of revegetation in the approved mining and reclamation plan.

817.126 Subsidence control: Buffer zones.
817.131 Cessation of operations: Temporary.
817.132 Cessation of operations: Permanent.
817.133 Post-mining land use.

AUTHORITY: Sections 102, 201, 501, 503, 504, 507, 508, 516, 517, 519, 701, 717 and 719, Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 474, 478, 495, 498, 501, 516, 526 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1257, 1258, 1266, 1267, 1269, 1291, 1307, 1309).

§ 817.1 Scope.

This Part sets forth the minimum performance standards for underground mining activities.

§ 817.2 Objectives.

This part is intended to ensure that all underground mining activities are conducted in a manner which preserves and enhances environmental and other values in accordance with the Act.

§ 817.11 Signs and markers.

(a) *Specifications.* Each sign and marker required to be posted under this Part shall—

(1) Be of a uniform design throughout the operation that can be seen and read easily;

(2) Be made of durable material; and

(3) Conform to each local ordinance and code.

(b) *Duration of maintenance.* Each person who conducts underground mining activities shall maintain signs and markers during all activities to which they pertain.

(c) *Mine and permit identification signs.*

(1) Each person who conducts underground mining activities shall display identification signs at all points of access from each public road and highway to surface areas associated with underground mining activities.

(2) The signs shall show the name, business address, and telephone number of the person who conducts underground mining activities and the identification number of each current permit authorizing underground mining activities.

(3) Each sign shall not be removed until after the release of all bonds.

(d) *Perimeter markers.* Each person who conducts underground mining activities shall clearly mark the perimeters of all areas affected by surface operations or facilities before submitting a permit application.

(e) *Buffer zone markers.* Each person who conducts underground mining activities shall mark all buffer zones, as required by section 817.57. Each buffer zone marker shall be designed and placed in the same manner as the perimeter markers. Each buffer zone marker shall be located along the boundary of the buffer zone.

(f) *Blasting signs.* If blasting is conducted incident to underground mining activities, the person who conducts those activities shall conspicuously display:

(1) Signs reading "Blasting Area" at the edge of blasting areas along roads within the permit area; and

(2) Signs clearly explaining the blasting warning and all-clear signals at all entrances to the permit area from each public road or highway.

(g) *Topsoil markers.* Where topsoil or other vegetation-supporting material is required to be segregated and stockpiled under section 817.23, the person who conducts the underground mining activities shall clearly mark the stockpiled material.

§ 817.13 Casing and sealing of underground openings: General requirements.

Each borehole, shaft, well, or other underground opening shall be cased, lined, or otherwise managed to prevent pollution and mixing of surface or ground water, and to ensure the safety of people, livestock, wildlife, and machinery in the area where these openings could be a hazard. Each borehole and well that is within the permit area shall be permanently closed, in a manner approved by the regulatory authority unless the opening is approved for monitoring. This section does not apply to holes drilled and used for blasting, in the area affected by surface operations.

§ 817.14 Casing and sealing of underground openings: Temporary.

(a) Each mine entry which is temporarily inactive but has a projected useful service under the approved mine plan shall be protected by barricades or other covering devices, shall be fenced, and signs shall be posted to prevent access into the entries and to identify the hazardous nature of the opening. Any barricade, fence, or other protective device shall be periodically inspected and maintained in good operating condition by the person who conducts the underground mining activities.

(b) Each borehole, shaft, or well which has been identified in the approved mining and reclamation plan to be used for the return of underground development waste, coal processing waste or water to the underground workings or to be used to monitor ground water conditions shall be temporarily sealed prior to use.

§ 817.15 Casing and sealing of underground openings: Permanent.

When no longer needed for mining, each shaft, drift, adit, tunnel, exploratory hole, entryway, or other opening to the surface shall be capped, sealed or backfilled, as required by the regulatory authority consistent with 30 CFR 75.1711 except as otherwise approved by the regulatory authority. Closure measures shall be of a permanent design to prevent access to the mine workings by people and animals and to prevent the flow of water except as otherwise approved by the regulatory authority.

§ 817.21 Topsoil: General requirements.

(a) Before disturbance of areas affected by surface operations or facilities, topsoil and subsoils to be saved under section 817.22 shall be removed from the area as a separate operation and segregated from other material.

(b) After removal, topsoil shall either be immediately redistributed in accordance with section 817.24 or stockpiled pending redistribution, if permissible under section 817.23.

§ 817.22 Topsoil: Removal.

(a) *Timing.* Topsoil shall be removed from areas to be affected by surface operations after the vegetative cover that would interfere with the use of the topsoil is cleared but before any drilling for blasting, mining, or other surface disturbance of areas designated for mine entries, superstructures, coal processing facilities, roads, storage areas, and other major structures incident to underground mining.

(b) *Materials to be removed.* All topsoil shall be removed unless use of alternative materials is approved by the regulatory authority to be segregated in accordance with paragraph (e) of this section. If use of alternative material is approved, all materials to be redistributed shall be removed.

(c) *Additional material to be removed in thin topsoil situations.* If the topsoil is less than 6 inches, a 6 inch layer that includes the A horizon and the unconsolidated materials immediately below the A horizon, or the A horizon and all unconsolidated material if the total available is less than 6 inches, shall be removed and the mixture segregated and replaced as the surface soil layer.

(d) *Subsoil segregation.* The B horizon and portions of the C horizon or other underlying layers demonstrated to have qualities for root development comparable to the B or C horizons shall be segregated and replaced as subsoil if the regulatory authority determines that the segregation and replacement is necessary or desirable to ensure soil productivity consistent with the approved post-mining land use.

(e) *Topsoil substitutes and supplements.* Selected overburden materials may be substituted for, or used as a supplement to, topsoil where the resulting soil medium is equal to or more suitable for vegetation, and if all the following requirements have been met:

(1) It is demonstrated to the regulatory authority by the results of chemical and physical analyses of overburden and topsoil that the selected overburden materials or an overburden and topsoil mixture is more suitable for restoring land capability and productivity and that it is the best available material to support and sustain the approved vegetation. These analyses shall include determinations of pH, sulfide content that when oxidized will lower the pH, percent organic material, nitrogen, phosphorus, potassium, texture class, and water-holding capacity, and such other analyses as required by the regulatory authority. The regulatory authority may also require that results of field-site trials or greenhouse tests be used to demonstrate the feasibility of using such overburden materials.

(2) The chemical and physical analyses and the results of field-site trials and greenhouse tests submitted to the regulatory authority shall be accompanied by a certification from a qualified soil scientist or agronomist stating, on the basis of the test results, that the proposed substitute material is equal to or more suitable for sustaining the vegetation than is the available topsoil, that the substitute material is the best available material to support the vegetation, and that the tests and analyses were conducted under his or her supervision and used standard testing procedures.

(3) The tests and analyses shall be conducted by a laboratory approved by the regulatory authority.

(4) The alternative material shall be removed, segregated, and replaced in compliance with the requirements for topsoil under this section.

(f) *Limits on topsoil removal area.* Where the removal of vegetative material, topsoil, or other materials may result in erosion which may cause air or water pollution, the person who conducts underground mining activities shall—

(1) Limit the size of the area from which topsoil is removed at any one time;

(2) Redistribute the surface soil layer at a time when the physical and chemical properties of topsoil can be protected and erosion can be minimized; and

(3) Take such other measures as the regulatory authority may approve or require.

§ 817.23 Topsoil: Storage.

(a) The topsoil and other materials removed under section 817.22 shall be stockpiled only when it is impractical to promptly redistribute such materials on regraded areas.

(b) The stockpiled materials shall be placed on a stable area within the permit area where the materials shall not be disturbed or exposed to excessive water or wind erosion, or contaminants which lessen their capability to support vegetation before they can be redistributed.

(1) Stockpiles shall be selectively placed and protected from wind and water erosion, unnecessary compaction, and contamination by undesirable materials either by—

(i) An effective cover of nonnoxious, quick-growing annual and perennial plants, seeded or planted during the first normal period for favorable planting conditions; or

(ii) By other methods demonstrated to and approved by the regulatory authority to provide equal protection.

(2) Unless approved by the regulatory authority, stockpiled topsoil and other materials shall not be moved until required for redistribution on a disturbed area.

§ 817.24 Topsoil: Redistribution.

(a) After final grading and before the replacement of topsoil and other materials segregated in accordance with section 817.23, regraded land shall be scarified or otherwise treated to eliminate slippage surfaces and to promote root penetration. If the person who conducts underground mining activities shows, through appropriate tests, and the regulatory authority approves that no harm will be caused to the topsoil and vegetation, the scarification may be conducted after topsoiling.

(b) Topsoil and other materials shall be redistributed in a manner that—

(1) Achieves an approximate uniform, stable thickness consistent with the post-mining land uses, slopes, aspects, and surface drainage system.

(2) Prevents excess compaction of the topsoil; and

(3) Protects the topsoil from wind and water erosion before and after it is seeded and planted.

§ 817.25 Topsoil: Nutrients and soil amendments.

Nutrients and soil amendments in the amounts determined by soil tests shall be applied to the redistributed surface soil layer so that it supports the post-mining land use approved by the regulatory authority and meets the revegetation requirements of sections 817.11–817.17. All soil tests shall be performed by a laboratory approved by the regulatory authority and certified by a qualified agronomist or soil scientist.

§ 817.31 Roads and associated structures: General requirements.

(a) Each person who conducts underground mining activities shall design, construct, utilize, maintain, and reclaim all roads, road rights-of-way, and associated structures to meet the requirements of sections 817.32–817.35, 817.38, and 817.95 to control or prevent erosion and siltation, air and water pollution, and damage to public or private property.

(1) To the extent possible using the best technology currently available, roads, road rights-of-way, associated structures, and other transportation facilities shall not cause damage to fish, wildlife and related environmental values and shall not cause additional contributions of suspended solids to streamflow, or to runoff outside the permit area. In no event shall contributions of suspended solids be in excess of limitations set by applicable State or Federal law.

(2) All roads shall be removed and the land affected regraded and revegetated in accordance with the requirements of section 817.38 unless—

(i) Retention of the road is approved as part of the approved post-mining land use or as being necessary to control erosion adequately;

(ii) The necessary maintenance is assured; and

(iii) All drainage shall be controlled according to section 817.34.

§ 817.32 Road construction: Location.

(a) All surface roads shall be located insofar as possible on ridges or on the flattest and most stable available slopes to minimize erosion. Except as otherwise specifically authorized in this section, no part of any road shall be located in the channel of a perennial stream. Stream fords are prohibited unless they are specifically approved by the regulatory authority as temporary routes across non-flowing streams that will not adversely affect sedimentation or fish, wildlife and related environmental values and that will not be used for coal haulage. All other stream crossings shall be made using bridges, culverts, or other structures designed, constructed, and maintained to meet the requirements of this section. Roads shall not be constructed in a manner that increases erosion or causes additional downstream sedimentation or flooding.

§ 817.33 Road construction: Erosion control.

In order to control erosion and subsequent disturbance of the hydrologic balance, roads shall be designed, constructed, and maintained in compliance with the following:

(a) *Vertical alignment.* Except where the regulatory authority requires lesser grades to control erosion, road grades shall be as follows:

(1) The overall grade shall not exceed $1v:10h$ (10 percent).

(2) The maximum grade shall not exceed $1v:6.5h$ (15 percent).

(3) There shall not be more than 300 feet of grade exceeding 10 percent

within any consecutive 1,000 feet of road constructed.

eling equipment over the layers already in place and by distributing the travel over the entire width of the em-

installed in the drainage ditches wherever debris from the drainage area could impair the functions of drainage

storm or larger event as specified by the regulatory authority.

storage facilities, equipment storage facilities, sheds, shops, and other buildings, shall be designed, construct-

(iii) Achieving quickly germinating and growing stands of temporary vegetation;

within any consecutive 1,000 feet of road constructed.

(4) The road surface shall be sloped toward the ditch line at the minimum rate of one-half inch per foot of surface width or crowned at the minimum rate of one-half inch per foot of surface width as measured from the centerline of the road.

(b) *Road cuts.* This paragraph applies to roads that are to remain in place and in use for more than 5 years or that are to remain as part of the approved post-mining land use. Cut slopes shall not be steeper than specifically authorized by the regulatory authority. The regulatory authority shall not authorize slopes steeper than $1v:1.5h$ in unconsolidated materials or $1v:0.25h$ in rock, except that steeper slopes may be specifically authorized by the regulatory authority if geotechnical analysis demonstrates that a minimum safety factor of 1.5 can be maintained.

(c) *Road embankments.* This paragraph applies to roads that are to remain in place and in use for more than 5 years or that are to remain as part of the approved post-mining land use. Embankment sections shall be constructed in accordance with the following provisions:

(1) All vegetative materials and topsoil shall be removed from the embankment foundation to ensure stability, and no vegetative materials or topsoil shall be placed beneath or in any road embankment.

(2) When an embankment is to be placed on side slopes exceeding $1v:5h$ (20 percent) the existing ground shall be plowed, stepped, and keyed in a manner which ensures the stability of the fill. The minimum dimensions of the keyway shall be 10 feet wide and 2 feet deep below the toe of fill. No material shall be placed, or allowed to slide, below the toe.

(3) Material containing by volume less than 25 percent of rock larger than 6 inches in greatest dimension shall be spread in successive horizontal layers not exceeding 12 inches in thickness before compaction.

(4) Where the material for an embankment consists of rock, broken stone, or fragmented material of a size that makes placing in 12-inch layers impossible under paragraph (c)(3) of this section, the embankment shall be constructed in layers less than 24 inches in thickness, provided the individual pieces are placed so that there is no nesting and all the voids are filled with finer material.

(5) Each layer of the embankment shall be completed, leveled, and compacted before the succeeding layer is placed. Loads of material shall be leveled as placed and kept smooth. The successive layers shall be compacted evenly by routing the hauling and leveling equipment over the layers already in place and by distributing the travel over the entire width of the embankment. This routine shall be continued until no visual horizontal movement of the embankment material is apparent.

(6) Successive lifts shall not be placed until the previous layer is compacted to achieve a density throughout the preceding lift thickness of at least 90 percent of the maximum dry density determined in accordance with American Association of State Highway and Traffic Officers (AASHTO) T-99. The AASHTO technical specification T-99 mentioned in this paragraph is hereby incorporated by reference. This work is incorporated as it exists on the date of adoption of this Part and notices of changes made in these materials will periodically be published in the FEDERAL REGISTER. AASHTO technical specification T-99 is available for inspection at OSM's Offices in OSM regional offices and in OSM's Office in the Department of the Interior, 18th and C Streets, N.W., Washington, D.C. 20240.

(7) Material shall be placed in an embankment only when its moisture content is within 4 percent of the optimum moisture content determined in accordance with AASHTO T-99.

(8) Embankment slopes shall not be steeper than $1v:2h$.

(9) The minimum safety factor for all embankments shall be 1.25, or such higher safety factor as the regulatory authority may specify.

(d) *Natural drainage.* Natural drainways shall not be altered or relocated for the purposes of road construction without the prior approval of the regulatory authority. The regulatory authority may approve alterations and relocations only if—

(1) The natural drainage is not blocked;

(2) No damage occurs to the hydrologic balance; and

(3) There is no adverse impact on adjoining landowners.

§ 817.34 Road construction: Drainage

(a) *General.* (1) Each road shall be designed, constructed, and maintained to have adequate drainage using structures such as, but not limited to, ditches, cross drains, and ditch relief drains. For roads that are to be maintained for more than 1 year, the water-control system shall be designed to safely pass the peak runoff from a 10-year 24-hour precipitation event or greater if required by the regulatory authority. Drainage pipe and culverts shall be constructed to avoid plugging or collapse and erosion at inlets and outlets. Drainage ditches shall be placed at the toe of all cut slopes formed by construction or roads. Trash racks and debris basins shall be installed in the drainage ditches wherever debris from the drainage area could impair the functions of drainage and sediment control structures.

(2) All drainage from roads and associated drainage structures shall pass through sediment control devices such as sedimentation ponds, sediment traps, vegetation filter strips, vegetated drains, straw dikes, mulches, check drains, and dugout ponds.

(b) *Ditches.* A ditch shall be provided on both sides of a through-cut and on the inside shoulder of a cut-fill section, with ditch relief cross-drains being spaced according to grade. Water shall be intercepted before reaching a switchback or large fill and drained safely away in accordance with this section. Water on a fill or switchback shall be released below the fill, using conduit or riprapped channels, and shall not be discharged onto the fill.

(c) *Culverts.* Ditch relief culverts shall be installed according to the following provisions:

(1) Road grade:

Grade percent	Spacing of culverts, in feet, not more than—
2 to 5	800
6 to 10	300
11 to 15	200

(2) Each culvert shall be adequate to safely pass the peak runoff from a 10-year 24-hour precipitation event and shall cross the road at not less than a 30° angle downgrade. The culvert may be designed to carry less than the peak runoff if the ditch will remain stable.

(3) The inlet end shall be protected by a rock headwall or other material approved by the regulatory authority and the outlet end shall be placed below the toe of the fill with an apron of rock riprap or other approved material.

(4) The culvert shall be covered by compacted fill to a minimum depth of 1 foot or half the culvert diameter, whichever is greater.

(5) The culvert shall be capable of sustaining design loads.

(d) *Stream crossings.* Drainage structures are required for stream channel crossings. Drainage structures shall not affect the normal flow or gradient of the stream. In designing drainage structures, consideration will be given to the time of year the stream is crossed and the length of time the structure is used. Embankments constructed across streams shall not exceed 15 feet in height, measured on the upstream side, unless approved by the regulatory authority. Stream crossings which have drainage areas greater than 100 acres shall be designed to safely pass the 100-year storm or larger event as specified by the regulatory authority.

§ 817.35 Road construction: Surfacing.

Roads shall be surfaced with rock or other material approved by the regulatory authority as sufficiently durable. Toxic or acid-forming substances shall not be used. Vegetation shall not be cleared for more than the width necessary for road and associated ditch construction, to serve traffic needs, and for utilities.

§ 817.36 Other transportation facilities.

Railroad loops, spurs, sidings, or other transport facilities shall be designed, constructed, maintained, and reclaimed to—

(a) Prevent, to the extent possible using the best technology currently available—

(1) Damage to fish, wildlife and related environmental values; and

(2) Additional contributions of suspended solids to streamflow or runoff outside the permit area. In no event shall contributions be in excess of limitations set by applicable State or Federal law.

(b) Control and minimize diminution or degradation of water quality and quantity.

(c) Control and minimize erosion and siltation.

(d) Control and minimize air pollution.

(e) Prevent damage to public or private property.

§ 817.38 Restoration of roads.

(a) Unless the regulatory authority approves retention of the road as suitable for the approved post-mining land use immediately after a road becomes no longer needed for operations, reclamation, or monitoring—

(1) The road shall be closed to vehicular traffic;

(2) All bridges and culverts shall be removed;

(3) Cross drains, dikes, and water bars shall be constructed to prevent erosion;

(4) Road surfaces shall be scarified and covered with topsoil; and

(5) The area affected shall be returned to approximate original contour and revegetated in accordance with sections 817.111–817.117.

(b) Unless otherwise authorized by the regulatory authority, all road surfacing materials shall be removed and handled or conveyed and disposed of in accordance with section 817.89.

§ 817.39 Support facilities and utility installations.

(a) The support facilities required for or used incidentally to the operation of the mine, including but not limited to mine buildings, coal loading facilities at or near the mine site, coal storage facilities, equipment storage facilities, sheds, shops, and other buildings, shall be designed, constructed, and located to prevent or control erosion and siltation, water pollution, or damage to public or private property and shall comply with all the environmental and other performance standards of this Part. Support facilities shall be designed, constructed, maintained, and used in a manner which prevents, to the extent possible using the best technology currently available—

(1) Damage to fish, wildlife and related environmental values;

(2) Additional contributions of suspended solids to streamflow or runoff outside the permit area. In no event shall such contributions be in excess of limitations set by applicable State or Federal law.

(b) All underground mining activities shall be conducted in a manner which prevents damage, destruction, or disruption of services provided by oil, gas, and water wells; oil, gas, and coal-slurry pipelines; railroads; and electric and telephone lines which pass over, under, or through the permit area, unless otherwise approved by the owner and the regulatory authority.

§ 817.41 Hydrologic balance: General requirements.

(a) Underground mining activities shall be planned and conducted to minimize disturbance to the prevailing hydrologic balance in order to prevent long-term adverse changes in the hydrologic balance that could result from those activities, on both the mine plan and affected areas.

(b) Changes in water quality and quantity, in the depth to ground water, and in the location of surface water drainage channels shall be minimized so that the approved post-mining land use of the disturbed land is not adversely affected.

(c) In no case shall applicable Federal and State water-quality statutes, regulations, standards or effluent limitations be violated.

(d) Operations shall be conducted to minimize water pollution and, where necessary, treatment methods shall be used to control water pollution.

(1) Each person who conducts underground mining activities shall emphasize mining and reclamation practices that will prevent or minimize water pollution and changes in flow in preference to the use of water treatment facilities.

(2) Practices to control and minimize pollution include, but are not limited to—

(i) Stabilizing disturbed areas through land shaping;

(ii) Diverting runoff;

(iii) Achieving quickly germinating and growing stands of temporary vegetation;

(iv) Regulating channel velocity of water;

(v) Lining drainage channels with rock or vegetation;

(vi) Mulching;

(vii) Selectively placing and sealing acid-forming and toxic-forming materials;

(viii) Designing mines to prevent gravity drainage of acid waters;

(ix) Sealing;

(x) Controlling subsidence; and

(xi) Preventing acid mine drainage.

(3) If these practices are not fully adequate to meet the hydrologic requirements of this Part, the person who conducts the underground mining activities shall operate and maintain the necessary water treatment facilities for as long as treatment is required.

§ 817.42 Hydrologic balance: Water quality standards and effluent limitations.

(a) All drainage from the disturbed area, including disturbed areas that have been graded, seeded, or planted, shall be passed through a sedimentation pond, a series of sedimentation ponds, or a treatment facility before leaving the permit area. Any discharge from underground workings to surface waters shall also be passed through a sedimentation pond, a series of sedimentation ponds, or a treatment facility. Sedimentation ponds and treatment facilities for the disturbed area before being discharged into an underground working shall be maintained until drainage from the disturbed area has met the ambient surface water quality requirements of section 816.52 and the revegetation requirements of sections 817.111–817.117. Sedimentation ponds and treatment facilities for discharges from the underground mine shall be maintained until the discharge meets the effluent limitations of this section without treatment or until the discharge has ceased. The regulatory authority may grant exemptions from this requirement only when the disturbed drainage area within the total disturbed area is small, if there is no discharge from the underground mine, and if the person who conducts the underground mining activities demonstrates to the regulatory authority that sedimentation ponds and treatment facilities are not necessary to meet the effluent limitations of this section and maintain water quality in downstream receiving waters. For the purposes of this section, disturbed area shall not include those areas affected by surface operations in which only diversion ditches, sedimentation ponds, or roads are installed in accordance with this Part, and the upstream area is not other-

wise disturbed by the person who conducts the underground mining activi-

or regulations or the limitations of this section. If the pH of water to be

(d) No diversion shall be constructed on or pass through existing slides or

tures such as channel lining structures, retention basins, and artificial channel roughness structures shall be

(c) Retaining sediment within disturbed areas;

(d) Diverting runoff away from dis-

cal detention time for the water inflow or runoff entering the pond from a 10-year 24-hour precipitation event plus

wise disturbed by the person who conducts the underground mining activities. Disturbed areas shall not include the area affected by underground operations unless those areas are also affected by fills, support facilities, or other major activities incident to underground mining activities. Sedimentation ponds required by this section shall be constructed in accordance with section 817.46 in appropriate locations before beginning any underground mining activities in the affected drainage area. Area in order to control sedimentation or otherwise treat discharges from areas disturbed by underground mining activities shall comply with all applicable Federal and State laws and regulations and, at a minimum, the following numerical effluent limitations:

Effluent limitations, in milligrams per liter (mg/l), except for pH

Effluent characteristics [1]	Maximum allowable [2]	Average of daily values for 30 consecutive days [3]
Iron, total	7.0	3.5
Manganese, total	4.0	2.0
Total suspended solids [4]	70.0	35.0
pH [5]	Within the range 6.0 to 9.0.	

[1] To be determined according to collection and analytical procedures adopted by the United States Environmental Protection Agency's regulations for waste water analyses 40 CFR 136.

[2] Based on representative sampling.

[3] The manganese limitation shall not apply to untreated discharges which are alkaline as defined by the Environmental Protection Agency (40 CFR 434).

[4] In Arizona, Colorado, Montana, New Mexico, North Dakota, South Dakota, Utah, and Wyoming, total suspended solids limitations will be determined on a case-by-case basis, but they must not be greater than 45 mg/l (maximum allowable) and 30 mg/l (average of daily value for 30 consecutive discharge days) based on a representative sampling.

[5] Where the application of neutralization and sedimentation treatment technology results in inability to comply with the manganese limitations set forth, the regulatory authority may allow the pH level in the discharge to exceed to a small extent the upper limit of 9.0 in order that the manganese limitations will be achieved.

(b) A discharge from the disturbed area is not subject to the effluent limitations of this section if—

(1) The discharge is demonstrated by the discharger to have resulted from a precipitation event larger than a 10-year 24-hour precipitation event or from a snowmelt of equivalent volume; and

(2) The discharge is from facilities designed, constructed, and maintained in accordance with the applicable requirements of this Part.

(c) Adequate facilities shall be installed, operated, and maintained to treat any water discharged from the disturbed area or discharged from the underground mine so that it complies with applicable Federal and State laws or regulations or the limitations of this section. If the pH of water to be discharged from the disturbed area or mine is less than 6.0, an automatic lime feeder or other automatic neutralization process approved by the regulatory authority shall be installed, operated, and maintained. The regulatory authority may authorize the use of a manual system if it finds that—

(1) Small and infrequent treatment requirements to meet applicable standards do not require use of an automatic neutralization process;

(2) The mine normally produces less than 500 tons of run-of-mine coal per day; and

(3) Timely and consistent treatment is ensured.

§ 817.43 Hydrologic balance: Diversions and conveyance of overland flow and shallow ground water flow.

Overland flow including flow through litter, and shallow ground water flow from undisturbed areas may be diverted away from disturbed areas by means of temporary or permanent diversions if required or approved by the regulatory authority as necessary to minimize erosion and to prevent or remove water from contact with acid-forming and toxic-forming materials. The following requirements shall be met for all diversions and for all collection drains that are used to transport waters into water-treatment facilities.

(a) Temporary diversions shall be constructed to pass safely the peak runoff from a precipitation event with a 3-year recurrence interval, or a larger event is specified by the regulatory authority.

(b) To protect fills and property and to avoid danger to public health and safety, permanent diversions shall be constructed to pass safely the peak runoff from a precipitation event with a 10-year recurrence interval, or a larger event if specified by the regulatory authority. Permanent diversions shall be constructed with gently sloping banks that are stabilized by vegetation. Asphalt, concrete, or other similar linings shall not be used unless specifically required by the regulatory authority to prevent seepage or to provide stability.

(c) Diversions shall be designed, constructed, and maintained in a manner which prevents additional contributions of suspended solids to streamflow and to runoff outside the permit area, to the extent possible using the best technology currently available. Appropriate sediment control measures for these diversions shall include, but not be limited to, maintenance of appropriate gradients, channel lining, revegetation, roughness structures, and detention basins.

(d) No diversion shall be constructed on or pass through existing slides or located so as to increase the potential for slides.

(e) When no longer needed, each temporary diversion shall be removed and the affected land regraded, topsoiled, and revegetated in accordance with sections 817.24, 817.25, 817.101, and 817.111–817.117.

(f) Diversion design shall incorporate the following:

(1) Any channel lining shall be designed using standard engineering practices to safely pass the design velocities. Riprap shall comply with the requirements of paragraph 817.72(b)(5).

(2) The design freeboard shall be no less than calculated using the following equation $f=1+0.025vd$. Where f=freeboard in feet; v=design velocity, in feet per second; and d=depth of flow, in feet. Additional freeboard protection shall be provided for transition of flows and for critical areas such as swales and curves.

(3) Energy dissipators shall be installed at discharge points where diversions intersect with natural streams.

(4) Excess excavated material not necessary for diversion channel geometry or regrading of the channel shall be disposed of in accordance with 30 CFR 817.71–817.73.

(5) Topsoil shall be handled in accordance with 30 CFR 817.21–817.25.

(g) Diversions shall not be constructed or operated to divert water into underground mines without the approval of the regulatory authority under section 817.55.

§ 817.44 Hydrologic balance: Stream channel diversions.

(a) Flow from perennial and intermittent streams within the permit area may be diverted if—

(1) The diversions are approved by the regulatory authority as necessary to comply with other performance standards in this Subchapter; and

(2) The diversions are in compliance with local, State, and Federal statutes and regulations.

(b) When streamflow is allowed to be diverted, the new stream channel shall be designed, constructed, and removed in accordance with the following requirements:

(1) The longitudinal profile of the stream, the channel, and the flood plain shall be designed and constructed to remain stable and to prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow or to runoff outside the permit area. In no event shall the contributions be in excess of requirements set by applicable State or Federal law. Erosion control structures such as channel lining structures, retention basins, and artificial channel roughness structures shall be used in diversions only when approved by the regulatory authority as being necessary to control erosion. These structures shall be approved for permanent diversions only where they are stable and will require infrequent maintenance.

(2) Channel, bank, and flood-plain configurations shall be adequate to pass safely the peak runoff of a 24-hour precipitation event with a 10-year recurrence interval for temporary diversions and a 100-year recurrence interval for permanent diversions, or larger events as specified by the regulatory authority.

(c) When no longer needed to achieve the purpose for which they are authorized, all temporary stream channel diversions shall be removed and the affected land regraded and revegetated in accordance with the requirements of Sections 817.24, 817.25, 817.101, and 817.111–817.117. At the time diversions are removed, downstream water treatment facilities previously protected by the diversion shall be modified or removed to prevent overtopping or failure of the facilities. In no case shall this requirement relieve the person who conducts the underground mining activities from maintenance of the treatment facility if otherwise required under this Part or the permit.

§ 817.45 Hydrologic balance: Sediment control measures.

Appropriate sediment control measures shall be designed, constructed, and maintained to prevent additional contributions of sediment to streamflow or to runoff outside the permit area, to minimize erosion areas, to the extent possible using the best technology currently available. Sediment control measures include practices carried out within and adjacent to the disturbed area. The sedimentation storage capacity of practices in and downstream from the disturbed areas shall reflect the degree to which successful mining and reclamation techniques are applied to reduce erosion and control sediment. Sediment control measures consist of the utilization of proper mining and reclamation methods and sediment control practices, singly or in combination. Sediment control methods include but are not limited to—

(a) Disturbing the smallest practicable area at any one time during the mining operation through progressive backfilling, grading, and timely revegetation;

(b) Shaping the backfilled material to promote a reduction of the rate and volume of runoff in accordance with the requirements of Section 817.101.

(c) Retaining sediment within disturbed areas;

(d) Diverting runoff away from disturbed areas;

(e) Diverting runoff using protected channels or pipes through disturbed areas so as not to cause additional erosion;

(f) Using straw dikes, riprap, check dams, mulches, vegetative sediment filters, dugout ponds, and other measures that reduce overland flow velocity, reduce runoff volume, or trap sediment;

(g) Building and maintaining sedimentation ponds;

(h) Treating with chemicals; and

(i) Treating mine drainage in underground sumps.

§ 817.46 Hydrologic balance: Sedimentation ponds.

(a) *General requirements.* Sedimentation ponds shall be used individually or in series and shall—

(1) Be constructed before any disturbance of the disturbed area to be drained into the pond;

(2) Be located as near as possible to the disturbed area and out of perennial streams wherever possible;

(3) Be constructed prior to any discharge from the underground mine; and

(4) Meet all the criteria in this Section.

(b) *Sediment storage volume.* Sedimentation ponds shall provide a sediment storage volume equal to—

(1) The accumulated sediment volume from the drainage area to the pond for a minimum of 3 years or the life of the pond, whichever is greater. Sediment storage volume shall be determined using the Universal Soil Loss Equation, gully erosion rates, and sediment delivery ratio converted to sediment volume using the sediment density or other empirical methods established by the regulatory authority and based upon actual sedimentation pond studies; or

(2) 0.1 acre-foot for each acre of disturbed area within the upstream drainage area or a greater amount if required by the regulatory authority. The regulatory authority may approve a sediment storage volume of not less than 0.035 acre-foot for each acre of disturbed area within the upstream drainage area if the person who conducts the underground mining activities has demonstrated that sediment removed by other sediment control measures is equal to the reduction in sediment storage volume; and

(3) The accumulated sediment volume necessary to retain sediment for 1 year in any discharge from the underground mine passing through the pond.

(c) *Detention time.* Sedimentation ponds shall provide a 24 hour theoretical detention time for the water inflow or runoff entering the pond from a 10-year 24-hour precipitation event plus the average inflow from the underground mine. Runoff diverted in accordance with Sections 817.43 and 817.44 away from the disturbed drainage areas and not passed through the sedimentation pond, need not be considered in sedimentation pond design. In determining the runoff volume, the characteristics of the mine site, reclamation procedures, and on-site sediment control practices shall be considered.

(1) The regulatory authority may approve a theoretical detention time of not less than 10 hours, when the person who conducts the underground mining activities demonstrates that—

(i) The improvement in sediment removal efficiency is equivalent to the reduction in detention time as a result of pond design. Improvements in pond design may include but are not limited to pond configuration, in-flow and outflow facility locations, baffles to decrease in-flow velocity, and short-circuiting, and surface areas; and

(ii) The pond effluent is shown to achieve and maintain applicable effluent limitations.

(2) The regulatory authority may approve a theoretical detention time of not less than 10 hours when the person who conducts the underground mining activities demonstrates that the size distribution or the specific gravity of the suspended matter is such that applicable effluent limitations are achieved and maintained.

(3) The regulatory authority may approve a theoretical detention time of less than 24 hours to any level of detention time when the person who conducts the underground mining activities demonstrates to the regulatory authority that the chemical treatment process to be used—

(i) Will achieve and maintain the effluent limitations;

(ii) Is harmless to fish, wildlife and related environmental values;

(iii) Is planned under the supervision of a registered professional engineer; and

(iv) Shall be operated by a qualified person approved by the regulatory authority.

(4) The calculated theoretical detention time and all supporting documentation and drawings used to establish the required detention times under paragraphs (c) (1)–(3) of this section shall be included in the permit application.

(d) *Dewatering.* The water storage resulting from inflow shall be removed by a nonclogging dewatering device or a spillway approved by the regulatory authority, and shall have a discharge rate to achieve and maintain the required theoretical detention time. The

dewatering device shall not be located at a lower elevation than the maximum elevation of the design sedimentation storage volume.

design will ensure against all settlement.

(1) The minimum top width of the embankment shall not be less than the

where water is being impounded may be riprapped or otherwise stabilized. Areas in which the vegetation is not successful or where rills and gullies de-

days after they are first exposed on the mine site, or within a lesser period if required by the regulatory authori-

(2) When operations may affect the ground water system, ground water levels and ground water quality shall

V 43/181 SE 18 78

dewatering device shall not be located at a lower elevation than the maximum elevation of the design sedimentation storage volume.

(e) Each person who conducts underground mining activities shall design, construct, and maintain sedimentation ponds to prevent short-circuiting.

(f) The design, construction, and maintenance of a sedimentation pond or other sediment control measures in accordance with this Section shall not relieve the person from compliance with applicable effluent limitations.

(g) There shall be no out-flow through the emergency spillway during the passage of the runoff resulting from 10-year 24-hour precipitation event through the sedimentation pond regardless of the volume of water and sediment present from the underground mine during the runoff.

(h) Sediment shall be removed from sedimentation ponds when the volume of sediment accumulates to 60 percent of the required sediment storage volume. With the approval of the regulatory authority, additional permanent sediment storage may be provided above that required for storage if the person who conducts the underground coal mine operations demonstrates that applicable effluent limitations will be achieved and maintained. Upon the approval of the regulatory authority for those cases where additional permanent storage is provided above that required for sediment under paragraph (b) of this section, sediment removal may be delayed until the remaining volume of permanent storage has decreased to 40 percent of the required sediment storage.

(i) An appropriate combination of principal and emergency spillways shall be provided to discharge safely the runoff from a 25-year 24-hour precipitation event, or larger event as specified by the regulatory authority, plus any inflow from the underground mine. The elevation of the crest of the emergency spillway shall be a minimum of 1.0 foot above the crest of the principal spillway. Emergency spillway grades and allowable velocities shall be as specified by the regulatory authority.

(j) The minimum elevation of the top of the settled embankment shall be 1.0 foot above the water surface in the reservoir with the emergency spillway flowing at design depth. For embankments subject to settlement, this 1.0 foot minimum elevation requirement shall apply at all times including the period after settlement.

(k) The constructed height of the dam shall be increased a minimum of 5 percent over the design height to allow for settlement unless it has been demonstrated to the regulatory authority that the material used and the design will ensure against all settlement.

(l) The minimum top width of the embankment shall not be less than the quotient of $(H+35)/5$ where H is the height of the embankment as measured from the upstream toe of the embankment.

(m) The upstream and downstream side slopes of the settled embankment shall not be less than $1v{:}5H$ with neither slope steeper than $1v{:}2h$. Slopes shall be designed to be stable in all cases, even if flatter side slopes are required.

(n) The embankment foundation area shall be cleared of all organic matter, all surfaces sloped to no steeper than $1v{:}1h$, and the entire foundation surface scarified.

(o) The fill material shall be free of sod, large roots and other large vegetative matter, and frozen soil, and in no case shall coal processing waste be used.

(p) The placing and spreading of fill material shall be started at the lowest point of the foundation and the fill brought up in horizontal layers of such thickness as required by the regulatory authority to facilitate compaction. Compaction shall be conducted as specified by the regulatory authority in order to achieve stability.

(q) If a sedimentation pond has an embankment that is more than 20 feet in height, as measured from the upstream toe of the embankment to the crest of the emergency spillway, or has a storage volume of 20 acre-feet or more, the following additional requirements shall be met:

(1) An appropriate combination of principal and emergency spillways shall be provided to safely discharge the runoff resulting from a 100-year 24-hour precipitation event, or a larger event if specified by the regulatory authority plus any in-flow from the underground mine.

(2) The embankment shall be designed and constructed with an acceptable static safety factor of at least 1.5 or such a higher safety factor as designated by the regulatory authority to ensure stability.

(3) Appropriate barriers shall be provided to control seepage along conduits that extend through the embankment.

(r) Each pond shall be designed and inspected during construction under the supervision of, and certified after construction by, a registered professional engineer.

(s) The entire embankment including the surrounding areas disturbed by construction shall be graded, fertilized, seeded, and mulched in accordance with Sections 817.111–817.117 immediately after the embankment is completed, provided that the active upstream face of the embankment where water is being impounded may be riprapped or otherwise stabilized. Areas in which the vegetation is not successful or where rills and gullies develop shall be repaired and revegetated in accordance with Sections 817.106 and 817.111–817.117.

(t) All ponds, including those not meeting the size or other criteria of 30 CFR 77.216(a), shall be examined for structural weakness, erosion, and other hazardous conditions in accordance with the inspection requirements contained in 30 CFR 77.216-3. Each person who conducts underground mining activities shall deliver to the regulatory authority any report or notification required under 30 CFR 77.216-3 whether or not the pond meets the criteria of 30 CFR 77.216(a).

(u) Each sedimentation pond shall be removed and the affected land regraded and revegetated in accordance with Sections 817.101, 817.102 and 817.111–817.117, unless approved by the regulatory authority for retention as compatible with the approved post-mining land use. If the regulatory authority approves retention, the sedimentation pond shall meet all the requirements for permanent impoundments in Section 816.49.

§ 817.47 Hydrologic balance: Discharge structures.

Discharges from sedimentation ponds and diversions shall be controlled, using energy dissipators, surge ponds, riprap channels, and other devices where necessary to reduce erosion and prevent deepening or enlargement of stream channels and to minimize disturbances to the hydrologic balance. Discharge structures shall be designed according to standard engineering design procedures.

§ 817.48 Hydrologic balance: Acid-forming and toxic-forming materials.

(a) Drainage from acid-forming and toxic-forming underground development waste and spoil, if any, into ground and surface water shall be avoided by—

(1) Identifying, burying, and treating, where necessary, such materials which, in the judgment of the regulatory authority, may be detrimental to vegetation or that may adversely affect water quality if not treated or buried. This material shall be buried, treated or disposed of in accordance with the provisions of paragraph (c) of this Section;

(b) Preventing water from coming into contact with acid-forming and toxic-forming materials in accordance with Section 817.103, or other measures as the regulatory authority may require; and

(c) Burying or otherwise treating all acid- or toxic-forming underground development waste and spoil within 30

days after they are first exposed on the mine site, or within a lesser period if required by the regulatory authority. Temporary storage of such materials may be approved by the regulatory authority upon a finding that burial or treatment within 30 days is not feasible and that storage will not result in any material risk of water pollution or other environmental damage. If storage is approved it shall be limited to the period until burial or treatment first becomes feasible. Stored acid- and toxic-forming underground development waste and spoil materials shall be placed on impermeable material and protected from erosion and contact with surface water.

§ 817.49 Hydrologic balance: Permanent and temporary impoundments.

(a) Permanent impoundments are prohibited unless authorized by the regulatory authority. Each person who conducts underground mining activities shall demonstrate to the regulatory authority that each permanent impoundment meets the following requirements:

(1) The quality of the impounded water is suitable on a permanent basis for its intended use and discharges from the impoundment will not degrade the quality of receiving waters below water quality standards under applicable State and Federal law.

(2) The level of water will be adequately stable so as to support the intended use.

(3) Adequate safety and access to the impounded water will be provided for proposed water users.

(4) Water impoundments will not result in the diminution of the quality or quantity of water used by adjacent or surrounding landowners for agricultural, industrial, recreational, or domestic uses.

(5) The impoundment dam construction and maintenance program shall be designed to achieve stability with an adequate factor of safety compatible with structures constructed and maintained under 16 U.S.C. 1006 Pub. L. 83-566. Standards for structures built under this law are contained in the Soil Conservation Service Practice Standard 378, "Pond," and Technical Release No. 60, "Earth Dams and Reservoirs," and are hereby incorporated by reference. These standards are available in all OSM offices. These materials are incorporated as they exist on the date of adoption of this Part, and notices of changes in these materials will be published periodically in the FEDERAL REGISTER.

(6) The size of the impoundment is adequate for its intended purposes.

(7) The impoundment will be suitable for the approved post-mining land use.

(b) Temporary impoundments of water in which the water is impounded in a dam shall meet the requirements of Section 817.46(e)–(q).

§ 817.50 Hydrologic balance: Ground water protection.

(a) To control mine drainage, surface entries, and accesses to underground workings, including adits and slopes, shall be located, designed, constructed, and utilized in such a manner as to prevent or control gravity discharge of water from the mine.

(b) Gravity discharge of water from an underground mine, other than a drift mine subject to paragraph (c) of this Section, may be allowed by the regulatory authority if—

(1) The discharge satisfies the water effluent limitations of 30 CFR 817.42 and all applicable State and Federal water quality standards;

(2) The person who conducts the underground mining activities demonstrates to the regulatory authority that changes in the hydrologic balance are minimal and post-mining land uses will not be adversely affected; and

(3) The discharge conveys mine wastes to a treatment facility in the permit area and the following conditions are met—

(i) All water discharged from the treatment facility meets the effluent limitations established in Section 817.42 and all applicable State and Federal water quality standards; and

(ii) Consistent maintenance of the treatment facility is ensured for the anticipated period of gravity discharge.

(c) Notwithstanding anything to the contrary in paragraphs (a) and (b) of this section, all openings for drift mines first used after the implementation of a State or Federal program and which are located in acid-producing or iron-producing coal seams, shall be located in such a manner as to prevent any gravity discharge from the mine.

(d) The regulatory authority may require physical, chemical and mineralogical analyses of coal bearing strata, aquifers, underground development wastes, spoil, mine wastes or other materials.

§ 817.52 Hydrologic balance: Surface and ground water monitoring.

(1) *Ground water.* Ground water levels, infiltration rates, subsurface flow and storage characteristics, and the quality of ground water shall be monitored in the manner required by the regulatory authority to determine the effects of underground mining activities on the recharge capacity of reclaimed lands and on the quantity and quality of water in ground water systems at the mine site and in adjacent areas.

(2) When operations may affect the ground water system, ground water levels and ground water quality shall be periodically monitored using measurements from a sufficient number of wells and mineralogical and chemical analyses of aquifer, overburden, and spoil material adequately to reflect changes in ground water quantity and quality resulting from these operations. The monitoring shall be adequate to plan for modification of the underground mining activities if necessary to minimize disturbance to the hydrologic balance.

(3) As specified and approved by the regulatory authority, the person who conducts the underground mining activities shall conduct additional hydrologic tests, including drilling, infiltration tests and aquifer tests, and the results shall be submitted to the regulatory authority to demonstrate compliance with Section 817.51.

(b) *Surface water.*

(1) Surface water monitoring shall be conducted in accordance with the monitoring program submitted under 30 CFR 784.13(b)(4) and approved by the regulatory authority. Monitoring shall—

(i) Be adequate to measure accurately and record water quantity and quality of discharges from the permit area;

(ii) In all cases in which analytical results of the sample collections indicate a violation of a permit condition or applicable standard has occurred, result in the operator notifying the regulatory authority immediately. Where a National Polluant Discharge Elimination System (NPDES) permit effluent limitation has been violated, the person who conducts the underground mining activities shall forward a copy of the Discharge Monitoring Report, EPA Form 3320-1, concurrently with notification of the violation;

(iii) Result in regular reports to the regulatory authority within 60 days of the end of each 60 day sample collection period; or

(iv) If the discharge for which water monitoring reports are required, is subject to regulation by a National Pollutant Discharge Elimination System (NPDES) permit issued under the Clean Water Act of 1977 (30 U.S.C. 1251-1378) which includes equivalent reporting requirements and requires filing of the water monitoring reports within 90 days or less of sample collection, the person who conducts the underground mining activities shall submit to the regulatory authority on the same time schedule as required by the NPDES permit or within 90 days following sample collection, whichever is earlier, either—

(A) A copy of the completed reporting form filed to meet NPDES permit requirements; or

(B) A letter identifying the State or Federal Government official with

§ 817.54 Hydrologic balance: Water rights and replacement.

817.44 unless the regulatory authority specifically authorizes underground mining activities closer to or through

the regulatory authority and to the person requesting the survey.

(b) Each person who conducts underground mining activities shall utilize personnel approved by the regula-

Access to the blasting area shall be controlled to prevent unauthorized entry at least 10 minutes before each blast and until an authorized repre-

concurrence of the Mine Safety and Health Administration.

(i) Flyrock from blasting shall be restricted as follows:

(B) A letter identifying the State or Federal Government official with whom the reporting form was filed to meet NPDES permit requirements and the date of filing.

(2) After disturbed areas have been regraded and stabilized according to this Part, the person who conducts underground mining activities shall monitor surface water flow and quality. Data from this monitoring shall be used to demonstrate that the quality and quantity of runoff without treatment is consistent with the requirement of this Section to minimize disturbance to the prevailing hydrologic balance and with the requirements of this Part to attain the approved postmining land use. These data shall provide a basis for approval by the regulatory authority for removal of water quality or flow control systems and for determining when the requirements of this Section are met. The regulatory authority shall determine the nature of data, frequency of collection, and reporting requirements.

(3) Equipment, structures, and other devices necessary to measure and sample accurately the quality and quantity of surface water discharges from the affected area, shall be properly installed, maintained, and operated and shall be removed when no longer required.

§ 817.53 Hydrologic balance: Transfer of wells.

(a) An exploratory or monitoring well may only be transferred for use as a water well with the prior approval of the regulatory authority. The surface owner shall submit a written request to the regulatory authority for approval of any well transfer.

(b) Upon an approved transfer of a well, the transferee shall—

(1) Assume primary liability for damages to persons or property from the well;

(2) Plug the well when necessary, but in no case later than abandonment of the well; and

(3) Assume primary responsibility for compliance with Sections 817.13–817.15 with respect to the well.

(c) Upon transfer of a well, the transferor shall—

(1) Be secondarily liable for damages;

(2) Be secondarily liable for plugging the well; and

(3) Be secondarily liable for compliance with Section 816.13–816.15 with respect to the well.

(d) Nothing in this Section shall be deemed to supersede or affect the applicability of any State law requirements with respect to a well transfer.

§ 817.54 Hydrologic balance: Water rights and replacement.

Any person who conducts in underground mining activities shall replace the water supply of an owner of interest in real property who obtains all or part of his supply of water for domestic, agricultural, industrial, or other legitimate use from an underground or surface source where the water supply has been affected by contamination, diminution, or interruption resulting from the underground mining activities.

§ 817.55 Hydrologic balance: Discharge of water into an underground mine.

Water from an underground mine shall not be discharged into other underground mine workings unless the person who conducts the underground mining activities demonstrates to the satisfaction of the regulatory authority that the discharge—

(a) Abates water pollution or otherwise eliminates public hazards resulting from underground mining activities;

(b) Is conveyed as a controlled flow; and

(c) Meets the water quality requirements of 817.42 for pH and total suspended solids except that the total suspended solid concentrations may be exceeded if the suspended material is approved by the regulatory authority or is limited to—

(1) Coal processing waste;

(2) Underground mine development waste;

(3) Fly ash from a coal-fired facility;

(4) Acid mine drainage sludge;

(5) Flue gas desulfurization sludge; or

(6) Inert materials used for stabilizing underground mines; and

(d) The discharge will not cause, result in, or contribute to a violation of applicable water quality standards.

(e) Minimizes disturbance to the hydrologic balance.

§ 817.56 Hydrologic balance: Post-mining rehabilitation of sedimentation ponds, diversions, impoundments and treatment facilities.

Before abandoning the permit area, the person who conducts the underground mining activities shall restore all permanent sedimentation ponds, diversions, impoundments and treatment facilities to meet the original design criteria for permanent structures or impoundments.

§ 817.57 Hydrologic balance: Stream buffer zones.

(a) No surface or underground area within 100 feet of a perennial stream or a stream with a macro-invertebrate biological community shall be disturbed by underground mining activities except in accordance with Section 817.44 unless the regulatory authority specifically authorizes underground mining activities closer to or through such a stream upon finding—

(1) That the original stream channel will be restored; and

(2) During and after the mining, the water quantity and quality from the stream section within 100 feet of the underground mining activities shall not be adversely affected.

(b) The area not to be disturbed shall be designated a buffer zone and marked as specified in Section 817.11.

§ 817.59 Coal recovery.

Underground mining activities shall be conducted so as to maximize the utilization and conservation of the coal so that reaffecting the land in the future through surface coal mining operations is minimized.

§ 817.61 Use of explosives: General requirements.

(a) Each person who conducts underground mining activities shall comply with all applicable local, State, and Federal laws and regulations and the requirements of Sections 816.61–816.68, in the storage, handling, preparation, and use of explosives.

(b) Blasting operations at areas affected by surface operations and facilities that use more than the equivalent of 5 pounds of TNT shall be conducted according to a time schedule approved by the regulatory authority.

(c) All blasting operations shall be conducted by experienced, trained, and competent persons who understand the hazards involved. Each person responsible for blasting operations shall—

(1) Have demonstrated a knowledge of, and shall comply with, MSHA safety requirements and U.S. Department of Treasury security requirements;

(2) Be capable of using mature judgment in all situations;

(3) Be in good physical condition and not addicted to intoxicants, narcotics, or other similar types of drugs;

(4) Possess current knowledge of the local, State, and Federal laws and regulations applicable to the work; and

(5) Possess a valid certificate of completion of training and qualification as required by 30 CFR 850 and 851.

§ 817.62 Use of explosives: Pre-blasting survey.

(a) On the request to the regulatory authority by a resident or owner of a man-made dwelling or structure that is located within one-half mile of any part of the permit area, the person who conducts the underground mining activities shall conduct a pre-blasting survey of the dwelling or structure and submit a report of the survey to the regulatory authority and to the person requesting the survey.

(b) Each person who conducts underground mining activities shall utilize personnel approved by the regulatory authority to conduct the survey to determine the condition of the dwelling or structure and to document any pre-blasting damage and other physical factors that could reasonably be affected by the blasting. Assessments of structures such as pipes, cables, transmission lines, and wells and other water systems shall be limited to surface condition and readily available data. Special attention shall be given to the pre-blasting condition of wells and other water systems used for human, animal, or agricultural purposes and to the quantity and quality of the water.

(c) A written report of the survey shall be prepared and signed by the person who conducted the survey. The report shall include recommendations of any special conditions or proposed adjustments to the blasting procedure which should be incorporated into the blasting plan to prevent damage. Copies of the report shall be provided to the person requesting the survey and to the regulatory authority.

§ 817.65 Use of explosives: Surface blasting requirements.

(a) The provisions of this Section apply only to blasting conducted on the surface.

(b) A resident or owner of a man-made dwelling or structure that is located within one-half mile of any area affected by surface operations or facilities shall be notified 24 hours prior to any blasting event required for facing-up operations.

(c) All blasting shall be conducted between sunrise and sunset. The regulatory authority may specify more restrictive time periods based on public requests or other considerations including the proximity to residential areas.

(d) Warning and all-clear signals of different character that are audible within a range of one-half mile from the point of the blast shall be given. Each person within the permit area and each person who resides or regularly works within one-half mile of the permit area shall be notified of the meaning of the signals through appropriate instructions. These instructions shall be periodically delivered or otherwise communicated in a manner which can reasonably be expected to inform such persons of the meaning of the signals. Each person who conducts underground mining activities shall maintain signs in accordance with Section 817.11(f).

(e) Access to the blasting area shall be regulated to protect the public and livestock from the effects of blasting. Access to the blasting area shall be controlled to prevent unauthorized entry at least 10 minutes before each blast and until an authorized representative of the person who conducts the underground mining activities has reasonably determined—

(1) That no unusual circumstances, such as imminent slides or undetonated charges, exist; and

(2) That access to and travel in or through the area can safely resume.

(f) Areas in which explosives are awaiting firing shall be guarded, barricaded and either posted or flagged against unauthorized entry.

(g) (1) Airblast shall be controlled so that it does not exceed the values specified below at any dwelling, public building, school, church, or commercial or institutional building, unless such building is owned or leased by the person who conducts the underground mining activities and is located within the permit area:

Lower Frequency Limit of Measuring System, Hz (±3 dB)	Maximum Level in dB
0.1 Hz or lower—flat response	135 peak.
2 Hz or lower—flat response	132 peak.
6 Hz or lower—flat response	130 peak.
C-weighted, slow response	109°C.

(2) In all cases except the C-weighted slow, the systems used must have a flat frequency response of at least 500 Hz at the upper end. The C-weighted must meet the standard ANSI S1.4-1971 specifications. The ANSI S1.4-1971 is hereby incorporated by reference. This work is incorporated as it exits on the date of adoption of this Part, and notice of changes made in these materials will periodically be published in the FEDERAL REGISTER. ANSI S1.4-1971 is available for inspection in OSM regional offices and in OSM's office in the Department of the Interior, 18th and C Streets NW., Washington, D.C. 20240.

(3) The person who conducts blasting may satisfy the provisions of this section by meeting any one of the four specifications in the chart in paragraph (g)(1) of this Section.

(h) Except where lesser distances are approved by the regulatory authority based upon a pre-blasting survey or other appropriate investigations, blasting shall not be conducted within—

(1) 1,000 feet of any building used as a dwelling, school, church, hospital, or nursing facility;

(2) 500 feet of facilities including, but not limited to, disposal wells, petroleum or gas-storage facilities, municipal water-storage facilities, fluid-transmission pipelines, gas or oil-collection lines, or water and sewage lines; and

(3) 500 feet of the active workings of an underground mine except with the concurrence of the Mine Safety and Health Administration.

(i) Flyrock from blasting shall be restricted as follows:

(1) No flyrock shall be cast beyond the line of property owned or leased by the person who conducts the underground mining activities without the consent of the landowners of adjacent areas.

(2) No flyrock shall be cast more than half the distance from the blast to the nearest dwelling, public building, school, church, commercial or institutional building, road, or railroad. This shall not apply to any structure or right-of-way on land owned by the person who conducts the underground mining activities and not leased to any other person;

(3) No flyrock shall be cast beyond the area of regulated access required under paragraph (e) of this Section; and

(4) These restrictions shall apply to material which travels along the ground surface as well as that which travels through the air.

(j) Blasting shall be conducted to prevent injury to persons, damage to public or private property outside the permit area, adverse impacts on any underground mine, and change in the course, channel, or availability of ground or surface waters outside the permit area.

(k) In all blasting operations, except as otherwise authorized in this Section, the maximum peak particle velocity shall not exceed 1 inch per second at the location of any dwelling, public building, school, church, or commercial or institutional building. The regulatory authority may reduce the maximum peak particle velocity allowed if it determines that a lower standard is required because of density of population or land use, age or type of structure, geology or hydrology of the area, frequency of blasts, or other factors.

(l) The maximum peak particle velocity does not apply to property within the permit area that is owned by the person who conducts the underground mining activities and is not leased to any other person.

(m) An equation for determining the maximum weight of explosives that can be detonated within any 8-millisecond period is in paragraph (n) of this Section. If the blasting is conducted in accordance with this equation, the velocity is deemed to be within the 1 inch per second limit.

(n) (1) The maximum weight of explosives to be detonated within any 8 millisecond period may be determined by the formula $W=(D/60)^2$ where W=the maximum weight of explosives, in pounds, that can be detonated in any 8-millisecond period, and D=the distance, in feet, to the nearest

dwelling, school, church, or commercial or institutional building.

(2) For distances between 300 and 5,000 feet, solution of the equation re-

(c) The regulatory authority may require a seismograph record of any or all blasts.

(1) That leachate and surface runoff will not degrade surface or ground waters or exceed the effluent limitations of Section 817.42;

terly throughout construction to ensure removal of all organic material and topsoil, placement of underdrainage systems, proper installation of surface drainage systems, proper placement

(4) Scientific or engineering studies demonstrate that the fill poses an unreasonable threat of failure.

(p) Modification required under paragraph (a) of this Section may in-

shall not contain less than 30 percent by volume of clay or clay minerals as determined by standard petrologic analytical tests, and shall not be acid-

dwelling, school, church, or commercial or institutional building.

(2) For distances between 300 and 5,000 feet, solution of the equation results in the following maximum weight:

Distance, in feet (D):	Max. weight, in pounds (W)
300	25
350	34
400	44
500	69
600	100
700	136
800	178
900	225
1,000	278
1,100	338
1,200	400
1,300	469
1,400	544
1,500	625
1,600	711
1,700	803
1,800	900
1,900	1,002
2,000	1,111
2,500	1,736
3,000	2,500
3,500	3,403
4,000	4,444
4,500	5,625
5,000	6,944

(o) If on a particular site the peak particle velocity exceeds one-half inch per second after a period of 1 second following the maximum ground particle velocity, the blasting procedures shall be revised to limit the ground motion.

(p) Electric or electric delay systems combining surface delays with in-hole delays may be used to reduce vibrations of approved by the regulatory authority. Requests to use such systems shall be accompanied by blasting reports and seismograph records of test blasting on the site showing that the delay pattern does not produce peak particle velocities in violation of this Section.

§ 817.67 Use of explosives: Seismographic measurements.

(a) Where a seismograph is used to monitor the velocity of ground motion and the peak particle velocity limit of 1 inch per second is not exceeded, the equation in Section 817.65(n) need not be used. If the equation is not being used, a seismographic record shall be obtained for each shot.

(b) The use of a modified equation to determine maximum weight of explosives for blasting operations at a particular site may be approved by the regulatory authority on receipt of a petition accompanied by reports including seismograph records of test blasting on the site. In no case shall the regulatory authority approve the use of a modified equation where the peak particle velocity of 1 inch per second required in Section 817.65(k) would be exceeded.

(c) The regulatory authority may require a seismograph record of any or all blasts.

§ 817.68 Use of explosives: Records of blasting operations.

A record of each blast, including seismograph reports, shall be retained for at least 3 years and shall be available for inspection by the regulatory authority and the public on request. The record shall contain the following data:

(a) Name of the person conducting the blast.

(b) Location, date, and time of blast.

(c) Name, signature, and license number of blaster-in-charge.

(d) Direction and distance, in feet, to the nearest dwelling, school, church, or commercial or institutional building either—

(1) Not located in the permit area; or

(2) Not owned nor leased by the person who conducts the underground mining activities.

(e) Weather conditions.

(f) Type of material blasted.

(g) Number of holes, burden, and spacing.

(h) Diameter and depth of holes.

(i) Types of explosives used.

(j) Total weight of explosives used.

(k) Maximum weight of explosives detonated within any 8 millisecond period.

(l) Maximum number of holes detonated within any 8 millisecond period.

(m) Methods of firing and type of circuit.

(n) Type and length of stemming.

(o) Mats or other protections used.

(p) Type of delay detonator and delay periods used.

(q) Seismographic records, where required, including the calibration signal of the gain setting and—

(1) Seismograph reading, including exact location of seismograph and its distance from the blast;

(2) Name of the person taking the seismograph reading; and

(3) Name of person and firm analyzing the seismograph record.

§ 817.71 Disposal of underground development waste and excess spoil: General requirements.

(a) Underground development waste and spoil not required to achieve the approximate original contour and which cannot be used as backfill in the underground mine shall be hauled or conveyed to and placed in designated disposal areas within a permit area other than mine working or excavations, only if the disposal areas are authorized for such purposes in the approved mining and reclamation permit and only in accordance with Sections 817.71–817.73. The material shall be placed in a controlled manner to ensure—

(1) That leachate and surface runoff will not degrade surface or ground waters or exceed the effluent limitations of Section 817.42;

(2) Stability of the fill; and

(3) The land mass is suitable for reclamation and revegetation compatible with the natural surroundings.

(b) The fill shall be designed using recognized professional standards, certified by a registered professional engineer, and approved by the regulatory authority.

(c) All vegetative and organic materials shall be removed from the disposal area and the topsoil shall be removed, segregated and replaced under Sections 817.21–817.23 before spoil is placed in the disposal area. If approved by the regulatory authority, organic material may be used as mulch or may be included in the topsoil to control erosion, to promote growth of vegetation or to increase the moisture retention of the soil.

(d) Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

(e) The disposal areas shall be located on the most moderate sloping and naturally stable areas available as approved by the regulatory authority. If such placement provides additional stability and prevents mass movement, fill materials suitable for disposal shall be placed upon or above a natural terrace, bench, or berm.

(f) The fill materials shall be hauled or conveyed and placed in a controlled manner, concurrently compacted as necessary to ensure mass stability and prevent mass movement, covered, and graded to allow surface and sub-surface drainage to be compatible with the natural surroundings, to ensure long-term stability.

(g) The final configuration of the fill must be suitable for post-mining land uses approved in accordance with Section 816.124 except that no depressions or impoundments shall be allowed on the completed fill.

(h) Terraces shall not be constructed unless approved by the regulatory authority.

(i) Where the slope in the disposal area exceeds 1v:2.8h (36 percent), or such lesser slope as may be designed by the regulatory authority based on local conditions, keyway cuts (excavations to stable bedrock), or rock toe buttresses shall be constructed to stabilize the fill. The slope of original ground at the toe of the fill shall not exceed 1v:5h (20 percent).

(j) The fill shall be inspected for stability by a registered engineer or other professional specialist approved by the regulatory authority during critical construction periods and at least quarterly throughout construction to ensure removal of all organic material and topsoil, placement of underdrainage systems, proper installation of surface drainage systems, proper placement and compaction of fill materials, and proper revegetation. The registered engineer or other qualified professional specialist shall provide to the regulatory authority a certified report within 2 weeks after each inspection that the fill has been constructed as specified in the design approved by the regulatory authority, and a copy of the report shall be retained at the minesite by the person who conducts the underground mining activities.

(k)(1) Coal processing waste shall not be disposed of in head of hollow fills and may be disposed of in underground development waste or excess spoil fills if such waste is—

(i) Placed in accordance with Section 817.85;

(ii) Demonstrated to be non-toxic and non-acid forming; and

(iii) Demonstrated to be consistent with the design stability of the fill.

(2) Wastes other than coal processing wastes shall be disposed of in accordance with Section 817.89.

(l) The disposal area shall not contain springs, natural water courses, or wet weather seeps unless lateral drains are constructed from the wet areas to the underdrains in a manner that prevents infiltration of the water into the spoil pile.

(m) If any portion of the fill interrupts, obstructs, or encroaches upon any natural drainage channel, the entire fill is classified as a valley or head-of-hollow fill and must be designed and constructed in accordance with the requirements of Sections 817.72 and 817.73, respectively.

(n) The foundation and abutments of the fill shall be stable under all conditions of construction and operation. Sufficient foundation investigations and laboratory testing of foundation materials shall be performed in order to determine the design requirements for stability of the foundation. Analyses of foundation condtions shall include the effect of underground mine workings, if any, upon the stability of the structure.

(o) The regulatory authority shall direct the person who conducts the underground mining activities to modify the fill to mitigate potential harm, if the regulatory authority determines that—

(1) The fill construction does not meet the requirements set out in this or following Sections, if applicable;

(2) The fill is not constructed in accordance with satisfactory engineering standards;

(3) The fill poses an imminent threat of failure; or

(4) Scientific or engineering studies demonstrate that the fill poses an unreasonable threat of failure.

(p) Modification required under paragraph (o) of this Section may include regrading, change of construction technique, abandonment, or removal of the fill.

(q) Underground development waste and excess spoil way be returned to underground workings only in accordance with the program submitted to and approved by the regulatory authority under 30 CFR 784.18.

§ 817.72 Disposal of underground development waste and excess spoil: Valley fills.

Valley fills shall meet all of the requirements of Section 817.71 and the additional requirements of this Section.

(a) The fill shall be designed to attain a long-term static factor of safety of 1.5, based upon data obtained from subsurface exploration, geotechnical testing, foundation design, and accepted engineering analyses.

(b) A sub-drainage system for the fill shall be constructed in accordance with the following:

(1) A system of underdrains constructed of durable rock shall—

(i) Be installed along the natural drainage system;

(ii) Extend from the toe to the head of the fill; and

(iii) Contain lateral drains to each area of potential drainage or seepage.

(2) A filter system to ensure the proper functioning of the rock underdrain system shall be designed and constructed using standard geotechnical engineering.

(3) In constructing the underdrains, no more than 10 percent of the rock may be less than 12 inches in size and no single rock may be larger than 25 percent of the width of the drain. Rock used in underdrains shall meet the requirements of paragraph (a) (5) of this Section.

(4) The minimum size of the main underdrain shall be:

Total amount of fill material	Predominant type of fill material	Minimum size of drain, in feet	
		Width	Hgt.
Less than 1 million cubic yards.	Sandstone..	10	4
Do	Shale	16	8
More than 1 million cubic yards.	Sandstone..	16	8
Do	Shale	16	16

(5) Rock used shall not have less than 50 percent wear in 500 revolutions in the Los Angeles Rattler Test (AASHTO T-96-70), shall not have less than 15 percent by weight loss in 5 cycles of the Sodium Sulfate Test (ASTM C-88, AASHTO T-104), and shall not contain less than 30 percent by volume of clay or clay minerals as determined by standard petrologic analytical tests, and shall not be acid-forming or toxic-forming.

(c)(1) Underground development waste and excess spoil shall be hauled or conveyed and placed in a controlled manner and concurrently compacted as specified by the regulatory authority in lifts no thicker than 18 inches in order to—

(i) Achieve the densities designed to ensure mass stability;

(ii) Prevent mass movement;

(iii) Avoid contamination of the rock underdrain or rock core; and

(iv) Prevent formation of voids.

(2) The person who conducts the underground mining activities may use lifts of greater thickness than required under paragraph (c) (1) of this Section if he has demonstrated to the regulatory authority by density monitoring tests that the density throughout the thickness of the lift is equal to or greater than the density specified in the design referred to in paragraph (a) of this Section, except that in no event shall lift thickness exceed 4 feet.

(d) Surface water runoff from the area above the fill shall be diverted away from the fill and into stabilized diversion channels designed to pass safely the runoff from the 24-hour duration 100-year frequency storm or larger event specified by the regulatory authority. Sediment control structures shall be provided at the discharge of the diversion ditch before entry into the natural water course in accordance with Section 817.46. Surface runoff from the fill surface shall be diverted to stabilized channels off the fill which will safely pass runoff from a 24-hour duration, 100-year frequency storm. Diversion design shall comply with the requirements of Section 817.43(f).

(e) The tops of the fill and any terrace constructed to stabilize the face, shall be graded no steeper than lv:20h (5 percent). The vertical distance between terrace shall not exceed 50 feet.

(f) Drainage shall not be directed over the outslope of the fill.

(g) The outslope of the fill shall not exceed lv:2h (50 percent). The regulatory authority may require a flatter slope.

§ 817.73 Disposal of underground development waste and excess spoil: Head-of-hollow fills.

Disposal of underground development waste and excess spoil in the head-of-hollow fill shall meet all standards set forth in Sections 817.71 and 817.72 and the additional requirements of this Section.

(a) The fill shall be designed to completely fill the disposal site approved by the regulatory authority to the ap-

proximate elevation of the ridgeline. A rock-core chimney drain may be utilized instead of the subdrain and surface diversion system required for

(b) Coal processing waste materials from activities outside the permit area such as other mines or abandoned mine waste piles may be disposed of in

§ 817.83 Coal processing waste banks: Water control measures.

(a) A properly designed sub-drainage system shall be provided and shall—

(c) Acceptable techniques for extinguishing burning wastes may include, but are not limited to the following—

(1) Quenching with surface applica-

be placed over the site. The operation of the disposal site shall be conducted in accordance with all local, State, and Federal requirements.

tory authority shall have approved the plans before alterations begin.

§ 817.92 Coal processing waste: Dams and

proximate elevation of the ridgeline. A rock-core chimney drain may be utilized instead of the subdrain and surface diversion system required for valley fills. If the crest of the fill is not approximately at the same elevation as the low point of the adjacent ridgeline, the fill must be designed as specified in Section 817.72, with diversion of runoff around the fill.

(b) The alternative rock-core chimney drain system shall be designed and incorporated into the construction of head-of-hollow fills as follows:

(1) The fill shall have along the vertical projection of the main buried stream channel or rill, a vertical core of durable rock at least 16 feet thick which shall extend from the toe of the fill to the head of the fill and from the base of the fill to the surface of the fill. A system of lateral rock underdrains shall connect this rock core to each area of potential drainage or seepage in the disposal area. Rocks used in the rock core and underdrains shall meet the requirements of Section 817.72(b).

(2) A filter system to insure the proper functioning of the rock core shall be designed and constructed using standard geotechnical engineering methods.

(3) The grading may drain surface water away from the outslope of the fill and toward the rock core. The maximum slope of the top of the fill shall be lv:33h (3 percent). Instead of the requirements of Section 817.71(g), a drainage pocket may be maintained at the head of the fill during and after construction to intercept surface runoff and discharge the runoff through or over the rock drain if stability of the fill is not impaired. In no case shall this pocket or sump have a potential for impounding more than 10,000 cubic feet of water. Terraces on the fill shall be graded with a 3- to 5-percent grade toward the fill and a 1-percent slope toward the rock core.

(c) The drainage control system shall be capable of safely passing the runoff from a 24-hour 100-year frequency storm, or larger event, as specified by the regulatory authority.

§ 817.81 Coal processing waste banks: General requirements.

(a) All coal processing waste shall be hauled or conveyed and placed in new and existing disposal areas which shall be within the permit area and which are approved by the regulatory authority for this purpose. The coal processing waste disposal area shall be designed, constructed and maintained—

(1) In accordance with Sections 817.71 and 817.72, the provisions of this Section and Sections 817.82-817.88; and

(2) To prevent combustion.

(b) Coal processing waste materials from activities outside the permit area such as other mines or abandoned mine waste piles may be disposed of in permit areas only if approved by the regulatory authority. The approval shall be based on a showing by the person who conducts underground mining activities, using hydrologic, geologic, physical, and chemical analyses, that disposal of these materials does not—

(1) Adversely affect water quality, water flow, or vegetation;

(2) Create public health hazards; and

(3) Cause instability in the disposal areas.

§ 817.82 Coal processing waste banks: Site inspection.

(a) All coal processing waste disposal sites shall be inspected by an engineer or other person approved by the regulatory authority.

(1) The inspections shall occur at least once each week beginning within 7 days after preparation of the disposal area begins and terminating when the coal processing waste bank has been graded, covered in accordance with Section 817.85 and topsoil has been distributed on the bank in accordance with Section 817.24 or for such longer period as the regulatory authority may require.

(2) The inspections shall include such observations and tests as may be necessary to evaluate the potential hazard to human life and property, to ensure that all organic material and topsoil have been removed and that proper construction and maintenance are occurring in accordance with the plan submitted under 30 CFR 780.35 and approved by the regulatory authority.

(3) The engineer or other approved inspector shall consider steepness of slopes, seepage, and other visible factors which could indicate potential failure and shall consider the results of failure with respect to the threat to human life and property.

(4) Copies of the inspection findings shall be maintained at the mine site.

(b) If any inspection discloses that a potential hazard exists, the regulatory authority shall be informed promptly of the finding and of the action procedures formulated for public protection and remedial action in the event of an emergency. If adequate emergency procedures cannot, for any reason, be formulated or implemented then the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate emergency agencies that emergency procedures are required for the coal processing waste area.

§ 817.83 Coal processing waste banks: Water control measures.

(a) A properly designed sub-drainage system shall be provided and shall—

(1) Comply with the provisions of Sections 817.71 and 817.72.

(2) Be covered so as to protect against the entrance of surface water or leachate from the coal processing waste.

(b) All surface drainage from the area above the coal processing waste bank and from the crest and face of the waste disposal area shall be diverted in accordance with Section 817.72(d).

(c) Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

(d) All water discharged from a coal processing waste bank shall comply with the regulations of Section 817.42.

§ 817.85 Coal processing waste banks: Construction requirements.

(a) The coal processing waste banks shall be constructed in compliance with Sections 817.71 and 817.72 and this Section.

(b) Coal processing waste banks shall have a minimum static factor of safety of 1.5.

(c) Compaction requirements during construction or modification of all coal processing waste banks shall meet the requirements of this paragraph, instead of those specified in Section 817.72(c). The coal processing waste shall be—

(1) Spread in layers no more than 8 inches in thickness; and

(2) Compacted to attain 90 percent of the maximum dry density in order to prevent spontaneous combustion and to provide the strength required for stability of the coal processing waste bank. Dry densities shall be determined in accordance with ASSHTO T-99, or equivalent.

(d) Following grading of the coal processing waste bank, the site shall be covered with a minimum of 4 feet of the best available non-toxic and non-combustible material in accordance with Section 817.22(e) and in a manner that does not impede flow from sub-drainage systems.

§ 817.86 Coal processing waste: Burning.

(a) Coal processing waste fires shall be extinguished by the person who conducts the underground mining activities, in accordance with a plan approved by the regulatory authority.

(b) Extreme caution shall be taken in all attempts to extinguish burning wastes to ensure that no hazards will exist to equipment operators or other persons working or living in the vicinity of the site.

(c) Acceptable techniques for extinguishing burning wastes may include, but are not limited to the following—

(1) Quenching with surface applications of water;

(2) Isolation of burning wastes by excavation;

(3) Exclusion of oxygen by blanketing or sealing with water, foam or other materials; and

(4) Injecting water or slurry to isolate and quench the wastes.

§ 817.87 Coal processing waste: Burned waste utilization.

(a) Before the person who conducts the underground mining activities may remove burned coal processing waste or other materials or refuse from a disposal area, approval shall be obtained from the regulatory authority. A plan regarding the method of removal, with maps and appropriate drawings to illustrate the proposed sequence of the operation and methods of compliance with this Part, shall be submitted to the regulatory authority. Consideration shall be given in the plan to potential hazards which may be created to persons working or living in the vicinity of the structure. The plan shall be certified by a qualified engineer.

(b) Burned coal processing waste may be utilized for offsite construction purposes with the approval of the regulatory authority.

§ 817.88 Coal processing waste: Return to underground workings.

Coal processing waste may be returned to underground mine workings only in accordance with the waste disposal program approved by the regulatory authority under 30 CFR 780.35.

§ 817.89 Disposal of non-coal wastes.

(a) Non-coal wastes including, but not limited to, grease, lubricants, paints, flammable liquids, garbage, abandoned mining machinery, timber and other combustables generated during underground mining activities shall be placed and stored in a controlled manner in a designated area to ensure that leachate and surface runoff do not degrade surface or ground water, fires are prevented, and the area remains stable and is suitable for reclamation and revegetation compatible with the natural surroundings.

(b) The final disposal of non-coal wastes shall be in a designated disposal site. The solid waste disposal site shall be designed and constructed with appropriate barriers on the bottom and sides of the designated site. The wastes shall be routinely compacted and covered to prevent combustion and wind born waste. When the disposal is completed or when the underground mining activites are completed, a minimum of 2 feet of soil cover shall be placed over the site. The operation of the disposal site shall be conducted in accordance with all local, State, and Federal requirements.

(c) At no time shall the person who conducts allow any solid waste material to be deposited at refuse embankments or impoundment sites nor shall the person who conducts the underground mining activities allow any solid waste disposal excavation to be placed within 8 feet of any coal outcrop or coal storage area.

§ 817.91 Coal processing waste: Dams and embankments: General requirements.

Sections 817.91–817.93 apply to existing and proposed dams and embankments constructed of coal processing waste or intended to impound coal processing wastes.

(a) All dams and embankments including those not meeting the size or other criteria of 30 CFR 77.216(a), shall be routinely inspected by a registered professional engineer, or someone under the supervision of a registered professional engineer, in accordance with Mine Safety and Health Review Commission regulations in 30 CFR Section 77.316-3.

(b) All dams and embankments subject to this section shall be routinely maintained. Vegetative growth shall be cut where necessary to facilitate inspection and repairs. Ditches and spillways shall be cleaned. Any combustible materials present on the surface, other than that used for surface stability such as mulch or dry vegetation, shall be removed and any other appropriate maintenance procedures followed.

(c) All dams and embankments subject to this section shall be inspected and certified annually as having been constructed and modified in accordance with current prudent engineering practices to minimize the possibility of failures. Any changes in the geometry of the dam or embankment shall be highlighted and included in the annual certification report. These certifications shall include a report on—

(1) Existing and required monitoring procedures and instrumentation;

(2) The average and maximum depths and elevations of any impounded waters over the past year;

(3) Existing storage capacity of the dam or embankment;

(4) Any fires occurring in the material over the past year; and

(5) Any other aspects of the dam or embankment affecting stability.

(d) A person who conducts underground mining activities shall submit to the regulatory authority plans for any enlargements, reductions in size, re-construction or other modification of impounding structures. Except where change is required to eliminate an emergency condition, the regulatory authority shall have approved the plans before alterations begin.

§ 817.92 Coal processing waste: Dams and embankments: Site preparation.

Before coal processing waste is placed at a dam or embankment:

(a) Clearing and grubbing of all trees, shrubs, grasses, and other organic material shall be performed and all combustibles shall be removed and stockpiled in accordance with the requirements of this Part.

(b) All surface drainage shall be diverted away from the crest and downstream face of the dam or embankment. Diversion ditches shall be designed and constructed, utilized, and maintained to prevent blockage and to pass the peak runoff from a 24-hour precipitation event with a 100-year recurrence interval unless greater event is specified by the regulatory authority. Sediment control structures shall be provided at the discharge of each diversion ditch before entry into natural water courses in accordance with Sections 817.4–817.55.

(c) Slope protection shall be provided to minimize surface erosion at the site and sediment control structures shall be required. All disturbed areas including diversion ditches that are not riprapped shall be vegetated upon completion of construction.

§ 817.93 Coal processing waste: Dams and embankments: Construction.

(a) Waste shall not be used in the construction of dams and embankments unless demonstrated through appropriate engineering analysis to have no adverse effect on stability, and approved by the regulatory authority.

(b) The design of the dam or embankment shall be based on the flood from the probable maximum precipitation event unless the person who conducts the underground mining activities shows that the failure of the dam or embankment would not cause loss of life or severely damage property or the environment, in which case and depending on site conditions, a design to safely pass the flow from a 100-year precipitation event may be specified by the regulatory authority.

(c) One or more spillways shall be provided for the dam or embankment to pass that portion of the design storm that cannot be safely stored. Spillways and outlet works shall be designed to provide adequate protection against erosion. Inlets shall be protected against blockage.

(d) The design freeboard distance between the lowest point on the embankment crest and the maximum water elevations shall be at least 3 feet.

V 4 3 / 1 8 1
SEP 18 78

(e) Dams and embankments shall have minimum safety factors as follows:

Case	Loading condition	Minimum safety factor
I	End of construction	1.3
II	Partial pool with steady seepage saturation.	1.5
III	Steady seepage from spillway or decant crest.	1.5
IV	Earthquake (cases II and III with seismic loading).	1.0

(f) The dam or embankment foundation and abutments shall be stable under all conditions of construction and operation of the impoundment. Sufficient foundation investigations and laboratory testing shall be performed to determine the factors of safety of the dam or embankment for all loading conditions in paragraph (e) of this Section and for all increments of construction.

(g) Allowances shall be made for settlement of the dam or embankment and the foundation so that the freeboard will be maintained.

(h) Dams or embankments created for impounding waste materials shall be subject to a minimum drawdown criteria that allows the facility to be evacuated by spillways or decants of 90 percent of the volume of water stored during the designed precipitation event within 10 days.

(i) For each dam and embankment a permanent identification number, at least 6 feet high shall—

(1) Show the permit number for the underground coal mining and reclamation operations;

(2) Show the name of the person operating or controlling the dam; and

(3) Be located on or immediately adjacent to each dam.

§ 817.95 Air resources protection.

(a) *Fugitive dust.* Each person who conducts underground mining activities shall plan and employ fugitive dust control measures as an integral part of site preparation, coal mining, and reclamation operations. The regulatory authority shall specify the control measures appropriate for use in planning, according to applicable Federal and State air quality standards, climate, existing air quality in the area affected by mining, and the available control technology.

(b) *Control measures.* The fugitive dust control measures to be used, depending on applicable Federal and State air quality standards, the climate, existing air quality, size of the operation, and type of operation shall include, but not be limited to—

(1) Periodic watering of unpaved roads with the minimum frequency of watering specified according to a quantitative standard approved by the regulatory authority;

(2) Chemical stabilization of unpaved roads with nontoxic soil cements or dust pallatives mixed into the upper 1 or 2 inches or more of the road surface;

(3) Paving of roads;

(4) Prompt removal of coal, rock, soil, and other dust-forming debris from roads and frequent scraping and compaction of unpaved roads to stabilize the road surface;

(5) Restricting the speed of vehicles to reduce the length and size of any fugitive dust caused by travel;

(6) Revegetating, mulching, or otherwise stabilizing all areas adjoining roads that are sources of fugitive dust;

(7) Restricting the travel of vehicles on other than established roads;

(8) Enclosing, covering, watering or otherwise treating loaded haul trucks and railroad cars to reduce loss of material to wind and spillage;

(9) Substituting of conveyor systems for haul trucks and covering of conveyor systems when conveyed loads are subjected to wind erosion;

(10) Minimizing the area of disturbed land;

(11) Prompt revegetation of regraded lands;

(12) Use of alternatives for coal-handling methods, restriction of dumping procedures, wetting of disturbed materials during handling, and compaction of disturbed areas;

(13) Planting of special windbreak vegetation at critical points in the permit area.

(14) Control of dust from drilling using water sprays, hoods, dust collectors, or other controls;

(15) Restricting the areas to be blasted at any one time to reduce fugitive dust;

(16) Restricting activities causing fugitive dust during periods of air stagnation;

(17) Extinguishing any areas of burning or smoldering coal and periodically inspecting for burning areas whenever the potential for spontaneous combustion is high; and

(18) Reducing the period of time between initially disturbing the soil and revegetating or other surface stabilization.

(19) Restricting fugitive dust at spoil and coal transfer and loading points with water sprays, negative pressure systems and baghouse filters, chemicals, or other practices.

(c) *Additional measures.* Where the regulatory authority determines the application of fugitive-dust control measures listed in paragraph (b) of this Section is insufficient to achieve and maintain applicable Federal and State air quality standards, the regulatory authority may require additional measures and practices as may be necessary to ensure compliance with all applicable air quality standards.

(d) *Monitoring.* Air-monitoring equipment shall be installed and monitoring shall be conducted in accordance with the air-quality monitoring program submitted to and as approved by the regulatory authority.

§ 817.97 Protection of fish, wildlife and related environmental values.

(a) Any person conducting underground mining activities shall, to the extent possible using the best technology currently available, minimize disturbances and adverse impacts of the operation on fish, wildlife and related environmental values, and achieve enhancement of such resources where practicable.

(b) A person who conducts underground mining activities shall promptly report to the regulatory authority the presence in the permit area of any critical habitat of a threatened or endangered species listed by the Secretary, any plant or animal listed as threatened or endangered by the State, or any bald or golden eagle, of which the person conducting underground mining activities becomes aware and which was not previously reported to the regulatory authority.

(c) A person who conducts underground mining activities shall ensure that the design and construction of telephone lines, electric power lines, distribution lines, and other transmission facilities on the permit area are in accordance with the guideline set forth in "Environmental Criteria for Electric Transmission System" (USDI, USDA (1970)) or in such alternative guidance manuals as may be approved by the regulatory authority. Distribution lines shall be designed and constructed in accordance with REA Bulletin 61-10 "Powerline Contacts by Eagles and Other Large Birds" or in such alternative guidance manuals as may be approved by the regulatory authority. The two works named in this paragraph are hereby incorporated by reference. These materials are incorporated as they exit on the date of adoption of this Part, and notices of changes in these materials will periodically be published in the Federal Register. These two works are available at all OSM Regional Offices and at the OSM Office in Washington, D.C. and on file at the Office of the Federal Register.

(d) Each person who conducts underground mining activities shall to the extent possible using the best technology currently available—

(1) Locate and operate haul and access roads so as to avoid or minimize impacts to important fauna species or other species protected by State or Federal law;

(2) Fence roadways where specified by the regulatory authority to guide locally important wildlife to roadway underpasses or overpasses and construct the necessary passages. No new barrier shall be created in known and important fauna migration routes;

(3) Fence, cover, or use other appropriate methods to exclude fauna from ponds which contain hazardous concentrations of toxic-forming materials;

(4) Restore, enhance, or avoid habitats of unique value for fauna;

(5) Restore, enhance, or maintain natural riparian vegetation on the banks of streams, lakes, and other wetland areas;

(6) Avoid intermittant stream channels undisturbed or restore them to natural, meandering shapes of the same gradient;

(7) Avoid perennial stream channels undisturbed or restore them to their former longitudinal profile and cross section including fauna habitat (usually a pattern of riffles, pools, and drops rather than a uniform depth).

(8) Advise all permanent and contractual personnel of pertinent State and Federal laws and regulations pertaining to fauna resources;

(9) Not use persistent pesticides on the area during underground mining and reclamation activities;

(10) Make every effort to prevent, control, and suppress range forest and coal fires;

(11) If fauna habitat is to be a primary or secondary post-mining land use, the operator shall, in addition to the requirements of 30 CFR 816.111-816.117—

(i) Select plant species to be used on reclaimed areas based on the following criteria—

(A) Their proven nutritional value for fauna;

(B) Their uses as cover for fauna; and

(C) Their ability to support and enhance fauna habitat after release of bonds; and

(ii) Distribute flora groupings to maximize benefit to fauna. Flora should be grouped and distributed in a manner which optimizes edge effect, cover, and other benefits for fauna;

(12) Where row crops are to be the primary land use, surround fields with rows of trees or hedges suitable for reducing wind, retaining moisture and providing habitat for birds and other small animals and where desirable intersperse trees, wetlands, other vegetation types, and fence rows, throughout the harvested area to break up large blocks of monoculture and to diversify habitat types to make them more suitable for small animals. Wetlands shall be preserved or created rather than drained or otherwise permanently abolished; and

(13) Where the primary land use is to be residential, public service, or industrial land use, intersperse reclaimed lands with greenbelts utilizing species of grass, shrubs and trees useful as food and cover for birds and small animals.

§ 817.99 Slides and other damage.

At any time a slide occurs which may have a potential adverse effect on life, property, health, safety, or the environment in the permit area, the person who conducts the underground mining activities shall notify the regulatory authority by the fastest available means and shall comply with any remedial measures required by the regulatory authority.

§ 817.100 Contemporaneous reclamation.

Reclamation efforts including backfilling, grading, topsoil replacement and revegetation or all areas affected by surface operations shall occur as contemporaneously as practicable with mining operations.

§ 817.101 Backfilling and grading: General requirements.

(a) Surface areas disturbed incident to underground mining activities shall be backfilled and graded in accordance with the time schedule approved by the regulatory authority.

(b) Backfilling and grading. (1) All areas affected by surface operations shall be returned to approximate original contour. Each person who conducts underground mining activities shall haul or convey, backfill, and compact (where advisable to ensure stability or to prevent leaching) and grade all spoil to eliminate all highwalls, spoil piles, and depressions.

(2) Backfilled material shall be placed to minimize adverse effects on ground water to minimize offsite effects and to support the approved post-mining land use.

(3) The post-mining graded slope need not be uniform.

(4) Cut-and-fill terraces may be used only in those situations expressly identified in Section 817.102.

§ 817.102 Backfilling and grading: General grading requirements.

(a) The final graded slopes shall not exceed in grade either the approximate pre-mining slope or any lesser slopes approved by the regulatory authority based on consideration of soil, climate, or other characteristics of the surrounding area. Post-mining final graded slopes need not be uniform but shall approximate the general nature of the pre-mining topography. The requirements of this Section may be modified by the regulatory authority where the underground mining activities are reaffecting previously mined lands that have not been restored to the standards of this Part and sufficient spoil is not available. The person who conducts underground mining activities shall, at a minimum—

(1) Retain all overburden and spoil on the solid portion of existing or new benches; and

(2) Backfill and grade to the most moderate slope possible to eliminate the highwall which does not exceed the angle of repose or such lesser slopes as is necessary to achieve a minimum static safety factor of 1.3. In all cases the highwall shall be eliminated.

(b) On approval by the regulatory authority and in order to conserve soil moisture, ensure stability, and control erosion on final graded slopes, cut-and-fill terraces may be allowed if the terraces are compatible with the approved post-mining land use and are appropriate substitutes for construction of lower grades on the reclaimed lands. The terraces shall meet the following requirements:

(1) The width of the individual terrace bench shall not exceed 20 feet unless specifically approved by the regulatory authority as necessary for stability, erosion control, or roads included in the approved post-mining land use plan.

(2) The vertical distance between terraces shall be as specified by the regulatory authority to prevent excessive erosion and to provide long-term stability.

(3) The slope of the terrace outslope shall not exceed $1v:2h$ (50 percent). Outslopes which exceed $1v:2h$ (50 percent) may be approved if they have a minimum static safety factor of more than 1.3 and provide adequate control over erosion and closely resemble the surface configuration of the land prior to mining. In no case may highwalls be left as part of terraces.

(4) Culverts and underground rock drains shall be used on the terrace only when approved by the regulatory authority.

(c) Small depressions may be constructed if they—

(1) Are approved by the regulatory authority to minimize erosion, conserve soil moisture or promote vegetation;

(2) Do not restrict normal access; and

(3) Are not inappropriate substitutes for lower grades on the reclaimed lands.

(d) All operations on slopes above 20° or on lesser slopes that the regulatory authority defines as a steep slope shall meet the provisions of 30 CFR Part 826.

(e) All final grading, preparation of overburden before replacement of topsoil, and placement of topsoil, in accordance with Section 817.24, shall be done along the contour to minimize

subsequent erosion and instability. If such grading, preparation or placement along the contour is hazardous to equipment operators then grading,

result in additional erosion and sedimentation.

§ 817.111 Revegetation: General require-

disturbed areas, except water areas and surface areas of roads approved for the post-mining land use, which have been final graded and topsoiled

(2) For purposes of paragraphs (b)(1)(i) and (ii) of this section, the average annual precipitation shall be determined either—

§ 817.117 Revegetation: Tree stocking for forest land.

This Section sets forth forest resource conservation standards for re-

woody plants which have been in place at least 3 years on the rehabilitated area shall be equal to or greater than 90 percent of the density of live woody

subsequent erosion and instability. If such grading, preparation or placement along the contour is hazardous to equipment operators then grading, preparation or placement in a direction other than generally parallel to the contour may be used. In all cases, grading, preparation, or placement shall be conducted in a manner which minimizes erosion and provides a surface for replacement of topsoil which will minimize slippage.

§ 817.103 Backfilling and grading: Covering coal and acid- and toxic-forming materials.

(a) *Cover.* (1) A person who conducts underground mining activities shall cover, with a minimum of 4 feet of the best available non-toxic and non-combustible material all exposed coal seams remaining after mining and any acid-forming, or toxic-forming, combustible materials, or any other materials identified by the regulatory authority, that are exposed, used, or produced during mining.

(2) If necessary, these materials shall be treated to neutralize toxicity in order to prevent water pollution and sustained combustion, and to minimize adverse effects on plant growth and land uses.

(3) Where necessary to protect against upward migration of salts, exposure by erosion, to provide an adequate depth for plant growth, or to otherwise meet local conditions, the regulatory authority shall specify thicker amounts of cover using non-toxic material.

(4) Acid-forming or toxic-forming material shall not be buried or stored in proximity to a drainage course so as to cause or pose a threat of water pollution.

(b) *Stabilization.* Backfilled materials shall be selectively hauled or conveyed and compacted wherever necessary to prevent leaching of acid-forming and toxic-forming materials into surface or ground waters and wherever necessary to ensure the stability of the backfilled materials. The method of compacting material and the design specifications shall be approved by the regulatory authority before the acid-forming and toxic-forming materials are covered.

§ 817.106 Regrading or stabilizing rills and gullies.

When rills or gullies deeper than 9 inches form in areas that have been regraded and topsoiled the rills and gullies shall be filled, graded, or otherwise stabilized and the area reseeded or replanted the areas according to Sections 817.111–817.117. The regulatory authority shall specify that rills or gullies of lesser size be stabilized if the rills or gullies are disruptive to the approved post-mining land use or may result in additional erosion and sedimentation.

§ 817.111 Revegetation: General requirements.

(a) Each person who conducts underground mining activities shall establish on all areas affected by surface operations and facilities diverse, effective, and permanent vegetative cover of species native to the area of affected land or species that supports the approved post-mining land uses. For areas designated as prime farmlands, the reclamation requirements of 30 CFR Part 823 shall apply.

(b) All revegetation shall be in compliance with the plan approved by the regulatory authority and shall be carried out in a manner that encourages a prompt vegetative cover and recovery of productivity levels compatible with the approved post-mining land use.

(1) All disturbed lands, except water areas and surface areas of roads that are approved as a part of the post-mining land use, shall be seeded or planted to achieve a vegetative cover of the same seasonal variety native to the area of disturbed land.

(2) The vegetative cover shall be capable of stabilizing the soil surface with respect to erosion.

(3) Vegetative cover shall be considered of the same seasonal variety when it consists of a mixture of species of equal or superior utility for the intended land use when compared with the utility of naturally occurring vegetation during each season of the year.

(4) If both the pre-mining and the post-mining land use is intensive, agriculture, planting of the crops and normally grown will meet the requirement of paragraph (b)(1) of this Section.

§ 817.112 Revegetation: Use of introduced species.

Introduced species may be substituted for native species only if approved by the regulatory authority after appropriate field trials have demonstrated that the introduced species are of equal or superior utility for the approved post-mining land use, or are necessary to achieve a quick, temporary, and stabilizing cover. Introduced species shall meet applicable State and Federal seed or introduced species statutes, and shall not include poisonous or toxic species.

§ 817.113 Revegetation: Timing.

Seeding and planting of disturbed areas shall be conducted during the first normal period for favorable planting conditions after final preparation. The normal period for favorable planting shall be that planting time generally accepted locally for the type of plant materials selected. Any disturbed areas, except water areas and surface areas of roads approved for the post-mining land use, which have been final graded and topsoiled shall be mulched as required by Section 817.114 and seeded, if required by the regulatory authority, with a temporary cover of small grains, grasses, or legumes to control erosion until an adequate permanent cover is established.

§ 817.114 Revegetation: Mulching.

(a) Suitable mulch shall be used on all regraded and topsoiled areas to control erosion, to promote germination of seeds, and to increase the moisture retention of the soil. Mulch shall be anchored to the soil surfaces to ensure effective protection of the soil and vegetation.

(b) Annual grasses and grains such as oats, rye, and wheat may be used instead of mulch when the regulatory authority determines that they will provide adequate stability and that they will later be replaced by species approved for the post-mining land use.

§ 817.115 Revegetation: Grazing.

When the approved post-mining land use is rangeland or pastureland, the reclaimed land shall be used for livestock grazing at a stocking rate equal to or less than approved by the regulatory authority for at least the last two full years of liability required under Section 817.116(b).

§ 817.116 Revegetation: Standards for success.

(a) Success of revegetation shall be measured by the techniques approved by the regulatory authority on the basis of the reference areas approved by the regulatory authority. This is to adjust for natural differences between the pre-mining years and post-mining years. Management of the reference area shall be comparable to that which is required for the approved post-mining land use of the mine plan area.

(b) The ground cover and productivity of living plants on the revegetated area shall be equal to the ground cover and productivity of living plants on the same approved reference area before mining for:

(i) Each year of a period of 5 full consecutive years after the last year of augumented seeding, fertilizing, irrigation, or other major work that ensures success in areas of more than 26.0 inches average annual precipitation; or

(ii) Each year of a period of 10 full consecutive years after the last year of augmented seeding, fertilizing, irrigation, or other major work that ensures success in areas of less than or equal to 26.0 inches average annual precipitation.

(2) For purposes of paragraphs (b)(1)(i) and (ii) of this section, the average annual precipitation shall be determined either—

(i) By interpolation, using standard interpolation techniques, from "Mean Annual Precipitations," Map, p. 97, The National Atlas of the United States, U.S. Department of the Interior, Geological Survey, 1970. This work is hereby incorporated by reference as it exists on the date of adoption of this Subchapter. Notices of changes in this atlas will periodically be published in the Federal Register. The atlas is available at all OSM offices and is on file in the Office of the Federal Register; or

(ii) Based on 10 years of continuous and reliable precipitation records from stations located in or adjacent to the permit area.

(3) The ground cover shall be considered equal if it is at least 90 percent of the ground cover or productivity of the reference area with 90 percent statistical confidence and with 80 percent statistical confidence on shrublands for any significant portion of the mined area. A lower percentage of ground cover and productivity may be authorized by the regulatory authority under the following standards:

(i) For previously mined areas that are not reclaimed to the performance standards in this subchapter, the ground cover of living plants for the areas shall not be less than can be supported by the best available topsoil and overburden in the mine plan area and in no case less than that existing before redisturbance;

(ii) For areas to be developed for industrial or residential use less than 2 years after regrading is completed the ground cover of living plants shall not be less than required to control erosion; and

(iii) Success in revegetation of cropland shall be determined on the basis of crop production from the mined area compared to the reference area. Crop production from the mined area shall be equal to that of the approved reference area for a minimum of two growing seasons. Production shall not be considered equal if it is less than 90 percent of the production of the reference area for any significant portion of the mined area.

(c) The person who conducts underground mining activities shall:

(1) Maintain any necessary fences and proper management practices; and

(2) Conduct periodic measurements of vegetation, soils, and water prescribed or approved by the regulatory authority to identify conditions during the applicable period of liability specified in paragraph (b) of this Section.

§ 817.117 Revegetation: Tree stocking for forest land.

This Section sets forth forest resource conservation standards for reforested operations to ensure that a cover of trees of commercial species, sufficient to adequately use the available growing space, is established after underground mining activities.

(a) The following are the minimum acceptable stocking standards for areas east of the 100th meridian west longitude as measured 5 years after planting:

(1) The area contains an average point count of six hundred trees per acre, to be computed as follows:

(i) 600 established trees of commercial species per acre at least 3 years of age each, each one to count as one toward meeting the stocking requirements; and

(ii) Root crown or root sprouts over one foot in height shall count as one toward meeting the stocking requirement.

(2) Rock areas, permanent roads, and surface water drainage ways in forest land shall not require stocking.

(3) A "countable tree" means a tree that can be used in calculating the degree of stocking under the following criteria:

(i) The tree shall be in place at least three growing seasons;

(ii) The tree shall be alive and healthy;

(iii) The tree shall have at least one-third of its length in live crown;

(iv) The tree shall be a commercial species which the regulatory authority determines will produce commerical trees physiologically suited for the area.

(4) Stocking means a measure of the degree to which space is occupied by well-distributed countable trees.

(b) The following are the minimum standards for areas west of the 100th meridian west longitudes where shelterbelts, fauna habitat, commercial forestland, or other forestlands are to be used for post-mining land use.

(1) A pre-mining and post-mining vegetation inventory of trees, shrubs and half-shrubs shall be conducted on established reference areas according to methods approved by the regulatory authority. This inventory shall contain, but not be limited to—

(i) Site quality;

(ii) Stand size;

(iii) Stand condition;

(iv) Site and species relations; and

(v) Appropriate forest/land utilization considerations.

(2) Appropriate trees, shrubs and half-shrubs on the revegetated area shall be measured using the approved methods after the vegetation has been established according to the approved mining and reclamation plan. The density, number per unit area, of live woody plants which have been in place at least 3 years on the rehabilitated area shall be equal to or greater than 90 percent of the density of live woody plants of the same life form (trees vs. shrubs and half-shrubs) on the reference area with ninety (90) percent statistical confidence. When this ground cover requirement is met, the five or ten year responsibility period required in Section 817.116 shall begin

(3) Upon expiration of the five or ten year responsibility period and at the time of request for bond release, each person who conducts underground mining activities shall provide documentation required in paragraph (a) of this section showing that the woody plants established on the rehabilitated site meet the requirements of the approved mining and reclamation plan. Species diversity, distribution, seasonal variety, vigor and regenerative capacity of the vegetation of the revegetated area shall be evaluated on the basis of the results which could reasonably be expected using the methods of revegetation in the approved mining and reclamation plan.

§ 817.121 Subsidence control: General requirements.

Underground mining activities shall be planned and conducted so as to prevent subsidence from causing material damage to the surface, to the extent technologically and economically feasible, and so as to maintain the value and foreseeable use of surface lands. This may be accomplished by leaving adequate coal in place, backfilling, or other measures to support the surface or by mining in such a manner that provides for planned and controlled subsidence.

§ 817.122 Subsidence control: Public notice.

The mining schedule shall be published in a newspaper of general circulation in the area of the mine and distributed by mail to all owners of property or residents within the affected and adjacent areas at least every 6 months during active mining operations. The mining schedule shall contain at a minimum:

(a) Identification of specific areas in which mining will take place;

(b) Dates of mining activities that could cause subsidence and affect specific structures;

(c) The probable surface effects on structures;

(d) Measures to be taken to prevent or control adverse surface effects; and

(e) The opportunity for surface owners to request a pre-mining survey of dwellings and structures.

V 4 3 / 1 8 1

§ 817.123 Subsidence control: Pre-mining survey.

(a) On a request to the regulatory authority by an owner of any dwelling or structure within the mine plan area and adjacent area likely to be affected by subsidence, the operator shall conduct a pre-mining survey of the dwelling or structure and shall submit a report of the survey to the regulatory authority. A pre-mining survey shall be conducted of all public buildings including but not limited to churches, schools, hospitals, and public utilities or municipal public service operations including highways, dams, and cemeteries.

(b) Personnel approved by the regulatory authority shall be used to conduct the survey to determine the condition of the dwelling or structure and to document any pre-mining damage and determine other physical factors that could reasonably be affected by subsidence resulting from mining. Assessments of structures such as roads, dams, pipelines, cables, transmission lines, and wells, ditches, and other water systems shall be limited to surface condition and other readily available data. Special attention shall be given to the pre-mining condition of springs, wells, reservoirs, and other water systems used for human, animal, or agricultural purposes and to quantity and quality of the water.

(c) A written report of the survey shall be prepared and signed by the person who conducted the survey and prepared the written report. The report shall include recommendations of any special conditions or proposed adjustments to the subsidence control procedures outlined in Section 817.122 which should be adopted to prevent material damage. Copies of the report shall be provided to the surface owner requesting the survey and to the regulatory authority.

§ 817.124 Subsidence control: Surface owner protection.

Each person who conducts underground mining activities, unless that person is the owner of overlying surface and adjacent lands subject to subsidence damage or holds a valid and specific waiver of surface damage for such lands from the present owner, shall consult with the owner of any dwelling or structure on such lands before conducting any underground mining activities.

§ 817.125 Subsidence control: Monitoring.

(a) Each person who conducts underground mining activities shall comply with the subsidence monitoring plan approved by the regulatory agency under 30 CFR 784.19.

(b) The regulatory authority may require the establishment of special monuments near sensitive structures and may require special measurements at different time and precision limits.

(c) An initial subsidence report shall be submitted to the regulatory authority with the permit application, and for mines in existence on the date of implementation of a State or Federal program no later than 8 months after the date of such implementation. The report shall describe the condition of the surface overlying each mine and nearby lands subject to subsidence due to underground mining activities at the time of the initial survey. This report shall be updated annually on the basis of additional surveys and shall contain comprehensive documentation of horizontal and vertical changes of monuments.

(d) If reasonable access for surveying is denied by the surface owner of lands subject to subsidence, the regulatory authority may modify the requirements of this Section as appropriate.

(e) If, on the basis of a detailed study of subsurface conditions, the regulatory authority determines that subsidence will be negligible, the monitoring requirements may be modified but shall, in any event, require detailed surveys before and after mining, or as specified in paragraph (c) of this Section.

§ 817.126 Subsidence control: Buffer zones.

(a) Underground mining activities shall not be conducted beneath or adjacent to any intermittent or perennial stream, or impoundment having a storage volume of 20 acre-feet or more, unless the regulatory authority on the basis of detailed subsurface information determines that subsidence will not cause material damage to the water body and associated structures. If subsidence exceeds the limitations approved in the mining permit, additional support or backfill material shall be placed to prevent additional subsidence from occurring.

(b) Underground mining activities beneath any aquifer that serves as the sole source of water supply to any municipal water system shall be conducted so as to avoid disruption of the aquifer and consequent exchange of ground water between the aquifer and other strata. The regulatory authority may prohibit mining in the vicinity of such aquifers or may limit the percentage of coal extraction in the interest of protecting water supplies.

(c) Underground mining activities shall not be conducted beneath or in close proximity to any public buildings including but not limited to churches, schools, hospitals, courthouses and government offices unless the regulatory authority on the basis of detailed subsurface information determines that subsidence will not cause material damage to these structures and specifically authorizes the mining.

§ 817.131 Cessation of operations: Temporary.

(a) Each person who conducts underground mining activities shall in areas in which there are no current operations, but operations are to be resumed under an approved plan, effectively support and close all surface access openings to underground operations, and secure surface facilities. Temporary abandonment shall not relieve a person of his obligation to comply with provisions of his approved mining and reclamation operations permit.

(b) Before temporary cessation of operations and reclamation, each person who conducts underground mining activities shall submit to the regulatory authority a notice of intention to cease or abandon operations and reclamation. This notice shall include a statement of the exact number of acres affected in the permit area, the extent and kind of reclamation accomplished, and identification of the regrading, revegetation, environmental monitoring, and water treatment activities that will continue during the temporary cessation.

§ 817.132 Cessation of operations: Permanent.

(a) The person who conducts underground mining activities shall close or backfill or otherwise permanently reclaim all affected areas in accordance with this Chapter and according to the plan approved by the regulatory authority.

(b) All equipment, structures, or other facilities not required for continued underground mining activities and monitoring unless approved as suitable for the post-mining land use, shall be removed and the affected lands reclaimed.

§ 817.133 Post-mining land use.

(a) *General.* All affected areas shall be restored in a timely manner—

(1) To conditions that are capable of supporting the use which they were capable of supporting before any mining;

(2) To higher or better uses achievable under criteria and procedures of this Section.

(b) *Determining pre-mining use of land.* The pre-mining uses of land to which the post-mining land use is compared shall be those uses which the land previously supported if the land had not been previously mined and had been properly managed.

(1) The post-mining land use for land that has been previously mined and not reclaimed shall be judged on the basis of the highest and best use that can be achieved and is compatible with surrounding areas.

(2) The post-mining land use for land that has received improper management shall be judged on the basis of the pre-mining use of surrounding lands that have received proper management.

(3) If the pre-mining use of the land was changed within 5 years of the beginning of mining, the comparison of post-mining use to pre-mining use shall include a comparison with the historic use of the land as well as its use immediately preceding mining.

(c) Before permanent abandonment, the permit area shall be restored, in a timely manner, either to conditions capable of supporting the uses they were capable of supporting before any mining or to conditions capable of supporting approved alternative land uses. Alternative land uses may be approved by the regulatory authority after consultation with the landowner or the land-management agency having jurisdiction over the lands, if the following criteria are met:

(1) The proposed post-mining land use is compatible with adjacent land use and, where applicable, with existing local, State, or Federal land use policies and plans. A written statement of the views of the authorities with statutory responsibilities for land use policies and plans shall have been submitted to the regulatory authority before underground mining activities began. Any required approval of local, State, or Federal land management agencies, including any necessary zoning or other changes required for the land use, shall have been obtained and shall remain valid throughout the underground mining activities.

(2) Specific plans shall be prepared and submitted to the regulatory authority which show the feasibility of the post-mining land use as related to needs, projected land use trends, and markets and that include a schedule showing how the proposed use will be developed and achieved within a reasonable time after mining and be sustained. The regulatory authority may require appropriate demonstrations to show that the planned procedures are feasible, reasonable, and integrated with mining and reclamation, and that the plans will result in successful reclamation.

(3) Provision of any necessary public facilities shall be ensured as evidenced by letters of commitment from parties other than the person who conducts underground mining activities, as appropriate, to provide them in a manner compatible with the plans submitted under 30 CFR 780.15. The letters shall be submitted to the regulatory authority before surface mining activities begin.

(4) Specific and feasible plans are submitted to the regulatory authority which show that financing and attainment and maintenance of the post-mining land use are feasible and are supported by letters of commitment from parties other than the person who conducts the underground mining activities.

(5) Plans for the post-mining land use shall have been designed under the general supervision of a registered professional engineer, or other appropriate professional, who will ensure that the plans conform to applicable accepted standards for adequate land stability, drainage, and vegetative cover, and esthetic design appropriate for the post-mining use of the site.

(6) The proposed use or uses will neither present actual or probable hazard to public health or safety nor will they pose any actual or probable threat of water flow diminution or pollution.

(7) The use or uses will not involve unreasonable delays in reclamation.

(8) Necessary approval of measures to prevent or mitigate adverse effects on fish, wildlife and related environmental values shall have been obtained from the regulatory authority and appropriate State and Federal fish and wildlife management agencies before surface mining activities begin.

(9) Proposals to change pre-mining land uses of range, fish and wildlife habitat, forestland, hayland, or pasture to a post-mining cropland use, where the cropland would require continuous maintenance such as seeding, plowing, cultivation, fertilization, or other similar practices to be practicable or to comply with applicable Federal, State, and local laws, have been reviewed by the regulatory authority to ensure that—

(i) There is a firm written commitment by the person who conducts underground mining activities or by the landowner or land manager to provide sufficient crop management after release of applicable performance bonds to ensure that the proposed post-mining cropland use remains practical and reasonable;

(ii) There is sufficient water available and committed to maintain crop production; and

(iii) Topsoil quality and depth are sufficient to support the proposed use.

PART 818—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—CONCURRENT SURFACE AND UNDERGROUND MINING

Sec.
818.1 Scope.
818.2 Objective.
818.4 Responsibility of regulatory authority.
818.11 Applicability.
818.12 Criteria for a variance to remain valid.
818.13 Review of variance.
818.15 Compliance with variance terms.
818.16 Additional performance standards.
818.18 Limits of variance.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 506, 508, 515, 516, Pub. L. 95-87, 91 stat. 448, 449, 467, 470, 471, 473, 478, 486, 495 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1256, 1258, 1565, 1266).

§ 818.1 Scope.

This Part sets forth the minimum performance standards each person who combines surface mining activities with underground mining activities shall comply with under a variance from the requirement that reclamation efforts proceed as contemporaneously as practicable for specific areas within the reclamation plan.

§ 818.2 Objective.

The objective of this Part is to ensure the maximum practicable recovery of mineral resources and to avoid multiple disturbances of the surface areas.

§ 818.4 Responsibility of regulatory authority.

The regulatory authority shall review and grant or deny requests for variances from the requirement that reclamation efforts proceed as contemporaneously as practicable in accordance with 30 CFR 785.18.

§ 818.11 Applicability.

A variance applies only to those specific areas within the reclamation plan that the applicant shows to be necessary for implementing the proposed concurrent operations and that the regulatory authority approves. The variance is effective for any area only for the time necessary to facilitate the underground mining authorized.

§ 818.12 Criteria for a variance to remain valid.

A variance from the requirement that reclamation proceed as contemporaneously as practicable for specific areas within the permit area is valid for combined surface mining and underground mining activities if the following criteria are met:

(a) Each person who conducts these activities submits to the regulatory authority specific, feasible plans for the proposed underground mining activities.

(b) The underground mining activities are necessary or desirable to ensure maximum practical recovery of the mineral resource and avoid multiple disturbance of the surface areas.

(c) The plan for the underground mining activities conforms to the requirements for underground mining in 30 CFR 817 and the permits necessary for the underground mining activities have been issued by the regulatory authority.

SEP 18 1978

(d) The specific areas within the reclamation plan which are proposed to be included in the variance are necessary for the proposed underground mining activities.

(e) No substantial adverse environmental damage, either on-site or off-site, results from the delay in completion of reclamation otherwise required in 30 CFR 816 and 817; and

(f) Provisions for the off-site storage of spoil will comply with 30 CFR 816.71–816.73.

§ 818.13 Review of variance.

The regulatory authority shall review each variance granted under this Part not more than three years from the date the permit is issued. The regulatory authority shall decide whether to renew, revise, or revoke the variance, based on the permittee's compliance with the terms of the variance.

§ 818.15 Compliance with variance terms.

(a) Each person who conducts operations under a variance issued under 30 CFR 785.18 shall comply with all applicable performance standards in this Subchapter and any State or Federal program in effect, except to the extent that—

(1) Non-compliance is specifically authorized in the permit variance; and

(2) Non-compliance is necessary to achieve the purposes for which the variance is granted.

(b) Each person who conducts operations under a variance issued under 30 CFR 785.18 shall comply with each term and condition of the variance as set forth in the permit.

§ 818.16 Additional performance standards.

In addition to the performance standards of 30 CFR 816 and 817, each person who conducts combined operations shall comply with the following performance standards:

(a) A 500-foot barrier pillar of coal shall be maintained between the surface and underground operations in any one seam. The regulatory authority and the Mine Safety and Health Administration may approve a lesser distance after a finding by the regulatory authority that the approved operations result in—

(1) Improved resources recovery;

(2) Abatement of water pollution; or

(3) Elimination of hazards to the health and safety of the public.

(b) The vertical distance between surface and underground mines working separate seams shall be sufficient to provide for the health and safety of the workers and to prevent surface water from entering the underground workings.

(c) No operations under a variance granted under 30 CFR 785.18 shall reduce the protection provided public health and safety below the level of protection required for surface coal mining and reclamation operations conducted without a variance.

§ 818.18 Limits of variance.

A variance under this Part shall apply only to those portions of the permit area identified in the permit variance terms.

PART 819—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—AUGER MINING

Sec.
819.1 Scope.
819.2 Objectives.
819.11 Auger mining: Additional performance standards.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 510, 515, 517, 701 Pub. L. 95-87, 91 stat. 448, 449, 467, 470, 471, 480, 486, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1260, 1265, 1267, 1291).

§ 819.1 Scope.

This Part sets forth additional performance standards for auger mining, which is a surface mining extraction method under the Act and performance standards of this Subchapter.

§ 819.2 Objectives.

The objectives of this Part are to—

(a) Prevent the additional adverse environmental effects of auger mining; and

(b) Prevent any unnecessary loss of coal reserves.

§ 819.11 Auger mining: Additional performance standards.

(a) Any auger mining associated with a surface coal mining operation shall be conducted to maximize recoverability of mineral reserves remaining after mining and reclamation operations are complete. Each person who conducts auger mining activities shall leave areas of undisturbed coal to provide access for future underground mining unless the regulatory authority determines that it is not practicable to recover the remaining coal reserves. Unmined sections shall be—

(1) A minimum of 250 feet wide at any point between the auger openings to the full depth of the auger holes;

(2) No more than 2,500 feet apart measured from the center of one unmined section to the center of the next unmined section unless a greater distance is set forth in the reclamation plan approved by the regulatory authority;

(3) In multiple seam mining, the unmined section shall be increased in width by 50 feet for each subjacent workable seam and the centers of all unmined sections shall be aligned vertically; and

(4) No auger hole shall be closer than 500 feet in horizontal distance to any abandoned or active underground mine except as approved by the regulatory authority and the Mine Safety and Health Administration after a finding by the regulatory authority that the approved operation results in improved resources recovery, abatement of water pollution, or elimination of hazards to the health and safety of the public.

(b) In order to prevent pollution of surface and ground water and to reduce fire hazards, each auger hole, except as provided by paragraph (c) of this section, shall be plugged so as to prevent discharge of water and access of air to the coal as follows:

(1) Each auger hole discharging water containing toxic or acid-forming material shall be plugged within 72 hours after completion by backfilling and compacting noncombustible and impervious material into the hole to a depth sufficient to form a water-tight seal.

(2) Each auger hole not discharging water shall be sealed as in paragraph (b) (1) of this Section to close the opening within 30 days following completion.

(c)(1) An auger hole need not be plugged if the regulatory authority finds—

(i) the impoundment of the water which would result from plugging the hole may create a hazard to the environment or public health or safety;

(ii) that drainage from the auger hole will not pose a threat of pollution to surface water; and

(iii) The requirements of paragraph (c)(2) of this section are met.

(2) For every hole meeting the requirements of paragraph (c)(1) of this section, an internal drainage system of durable non-degradable rock shall be installed from the auger hole through the backfill and exit into a stable channel approved by the regulatory authority to allow dissipation of water pressure and to prevent saturation of the backfill.

(d) The regulatory authority shall prohibit auger mining in the permit area if it determines that—

(1) Sealing auger holes will not eliminate water pollution or instability of fills;

(2) The prohibition is necessary to maximize the utilization and conservation of the solid fule resources; or

(3) Subsidence resulting from auger mining may disturb or damage powerlines, pipelines, buildings, or other facilities.

(e) In addition to meeting the requirements of this Part, each person who conducts auger mining activities shall meet each requirement of Part 816 including, but not limited to, the requirement to return the disturbed

areas to approximate original contour and to maintain the hydrologic balance and water quality.

PART 820—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—ANTHRACITE MINES IN PENNSYLVANIA

Sec.
820.1 Scope.
820.2 Objective.
820.11 Performance standards: Anthracite mines in Pennsylvania.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 529, Pub. L. 95-97, 91 Stat. 448, 449, 467, 470, 471, 514 30 (U.S.C. 1202, 1211, 1251, 1253, 1254, 1279).

§ 820.1 Scope.

This Part contains performance standards for surface coal mining and reclamation operations conducted at anthracite coal mines located in Pennsylvania.

§ 820.2 Objective.

This Part implements Subsection 529(a) of the Act, which requires the Secretary to adopt special performance standards for anthracite mines regulated by environmental protection standards of a State.

§ 820.11 Performance standards: Anthracite mines in Pennsylvania.

(a) Anthracite surface coal mining and reclamation operations in Pennsylvania shall comply with all the Pennsylvania environmental protection provisions for anthracite coal mining in effect on August 3, 1977, instead of the provisions of this Subchapter. These Pennsylvania provisions include, but are not limited, to—

(1) The Pennsylvania Anthracite Strip Mining and Conservation Act, June 27, 1947, P.L. 1095, as amended through August 3, 1977, 52 P.S. Section 681.1 *et seq* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(2) The Pennsylvania Coal Refuse Disposal Control Act, September 24, 1968, P.L. 1040, No. 318, as amended through August 3, 1977, 52 P.S. Section 30.51 *et seq.* (Purdons 1966, 1978 Supp.)

(3) The Pennsylvania Surface Mining Conservation and Reclamation Act, May 31, 1945, P.L. 1198, as amended through August 3, 1977, 52 P.S. 1396.1 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(4) The Pennsylvania Anthracite Coal Mine Act of 1965, P.L. No 346, as amended through August 3, 1977, 52 P.S. Section 70.101 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(5) The Pennsylvania Clean Streams Law, as amended through August 3, 1977, 35 P.S. Sections 691.1 *et. seq.* and regulations adopted thereunder;

(6) The Pennsylvania Gas Operations, Well-Drilling, Petroleum and Coal Mining Act, P.L. 756, Nov. 30, 1965, as amended through August 3, 1977, 52 P.S. Section 2101 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(7) Provisions regulating the discharge of coal, culm or refuse into streams under P.L. 640, June 27, 1913, as amended through August 3, 1978 52 P.S. Section 631 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(8) Regulation of coal stripping under P.L. 133, June 18, 1941, as amended through August 3, 1978, 52 P.S. Section 1471 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(9) Regulation of subsidence under P.L. 1198, May 22, 1921, as amended through August 3, 1977, 52 P.S. Section 661 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(10) Regulation of subsidence under Pub. L. 1538, Sept. 20, 1961, as amended through August 3, 1977 (52 P.S. Section *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder;

(11) The establishment of mine safety zones under P.L. 1994, Dec. 22, 1959, as amended through August 3, 1978, 52 P.S. Section 3101 *et seq.* (Purdons 1966, 1978 Supp.) and regulations adopted thereunder; and

(12) All Pennsylvania statutes and regulations relating to the prevention or control of air pollution in effect on August 3, 1978.

(b) If Pennsylvania's regulatory program or regulations for anthracite coal mining and reclamation operations in effect on August 3, 1977, are amended, the Secretary, upon receipt of a notice of amendment, shall issue additional regulations as necessary to meet the purposes of this Act.

(c) Anthracite coal mines in Pennsylvania shall comply with all the requirements of this Chapter except—

(1) The performance standards in Subchapter K; and

(2) Where specifically exempted within the regulations.

PART 821—VARIANCES FROM PERMANENT PROGRAM PERFORMANCE STANDARDS—CERTAIN MINES IN ALASKA

Sec.
821.1 Scope.
821.2 Objective.
821.11 Alaska: Operations eligible for a variance.
821.12 Alaska: Expiration of variance.
821.13 Alaska: Procedure for obtaining variance.
821.14 Alaska: Scope of variance.

AUTHORITY: Sections 102, 201, 501, 503, 504, 512, 515, 516, 701, 708, 716 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 482, 486, 495, 516, 521, 526 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1562, 1265, 1266, 1291, 1298, 1306).

§ 821.1 Scope.

This Part sets forth the variances from the performance standards of Subchapter K for certain mines in Alaska.

§ 821.2 Objective.

This Part is intended to ensure that during the time period set forth in 30 CFR 821.12, enforcement of the performance standards of this Subchapter need not cause cessation of the operation of Alaska mines which were in operation during the year prior to August 3, 1977.

§ 821.11 Alaska: Operations eligible for a variance.

Variances from the performance standards of this Subchapter may be granted to a person who conducts surface coal mining and reclamations operations—

(a) Which are located in Alaska;

(b) From which coal was mined between August 3, 1976, and August 2, 1977; and

(c) For which the Secretary determines that the variance is necessary to ensure continued operation.

§ 821.12 Alaska: Expiration of variance.

Each variance granted under this Part shall expire on the earlier of the following:

(a) One year after the Secretary makes the report on the findings of the Alaska Coal Mine Study to the President and Congress as required under Section 708 of the Act; or

(b) August 3, 1980.

§ 821.13 Alaska: Procedure for obtaining variance.

(a) Any person who conducts a surface coal mining and reclamation operation in Alaska may petition the Secretary to modify the applicability of a performance standard to that operation. The petition shall be in writing and shall clearly identify—

(1) The performance standard involved;

(2) The alternative methods to be used to protect the environment and the public health and safety;

(3) The reasons for the request for modification, with full descriptions of—

(i) The effect that continued compliance with the performance standard would have on mining and reclamation; and

(ii) The effect that the proposed modification would have on the envi-

ronment and the public health and safety.

(4) The location of the mine;

(b) If the Secretary determines that

§ 822.2 Objectives.

This Part establishes the minimum performance and reclamation standards to preserve either the existing or

systems that supply alluvial valley floors. If environmental monitoring shows that the surface coal mining operation is causing material damage to

(e) Monitoring shall be performed during operations to identify characteristics of the alluvial valley floor not identified in the permit application

(2) Separately remove the B horizon of the soil or a combination of B horizon and underlying C horizon or other suitable soil material that will create a

(2) Protects the surface layer from wind and water erosion before it is seeded or planted.

(e) Apply nutrients and soil amend-

ronment and the public health and safety.

(4) The location of the mine;

(b) If the Secretary determines that the petition presents reasonable justification for modifying the performance standard, he shall publish a notice of intent to modify the applicability of the performance standard and to hold a hearing in accordance with paragraph (c) of this Section. The notice shall be published in the FEDERAL REGISTER and in a newspaper of general circulation in the area of Alaska where the coal mine is located.

(c) The Secretary shall hold a public hearing on the petition in Alaska and any person may testify for or against the proposed modification.

(d) The Secretary shall publish his decision in the FEDERAL REGISTER and in the same newspaper in which the original notice was published, after the Secretary—

(1) Considers public comment;

(2) Obtains the concurrence of the Administrator of the United States Environmental Protection Agency; and

(3) Consults with the Governor of Alaska.

§ 821.14 Alaska: Scope of variance.

No variance shall waive the applicability of the performance standards of this Subchapter more than is necessary to insure continuation of the mining operation. Except as specifically modified by a variance granted under this Part, each performance standard of this Subchapter shall apply to each surface coal mining and reclamation operation in Alaska.

PART 822—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—OPERATIONS IN ALLUVIAL VALLEY FLOORS

Sec.
822.1 Scope.
822.2 Objectives.
822.11 Alluvial valley floors: Hydrologic functions.
822.12 Alluvial valley floors: Farming and water quality.
822.13 Alluvial valley floors: Maintenance of agricultural uses.
822.14 Alluvial valley floors: Monitoring.

AUTHORITY: Sections 162, 201, 501, 503, 504, 506, 508, 510, 515, 516, 517 and 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 473, 478, 480, 486, 495, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1256, 1258, 1260, 1265, 1266, 1267, 1291).

§ 822.1 Scope.

This Part governs surface coal mining and reclamation operations on or which affect alluvial valley floors in the arid and semi-arid areas located west of the 100th meridian west longitude.

§ 822.2 Objectives.

This Part establishes the minimum performance and reclamation standards to preserve either the existing or potential agricultural uses and productivity of alluvial valley floors during and after mining.

§ 822.11 Alluvial valley floors: Hydrologic functions.

(a) Each person who conducts, surface coal mining and reclamation operations in or adjacent to alluvial valley floors shall plan and conduct the operations to preserve the essential hydrologic functions of the alluvial valley floors throughout the mining and reclamation process.

(b) During mining, the essential hydrologic functions of alluvial valley floors shall be preserved along reaches of alluvial valley floors not disturbed. These functions shall be preserved by maintaining those geologic, hydrologic, and biologic characteristics of the alluvial valley floor that support the functions.

(c) After mining, the essential hydrologic functions of alluvial valley floors shall be preserved in affected and adjacent areas of alluvial valley floors by reestablishing those geologic, hydrologic, and biologic characteristics of the alluvial valley floor that are necessary to support these functions.

(d) The characteristics that support the essential hydrologic functions of alluvial valley floors are those in 30 CFR 785.19 and those other geologic, hydrologic, or biologic characteristics identified during pre-mining investigations or monitoring conducted during the surface coal mining and reclamation operation.

§ 822.12 Alluvial valley floors: Farming and water quality.

(a) Surface coal mining and reclamation operations shall not interrupt, discontinue, or preclude farming on alluvial valley floors, unless—

(1) The pre-mining land use is undeveloped rangeland which is not significant to farming; or

(2) The area of affected alluvial valley floor is small and provides or may provide negligible support for production from one or more farms.

(b) If environmental monitoring shows that a surface coal mining operation is interrupting, discontinuing, or precluding farming on alluvial valley floors, the operation shall cease until remedial measures are taken by the person who conducts the operation. The remedial measures shall be approved by the regulatory authority.

(c) Each person who conducts surface coal mining and reclamation operations shall plan and conduct the operations so that no material damage is caused to the quality or quantity of water in surface or underground water systems that supply alluvial valley floors. If environmental monitoring shows that the surface coal mining operation is causing material damage to water that supplies alluvial valley floors, the operation shall cease until remedial measures are taken by the person who conducts the operation. The remedial measures shall be approved by the regulatory authority.

(d) This section does not apply to a surface coal mining operation under an initial permit issued under a State or Federal program which satisfies paragraph (e) of this Section, or to those portions of a surface coal mining operation under a renewal permit under a State or Federal program which were previously identified in a reclamation plan under the State or Federal program and which satisfy paragraph (e) of this Section.

(e) This section shall not apply to an operation that:

(1) Was in production in the year preceding August 3, 1977, was located in or adjacent to an alluvial valley floor, and produced coal in commercial quantities during the year preceding August 3, 1977; or

(2) Had obtained specific permit approval by the State regulatory authority before August 3, 1977, to conduct surface coal mining operations for an area within an alluvial valley floor.

§ 822.13 Alluvial valley floors: Maintenance of agricultural uses.

The person who conducts surface coal mining and reclamation operations shall ensure that the agricultural utility and the level of productivity of alluvial valley floors is reestablished and maintained after mining.

§ 822.14 Alluvial valley floors: Monitoring.

(a) The person who conducts surface coal mining and reclamation operations shall install, maintain, and operate an environmental monitoring system on all alluvial valley floors affected by the operations in order to show that the agricultural utility and production and the potential for agricultural utility and production are being maintained.

(b) The monitoring system shall result in sufficient numbers of hydrologic and biologic measurements to demonstrate that the important characteristics have been identified so that the essential hydrologic functions may be reestablished.

(c) The monitoring shall include ground water and surface water quantity and quality, vegetation measurements, and soil analyses.

(d) The monitoring shall be performed at a frequency which is adequate to indicate longer term trends that could affect agricultural use of the alluvial valley floors.

(e) Monitoring shall be performed during operations to identify characteristics of the alluvial valley floor not identified in the permit application and to evaluate the importance of all characteristics.

(f) All monitoring data collected shall routinely be made available to the regulatory authority.

PART 823—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—OPERATIONS ON PRIME FARMLAND

Sec.
823.1 Scope.
823.2 Objective.
823.11 Prime farmland: Special requirements.
823.12 Prime farmland: Soil removal.
823.13 Prime farmland: Soil stockpiling.
823.14 Prime farmland: Soil replacement.

AUTHORITY: Sections 102, 201, 501, 503, 504, 506, 508, 510, 515, 516, 517, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 473, 478, 480, 486, 495, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1256, 1258, 1260, 1266, 1267, 1291).

§ 823.1 Scope.

This Part sets forth special performance standards for surface coal mining and reclamation operations on prime farmland.

§ 823.2 Objective.

The objective of this Part is to minimize the effects of mining upon prime farmland so that the land will have equal productivity after mining and is not lost as a resource.

§ 823.11 Prime farmland: Special requirements.

Each person who conducts surface coal mining and reclamation operations on prime farmland shall meet the following requirements:

(a) A permit shall be obtained under 30 CFR 785.17.

(b) Each soil horizon to be used in the reconstruction of the soil shall be removed before drilling, blasting, or mining in a manner that prevents mixing or contaminating the soil horizon with undesirable material. Where removal of soil horizons results in erosion that may cause air and water pollution, the regulatory authority shall specify methods of treatment to control erosion of exposed overburden.

§ 823.12 Prime farmland: Soil removal.

(a) Each person who conducts surface coal mining and reclamation operations on prime farmland shall—

(1) Separately remove the entire A horizon or other suitable soil materials which will create a final soil having an equal or greater productive capacity than that which existed prior to mining.

(2) Separately remove the B horizon of the soil or a combination of B horizon and underlying C horizon or other suitable soil material that will create a reconstructed root zone of equal or greater productive capacity than that which existed before mining.

(3) Separately remove the underlying C horizons or other strata, or a combination of horizons or other strata, to be used instead of the B horizon. These combinations shall be of equal or greater thickness and equal to or more favorable for plant growth than the B horizon. When replaced these combinations shall create in the reconstructed soil a final root zone of comparable depth and quality to that which existed in the natural soil.

(b) The minimum depth of soil and soil material to be reconstructed shall be 48 inches unless the regulatory authority specifies a greater depth because of uniquely favorable soil horizons at greater depths.

§ 823.13 Prime farmland: Soil stockpiling.

If stockpiling of soil horizons is allowed by the regulatory authority instead of immediate replacement, the A horizon and B horizon shall be stored separately. These stockpiles shall be placed within the permit area where they are not disturbed or exposed to excessive water or wind erosion before the stockpiled horizons can be redistributed. Stockpiles in place for more than 30 days shall meet the requirements of Section 816.23.

§ 823.14 Prime farmland: Soil replacement.

Each person who conducts surface coal mining and reclamation operations on prime farmland shall meet the following requirements when replacing soil:

(a) Replace the soil material on land graded to the final contour;

(b) Scarify the final graded land before the soil material is replaced;

(c) Replace the B horizon or other suitable soil material specified in Sections 823.12(a)(2) and (a)(3), in a manner that avoids excessive compaction of overburden and to a thickness comparable to the root zone that existed in the soil before mining.

(d) Replace the A horizon or other suitable soil materials, specified in Section 823.12(a)(1) as the final surface soil layer. This surface soil layer shall equal the thickness of the original soil as determined in 30 CFR 785.17(e)(1) and be replaced in a manner that—

(1) Prevents excessive compaction of both the surface layer and underlying material and reduction of permeability to less than 0.06 inch per hour in the upper 20 inches of the reconstructed soil profile; and

(2) Protects the surface layer from wind and water erosion before it is seeded or planted.

(e) Apply nutrients and soil amendments as needed to establish quick vegetative growth.

PART 824—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—MOUNTAINTOP REMOVAL

Sec.
824.1 Scope.
824.2 Objectives.
824.11 Mountaintop removal: Performance standards.

AUTHORITY: Sections 102, 201, 501, 503, 504, 506, 508, 510, 515, 517, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 474, 478, 480, 486, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1354, 1256, 1258, 1260, 1265, 1267, 1291).

§ 824.1 Scope

This Part sets forth an alternate method of surface mining that grants an exception to the approximate original contour performance standard requirement.

§ 824.2 Objectives.

The objectives of this Part are to—

(a) Enhance coal recovery;

(b) Reclaim the land to equal or higher economic post-mining use; and

(c) Protect and enhance environmental and other values under the Act.

§ 824.11 Mountaintop removal: Performance standards.

(a) Under an approved State program or under a Federal program, surface coal mining and reclamation operations may be granted a variance from the requirements of this Subchapter for restoring affected areas to approximate original contour, if—

(1) The regulatory authority grants an exemption from the requirement to restore to approximate original contour in accordance with 30 CFR 785.15;

(2) The entire coal seam running through the upper fraction of a mountain, ridge, or hill is removed by removing all of the overburden and creating a level plateau or gently rolling contour with no highwalls remaining;

(3) An industrial, commercial, agricultural, residential, or public facility (including recreational facilities) use is proposed and approved for the affected land;

(4) The alternative land use criteria of Section 816.33 are met; and

(5) All applicable performance standards other than the requirement to restore to approximate original contour are met.

(b) Surface coal mining and reclamation operations conducted under this variance shall comply with the following standards:

(1) An outcrop barrier of sufficient width, consisting of the toe of the lowest coal seam, and its associated

AUTHORITY: Sections 102, 201, 501, 503, 504, 508, 510, 515, 527, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 478, 480, 486, 513, 516 (30 U.S.C. 1202, 1211, 1251, 1253,

(1) In the final mine area, highwalls shall be allowed to remain if found to be stable by the regulatory authority;

(ii) Measurements of individual slopes, locations at which measurements are made, and the average natu-

PART 826—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—OPERATIONS ON STEEP SLOPES

(d) Material in excess of that required by the grading provisions of this Part shall be disposed of in ac-

(1) An outcrop barrier of sufficient width, consisting of the toe of the lowest coal seam, and its associated overburden, shall be retained to prevent slides and erosion.

(2) The final graded top plateau slopes on the mined area shall be less than 1*v*:5*h* so as to create a level plateau or gently rolling configuration and the outslopes of the plateau shall not exceed 1*v*:2*h*, except where engineering data substantiates and the regulatory authority finds that a minimum static safety factor of 1.5 will be attained.

(3) The resulting level or gently rolling contour shall be graded to drain inward from the outslope except at specific points where it drains over the outslope in stable protected channels.

(4) Natural watercourses shall not be damaged.

(5) All waste and acid-forming or toxic-forming materials, including the strata immediately below the coal seam shall be covered with non-toxic spoil to prevent pollution and achieve the post-mining land use.

(6) Spoil shall be placed on the mountaintop bench as is necessary to achieve the post-mining land use approved under paragraphs (a)(3) and (a)(4) of this Section. All excess spoil material not retained on the mountaintop shall be placed in accordance with the standards of 30 CFR 816.71-816.73 and 816.52.

(c)(1) Each permit which grants approval for mountaintop removal shall be reviewed not more than 3 years from the date the permit was issued, unless the person who conducts the operation affirmatively demonstrates and the regulatory authority finds that all operations are proceeding in accordance with the terms of the permit and applicable requirements of the Act and this Part.

(2) Each permit which grants approval for mountaintop removal may be modified by the regulatory authority if it determines that more stringent measures are necessary to:

(i) Prevent or control slides or erosion;

(ii) Prevent damage to natural water courses;

(iii) Avoid water pollution; or

(iv) Ensure successful revegetation.

PART 825—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—SPECIAL BITUMINOUS COAL MINES IN WYOMING

Sec.
825.1 Scope.
825.2 Objective.
825.11 Performance standards: Special bituminous coal mines operating prior to January 1, 1972.
825.12 Performance standards: Special bituminous coal mines developed after August 3, 1977.
825.13 Changes in Wyoming program.

AUTHORITY: Sections 102, 201, 501, 503, 504, 508, 510, 515, 527, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 478, 480, 486, 513, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1258, 1260, 1277, 1291).

§ 825.1 Scope.

(a) This Part sets forth special requirements for certain bituminous coal surface mines located west of the 100th meridian west longitude, which existed on January 1, 1972, or are immediately adjacent thereto and for which development began after August 3, 1977, in accordance with Section 527 of the Act.

(b) Unless specifically modified by this Part, each performance standard of this Subchapter applies to these mines.

§ 825.2 Objective.

The objective of this Part is to minimize any adverse environmental effect of special bituminous coal mines located west of the 100th meridian west longitude by providing—

(a) Special standards for on-site handling of spoil;

(b) Elimination of depressions capable of collecting water;

(c) Creation of improvements and regrading to approximate original contour; and

(d) Allowing for retention of certain stable highwalls.

§ 825.11 Performance standards: Special bituminous coal mines operating before January 1, 1972.

(a) This Section contains special performance standards for those portions of special bituminous coal mines, as defined in 30 CFR 701.5, which—

(1) Were approved for operation before January 1, 1972, including the orderly expansion of such a mine pit to the extent authorized by State law;

(2) Have actually been producing coal since January 1, 1972;

(3) Because of past duration of mining are committed to a mode of operation that warrants an exception to some of the provisions of this Subchapter; and

(4) Involve the mining of more than one seam and mining has been initiated on the deepest coal seam contemplated to be mined in the current operation.

(b) Operations subject to this Section shall at a minimum meet the general performance standards of this Subchapter for all operations conducted on the permit area outside the mine pit and for those operations associated with spoil storage areas. All the standards of this Subchapter apply to the mine pit for requirements for backfilling and grading. Special requirements for backfilling and grading the mine pit area are as follows:

(1) In the final mine area, highwalls shall be allowed to remain if found to be stable by the regulatory authority;

(2) Benches may be constructed if approved by the regulatory authority in the approved mining plan;

(3) The exposed pit floors shall be sloped and graded to provide access to the area;

(4) Topsoil shall be replaced in accordance with 30 CFR 816.24;

(5) The floor of the pit shall be seeded according to the requirements of 30 CFR 816.111-816.117 and 816.102;

(6) Where water impoundments are included as part of the mine plan, riprap may be used if necessary to prevent erosion; and

(7) Spoil piles shall be graded and contoured with no more than the overall slope of 17 degrees allowed, and terraces may be used to break the slope when it can be shown that terraces will accomplish the required reclamation. For the post-mining land use, steeper slopes may be permitted upon approval of the regulatory authority, if it can be demonstrated that this method provides the required results.

§ 825.12 Performance standards: Special bituminous coal mines developed after August 3, 1977.

(a) This Section applies to those special bituminous coal mines, as defined in 30 CFR 701.5, which are developed after August 3, 1977, on lands immediately adjacent to portions of mines subject to Section 825.11.

(b) Operations subject to this section shall comply with all requirements of Wyoming law.

(c) Operations subject to this section shall, at a minimum, meet the general performance standards of this Subchapter for all operations conducted on the permit area outside the mine pit and for the operations associated with spoil storage areas. The standards of 30 CFR Part 816 apply to the mine pit except for the requirements for backfilling and grading.

(d) Special requirements for backfilling and grading the mine pit area are as follows:

(1) *Slope specifications.* Slope specifications for the post-mining land use shall be based on an average of the natural slopes measured in the immediate area of the mine-site. The maximum inclination of the slopes in the reclaimed area shall not be greater than this average slope.

(i) Slopes steeper than the average of the natural slopes may be approved by the regulatory authority if it can be demonstrated that returning the affected area to a slope equal to or less than the average natural slope would greatly increase the amount of disturbed land.

(ii) Measurements of individual slopes, locations at which measurements are made, and the average natural slope as determined from the individual slope measurements shall be submitted for approval to the regulatory authority.

(2) *Post-mining land uses that do not include permanent water impoundments.*

(i) The final mine area shall be backfilled, graded, and contoured to the extent necessary to return the land to the use approved by the regulatory authority.

(ii) All backfilling, grading, and contouring shall preserve the original drainage system or provide substitute drainage systems approved by the regulatory authority.

(iii) Terraces or benches may be used only if it can be demonstrated that contouring methods do not provide the required results. Detailed plans of dimensions and design of the terraces or benches, check dams, erosion prevention techniques, and slopes of the terraces or benches and their intervals shall be submitted to the regulatory authority for approval before construction.

(iv) Depressions that will accumulate water shall not be allowed unless they are approved under paragraph (d)(3) of this Section.

(3) *Post-mining land uses that include permanent water impoundments.*

(i) The exposed mine pit area shall be sloped, graded, and contoured to blend with the topography of the surrounding terrain and to provide access to the area. Where necessary to prevent erosion, riprap shall be used.

(ii) If the person who conducts the surface mining activities demonstrates that the pitwall can be stabilized by terracing or other techniques, the regulatory authority may approve leaving the stabilized pitwall along one-half of the proposed shoreline, as measured along the circumference. The remaining part of the shoreline shall be graded and contoured to blend with the topography of the surrounding terrain and to provide access to the area. Detailed explanations of the techniques to be used to stabilize the pitwall shall be submitted for approval to the regulatory authority.

§ 825.13 Changes in Wyoming program.

In the event of an amendment or revision to the State of Wyoming's regulatory program, regulations, or decisions made thereunder governing special bituminous coal mines, the Secretary shall issue additional regulations as necessary to meet the purposes of the Act.

PART 826—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—OPERATIONS ON STEEP SLOPES

Sec.
826.1 Scope.
826.2 Objective.
826.11 Applicability.
826.12 Steep slopes: Performance standards.
826.13 Steep slopes: Limited variances.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 508, 510, 515, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 478, 480, 486, 467, 470, 478, 480, 486, 516 (U.S.C. 1202, 1211, 1251, 1253, 1258, 1260, 1265, 1291).

§ 826.1 Scope.

This Part provides special environmental performance standards for operations on steep slopes.

§ 826.2 Objective.

The objective of this Part is to ensure adequate environmental protection during surface coal mining and reclamation operations on steep slopes.

§ 826.11 Applicability.

(a) Any surface coal mining and reclamation operations on steep slopes shall meet the performance standards of this Part.

(b) The standards of this Part do not apply to:

(1) Mining conducted on a flat or gently rolling terrain with an occasional steep slope through which the mining proceeds and leaves a plain or predominatly flat area; or

(2) That part of operations granted a variance under Section 515(e) of the Act and Section 826.13.

§ 826.12 Steep slopes: Performance standards.

(a) Spoil, waste materials, or debris, including that from clearing and grubbing or haul road construction, and abandoned or disabled equipment, shall not be placed or allowed to remain on the downslope.

(b) The highwall shall be completely covered with compacted spoil and the disturbed area graded to comply with the provisions of 30 CFR 816.101-816.108 including, but not limited to, the return of the site to approximate original contour. The person who conducts the surface coal mining and reclamation operation must demonstrate to the regulatory authority, using standard geotechnical analysis, that the minimum static factor of safety for the stability of all portions of the reclaimed land is at least 1.3.

(c) Land above the highwall shall not be disturbed unless the regulatory authority finds that the disturbance facilitates compliance with the requirements of this Part such as for construction of diversions.

(d) Material in excess of that required by the grading provisions of this Part shall be disposed of in accordance with the requirements of 30 CFR Sections 816.71-816.73.

(e) Woody materials shall not be buried in the backfilled area. Woody materials may be chipped and distributed over the surface of the backfill as mulch if special provision is made for their use and when approved by the regulatory authority.

(f) Unlined or unprotected drainage channels shall not be constructed on backfills constructed under this Part unless approved by the regulatory authority as stable and not subject to erosion.

§ 826.13 Steep slopes: Limited variances.

(a) *Conditions for approval.* Under every Federal program or any approved State program which includes appropriate procedures, persons may be granted variances from the approximate original contour requirements of Section 826.12(b) if the following standards are met:

(1) The highwall shall be completely backfilled with spoil material, which has a static factor of safety of at least 1.3 using standard geotechnical analyses.

(2) The watershed control of the area within which the mining occurs shall be improved by reducing the peak flow from a precipitation or thaw and reducing the total suspended solids or other pollutants in the surface water discharge during a precipitation or thaw. The total volume of flow during every season of the year shall not vary in a way that adversely affects the ecology of any surface water or any existing or planned public or private use of surface or ground water.

(3) Land above the highwall may be disturbed for a horizontal distance which is not greater than one-half the highwall height if the regulatory authority finds that the disturbance is necessary to—

(i) Blend the solid highwall and the backfilled material;

(ii) Control surface runoff; or

(iii) Provide access to the area above the highwall.

(4) The landowner shall have requested in writing, as part of the permit application, that the variance be granted.

(5) The regulatory authority shall make a finding that the approved post-mining land use constitutes an equal or better economic or public use. The post-mining land use shall consist only of one of the following land uses:

(i) Industrial.

(ii) Commercial.

(iii) Residential.

(iv) Public use, including recreational facilities.

(6) The backfilling, grading, and placement of spoil shall be designed and certified by a qualified registered

§ 827.12 Coal processing plants: Performance standards.

Construction, operation, maintecilities, water storage facilities, and any structure or system related to the coal processing plant shall comply with 30 CFR 816

fish, wildlife and related environmental values, and threats to the public

inspection per month of each surface coal mining and reclamation operation

contain civil and criminal penalties which are no less stringent than those

(6) The backfilling, grading, and placement of spoil shall be designed and certified by a qualified registered professional engineer in conformance with professional standards established to ensure the stability, drainage, and surface configuration necessary for the intended use of the site.

(7) Only the amount of spoil as is necessary to achieve the post-mining land use, ensure the stability of spoil retained on the bench, and meet all other requirements of the Act and this Chapter shall be placed off the mine bench. All spoil not retained on the bench shall be placed in accordance with Section 816.71–816.73 and Section 816.101–102.

(b) *Review of variances.* (1) Within the six months before the third anniversary of the issuance of the permit, the person who conducts the surface coal mining and reclamation operation shall demonstrate to the regulatory authority that the proposed development is proceeding in accordance with the terms of the reclamation plan.

(2) If the person who conducts the surface coal mining and reclamation operation fails to comply with paragraph (b)(1) of this Section, the regulatory authority shall, not later than 3 years after the date of issuance of the permit, review the variance to determine whether it should be revoked, revised, or renewed.

PART 827—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—COAL PROCESSING PLANTS AND SUPPORT FACILITIES NOT LOCATED AT OR NEAR THE MINESITE OR NOT WITHIN THE PERMIT AREA FOR A MINE

Sec.
827.1 Scope.
827.11 Applicability.
827.12 Coal processing plants: Performance standards.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 508, 510, 515, 517, 701 Pub. L. 95-87, 91 Stat. 448, 449, 467, 479, 471, 480, 486, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1260, 1265, 1267, 1291).

§ 827.1 Scope.

This Part sets forth requirements for coal processing plants and their support facilities not located at or near the mine site or not within the permit area for a mine, to ensure the protection of public property and the environment, in accordance with the Act.

§ 827.11 Applicability.

Each person who conducts surface operations consisting of operation of a coal processing plant or support facility which is not located within the permit area for a specific mine shall obtain a permit to conduct the operation.

§ 827.12 Coal processing plants: Performance standards.

Construction, operation, maintenance, modification, reclamation, and removal activities at coal processing plants and associated facilities not located within the permit area for a specific mine shall comply with the following performance standards:

(a) Signs and markers for the coal processing plant, coal processing waste disposal area, and water treatment facilities shall comply with Section 816.11 of this Part, and with all State, Federal, local, or other ordinances and codes.

(b) Roads, transport, and associated structures shall be constructed, maintained, and reclaimed in accordance with Sections 816.31–816.36.

(c) Any stream or channel realignment shall comply with Section 816.44.

(d) Any disturbed area related to the coal processing plant or associated facilities shall have sediment control structures in compliance with Sections 816.45 and 816.46, and all discharges from these structures shall meet the effluent limitations of Section 816.42 and any other State or Federal law applicable to water quality.

(e) Permanent impoundments associated with coal processing plants shall meet the standards of Section 816.49. Dams constructed of or impounding coal processing waste shall comply with Sections 816.91–816.93.

(f) Use of wells and the preservation of water rights shall comply with Sections 816.53 and 816.54.

(g) Disposal of coal processing waste, solid waste, and any excavated materials shall comply with Sections 816.81–816.88, 816.89, and 816.71–816.73, respectively.

(h) Discharge structures for diversions and sediment control structures shall comply with Section 816.47.

(i) Air pollution control measures associated with fugitive dust emissions shall comply with Section 816.95 and all other applicable State or Federal air pollution control requirements and limitations.

(j) Fish, wildlife and related environmental values shall be protected in accordance with Section 816.97.

(k) Slide areas and other surface stabilization shall comply with Section 816.99.

(l) Each person who operates coal processing plants and associated structures shall comply with Section 816.79, to minimize adverse effects upon or resulting from nearby underground operations.

(m) Reclamation operations shall contain provisions for proper topsoil, revegetation, and abandonment in accordance with Sections 816.111–816.117, 816.121–816.124, and 816.56.

(n) Conveyors, buildings, storage bins or stockpiles, water treatment facilities, water storage facilities, and any structure or system related to the coal processing plant shall comply with 30 CFR 816.

(o) Any coal processing plant or associated structures located on prime farmland shall meet the requirements of 30 CFR 823.

PART 828—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—IN-SITU PROCESSING

Sec.
828.1 Scope.
828.2 Objectives.
828.11 In-situ processing: Performance standards.
828.12 In-situ processing: Monitoring.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 510, 515, 517, 701; Pub. L. 95-87, 91 Stat. 448, 449, 467, 470, 471, 480, 486, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1260, 1265, 1267, 1291).

§ 828.1 Scope.

This Part sets forth special environmental performance standards for in situ processing activities.

§ 828.2 Objectives.

This Part is intended to ensure that all in-situ processing activities are conducted in a manner which preserves and enhances environmental values in accordance with the Act. This Part provides additional performance standards to reflect the nature of in-situ processing.

§ 828.11 In-situ processing: Performance standards.

(a) The person who conducts in-situ processing activities shall comply with 30 CFR Part 817 and this Section.

(b) In situ processing activities shall be planned and conducted to minimize disturbance to the prevailing hydrologic balance by—

(1) Avoiding discharge of fluids into holes or wells other than as approved by the regulatory authority;

(2) Injecting process recovery fluids only into geologic zones or intervals approved as production zones by the regulatory authority;

(3) Avoiding annular injection between the wall of the drill hole and the casing; and

(4) Preventing discharge of process fluid into surface waters.

(c) Each person who conducts in-situ processing activities shall submit for approval, and follow after approval, a plan that ensures that all acid-forming, toxic-forming, or radioactive gases, solids, or liquids constituting a fire, health, safety, or environmental hazard and caused by the mining and recovery process are promptly treated, confined, or disposed of in a manner that prevents contamination of ground and surface waters, damage to fish, wildlife and related environmental values, and threats to the public health and safety.

(d) Each person who conducts in-situ processing activities shall prevent flow of the process recovery fluid—

(1) Horizontally beyond the affected area identified in the permit; and

(2) Vertically into overlying or underlying aquifers.

(e) Each person who conducts in-situ processing activities shall restore the quality of affected ground water in the mine plan and adjacent area, including ground water above and below the production zone, to the approximate pre-mining levels or better to ensure that the potential for use of the ground water is not diminished.

§ 828.12 In-situ processing: Monitoring.

(a) Each person who conducts in-situ processing activities shall monitor the quality and quantity of surface and ground water and the subsurface flow and storage characteristics, in a manner approved by the regulatory authority to measure changes in the quantity and quality of water in surface and ground water systems in the mine plan area and in adjacent areas.

(b) Air quality monitoring shall be conducted in accordance with the air quality monitoring program approved by the regulatory authority and shall include periodic measurement of windspeed, direction, and temperature and of those air quality indicators specified by the regulatory authority in consultation with the appropriate air quality control authority.

(c) Environmental monitoring shall measure, at a minimum, any increases in ambient levels of phenols, nitrogen compounds, and carbon compounds.

PART 840—STATE REGULATORY AUTHORITY INSPECTION AND ENFORCEMENT

Sec.
840.1 Scope.
840.11 Inspections by State regulatory authority.
840.12 Right of entry.
840.13 Enforcement authority.
840.14 Availability of records.

AUTHORITY: Secs. 102, 201, 501(b), 503, 517, 518, 521, and 523 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 498, 499, 504, 510 (30 U.S.C. 1202, 1211, 1251, 1253, 1267, 1268, 1271, 1273).

§ 840.1 Scope.

This Part sets forth the minimum requirements for inspection and enforcement by a State, where a State is the regulatory authority under a State program or a cooperative agreement.

§ 840.11 Inspections by State regulatory authority.

(a) The State regulatory authority shall conduct, on at least one partial inspection per month of each surface coal mining and reclamation operation under its jurisdiction. A partial inspection is an on-site review of a person's compliance with some of the permit conditions and requirements imposed under the State program or the cooperative agreement during which the inspector collects evidence with respect to every violation of any such condition or requirement he observed.

(b) The State regulatory authority shall conduct at least one complete inspection per calendar quarter of each surface coal mining and reclamation operation under its jurisdiction. A complete inspection is an on-site review of a person's compliance with all permit conditions and requirements imposed under the State program or the cooperative agreement, within the entire area disturbed or affected by surface coal mining and reclamation operations, including the collection of evidence with respect to every violation of any such condition or requirement.

(c) The inspections required under paragraphs (a) and (b) of this section shall:

(1) Be carried out on an irregular basis so as to monitor compliance at all operations, including those which operate nights, weekends, or holidays;

(2) Occur without prior notice to the person being inspected or any agent or employee of such person, except for necessary on-site meetings; and

(3) Include the prompt filing of inspection reports adequate to enforce the requirements of and to carry out the terms and purposes of the applicable program, the regulations and the Act.

§ 840.12 Right of entry.

(a) Within its jurisdiction, the State regulatory authority shall have statutory authority that grants its representatives a right of entry to, upon, and through any surface coal mining and reclamation operation without advance notice or search warrant, upon presentation of appropriate credentials.

(b) The State regulatory authority shall have statutory authority that authorizes its representatives to inspect any monitoring equipment or method of operation and to have access to and copy any records required under the State program or the cooperative program or a permit issued the program. The statutory authority shall provide that the representatives may exercise such rights at reasonable times, without advance notice or a search warrant, upon presentation of appropriate credentials.

§ 840.13 Enforcement authority.

(a) Each State program and each cooperative agreement program shall contain civil and criminal penalties which are no less stringent than those set forth in Section 518 of the Act and in 30 CFR 843.20 and Part 845.

(b) The enforcement provisions of each State program and cooperative agreement program shall contain sanctions no less stringent than those set forth in Section 521 of the Act and in 30 CFR 843.11, 843.12, 843.19, Part 808, and subchapter G.

(c) Each State program and each cooperative program shall contain procedural rights relating to the penalties and sanctions in paragraphs (a) and (b) of this section which shall be consistent with those provided in 30 CFR 843 and 845 and subchapter G.

(d) Nothing in the Act or this Part shall be construed as eliminating any additional enforcement rights or procedures which are available under State law to a State regulatory authority but which are not specifically enumerated in Section 518 and Section 521 of the Act.

§ 840.14 Availability of records.

(a) Each State regulatory authority shall make available to the Director and the Regional Director, upon request, copies of all documents relating to applications for and approvals of existing, new, or revised permits and all documents relating to inspection and enforcement actions.

(b) Copies of all records, reports, inspection materials, or information obtained by the State under a State program or a cooperative program, except information mentioned in paragraphs (c) and (d) of this section shall be immediately made available to the public in the area of mining so that they are conveniently available to residents in the area of mining. Copies shall be deemed conveniently available if they are furnished upon request within 5 days, in the case of a county or multi-county location, or 24 hours, in the case of a State or central location.

(c) Information as to coal seams, test borings, core samplings, or soil samples which is required under a State program or a cooperative program under Section 507(b)(17) of the Act and pertains only to analysis of the chemical and physical properties of the coal, except information regarding mineral or elemental content which is potentially toxic in the environment, shall be kept confidential and shall not be made a matter of public record.

(d) In order to protect preparation for hearings and enforcement proceedings, the Director and the State regulatory authority may enter into agreements regarding procedures for the special handling of investigative and enforcement reports and other materials.

842.16 Availability of records.

AUTHORITY: Secs. 102, 201, 501(b), 504, 507, 517, 518, 521 and 523 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 471, 474, 499, 504, 510 (30 U.S.C. 1202, 1211, 1251, 1254, 1257, 1267, 1268, 1271, 1273).

§ 842.1 Scope.

This Part sets forth general procedures governing Federal inspections under the permanent regulatory program.

§ 842.11 Federal inspections.

(a) Authorized representatives of the Secretary shall conduct inspections of surface coal mining and reclamation operations as are necessary:

(1) To evaluate the administration of approved State programs and cooperative programs;

(2) To develop or enforce Federal programs and Federal lands programs;

(3) To enforce those requirements and permit conditions imposed under a State program or cooperative program not being enforced by a State, under Section 504(b) or section 521(b) of the Act; and

(4) To determine whether the citations issued during an inspection authorized under this section have been complied with.

(b) An authorized representative of the Secretary shall immediately conduct a Federal inspection to enforce any requirement the Act, this Chapter, any State, Federal, cooperative or Federal lands program or any permit condition imposed under such program:

(1) When the authorized representative has reason to believe, on the basis of information available, other than information resulting from a previous Federal inspection, that such a violation exists and—

(i) There is no State regulatory authority; or

(ii) The authorized representative has notified the State regulatory authority of the possible violation and within 10 days after notification the State regulatory authority has failed to take appropriate action to have the violation corrected and to inform the authorized representative that it has taken such action or has a valid reason for its inaction; or

(iii) The person supplying the information provides adequate proof that an imminent danger to the public health and safety or a significant imminent environmental harm exists and that the State regulatory authority has failed to act.

(c) The Office, when acting as the regulatory authority under a Federal program or a Federal lands program and when enforcing a State program or a cooperative program in whole or in part pursuant to Section 504(b) or section 521(b) of the Act, shall conduct inspections of all surface coal mining and reclamation operations under its jurisdiction. These inspections shall average at least:

(1) One partial inspection per month of each surface coal mining and reclamation operation under its jurisdiction. A partial inspection is an onsite review of a person's compliance with some of the permit conditions and requirements imposed under the applicable program, during which the inspector collects evidence with respect to every violation of any such condition or requirement he observed; and

(2) One complete inspection per calendar quarter. A complete inspection is an onsite review of a person's compliance with all permit conditions and requirements imposed under the applicable program within the entire area disturbed or affected by surface coal mining and reclamation operations, including the collection of evidence with respect to every violation of any such condition or requirement.

(d) The inspections required under paragraph (c) shall—

(1) Be carried out on an irregular basis so as to monitor compliance at all operations, including those which operate nights, weekends, or holidays;

(2) Occur without prior notice to the person being inspected or any of his agents or employees, except for necessary onsite meetings; and

(3) Include the prompt filing of inspection reports adequate to enforce the requirements of and to carry out the terms and purposes of the applicable program, any permit condition imposed under such program, this Chapter and the Act.

§ 842.12 Citizens' requests for Federal inspections.

(a) A citizen may request a Federal inspection under 30 CFR 842.11(b) by furnishing to an authorized representative of the Secretary—

(1) A signed written statement giving the authorized representative reason to believe a violation exists, and a phone number and address where the citizen can be contacted; or

(2) An oral report, followed by a signed written statement, giving that information, phone number and address.

(b) The information provided under paragraph (a) of this section shall be considered as furnishing reason to believe a violation exists if it alleges facts that are credible and would, if true, be sufficient to show a violation of the Act, this chapter, any applicable program or any permit condition imposed under such program.

(c) The identity of any person supplying information to the Office relating to a possible violation or imminent danger or harm shall remain confidential with the Office if requested by such person, unless disclosure is required under the Freedom of Information Act (5 U.S.C. Section 552) or other Federal law;

(d) If a Federal inspection is conducted as a result of information provided to the Office by a citizen as described in paragraph (a) of this section, the person who provided the information shall be notified when the inspection is to occur and be allowed to accompany the authorized representative of the Secretary during the inspection. Such person has a right of entry to, upon and through the surface coal mining and reclamation operations about which he supplied information, but only if he is in the presence of and is under the control, direction and supervision of the authorized representative while on the mine property.

(e) Within 10 days of the Federal inspection, or, if there is no inspection, within 15 days of receipt of the citizen's written statement, the Office shall send the citizen the following:

(1) If an inspection was made, a description of the enforcement action taken, which may consist of copies of the Federal inspection report and all notices of violation and cessation orders issued as a result of the inspection or an explanation of why no enforcement action was taken;

(2) If no Federal inspection was conducted, an explanation of the reason why; and

(3) An explanation of the citizen's right, if any, to informal review of the action or inaction of the Office under 30 CFR 842.14.

(f) The Office shall give copies of all materials in paragraphs (e)(1) and (2) of this Section to the person inspected, except that the name of the citizen shall be removed unless disclosure of the citizen's identity is permitted under paragraph (c) of this section.

§ 842.13 Right of entry.

Each authorized representative of the Secretary conducting a Federal inspection under 30 CFR 842.11:

(a) Shall have a right of entry to, upon, and through any surface coal mining and reclamation operations without advance notice or a search warrant, upon presentation of appropriate credentials; and

(b) May, at reasonable times and without delay, have access to and copy any records, and inspect any monitoring equipment or method of operation required under the Act, this Chapter, the applicable program or any permit condition imposed under such program.

§ 842.14 Review of adequacy and completeness of inspections.

Any person who is or may be adversely affected by a surface coal mining operation may notify the Regional Director in writing of any alleged failure on the part of the Office to make adequate and complete Federal inspections as provided in 30 CFR 842.11(c) and (d). The notification shall include sufficient information to create a reasonable belief that 30 CFR 842.11(c) and (d) are not being complied with and to demonstrate how the person is or may be adversely affected. The Regional Director shall within 15 days of receipt of the notification determine whether 30 CFR 842.11(c) and (d) are being complied with, and if not, shall immediately order a Federal inspection to remedy the noncompliance. The Regional Director shall also furnish the complainant with a written statement of the reasons for his determination and the actions, if any, he has taken.

§ 842.15 Review of decision not to inspect or enforce.

(a) Any person who is or may be adversely affected by a surface coal mining operation may ask the Regional Director to informally review an authorized representative's decision not to inspect or take appropriate enforcement action with respect to any violation alleged by that person in a request for Federal inspection under Section 842.12. The request for review shall be in writing and shall include a statement of how the person is or may be adversely affected and why the decision merits review.

(b) The Regional Director shall conduct the review and inform the person in writing of the results of the review within 30 days of his receipt of the request.

(c) Informal review under this Section shall not affect any right to formal review under Section 525 of the Act or to a citizen's suit under Section 520 of the Act.

§ 842.16 Availability of records.

(a) Copies of all records, reports, inspection materials, or information obtained by the Office under Title V of the Act, this chapter, a Federal program or a Federal lands program, or a State program being enforced by the Office under Sections 504(b) or 521(b) of the Act, except information in paragraph (b) of this section, shall be immediately made available to the public at Regional, district and field offices of the Office, or other locations designated by the Office, in the area of mining so that they are conveniently available to residents in the area of mining. All such copies shall be deemed conveniently available if they are provided upon request within 5 days, in the case of a district, field or other local office, and 24 hours in the case of a Regional or central office.

(b) Information as to coal seams, test borings, core samplings, or soil samples which is required under Section 507(b)(17) of the Act, and pertains only to the analysis of the chemical and physical properties of the coal, except information regarding mineral or element content which is potentially toxic in the environment, shall be kept confidential and shall not be made a matter of public record.

PART 843—FEDERAL ENFORCEMENT

Sec.
843.1 Scope.
843.5 Definitions.
843.11 Cessation orders.
843.12 Notices of violation.
843.13 Suspension or revocation of permits.
843.14 Notices of violation and cessation orders.
843.15 Informal mine site hearing.
843.16 Formal review of citations.
843.17 Failure to give notice and lack of reasonable relief.
843.18 Inability to comply.
843.19 Injunctive relief.

AUTHORITY: Secs. 102, 201, 501(b), 503, 504, 510, 517, 518, 521, 523, 525 and 701 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 470, 471, 480, 498, 499, 504, 510, 511, and 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1260, 1267, 1268, 1271, 1273, 1275, and 1291).

§ 843.1 Scope.

This Part sets forth general rules regarding enforcement by the Office of the Act, this Chapter, all Federal programs, the Federal lands program, all State programs being enforced by the Office under Section 504(b) or Section 521(b) of the Act, and all permit conditions imposed under any of these programs. Civil penalties in connection with notices of violation and cessation orders issued under this Part are set forth in 30 CFR 845.

§ 843.5 Definitions.

Authorized representative of the Secretary means a person designated by the Secretary as his authorized representative to act with respect to matters mentioned in this Chapter.

§ 843.11 Cessation orders.

(a)(1) An authorized representative of the Secretary shall immediately order a cessation of surface coal mining and reclamation operations or of the relevant portion, if he finds, on the basis of any Federal inspection, any condition or practice or any violation of the Act, this Chapter, any applicable program, or any permit condition imposed under any such program, which:

(i) Creates an imminent danger to the health or safety of the public; or

(ii) Is causing or can reasonably be expected to cause significant, imminent environmental harm to land, air, or water resources.

(2) If the cessation ordered under paragraph (a)(1) of this section will not completely abate the imminent danger or harm in the most expeditious manner possible, the authorized representative of the Secretary shall impose affirmative obligations on the person to whom it is issued to abate the condition, practice, or violation. The order shall specify the time by which abatement shall be accomplished and may require, among other things, the use of existing or additional personnel and equipment.

(b)(1) An authorized representative of the Secretary shall immediately order a cessation of surface coal mining and reclamation operations, or of the relevant portion, when a notice of violation has been issued under 30 CFR 843.12(a) and the permittee fails to abate the violation within the abatement period fixed or subsequently extended by the authorized representative.

(2) A cessation order issued under this paragraph shall require the person to whom it is issued to take all steps the authorized representative of the Secretary deems necessary to abate the violations covered by the order in the most expeditious manner possible.

(c) A cessation order issued under paragraphs (a) or (b) of this section shall be in writing, shall be signed by the authorized representative who issues it and shall set forth with reasonable specificity: (1) the nature of the violation; (2) the remedial action or affirmative obligation required, if any; (3) the time established for abatement including interim steps, if appropriate; and (4) a reasonable description of the portion of the surface coal mining and reclamation operation to which it applies. The order shall remain in effect until the condition, practice or violation has been abated or until vacated, modified or terminated in writing by an authorized representative of the Secretary.

(d) Reclamation operations and other activities intended to protect public health and safety and the environment shall continue during the period of any order unless otherwise provided in the order.

(e) An authorized representative of the Secretary may modify, terminate or vacate a cessation order for good cause, and may extend the time for abatement if the failure to abate within the time previously set was not

caused by lack of diligence on the part of the person to whom it was issued.

(f) An authorized representative of the Secretary shall terminate a cessa-

regulatory authority and the person responsible for the violation, so that appropriate enforcement action can be taken by the State regulatory authori-

the permit area within any 12-month period.

(b) The Director shall not issue a show cause order if he finds that to do

§ 843.14 Notices of violation and cessation orders.

(a) A notice of violation or cessation

(1) Is informed in the notice or order that he will be deemed to have waived a mine site hearing unless he requests one in writing within 30 days after he

843.11 or 843.12 or a person having an interest which is or may be adversely affected by the issuance, modification, vacation or termination of a notice or

caused by lack of diligence on the part of the person to whom it was issued.

(f) An authorized representative of the Secretary shall terminate a cessation order, by written notice to the person to whom the order was issued, when he determines that all conditions, practices or violations listed in the order have been abated. Termination shall not affect the right of the Assessment Office to assess civil penalties for those violations under 30 CFR 845.

§ 843.12 Notices of violation.

(a)(1) An authorized representative of the Secretary shall issue a notice of violation if, on the basis of a Federal inspection carried out during the enforcement of a Federal program or Federal lands program or during Federal enforcement of a State program under Sections 504(b) or 521(b) of the Act, he finds a violation of the Act, this Chapter, the applicable program, or any permit condition imposed under such program, which does not create an imminent danger or harm for which a cessation order shall be issued under 30 CFR 843.11.

(2) A notice of violation issued under this section shall be in writing, shall be signed by the authorized representative who issues it, and shall set forth with reasonable specificity:

(i) The nature of the violation;

(ii) The remedial action required which may include interim steps;

(iii) A reasonable time for abatement which may include time for accomplishment of interim steps; and

(iv) A reasonable description of the portion of the surface coal mining and reclamation operation to which it applies.

(b) An authorized representative of the Secretary may extend the time set for abatement or for accomplishment of an interim step if the failure to meet the time previously set was not caused by lack of diligence on the part of the person to whom it was issued. The total time for abatement under a notice of violation, including all extensions, shall not exceed 90 days from the date of issuance.

(c) If the person to whom the notice was issued fails to meet any time set for abatement or for accomplishment of an interim step, the authorized representative shall issue a cessation order under 30 CFR 843.11(b).

(d) When, on the basis of a Federal inspection conducted to evaluate an approved State program under 30 CFR 842.11(a)(1) or conducted under 30 CFR 842.11(b)(1) as a result of State inaction, an authorized representative of the Secretary finds a violation for which a notice of violation cannot be issued under this Section, the authorized representative shall give written notice of the violation to the State regulatory authority and the person responsible for the violation, so that appropriate enforcement action can be taken by the State regulatory authority. The State regulatory authority shall, within 10 days of receipt of the notice, give written notice to the authorized representative of the action it has taken and plans to take with respect to the violation.

(e) An authorized representative of the Secretary shall terminate a notice of violation by written notice to the person to whom it was issued, when he determines that all violations listed in the notice of violation have been abated. Termination shall not affect the right of the Assessment Office to assess civil penalties for those violations under 30 CFR Part 845 (civil penalties).

§ 843.13 Suspension or revocation of permits.

(a)(1) Except as provided in paragraph (b) of this section, the Director shall issue an order to a permittee requiring him to show cause why his permit and his right to mine under the Act should not be suspended or revoked, if the Director determines that a pattern of violations of any requirements of the Act, these regulations, or any permit conditions by the permittee exists or has existed, and that the violations were willful or were caused by the permittee's unwarranted failure to comply with such requirements or conditions. A willful violation is a violation resulting from an intentional act or omission. Unwarranted failure to comply means the failure of the permittee to prevent the occurrence of any violation due to indifference, lack of diligence, or lack of reasonable care.

(2) The Director may determine that a pattern of violations exists or has existed, based on two or more Federal inspections of the permit area within any 12-month period, after considering the circumstances, including:

(i) The number of violations, on more than one occasion, of one or more provisions of the Act, this Chapter, the applicable program or the permit, which relate to the same general topic;

(ii) The number of violations, on more than one occasion, of one or more provisions of the Act, this Chapter, the applicable program or the permit, which are not related to the same general topic; and

(iii) The extent to which the violations were isolated departures from lawful conduct.

(3) The Director shall determine that a pattern of violations exists if he finds that there were violations of provisions of the Act, this Chapter, the applicable program or the permit relating to the same general topic during three or more Federal inspections of the permit area within any 12-month period.

(b) The Director shall not issue a show cause order if he finds that to do so would not further enforcement of the Act.

(c) At the same time as the issuance of the order, the Director shall:

(1) File a copy of the order to show cause with the Office of Hearings and Appeals and the State regulatory authority, if any;

(2) If practicable, publish notice of the order, including a brief statement of the procedure for intervention in the proceeding, in a newspaper of general circulation in the area of the mine; and

(3) Post the notice at the regional, district or field office closest to the mine site.

(d) If the permittee files an answer to the show cause order and requests a hearing under 43 CFR Part 4, a public hearing shall be provided as set forth in that Part. The Office of Hearings and Appeals shall give thirty days' written notice of the date, time and place of the hearing to the Director, the permittee, the State regulatory authority, if any, and any intervenor. Upon receipt of the notice the Director shall publish it, if practicable, in a newspaper of general circulation in the area of the mine, and shall post it at the Regional, district or field office closest to the mine site.

(e) Within sixty days after the hearing, and within the time limits set forth in 43 CFR Part 4, the Office of Hearings and Appeals shall issue a written determination as to whether a pattern of violations exists and, if appropriate, an order. If the Office of Hearings and Appeals revokes or suspends the permit and the permittee's right to mine under the Act, the permittee shall immediately cease surface coal mining operations on the permit area and shall:

(1) If the permit and the right to mine under the Act are revoked, complete reclamation within the time specified in the order; or

(2) If the permit and the right to mine under the Act are suspended, complete all affirmative obligations to abate all conditions, practices or violations, as specified in the order.

(f) An order issued under this Section by the Office of Hearings and Appeals or by a court, upon review of that order, may assess against either party, at the request of any person, a sum equal to the aggregate amount of all costs and expenses including attorneys' fees, reasonably incurred by that person for or in connection with his participation in proceedings under this section including any judicial review thereof, as the Office of Hearings and Appeals or the court deems proper.

§ 843.14 Notices of violation and cessation orders.

(a) A notice of violation or cessation shall be served on the person to whom it is directed or his designated agent promptly after issuance, as follows:

(1) By tendering a copy at the mine site to the designated agent or to the individual who, based upon reasonable inquiry by the authorized representative, appears to be in charge of the surface coal mining or reclamation operation referred to in the notice or order. If no such individual can be located at the mine site, a copy may be tendered to any individual at the mine site who appears to be an employee of the person to whom the notice or order is issued. Service shall be complete upon tender of the notice or order.

(2) As an alternative to paragraph (a)(1) of this section, service may be made by sending a copy of the notice or order by certified mail or by hand to the person to whom it is issued or his designated agent. Service shall be complete upon tender of the mail and shall not be incomplete because of refusal to accept.

(b) A show cause order may be served on the person to whom it is issued in either manner provided in paragraph (a)(2) of this section.

(c) Designation by any person of an agent for service of notices and orders shall be made in writing to the appropriate regional, district or field office of the Office.

(d) The Office shall furnish copies of notices and orders to the State regulatory authority, if any, promptly after their issuance. The Office may furnish copies to any person having an interest in the surface coal mining and reclamation operation or the permit area, such as the owner of the fee, a corporate officer of the permittee or the bonding company.

§ 843.15 Informal mine site hearing.

(a) Except as provided in paragraphs (b) and (c), a notice of violation or cessation order which requires cessation of mining, expressly or by necessary implication, shall expire within 30 days after it is served unless an informal public hearing has been held within that time at or reasonably close to the mine site so that it may be viewed during the hearing. For purposes of this section, mining means extracting coal from the earth or coal waste piles and transporting it within or from the permit area.

(b) Paragraph (a) of this section shall not apply if the condition, practice or violation in question has been abated or if the mine site hearing has been waived.

(c) The mine site hearing shall be deemed waived if the person to whom the notice or order is issued:

(1) Is informed in the notice or order that he will be deemed to have waived a mine site hearing unless he requests one in writing within 30 days after he has actual notice of the notice or order; and

(2) Fails to request a mine site hearing within that time.

(d) The person to whom the notice or order is issued shall be deemed to have consented to an extension of time for the mine site hearing if his request is received on or after the 21st day after he has actual notice of the notice or order. The extension of time shall equal to the number of days elapsed after the 21st day.

(e) The Office shall give notice of the time, place and subject matter of the mine site hearing, at least five days in advance of the hearing to:

(1) The person to whom the notice or order was issued,

(2) Any person who filed a report which led to that notice or order; and

(3) The State regulatory authority, if any.

(f) The Office shall also, at least five days before the hearing, post notice of the hearing at the regional, district or field office closest to the mine site, and publish it, to the extent practicable, in a newspaper of general circulation in the area of the mine.

(g) Section 554 of Title 5 of the United States Code, regarding requirements for formal adjudicatory hearings, shall not govern mine site hearings. A mine site hearing shall be conducted by a representative of the Office, who may accept oral or written arguments and any other relevant information from any person attending.

(h) Within five days of the close of the mine site hearing, the Office shall affirm, modify, or vacate the notice or order in writing. The decision shall be sent to—

(1) The person to whom the notice or order was issued;

(2) Any person who filed a report which led to the notice or order; and

(3) The State regulatory authority, if any.

(i) The granting or waiver of a mine site hearing shall not affect the right of any person to request formal review under Sections 518(b), 525, 521(a)(4) of the Act.

(j) At such hearings no evidence as to statements made or evidence produced at a mine site hearing shall be introduced as evidence or to impeach a witness. Expiration of a notice or order shall not affect the Director's right to assess civil penalties for the violations mentioned in the notice or order under 30 CFR 845, civil penalties.

§ 843.16 Formal review of citations.

(a) A person issued a notice of violation or cessation order under 30 CFR 843.11 or 843.12 or a person having an interest which is or may be adversely affected by the issuance, modification, vacation or termination of a notice or order, may request review of that action by filing an application for review and request for hearing, under 43 CFR Part 4, within 30 days after receiving notice of the action.

(b) The filing of an application for review and request for a hearing under this Section shall not operate as a stay of any notice or order, or of any modification, termination or vacation of either.

§ 843.17 Failure to give notice and lack of reasonable relief.

No notice of violation, cessation order or order revoking or suspending a permit may be vacated in an administrative review proceeding for failure to give the notice to the State regulatory authority required under 30 CFR 842.11(b)(1)(ii) or because it is subsequently determined that the Office did not have information sufficient, under 30 CFR 842.11(b)(1)(i), to justify an inspection.

§ 843.18 Inability to comply.

(a) No order to show cause, cessation order or notice of violation issued under this Part may be vacated because of inability to comply.

(b) Unless caused by lack of diligence, inability to comply may be considered only in mitigation of the amount of civil penalty under 30 CFR 845 and of the duration of the suspension of a permit under 30 CFR 842.16(d).

§ 843.19 Injunctive relief.

The Office may request the Attorney General of the United States to institute a civil action for relief, including a permanent or temporary injunction, restraining order or any other order, in the district court of the United States for the district in which the surface coal mining and reclamation operation is located or in which the person to whom the notice of violation or order has been issued has his principal office, whenever that person or his agent in violation of the Act, this Chapter, any applicable program, or any permit condition imposed under that program:

(a) Violates or fails or refuses to comply with any order or decision of the Secretary or an authorized representative of the Secretary under the Act, this Chapter or any applicable program for which the Office is the regulatory authority;

(b) Interferes with, hinders or delays the Secretary or an authorized representative of the Secretary;

(c) Refuses to admit an authorized representative of the Secretary to a mine;

(d) Refuses to permit inspection of a mine by an authorized representative of the Secretary;

(e) Refuses to furnish any required

(d) Refuses to permit inspection of a mine by an authorized representative of the Secretary;

(e) Refuses to furnish any required information or report;

(f) Refuses to permit access to or copying of any required records; or

(g) Refuses to permit inspection of monitoring equipment.

PART 845—CIVIL PENALTIES

Sec.

845.1 Scope.
845.2 Objective.
845.11 How assessment are made.
845.12 When penalty will be assessed.
845.13 Point system for penalties.
845.14 Determination of amount of penalty.
845.15 Assessment of separate violations for each day.
845.16 Waiver of use of formula to determine civil penalty.
845.17 Procedures for assessment of civil penalties.
845.18 Procedures for assessment conference.
845.19 Request for hearing.
845.20 Final assessment and payment of penalty.

AUTHORITY: Secs. 102, 201, 501(b), 517, 518, 521, 523 and 525 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 498, 499, 504, 510, and 511 (30 U.S.C. 1202, 1211, 1251, 1267, 1268, 1271, 1273 and 1275.)

§ 845.1 Scope.

This Part covers the assessment of civil penalties under Section 518 of the Act with respect to cessation orders and notices of violation issued under Part 843 (Federal enforcement).

§ 845.2 Objective.

Civil penalties are assessed under Section 518 of the Act and this Part to deter violations and to ensure maximum compliance with the terms and purposes of the Act on the part of the coal mining industry.

§ 845.11 How assessment are made.

The Assessment Office shall review each notice of violation and cessation order in accordance with the assessment procedures described in 30 CFR 845.12, 845.13, 845.14, 845.15, and 845.16 to determine whether a civil penalty will be assessed, the amount of the penalty, and whether each day of a continuing violation will be deemed a separate violation for purposes of the total penalty assessed.

§ 845.12 When penalty will be assessed.

(a) The Assessment Office shall assess a penalty for each violation contained in a cessation order.

(b) The Assessment Office shall assess a penalty for each violation contained in a notice of violation, if the violation is assigned 31 points or more under the point system described in 30 CFR 845.13.

(c) The Assessment Office may assess a penalty for a violation assigned 30 points or less under the point system described in 30 CFR 815.13. In determining whether to assess a penalty, the Assessment Office shall consider the factors listed in 30 CFR 845.13.

§ 845.13 Point system for penalties.

(a) The Assessment Office shall use the point system described in this section to determine the amount of the penalty and, in the case of notices of violation, whether a mandatory penalty should be assessed as provided in 30 CFR 845.12(b).

(b) Points shall be assigned as follows:

(1) *History of previous violations.* The Assessment Office shall assign up to 30 points based on the history of previous violations. One point shall be assigned for each past violation contained in a notice of violation. Five points shall be assigned for each violation, but not a condition or practice, contained in a cessation order. The history of previous violations, for the purpose of assigning points, shall be determined and the points assigned with respect to a particular surface coal mining operation. Points shall be assigned as follows:

(i) Except as provided in paragraph (b)(1)(ii) of this section, only violations for which notices or orders were issued within 1 year preceding the violation under consideration shall be counted;

(ii) A violation which is the subject of pending administrative or judicial review shall not be counted until termination of such review, and the period of time during which the violation was under review shall not be counted in computing the one-year period;

(iii) No violation for which the notice or order has been vacated shall be counted; and

(iv) Each violation shall be counted without regard to whether it led to a civil penalty assessment.

(2) *Seriousness.* The Assessment Office shall assign up to 30 points based on the seriousness of the violation, according to the following schedules:

(i) *Probability of occurrence.* The Assessment Office shall assign up to 15 points based on the probability of the occurrence of the event which a violated standard is designed to prevent. Points shall be assessed as follows:

Probability of occurrence	Points
None or insignificant	0–4
Unlikely	5–9
Likely	10–14
Occurred	15

An example of the concept of the phrase "the event which a violated standard is designed to prevent" is as follows: failure to remove topsoil is a violation of the topsoil standard in 30 CFR 816.22; however, delay in and failure of revegetation and resulting environmental harm are events which the topsoil standard in 30 CFR 816.22 is designed to prevent.

(ii) *Extent of potential or actual damage.* The Assessment Office shall assign up to 15 points based on the extent of the potential or actual damage, in terms of area and impact on the public or environment, as follows:

(A) If the damage or impact which the violated standard is designed to prevent would remain within the permit area, the Assessment Office shall assign zero to seven points depending on the duration and extent of the damage or impact.

(B) If the damage or impact which the violated standard is designed to prevent would extend outside the permit area, the Assessment Office shall assign eight to fifteen points depending on the duration and extent of the damage or impact.

(iii) *Alternative.* In the case of a violation of an administrative requirement, such as a requirement to keep records, the Assessment Office shall, as an alternative to paragraphs (i) and (ii), assign up to 15 points for seriousness based upon the extent to which enforcement is obstructed by the violation.

(3) *Negligence.* (i) The Assessment Office shall assign up to 25 points based on the degree of fault of the person to whom the citation was issued in causing or failing to correct the violation, condition or practice which led to the citation, either through act or omission. Points shall be assessed as follows:

(A) A violation which occurs through no negligence shall be assigned no penalty points for negligence;

(B) A violation which is caused by negligence shall be assigned 12 points or less, depending on the degree of negligence;

(C) A violation which occurs through a greater degree of fault than negligence shall be assigned 13 to 25 points depending on the degree of fault.

(ii) In determining the degree of negligence involved in a violation and the number of points to be assigned, the following definitions apply:

(A) No negligence means an inadvertent violation which was unavoidable by the exercise of reasonable care.

(B) Negligence means failure to prevent or correct a violation due to indifference, lack of diligence, or lack of reasonable care, or the commission of an act which results in a violation with indifference, lack of diligence or lack of reasonable care.

(C) A greater degree of fault than negligence means reckless, knowing or intentional conduct.

(iii) In calculating points to be assigned for negligence, the actions of all persons working on the mine site shall be attributed to the person to whom the citation was issued.

(4) *Good faith in attempting to achieve compliance.* (i) The Assessment Office shall subtract or add points based on the degree of good faith of the person to whom the citation was issued in attempting to achieve rapid compliance after notification of the violation. Points shall be assigned as follows:

Degree of Good Faith	Points
Rapid compliance	−1 to −10
Normal compliance	0
Lack of good faith	1 to 10

(ii) The following definitions shall apply under paragraph (b)(4)(i) of this section:

(A) *Rapid compliance* means that the person to whom the citation was issued took extraordinary measures to abate the violation in the shortest possible time and that abatement was achieved before the time set for abatement.

(B) *Normal compliance* means the person to whom the citation was issued abated the violation within the time given for abatement.

(C) *Lack of good faith* means the person to whom the citation was issued did not show diligence in attempting to abate the violation and the violation was not timely abated.

(iii) If the consideration of this criterion is impractical because of the length of the abatement period, the assessment may be made without considering this criterion, and may be reconsidered if the person to whom the citation was issued so requests within 10 days after the violation has been abated.

§ 845.14 Determination of amount of penalty.

The Assessment Office shall determine the amount of any civil penalty by converting the total number of points assigned under 30 CFR 845.13 to a dollar amount according to the following schedule:

Points	Dollars	Points	Dollars
1	20	2	40
3	60	4	80
5	100	6	120
7	140	8	160
9	180	10	200
11	220	12	240
13	260	14	280
15	300	16	320
17	340	18	360
19	380	20	400
21	420	22	440
23	460	24	480
25	500	26	600

66	4,600	67	4,700
68	4,800	69	4,900
70 and above	5,000.		

§ 845.15 Assessment of separate violations for each day.

(a) The Assessment Office may assess separately a civil penalty for each day from the date of issuance of the notice of violation or cessation order to the date set for abatement of the violation. In determining whether to make such an assessment, the Assessment Office shall consider the factors listed in 30 CFR 845.13 and the extent to which the person to whom the citation was issued gained any economic benefit as a result of a failure to comply.

(b) Whenever a violation has not been abated within the abatement period set in the citation, a civil penalty of not less than $750 shall be assessed for each day during which such failure continues, except that if the person to whom the notice or order was issued initiates review proceedings with respect to the violation the abatement period shall be extended as follows:

(1) If the Secretary orders suspension of the abatement requirements of the notice or order in a proceeding under section 525 of the Act, after determining that the person to whom the citation was issued will suffer irreparable loss or damage from the application of the requirements, the period permitted for abatement shall not end until the date on which the authorized representative of the Secretary issues a final order with respect to the violation in question; and

(2) If a court orders the suspension of the abatement requirements of the notice or order in a proceeding under section 526 of the Act, the period permitted for abatement shall not end until the date on which the court issues a final order with respect to the violation.

(c) For any violation which continues for two or more days and which is assigned more than 70 points under 30 CFR 845.12, the Assessment Office shall assess a civil penalty for a minimum of two separate days.

§ 845.16 Waiver of use of formula to determine civil penalty.

(a) The Director, upon his own initiative or upon written request received within 10 days of issuance of a notice of violation or a cessation order, may elect to waive in whole or in part the use of the formula contained in 30 CFR 845.13 to set the civil penalty if he determines that a waiver will further the enforcement objectives of the Act. However, the Director shall not waive the use of the formula and reduce the proposed assessment on the basis of an argument that a reduction in the proposed penalty could be used to abate violations of the Act.

(b) If the Director waives the use of the formula in whole or in part, he shall give a written explanation of the basis for the assessment made to the person to whom the notice or order was issued.

§ 845.17 Procedures for assessment of civil penalties.

(a) Within 10 days of service of a notice or order, the person to whom it was issued may submit written information about the violation to the Assessment Office and to the inspector who issued the citation. The Assessment Office shall consider any information so submitted in determining the facts surrounding the violation and the amount of the penalty.

(b) The Assessment Office shall serve a copy of the proposed assessment and of the worksheet showing the computation of the proposed assessment on the person to whom the citation was issued, by certified mail, within 30 days of the issuance of the citation. If the mail is tendered at the address of that person set forth in the sign required under 30 CFR 816.11, or at any address at which that person is in fact located, and he refuses to accept delivery of or to collect such mail, the requirements of this paragraph shall be deemed to have been complied with upon such tender.

§ 845.18 Procedure for assessment conference.

(a) The Assessment Office shall arrange for a conference to review the proposed assessment upon written request of the person to whom the citation was issued if the request is received within 15 days from the date the proposed assessment is mailed. That person may submit additional material for consideration during the conference, and the Assessment Office may contact him to discuss the assessment prior to the conference, if necessary to expedite the review.

(b) The Assessment Office shall assign a conference officer to hold the assessment conference. He shall con-

vided in paragraph (c)) within 30 days from receipt of the proposed assessment, except that:

assessed all or part of the escrowed amount, with interest from the date of payment into escrow to the date of the

person working on Federal lands after February 3, 1979.

(3) Monitoring approved State training courses, examinations and certifi-

duct all training to meet the requirements of this part, or that training courses will be conducted by surface coal mine operators under the supervi-

(i) Important rock and explosives properties;

(ii) Design of blast holes;

(iii) Pattern design, surface blasting,

(b) The Assessment Office shall assign a conference officer to hold the assessment conference. He shall consider all relevant information on the violation presented by the person to whom the citation was issued and may recalculate the proposed penalty higher or lower in the manner provided in 30 CFR 845.13 or vacate the proposed penalty. The Assessment Office shall serve any notice of modification or vacation of the proposed penalty assessment on the person to whom the citation was issued, in the manner provided in 30 CFR 845.17(b). The reasons for every change in a proposed assessment shall be fully documented in the file.

(c) The Assessment Office shall post notice of the time and place of the conference at the regional, district or field office closest to the mine at least 5 days before the conference. Any person shall have a right to attend and participate in the conference.

(d) If the issues are resolved, the conference officer shall prepare a settlement agreement to be signed by the conference officer on behalf of the Assessment Office and by the person assessed. If full payment is not received by the Assessment Office within 30 days after the date of signing, the Assessment Office shall enter the agreed-upon amount as a final order of the Secretary or shall rescind the agreement and reinstate the original proposed assessment.

(e) If a settlement agreement is entered into, the person assessed will be deemed to have waived all rights to further review of the violation or penalty in question, except as otherwise expressly provided in the settlement agreement. The settlement agreement shall contain a clause to this effect.

(f) A reduction of a proposed civil penalty assessment of more than 25 percent and more than $500 shall not be final and binding on the Secretary until approved by the Director or his designee.

(g) The conference officer may terminate the conference when he determines that the issues cannot be resolved or that the person assessed is not diligently working toward resolution of the issues.

(h) The Assessment Office shall notify the Office of Hearings and Appeals when a conference is terminated, the proposed penalty is raised or lowered, a settlement agreement has been entered into, or the proposed penalty has been paid in full.

§ 845.19 Request for hearing.

(a) The person assessed may contest the proposed penalty or the fact of the violation by submitting a petition and an amount equal to the proposed penalty to the Office of Hearings and Appeals (to be held in escrow as provided in paragraph (c)) within 30 days from receipt of the proposed assessment, except that:

(1) The fact of the violation may not be contested if it has been decided under an appeal filed under 30 CFR 843.16;

(2) If the conference officer raises the penalty as provided in 30 CFR 845.18(b), the person assessed shall submit the difference to the Office of Hearings and Appeals to be held in escrow as provided in paragraph (c), within 30 days of the modification of the proposed assessment or waive his right to further review under this Section; and

(3) If the conference officer lowers the penalty, the Assessment Office shall refund the difference to the person assessed with interest, as provided in 30 CFR 845.20(d).

(b) If a conference under 30 CFR 845.18 has been requested:

(1) The hearing shall be deferred until—

(i) The Assessment Office notifies the Office of Hearings and Appeals that the conference has been terminated, or the proposed penalty has been reduced; or

(ii) If the proposed penalty has been raised, the difference is submitted as provided in paragraph (a)(2) of this section.

(2) The hearing shall be waived if a settlement agreement is entered into as provided in 30 CFR 845.18(e).

(c) The Office of Hearings and Appeals shall transfer all funds submitted under paragraph (a) to the Assessment Office, which shall hold them in escrow pending completion of the review process, at which time it shall disburse them as provided in 30 CFR 845.20.

§ 845.20 Final assessment and payment of penalty.

(a) If the person to whom a citation is issued fails to request a hearing as provided in 30 CFR 845.19, the proposed assessment shall become a final order of the Secretary and the penalty assessed shall become due and payable upon expiration of the time to request a hearing.

(b) If any party requests judicial review of a final order of the Secretary, the proposed penalty shall continue to be held in escrow until completion of the review. Otherwise, subject to paragraph (d) of this section, the escrowed funds shall be transferred to the Assessment Office in payment of the penalty, and the escrow shall end.

(c) If administrative and judicial review terminates in an order reducing or eliminating the proposed penalty assessed under this part, the Assessment Office shall within 30 days of receipt of the order refund to the person assessed all or part of the escrowed amount, with interest from the date of payment into escrow to the date of the refund at the rate of 6 percent or at the prevailing Department of the Treasury rate, whichever is greater.

(d) If the review terminates in an order increasing the penalty, the person to whom the citation was issued shall pay the difference to the Assessment Office within 10 days after receipt of the order.

SUBCHAPTER M CERTIFICATION AND TRAINING OF BLASTERS AND BLASTER LEARNERS

REQUIREMENTS FOR BLASTER CERTIFICATION PROGRAM

Sec.
850.1 Scope.
850.2 Objectives.
850.3 Responsibility.
850.5 Definitions.
850.11 Training Programs.
850.12 Examinations.

AUTHORITY: Secs. 102, 201, 501(b), 515, 719, of Pub. L. 95-87, 91 Stat. 448, 449, 468, 486 and 526 (30 U.S.C. 1202, 1211, 1251, 1265 and 1309).

§ 850.1 Scope.

This part establishes program requirements and criteria for the training, examination and certification of persons engaging in or directly responsible for blasting or the use of explosives in surface coal mining and reclamation operations.

§ 850.2 Objectives.

The objectives of this part are:

(a) To establish minimum requirements and criteria for a training course in the use of explosives to ensure that blasting operations are conducted by well trained persons, and

(b) To establish standard examination and certification requirements to assure that blasting operations are conducted by competent persons.

§ 850.3 Responsibility.

(a) The Director is responsible for establishing a national examination for persons engaged in or directly responsible for blasting or the use of explosives in surface coal mining and reclamation operations and requirements governing the administration of that examination.

(b) Each Regional Director of the Office is responsible for:

(1) Reviewing and approving training, examination and certification programs proposed in a State program submitted under 30 CFR 731.

(2) Establishing and conducting Federal training courses and examining and certifying qualified blasters or blaster learners, in a State which does not have an approved State program after August 3, 1979, or for each person working on Federal lands after February 3, 1979.

(3) Monitoring approved State training courses, examinations and certification programs to ensure compliance with the requirements of this Part.

(c) Each State is responsible for:

(1) Preparing and submitting to the Regional Director on or before February 3, 1979, a State plan for the training, examination, and certification of blasters and blaster learners within a State program submitted under 30 CFR 731, which meets the requirements of this part, or notifying the Director of an intention not to submit a plan;

(2) Requiring that any person engaging in or directly responsible for blasting or use of explosives in surface coal mining and reclamation operations in the State shall, on and after the approval of a State program, be certified by the State or Federal government;

(3) Conducting training programs, holding examinations, and certifying blasters and blaster learners under an approved State plan;

(4) Approving and monitoring training programs conducted by any surface coal mine operator to ensure compliance with the requirements of State regulations where the program is authorized under an approved State program; and

(5) Collecting, maintaining and providing the Office with data on course attendance, test results and other information the Office may require.

(d) Any person who intends to be directly responsible for the conduct of blasting or use of explosives in surface coal mining and reclamation operations shall obtain a blaster's certification after approval of a State plan or implementation of a Federal program for certification before conducting these activities.

(e) Any person who intends to engage in, but not be directly responsible for the conduct of, blasting or using explosives in surface coal mining and reclamation operations shall obtain a blaster learners certificate after approval of a State plan or implementation of a Federal program for certification before engaging in these activities.

§ 850.5 Definitions.

Blaster means any person engaging in or responsible for conducting blasting or use of explosives in surface coal mining and reclamation operations.

Blaster learner means any person engaging in blasting or using explosives on surface coal mining and reclamation operations under the direct supervision of a certified blaster.

§ 850.11 Training programs.

A State program may provide that the State regulatory authority conduct all training to meet the requirements of this part, or that training courses will be conducted by surface coal mine operators under the supervision of the State. In either case the training course must be approved by the Office and at a minimum meet the requirements of this section.

(a) Each Instructor shall have a thorough knowledge of the subject matter they teach and have had practical field experience in its application.

(b) The course of training for blaster learners shall be the course required by the Mine Health and Safety Administration, and an introductory course in blasting and the use of explosives as approved by the Office.

(c) The course of training for blasters shall, at a minimum, include instruction in:

(1) The storage, transportation and use of explosives for blasting purposes;

(2) The design and layout of blast patterns, including proper use of delays;

(3) Loading of boreholes;

(4) Priming and boosting;

(5) Tamping and stemming;

(6) Blasting with detonating cord and other nonelectrical initiating systems;

(7) The use of blasting machines;

(8) The use of testing machines;

(9) The hazards and dangers involved in the use of explosives for blasting purposes;

(10) The chemical and physical properties of explosives;

(11) Ground vibrations and methods of monitoring and control;

(12) Air blast and methods of monitoring and control;

(13) Electrical blasting hazards;

(14) The need for accurate reports and blasting logs; and

(15) Any other subject matter that a State or the Office may require.

(c) On the job training shall be encouraged to the extent possible.

§ 850.12 Examinations.

(a) Examinations for blasters and blaster learners shall be conducted as needed by:

(1) The State regulatory authority in each State where there is an approved State program; and

(2) The Office in each State where there is a Federal program and for operations on Federal lands where there is no cooperative agreement between the State and the Office.

(b) The examination for blasters shall be a written examination established by the Office and shall include questions related to:

(1) Explosive energy;

(i) Types of explosives;

(ii) Selection of explosives; and

(iii) Explosive properties.

(2) Blast design:

(i) Important rock and explosives properties;

(ii) Design of blast holes;

(iii) Pattern design, surface blasting, including timing of blast holes with delay intervals and spacing burden and stemming; and

(iv) Controlled blasting techniques.

(3) Loading boreholes:

(i) Priming and boosting; and

(ii) Decking.

(4) Initiation systems:

(i) Electric;

(ii) Detonating cord;

(iii) Shock tube;

(iv) Gas detonation; and

(v) Additional initiation systems, as developed.

(5) Ground vibrations, air blast and fly rock monitoring and control.

(i) Monitoring and control.

(6) Secondary blasting.

(7) Current Federal and State blasting regulations.

(8) Such other matters as the State or the Office may require.

(c) Examinations for blaster learners shall be those prescribed and utilized in the introducotry blasting course required by the Office and the Mine Health and Safety Administration.

PART 851—MINIMUM REQUIREMENTS FOR CERTIFICATION OF BLASTERS

Sec.
851.1 Scope.
851.11 Certification procedures.
851.12 Terms and conditions of certification.
851.13 Recertification.
851.14 Restrictions.
851.15 Appeals.

AUTHORITY: Secs. 102, 201, 501(b), 515, and 719 of Pub. L. 95-87, 91 Stat. 448, 449, 468, 486 and 526 (30 U.S.C. 1202, 1211, 1251, 1265 and 1309).

§ 851.1 Scope.

This Part sets forth the minimum requirements that a person responsible for conducting blasting or use of explosives on surface coal mining and reclamation operations shall meet in order to become certified as a blaster by the State regulatory authority or the Office. It also provides a basic description of the terms and conditions of certification, the requirements for recertification, the minimum restriction on a Blaster's Certification and the procedures for appealing a decision with regard to suspension or revocation of a Blaster's Certification.

§ 851.11 Certification procedures.

(a) Each applicant for Blaster's certification shall be required to pass a qualifying examination established by the Office according to the requirements of 30 CFR 850.12. Each applicant may use one of the following con-

ditions as a prerequisite for taking the certification examination:

(1) A signed notorized statement

cate of certification to any duly authorized representative of the regulatory authority or the Office.

(c) The certified blaster-in-charge shall fire all blasts. When more than one certified blaster is engaged in the preparation for a blast, the operation's

V 43 / 181
SEP 18 78

ditions as a prerequisite for taking the certification examination:

(1) A signed notorized statement from the applicant's employer or other responsible person's certifying that the applicant is experienced in blasting; or

(2) Completion of a course in blasting approved by the Office, according to the requirements of 30 CFR 850.11.

(b) Applicants failing to qualify in the examination may reapply for examination by submitting a new application to the examining authority.

(c) Each applicant for blaster's certification must show proof of completion of the Mine Health and Safety training as required by the Mine Health and Safety Administration prior to being certified.

(d) Each applicant for blaster's certification shall have at least two years experience in blasting as applicable to surface coal mining operation.

(e) Each applicant for a Blaster's certification shall be notified in writing whether they have qualified or failed to qualify in the examination for Blaster's certification, within 30 days from the date of the examination.

(f) If the applicant qualifies in the examination, the State regulatory authority or the Office may grant certification if the application shows that all other requirements are met.

§ 851.12 Terms and conditions of certification.

(a) Certification shall be for a period of 3 years.

(b) A certificate of certification shall be issued only to an individual qualified in accordance with the requirements of section 850.12(c) of this part and shall bear his name, address, photograph, and signature.

(c) Each blaster or blaster learner shall, upon request, exhibit his certificate of certification to any duly authorized representative of the regulatory authority or the Office.

(d) After appropriate notice and an opportunity for an appeal, according to the requirements in section 851.15, the regulatory authority of the Office may suspend or revoke the certification of a blaster or blaster learner for any of the following reasons:

(1) Non-compliance with any order of the regulatory authority;

(2) Violation of the provisions of any State or Federal explosive law or regulation, or proof that false information was willfully given or a misrepresentation was willfully made to obtain the certification; or

(3) The Blaster or learner is an unlawful user of, or is addicted to, alcohol, narcotics, or other dangerous drugs.

§ 851.13 Recertification.

(a) Each blaster or blaster learner may apply for recertification every three (3) years to the regulatory authority or the Office. Before being recertified, blasters must complete an 8 hour refresher course required by the Office.

(b) Each blaster or blaster learner who fails to obtain recertification every 3 years may be required to apply for re-examination by submitting proper application accompanied by the appropriate fee, if required. In any event, re-examination is required every six years.

(c) Any individual whose certification has been suspended shall be required to pass a qualifying examination before being recertified.

§ 851.14 Restrictions.

(a) A blaster or blaster learner certification shall not be assigned or transferred.

(b) A blaster shall not delegate their responsibility to any individual who is not a certified blaster.

(c) The certified blaster-in-charge shall fire all blasts. When more than one certified blaster is engaged in the preparation for a blast, the operation's management shall designate the blaster-in-charge.

(d)(1) The blaster-in-charge shall be on the actual site of the blasting operation and shall directly supervise each blasting crew which may not exceed 6 learners per crew. The blaster-in-charge shall not be responsible for nor supervise more than one crew at any one time.

(2) The blaster-in-charge may authorize learners to perform general blasting operations, to load and unload explosives, prepare explosives for use in blasting, transport explosives at or near the job site, charge explosives into drill holes, tamp, or otherwise prepare explosives for detonation. However, each of these duties shall be performed only after instructions from and under the direct supervision of the blaster-in-charge. The blaster-in-charge has the full responsibility for all blasting including keeping of blasting logs and records, the blasting related activities of the learners in his charge, and for ensuring that all persons under his supervision have the necessary training to safely perform their duties.

§ 851.15 Appeals.

(a) Any person whose certification has been suspended or revoked may, within 30 days from the date of notice of this action, appeal the decision to the Director, The appeal shall contain a statement of the decision being appealed and facts upon which the requested reversal or modification of the decision is based.

(b) The Director shall take appropriate action on the appeal within 30 days from receipt of the appeal.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR notice 41 FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/COAST GUARD	USDA/ASCS		DOT/COAST GUARD	USDA/ASCS
DOT/NHTSA	USDA/APHIS		DOT/NHTSA	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/OHMO	USDA/FSQS		DOT/OHMO	USDA/FSQS
DOT/OPSO	USDA/REA		DOT/OPSO	USDA/REA
CSA	CSC		CSA	CSC
	LABOR			LABOR
	HEW/FDA			HEW/FDA

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408.

NOTE: As of August 14, 1978, Community Services Administration (CSA) documents are being assigned to the Monday/Thursday schedule.

federal register

Area Code 202 Phone 523-5240

Published daily, Monday through Friday (no publication on Saturdays, Sundays, or on official Federal holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C., Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $5.00 per month or $50 per year, payable in advance. The charge for individual copies is 75 cents for each issue, or 75 cents for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER.

Title 3—The President

PROCLAMATION 4596

National Port Week, 1978

By the President of the United States of America

A Proclamation

Since the days of its early settlement, the United States has been dependent on water transportation for its trade. Populations tended to locate around harbors, which rapidly became the economic centers of the New World. Now there are some 170 commercial seaports in this country, as well as numerous inland ports on our navigable inland waterways. The result has been the creation of a network of ocean and inland ports that includes many of the country's most important centers of industry, distribution, finance, and education.

Ports provide the vital link between land and water carriers. The port industry contributes enormously to the Nation's economy. It facilitates international trade, employs significant numbers of people, provides substantial personal and business incomes, and generates revenues for State and local governments.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, in order to remind Americans of the importance of the port industry of the United States to our national life, do hereby designate the seven calendar days beginning September 17, 1978, as "National Port Week." I invite the Governors of the several States, the chief officials of local governments, and the people of the United States to observe such week with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of September, 1978, in the year of our Lord nineteen hundred seventy-eight, and of the Independence of the United States the two hundred and third.

Jimmy Carter

REORGANIZATION PLAN NO. 3 OF 1978

Prepared by the President and transmitted to the Senate and the House of Representatives in Congress assembled, June 19, 1978, pursuant to the provisions of Chapter 9 of Title 5 of the United States Code.

PART I. Federal Emergency Management Agency

Section 101. Establishment of the Federal Emergency Management Agency.

There is hereby established as an independent establishment in the Executive Branch, the Federal Emergency Management Agency (the "Agency").

Section 102. The Director.

The Agency shall be headed by a Director, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be compensated at the rate now or hereafter prescribed by law for level II of the Executive Schedule.

Section 103. The Deputy Director.

There shall be within the Agency a Deputy Director, who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be compensated at the rate now or hereafter prescribed by law for level IV of the Executive Schedule. The Deputy Director shall perform such functions as the Director may from time to time prescribe and shall act as Director during the absence or disability of the Director or in the event of a vacancy in the Office of the Director.

Section 104. Associate Directors.

There shall be within the Agency not more than four Associate Directors, who shall be appointed by the President, by and with the advice and consent of the Senate, two of whom shall be compensated at the rate now or hereafter prescribed by law for level IV of the Executive Schedule, one of whom shall be compensated at the rate now or hereafter prescribed by law for level V of the Executive Schedule and one of whom shall be compensated at the rate now or hereafter prescribed by law for GS-18 of the General Schedule. The Associate Directors shall perform such functions as the Director may from time to time prescribe.

Section 105. Regional Directors.

There shall be within the Agency ten regional directors who shall be appointed by the Director in the excepted service and shall be compensated at the rate now or hereafter prescribed by law for GS-16 of the General Schedule.

Section 106. Performance of Functions.

The Director may establish bureaus, offices, divisions, and other units within the Agency. The Director may from time to time make provision for the

performance of any function of the Director by any officer, employee, or unit of the Agency.

Reorganization Plan or by recess appointment, as the case may be. The President may authorize any such person to receive the compensation attached to the Office in respect of which that person so serves, in lieu of other

performance of any function of the Director by any officer, employee, or unit of the Agency.

PART II. Transfer of Functions

Section 201. Fire Prevention.

There are hereby transferred to the Director all functions vested in the Secretary of Commerce, the Administrator and Deputy Administrator of the National Fire Prevention and Control Administration, and the Superintendent of the National Academy for Fire Prevention and Control pursuant to the Federal Fire Prevention and Control Act of 1974, as amended, (15 U.S.C. 2201 through 2219); exclusive of the functions set forth at Sections 18 and 23 of the Federal Fire Prevention and Control Act (15 U.S.C. 278(f) and 1511).

Section 202. Flood and Other Matters.

There are hereby transferred to the Director all functions vested in the Secretary of Housing and Urban Development pursuant to the National Flood Insurance Act of 1968, as amended, and the Flood Disaster Protection Act of 1973, as amended, (42 U.S.C. 2414 and 42 U.S.C. 4001 through 4128), and Section 1 of the National Insurance Development Act of 1975, as amended, (89 Stat. 68).

Section 203. Emergency Broadcast System.

There are hereby transferred to the Director all functions concerning the Emergency Broadcast System, which were transferred to the President and all such functions transferred to the Secretary of Commerce, by Reorganization Plan Number 1.

PART III. General Provisions

Section 301. Transfer and Abolishment of Agencies and Officers.

The National Fire Prevention and Control Administration and the National Academy for Fire Prevention and Control and the positions of Administrator of said Administration and Superintendent of said Academy are hereby transferred to the Agency. The position of Deputy Administrator of said Administration (established by 15 U.S.C. 2204(c)) is hereby abolished.

Section 302. Incidental Transfers.

So much of the personnel, property, records, and unexpended balances of appropriations, allocations and other funds employed, used, held, available, or to be made available in connection with the functions transferred under this Plan, as the Director of the Office of Management and Budget shall determine, shall be transferred to the appropriate agency, or component at such time or times as the Director of the Office of Management and Budget shall provide, except that no such unexpended balances transferred shall be used for purposes other than those for which the appropriation was originally made. The Director of the Office of Management and Budget shall provide for terminating the affairs of any agencies abolished herein and for such further measures and dispositions as such Director deems necessary to effectuate the purposes of this Reorganization Plan.

Section 303. Interim Officers.

The President may authorize any persons who, immediately prior to the effective date of this Plan, held positions in the Executive Branch to which they were appointed by and with the advice and consent of the Senate, to act as Director, Deputy Director, and Associate Directors of the Agency, until those offices are for the first time filled pursuant to the provisions of this

Reorganization Plan or by recess appointment, as the case may be. The President may authorize any such person to receive the compensation attached to the Office in respect of which that person so serves, in lieu of other compensation from the United States.

Section 304. Effective Date.

The provisions of this Reorganization Plan shall become effective at such time or times, on or before April 1, 1979, as the President shall specify, but not sooner than the earliest time allowable under Section 906 of Title 5, United States Code.

[Amdt. No. 135]

PART 271—PARTICIPATION OF STATE AGENCIES AND ELIGIBLE HOUSEHOLDS

Food Stamp Program; Retroactive Relief

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: This rule, which applies only to members of the plaintiff class in *Aiken* v. *Obledo*, 442 F. Supp. 628 (E.D. Cal. 1977), establishes by regulation procedures for granting retroactive food stamp benefits to households eligible for retroactive relief under the court order issued in *Aiken*. In addition to the methods specified in a February 3, 1978, telegram issued to State agencies, the regulation provides that, at State agency option, households may receive their entire entitlement to retroactive benefits in the form of a lump sum of food coupons. Also, the regulation will require that State agencies provide retroactive benefits based on current food stamp allotment tables to all members of the *Aiken* class who have not already received or begun to receive such benefits based on previously effective allotment tables. These additional procedures will speed delivery of benefits to the plaintiff class and will greatly simplify benefit calculation, reconciliation of issuance documents and reporting for State agencies.

EFFECTIVE DATE: September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Susan D. McAndrew, Acting Chief, Program Standards Branch, Program Development Division, Office of Family Nutrition Programs, 500 12th Street SW., Washington, D.C. 20250—202-447-8918.

SUPPLEMENTAL INFORMATION: Court ordered procedures for granting retroactive food stamp benefits to members of the plaintiff class in *Aiken* whose benefits were unlawfuly denied or delayed were published at 43 FR 6286 et seq. (February 14, 1978). These procedures, sent by telegram dated February 3, 1978, to all State Welfare Commissioners and all FNS Regional Administrators, required that State agencies issue retroactive benefits to *Aiken* class members as follows: (1) a currently eligible household will receive its food coupon allotment at no or reduced cost until its retroactive entitlement is exhausted; (2) a household currently eligible at zero purchase will receive up to 150 percent of its food coupon allotment until its retroactive entitlement is exhausted; or (3) a currently ineligible household will receive up to 100 percent of the food coupon allotment for its household size at no cost until its retroactive entitlement is exhausted.

In addition, the telegram set out requirements for notification of potential class members, for processing claims filed under the court order and for reporting information on applicants for benefits and the dollar amount of benefits paid out.

State agencies now report technical problems in complying with the requirement to provide lost benefits in the form of food coupons to households currently ineligible for participa-

tion and with computing such benefits with the food coupon allotment tables in effect at the time benefits were gramed to authorize only the current food coupon allotment tables. As the *Aiken* order covers certification ac- all households, whether eligible or ineligible, in the form of a lump sum of food coupons. Currently eligible

To ease the transition to the lump sum method, the regulation allows the State agency to continue to use the

hold size until its retroactive entitlement is exhausted; or

(*d*) At the option of the State agency, all households whether eligi- *Aiken*. The State agency may, after adopting the lump sum method, restore *Aiken* benefits to a household by the monthly adjustment method only

tion and with computing such benefits with the food coupon allotment tables in effect at the time benefits were denied or delayed. Also, State agencies are currently devoting considerable staff time and administrative funds in preparing for the implementation of the Food Stamp Act of 1977. It is felt that a prolonged period of application processing and benefit delivery by the monthly adjustment method will adversely affect States' ability to orderly implement the new Act.

Massachusetts and Maine have highlighted the difficulties associated with issuance of retroactive benefits to ineligible households.[1] Both States have automated systems for issuance and reconciliation of Authorization to Purchase (ATP) cards. These systems are programed to issue ATP cards only in amounts authorized by the current issuance tables (and up to 150 percent of such amounts as required by 7 CFR 271.1(q)(5)(iii)). Issuance of ATP cards in amounts reflecting noncurrent coupon allotments requires hand preparation of these cards and further requires hand reconciliation once they are transacted. This manual process is costly, time consuming and inherently error-prone. Massachusetts is significantly adversely affected by the requirement to grant retroactive benefits to ineligible households, as its issuance system is automated to such an extent that there is no staff available to conduct a hand issuance and reconciliation operation. The only alternative is a costly rewrite of the computer program which could take months to implement.

Both States have suggested that use of the current food coupon allotment tables to issue lost benefits to ineligible households would enable States to use their current automatic data processing (ADP) systems to issue and reconcile ATP cards issued under the *Aiken* order. Thus the costly manual system or extensive reprograming could be avoided. Benefit calculation could be simplified as the worker could use one issuance table rather than one or more of the seven which have been issued since August 1974.

The Department agrees that State agencies will encounter problems issuing lost benefits to ineligible households. The degree of difficulty experienced will depend on the ADP capabilities of the State agency, the availability of staff to conduct a manual operation, and the number of claims from currently ineligible households. Virtually all of the State and local agencies that use ADP systems to issue and reconcile ATP cards are programed to authorize only the current food coupon allotment tables. As the *Aiken* order covers certification actions dating back as early as August 1974, we can anticipate that a significant percentage of the plaintiff class may not be currently eligible for program benefits. The Department feels that the increased *benefit* costs of paying retroactived benefits according to the current tables will be more than offset by savings in *administrative* costs that will accrue through use of cost effective ADP systems. It is also evident that, in those States which have already paid or begun to pay retroactive benefits to individual households based on previously effective allotment tables, a requirement that the States seek out such households and recalculate their retroactive benefits based on current allotment tables would constitute a heavy and unwarranted administrative burden on the States, since they have already provided the affected households with the precise amount in benefits which were lost at the time of denial or delay. Accordingly, after receiving court approval, the Department has adopted in this final rule the requirement that current allotment tables be used in calculating the retroactive benefits to be paid to *Aiken* class members who have not already received or begun to receive such benefits based on allotment tables in effect at the time benefits were lost.

The Vermont State agency has suggested, for purposes of the *Aiken* court order only, that retroactive benefits be paid to all households, whether currently eligible or ineligible, in one lump sum of food coupons. It was felt that this method would speed delivery of benefits to the plaintiff class, improve accountability over *Aiken* issuances, and allow States to complete action on claims made under *Aiken* will in advance of implementation of the Food Stamp Act of 1977. In response to an informal poll, many State agencies reported that they would adopt the lump sum method if offered this option in lieu of the monthy adjustment method.

With the approval of the *Aiken* court, this suggestion has also been adopted in the final rule. We feel the lump sum restoration method, together with the requirement to compute benefits in accordance with the current allotment tables, will result in significant cost savings to State and local governments and will also be beneficial to the members of the plaintiff class. The provisions of the final regulation are discussed in detail below.

The regulation continues the restoration methods mandated by the February 3, 1978, telegram; however, an optional provision allows State agencies to pay out retroactive benefits to all households, whether eligible or ineligible, in the form of a lump sum of food coupons. Currently eligible households will also receive their regular food coupon allotments. Adoption of the lump sum option is not mandated, as some State agencies might not be able to timely implement this method due to staff resources being assigned to implementation of the 1977 Act or lengthy State APA procedures. Regardless of the method used to restore benefits, the regulation requires that the State agency use the current food coupon allotment tables to determine the amount of retroactive benefits owed to a household. As noted above, the regulation does not result in any further entitlement to retroactive benefits being provided to households who have already received or begun to receive benefits under the *Aiken* order.

The regulation requires preparation of a special issuance document which is specifically identifiable as relating to the *Aiken* order. In a machine (ATP) system, any number of ATP cards may be issued to set up a lump sum issuance of coupons to a household. For example, a single person household entitled to 2 month's retroactive benefits could receive a single ATP authorizing issuance of $108 in food coupons or it could receive two ATP cards, each authorizing issuance of $54 in food coupons. The State agency may choose the most administratively feasible method based on its operational capabilities. In a manual system (HIR card), the State agency may prepare an HIR card for each application approved or it may enter each issuance on a single HIR card. Issuance of food coupons authorized by these special documents are to be reported as regularly authorized issuances on Form FNS-250, Food Coupon Accountability Report, and other related accountability reports. Separate identification of *Aiken* issuance will facilitate preparation of the report on *Aiken* activities due November 1, 1978.

When a household has filed more than one application for retroactive *Aiken* benefits, the State agency may restore benefits for each application as it is approved, restore the full amount only after all applications have been approved, or restore benefits for any number of applications as they are approved. It is up to the State agency to detemine which method will be the most feasible and cost effective in terms of its own operation. State agencies that adopt the lump sum restoration method must alert issuance agents that special issuance documents are being issued as unusual coupon allotments and transactions of multiple ATP cards are authorized.

[1] Under current rules, ineligible households entitled to retroactive benefits cannot have these benefits restored until they again become eligible for program benefits. However, under the *Aiken* order, such relief to ineligible households was required.

To ease the transition to the lump sum method, the regulation allows the State agency to continue to use the monthly adjustment method for households which have already begun to receive *Aiken* benefits. Even if a State decides to issue the remaining entitlement as a lump sum, there is no need to recompute the amount of benefits owing. Further, the regulation allows State agencies to use the monthly adjustment method to restore benefits if a household so requests. For example, a household may state that it is unable to safeguard a larger than normal food coupon allotment.

It is the policy of this Department to give the public and State agencies an opportunity to comment on regulatory changes before issuance. However, because of the need for timely implementation to benefit both claimants under *Aiken* and State agencies, the Department has decided that it is contrary to the public interest to give notice of proposed rulemaking. As the only *mandatory* procedural change is a simplification of the benefit calculation, implementation of the amendment is set at 30 days from the date of publication in the FEDERAL REGISTER. No time is set for implementation of the *optional* procedures; however, we expect that States wishing to use them will implement as soon as possible to gain the maximum benefit.

Accordingly, 7 CFR Part 271 is amended by adding a new subparagraph to §271.1(q) as follows:

* * * * * *

§271.1 General terms and conditions for State agencies.

* * * * * *

(q) *Restoration of lost benefits.* * * *

* * * * * *

(8) *Restoration of benefits under the Aiken, et al. v. Obledo, et al. court order.* (i) *Method of restoration.* Members of the class eligible to receive retroactive relief under the terms of the court order issued in *Aiken, et al. v. Obledo, et al.* shall receive retroactive food stamp benefits as follows:

(*a*) A currently eligible household shall receive its food coupon allotment at no or reduced cost until its retroactive entitlement is exhausted;

(*b*) A currently eligible household participating with no purchase requirement shall receive up to 150 percent of its food coupon allotment until its retroactive entitlement is exhausted;

(*c*) A currently ineligible household shall receive up to 100 percent of the food coupon allotment for its household size until its retroactive entitlement is exhausted; or

(*d*) At the option of the State agency, all households, whether eligible or ineligible, shall receive their entire retroactive entitlement in the form of a lump sum of food coupons. Eligible households will also receive their regular food coupon allotment.

(ii) *Computation of entitlement.* Regardless of the method used to restore retroactive benefits due under the *Aiken* order, the State agency shall use the current monthly food coupon allotment tables to determine the amount of retroactive benefits to be paid the household. Households which have already received or begun to receive retroactive benefits computed with the issuance tables in effect at the time of the delay or denial of benefits are not entitled to receive any additional benefits under this regulation.

(iii) *Preparation of issuance documents.* A special issuance document, either an ATP in a machine system or an HIR card in a manual system, shall be prepared for lump sum restoration under *Aiken.* The document shall be coded *"Aiken v. USDA"* either in print or with the appropriate computer code. In a machine system, any number of ATP cards may be issued to effect the issuance of a lump sum of coupons. In a manual system, one HIR card may be used to record issuances from any number of applications filed by a household. These documents shall be considered as regular authorized issuances for the Form FNS-250, Food Coupon Accountability Report, and other related accountability reports. Because the State agency must file a summary report of benefits restored under *Aiken,* a separate monthly tally should be kept so that this report can be prepared.

(iv) *Multiple applications for benefits.* If a household has filed more than one application for retroactive *Aiken* benefits, the State agency may do any one of the following: Restore the full amount for each application as it is approved; restore the full amount only after all applications have been approved; or restore the full amount for any number of applications as they are approved.

(v) *Issuance agent alert.* The State agency shall alert issuance agents that special issuance documents are being issued and that unusual coupon allotments and transactions of multiple ATP cards are authorized.

(vi) *Transition to lump sum method.* If a State agency decides to use the lump sum restoration method, it may do so for all households at the same time, or it may continue to make monthly adjustments for households which have already begun to receive restoration of lost benefits under *Aiken.* The State agency may, after adopting the lump sum method, restore *Aiken* benefits to a household by the monthly adjustment method only if it so requests.

(vii) *Implementation.* This regulation shall be implemented no later than 30 days after the date of publication in the FEDERAL REGISTER.

(78 Stat. 703, as amended (7 U.S.C. 2011-2026).)

NOTE.—The Food and Nutrition Service has determined that this document does not contain a major proposal requiring preparation of an Economic Impact Statement under Executive Order 11821 and OMB Circular A-107.

(Catalog of Federal Domestic Assistance Programs No. 10.551, Food Stamps.)

Dated: August 1, 1978.

CAROL TUCKER FOREMAN,
Assistant Secretary.

CHAPTER IX—AGRICULTURAL MARKETING SERVICE (MARKETING AGREEMENTS AND ORDERS; FRUITS, VEGETABLES, NUTS), DEPARTMENT OF AGRICULTURE

[Lemon Regulation 163]

PART 910—LEMONS GROWN IN CALIFORNIA AND ARIZONA

Minimum Size Requirement

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This regulation requires fresh California-Arizona lemons shipped to market to be at least 1.82 inches in diameter (size 235's in cartons). This requirement is needed to provide orderly marketing in the interest of producers and consumers.

EFFECTIVE DATES: September 24, 1978, through September 22, 1979.

FOR FURTHER INFORMATION CONTACT:

Charles R. Brader, 202-447-6393.

SUPPLEMENTARY INFORMATION: on August 28, 1978, notice was published in the FEDERAL REGISTER (43 FR 38411) inviting written comments on proposed minimum diameter requirements for shipments of 1978-79 season lemons, under marketing order No. 910, as amended (7 CFR Part 910), regulating the handling of lemons grown in California and Arizona. None were received. This program is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674).

Shipments of lemons from the production area are now in progress and such shipments are regulated by size through September 23, 1978, under

container may measure smaller than 1.82 inches in diameter.

(b) As used in this section, "handle," "handler," "district," "district 2," and

plinary actions for possible rule violations within the disciplinary jurisdiction of the exchange.[1] The Commis-

procedures for certain of the general requirements now contained in §§ 1.51(a) (4), (5), and (7) of the Commission's regulations, 17 CFR §§1.51(a)

requirements of § 1.51 and not to supplant them, the Commission has determined not to amend § 1.51.

The Commission agrees that uni-

forcement staff has concluded that a reasonable basis exists for finding such violation. (See §§ 8.07 and 8.09.) These two provisions are indicative of

Shipments of lemons from the production area are now in progress and such shipments are regulated by size through September 23, 1978, under lemon regulation 111 (42 FR 48869), which requires such lemons to be at least 1.82 inches in diameter. This regulation, which would become effective September 24, 1978, would continue in effect this size requirement. The volume and size composition of the lemon crop in California and Arizona is such that ample supplies of the more desireable sizes are available to satisfy the demand in domestic fresh markets. The regulation is designed to permit shipment of ample supplies of lemons of acceptable sizes, maturity, and juice content in the interest of both growers and consumers, and is necessary to maintain orderly marketing conditions and provide consumer satisfaction. Sales opportunities for smaller fresh lemons in domestic markets are quite limited, as they have relatively low juice yields. Lemons failing to meet the minimum size requirement could be shipped to fresh export markets, left on the trees to attain further growth, or utilized in processing. The regulation is consistent with the objective of the act of promoting orderly marketing and protecting the interest of consumers.

After consideration of all relevant matter presented, including the proposal in the notice and other available information, it is hereby found that the following regulation is in accordance with this marketing agreement and order and will tend to effectuate the declared policy of the act.

It is further found that good cause exists for not postponing the effective date of this regulation unitl 30 days after publication in the FEDERAL REGISTER (5 U.S.C. 553) in that (1) notice of proposed rulemaking concerning this regulation was published in the FEDERAL REGISTER, and no objection to the regulation or its effective date was received; (2) the regulatory provisions are the same as those contained in the notice and are currently in effect through September 23, 1978; and (3) compliance with this regulation will not require any special preparation on the part of persons subject thereto which cannot be completed by the effective time hereof.

§ 910.463 Lemon regulation 163.

Order. (a) From September 24, 1978, through September 22, 1979, no handler shall handle any lemons grown in district 1, district 2, or district 3 which are of a size smaller than 1.82 inches in diameter, which shall be the largest measurement at a right angle to a straight line running from the stem to the blossom end of the fruit: *Provided,* That not to exceed 5 percent, by count, of the lemons in any type of container may measure smaller than 1.82 inches in diameter.

(b) As used in this section, "handle," "handler," "district," "district 2," and "district 3" shall have the same meaning as when used in said amended marketing agreement and order.

(Secs. 1-19, 48 Stat. 31, as amended; 7 U.S.C. 601-674.)

Dated September 13 1978, to become effective September 24, 1978.

CHARLES R. BRADER,
Acting Director, Fruit and Vegetable Division, Agricultural Marketing Service.

[FR Doc. 78-26282 Filed 9-18-78; 8:45 am]

[6351-01]

Title 17—Commodity and Securities Exchanges

CHAPTER I—COMMODITY FUTURES TRADING COMMISSION

PART 8—EXCHANGE PROCEDURES FOR DISCIPLINARY, SUMMARY, AND MEMBERSHIP DENIAL ACTIONS

AGENCY: Commodity Futures Trading Commission.

ACTION: Final rule.

SUMMARY: The Commodity Futures Trading Commission has adopted part 8 of its regulations under the Commodity Exchange Act, as amended. Part 8 contains minimum standards to be followed by each exchange in establishing procedures for enforcing its rules and for taking membership responsibility actions. Among other things, these regulations prescribe requirements for commencing investigations of possible rule violations, establish fair disciplinary procedures, and specify the records to be kept by an exchange in carrying out its rule enforcement responsibilities. A separate subpart has been reserved for rules which are expected to be adopted on the subject of membership denial actions.

EFFECTIVE DATE: Part 8 shall become effective on January 17, 1979.

FOR FURTHER INFORMATION CONTACT:

Barbara R. Stern, Division of Trading and Markets, Commodity Futures Trading Commission, 2033 K Street NW., Washington, D.C. 20581, telephone 202-254-5208.

SUPPLEMENTARY INFORMATION: On February 25, 1977, The Commission published proposed regulations governing the procedures to be followed by an exchange in taking disciplinary actions for possible rule violations within the disciplinary jurisdiction of the exchange.[1] The Commission indicated that the rules were intended to accomplish three objectives: (1) To promote the prompt and thorough investigation and prosecution of exchange rule violations; (2) to insure that disciplinary proceedings are conducted fairly; and (3) to provide sufficient records to facilitate the Commission's rule enforcement inspections and Commission review of specific exchange disciplinary and access denial actions conducted pursuant to section 8c of the Commodity Exchange Act, as amended, 7 U.S.C. 1 et seq. (1976.[2]

The Commission received comments from the 10 exchanges which have been designated as contract markets for various commodities under section 5 of the Act and from one futures commission merchant. After carefully considering all of the comments, the Commission has determined that the regulations should be adopted, but with certain modifications. Among these are changes in wording and organization which are designed to make the regulations clearer and easier to use. Other revisions generally afford an exchange wider latitude in establishing procedures for adjudicating possible rule violations. In addition, the requirements under subpart C have been amended to provide for procedures that are more appropriate to those cases where summary action is permitted. The Commission has also determined that the prescribed disciplinary procedures should not be applicable to membership denial actions. The Commission intends, however, to adopt separate rules governing membership denial actions which will become subpart D of this part.

The comments and amendments to Part 8 are included in the discussion below, which also provides an overview of the adopted regulations. Explanation has been provided for those sections which are new or which, judging from the comments received appear to have generated special concern. The discussion is not intended to cover all of the details of the adopted regulations.

COMMENTS ON AND REVISIONS OF PART 8

ORGANIZATION

Part 8 is divided into four subparts. Subpart A contains general provisions which set forth the scope of the rules and define terms as used in Part 8. Subpart B contains the disciplinary procedure which is to be utilized by an exchange in investigating and adjudicating possible rule violations within the exchange's disciplinary jurisdiction. This subpart provides specific

[1] 42 FR 11142 (Feb. 25, 1977).
[2] Id.

procedures for certain of the general requirements now contained in §§ 1.51(a) (4), (5), and (7) of the Commission's regulations, 17 CFR §§1.51(a) (4), (5), and (7) (1977). Subpart C contains procedures which may be used for taking summary action in specified circumstances. One type of summary procedure is designed to permit an exchange to take immediate action in situations where time is a critical factor. A second kind of summary action may be used for very minor violations where a full proceeding would be unduly burdensome and seems inappropriate in view of the violation and sanction. Subpart D has been reserved for regulations concerning membership denial actions, which are expected to be adopted at a later date.

GENERAL COMMENTS

The comments received from the exchanges generally reflected a view that the Commission's proposed regulations were overly complex and formal. Many exchanges argued that uniformity of procedures should not be a goal in and of itself and that each exchange should be given more discretion to fashion a disciplinary procedure tailored to its particular needs. One exchange suggested that the Commission should merely require each exchange to adopt rules requiring prompt and fair handling of member disciplinary procedures as an alternative to promulgating a set of regulations applicable to all 10 exchanges. Another exchange suggested that the Commission adopt an exemptive regulation which would permit the Commission to waive strict application of its rules whenever an exchange has demonstrated substantial compliance with the general principles of rule enforcement.

Part 8 was proposed, in part, in response to staff findings amd recommendations based on observations made during the Commission's contract market rule enforcement inspections. The proposed regulations were intended to correct deficiencies, some of which were severe, in existing exchange rule enforcement programs. The Commission has continued its program of rule enforcement inspections and its recent experience reaffirms the earlier conclusion that minimum requirements are essential for effective regulation. Accordingly, the Commission has determined that most of the requirements in the proposed regulations, particularly those pertaining to investigations and recordkeeping, should be adopted.

At the time Part 8 was proposed the Commission intended to amend § 1.51 to delete therefrom any provision which duplicated or overlapped with the part 8 regulations as adopted. Since part 8 is intended to amplify the requirements of § 1.51 and not to supplant them, the Commission has determined not to amend § 1.51.

The Commission agrees that uniformity of procedures should not be and is not the primary goal of the adopted regulations. The adopted regulations have been designed to provide each exchange with as much flexibility as possible. An exchange is free to establish procedures within the regulatory framework. It is emphasized that the adopted regulations set forth minimum standards to be followed by an exchange in establishing a disciplinary procedure. As is stated in § 8.01, the regulations do not preclude an exchange from adopting rules containing additional standards of practice and procedure consistent with the regulations, and some exchanges already have such rules. One exchange, for example, provides parties under investigation with notice of the investigation although the adopted regulations do not require notice until a person is charged with a violation. The examples below further demonstrate the flexibility of part 8, particulary in the adjudicatory stage of the disciplinary procedure. Many exchanges objected to the proposed mandatory default provisions where a respondent failed to deny charges or to request a hearing. The adopted regulations permit an exchange that wishes to do so to conduct a hearing on charges of a rule violation whether or not one is requested by a person charged with the violation. (See §§ 8.14 and 8.15.) In addition, under subpart C providing for summary action, an exchange may establish a procedure for imposing sanctions for violations of rules of decorum, submission of records, or other similar activities. (See § 8.27.) This is in contrast to the proposed regulations, which would have required an exchange to provide an opportunity for a full hearing and appeal, no matter how minor the violation or sanction.

One exchange was critical of the Commission's statement that the regulations had been drafted to permit exchanges to retain a "certain" amount of discretion in handling their rule enforcement obligations. This exchange emphasized the need to be able to judge disciplinary matters within its jurisdiction on the facts before it. The Commission did not intend by using the work "certain" to imply that an exchange's discretion was to be severely limited. Each exchange is clearly responsible for its own self-regulation. For example, an exchange's enforcement staff may close an investigation if it determines that no reasonable basis exists for finding a violation and the disciplinary committee may choose not to charge a person with a rule violation even though the enforcement staff has concluded that a reasonable basis exists for finding such violation. (See §§ 8.07 and 8.09.) These two provisions are indicative of the wide discretion given an exchange under the adopted regulations. Moreover, they demonstrate that exchange discretion is not limited merely to procedural matters involved in adjudicating possible violations, but that it goes to what is perhaps the essential aspect of rule enforcement by authorizing each exchange to determine which cases should or should not be adjudicated.[3] Prosecutorial discretion, however, should not and cannot relieve an exchange of the statutory obligation to enforce its rules as part of its self-regulatory responsibilities.

One exchange asserted that the Commission's regulations will significantly increase the costs of its rule enforcement program. The commenter appeared to be primarily concerned with the obligation to complete investigations within the time period prescribed in the proposed regulations and to submit periodic status reports to the Commission on cases where longer investigations are necessary. As will be discussed further, the Commission has extended the period for completing investigations from 3 months to 4 and has deleted the proposed periodic status reporting requirement. More importantly, however, the Commission believes that an adequate enforcement staff which can effectively police trading practices and promptly investigate potential violations is critical to the protection of the public interest. As the Commission states in guideline II:

> The mere fact that an exchange, because of its method of financing, does not have sufficient resources to fund an adequate enforcement program does not justify its not having an adequate program. It is the obligation of every contract market to make whatever modifications in its self-financing scheme as are necessary to enable it to adequately fund an enforcement program which will protect the public interest.[4]

The Commission also believes that even though the new hearing and recordkeeping requirements may increase the cost of disciplinary actions, the need for fundamental fairness and complete records outweighs the burden any such additional costs may impose on an exchange.

Finally, three exchanges requested that the Commission hold hearings before adopting final regulations. For

[3] The fact that these decisions will be subject to Commission oversight both during rule enforcement inspections and when the Commission reviews records of exchange actions required to be forwarded to the Commission does not mimimize the breadth of an exchange's discretion in this area.

business conduct committee are much more aware of the nuances of trading and are able to discern quickly whether certain evidence warrants further

their duties by concern for job security. However, there will not be a problem if, as is required, the enforcement staff is truly independent. In further-

several reasons, the Commission has determined that public hearings on its proposals are not necessary. Ample opportunity to comment on the proposed regulations has already been provided. The formal comment period in the FEDERAL REGISTER was 60 days; the Commission also accepted and considered comments submitted after that period by exchanges that were unable to meet that deadline. In addition, all of the exchanges have expressed their views and the Commission has carefully evaluated their suggestions and comments. In many cases the regulations as adopted reflect changes recommended by the exchanges. Finally, the Commission emphasizes that the adopted regulations do not embody any startling or novel concepts and in many ways codify the views previously expressed by the Commission.[5]

MISCELLANEOUS COMMENTS

The Commission received several comments concerning the proposed regulations published as part 9,[6] which will implement the notice requirement in section 8c of the act concerning reporting by an exchange of expulsions, suspensions, disciplinary actions, and access denial actions. These comments will be considered in conjunction with comments received on part 9 before final regulations thereunder are adopted.

One exchange indicated that it did not consider as binding a statement which appeared only in the preamble to and not in the text of the regulations. The Commission wishes to make clear that the narrative portion of the FEDERAL REGISTER notice announcing the proposal or adoption of regulations contains the Commission's views on the purpose and meaning of its rules. It is offered as further guidance and explanation of the requirements of a regulation and, as such, should be accorded significant weight by affected persons. Failure to adhere to a Commission interpretation may result in enforcement action for violation of the regulation.

SUBPART A—GENERAL PROVISIONS

SCOPE OF RULES

As has been discussed in great detail above, many exchanges argued in their comments that part 8 should give an exchange more discretion to fashion a disciplinary system tailored to its particular needs. In response to these comments, § 8.01 as adopted gives an exchange the authority to adopt rules and practices in addition to those required by part 8, so long as they are not inconsistent with these regulations.

IMPLEMENTING EXCHANGE RULES

One exchange commented that there was little need for an exchange to adopt and promulgate rules of its own when it was required by law to follow the Commission's standards in the part 8 regulations, many of which are detailed enough to stand alone. The Commission believes that this comment has merit with respect to certain of the regulations. It has therefore added a new section, § 8.02, to the regulations as adopted.

Section 8.02(a) specifies those regulations for which exchanges must adopt implementing rules (§§ 8.11, 8.13, 8.15, 8.17, 8.18, and 8.20 of subpart B and §§ 8.26 and 8.28 of subpart C). Each exchange should have specific rules implementing these regulations, since they permit an exchange to choose among several alternative approaches and it is important for a person subject to a disciplinary action to know exactly what his rights and obligations are under that exchange's procedures. For example, some of these regulations require an exchange to take or permit a specific action "promptly." Wherever possible the implementing exchange rule should specify what that period of time is.

In addition, section 8.02(a) requires each exchange to submit all rules required to be adopted pursuant thereto by the effective date of the part 8 regulations. Of course, an exchange applying for contract market designation pursuant to section 6 of the Act subsequent to the effective date of the regulations will have to submit its required part 8 rules at the time of its application.

The Commission wishes to point out that, in contrast to the regulations specified in § 8.02(a), there are other part 8 regulations which do not require the submission of implementing rules but must nonetheless be strictly followed (§§ 8.05, 8.06, 8.07, 8.08, 8.09, and 8.12). For example, while each exchange must have an enforcement staff and a disciplinary committee (§§ 8.05 and 8.08), it need not submit to the Commission rules establishing them.

Certain of the Part 8 regulations provide that a disciplinary procedure is permitted if it is authorized by the rules of an exchange (§§ 8.10, 8.14, 8.16, and 8.20 of subpart B and § 8.27 of subpart C). Section 8.02(b) gives an exchange discretion to adopt rules implementing any or all of these regulations.

Sections 8.02 (a) and (b) require each exchange to submit all rules adopted pursuant thereto to the Commission for its approval. The Commission recognizes that prior to these regulations an exchange may have adopted rules that comply with various sections of Part 8. The prohibition in §§ 8.02 (a) and (b) against putting into effect a rule submitted pursuant thereto prior to Commission approval does not apply to existing exchange rules which are required to be enforced in accordance with § 1.53 or which have been submitted to and approved by the Commission pursuant to section 5a(12) of the Act.

DEFINITIONS

The term "disciplinary procedure" in § 8.03(d) has been amended to refer only to the investigation and adjudication of possible rule violations and the imposition of penalties under subpart B. It does not include the taking of summary action, which is now subject to the procedures set forth in subpart C, or to the adjudication of membership denial actions which, as noted above, is to be governed by a separate set of procedures to be adopted as subpart D.

The term "exchange" in § 8.03(f) replaces the term "contract market," used in the proposed regulations, in order to be consistent with section 8c of the Act and with regulations proposed as part 9.

The term "penalty" in § 8.03(i) has been modified, as discussed below, to refer only to sanctions imposed pursuant to a finding that a violation has been committed or the terms of a settlement agreement.[7] Thus, a warning letter does not constitute a penalty if it is issued in accordance with § 8.07(c) but does constitute a penalty if it is issued after a finding that a violation has been committed.

The term "respondent" in § 8.03(l) has been amended for clarification to include a person who is subject to a summary action under subpart C as well as a person served with a notice of charges under subpart B.

The following new definitions were added to § 8.03 to clarify the adopted regulations: (b) "Charge or charges," (j) "person(s) within the jurisdiction of an exchange," (k) "record of the proceeding," and (n) "violation."

RECORD RETENTION

All reports and records required to be made under these regulations are subject to the general record retention and inspection provisions contained in § 1.31.

[5] One of the areas which generated considerable discussion is the requirement that an exchange maintain an independent enforcement staff to investigate and prosecute possible rule violations. (See § 8.05.) The regulation, however, is consistent with guideline II, a Commission policy statement issued nearly 3 years ago.

[6] 42 FR 30473 (June 14, 1977).

[7] Under § 8.16(c), a settlement agreement must specify the rule violations the disciplinary committee has reason to believe were committed. However, a respondent may be permitted to accept a penalty without either admitting or denying the rule violations upon which the penalty is based.

ENFORCEMENT STAFF

Seven exchanges commented on the requirements of § 8.05 relating to the composition and functions of the enforcement staff. Section 8.05 requires each exchange to have an enforcement staff which is authorized to investigate and prosecute possible rule violations, and precludes exchange members and persons whose interests would conflict with enforcement duties from serving on the staff. It also prohibits persons with trading privileges from directing or controlling the staff's operations. While not specifically stated in § 8.05, the Commission assumes that the members of the enforcement staff, like all other employees of the exchange, will operate under the chief executive officer of the exchange.

The comments ranged from requests for clarification to strong objection. In general, the strong objections were voiced by those exchanges whose present systems conflict with the regulation either because members now participate in investigating and/or prosecuting possible violations or because their enforcement staffs, operate under the direct supervision of exchange members as an adjunct of an exchange committee. These exchanges argued that their present systems are workable and effective and that if the enforcement staff is restricted to nonmembers it will suffer from a lack of expertise which members provide by virtue of their experience with exchange operations.

The requirements of § 8.05 concerning the composition of the enforcement staff reflect an important policy. In guideline II the Commission advises that "each exchange has the obligation of having a suitable staff engaged in actively and continuously looking for possible violations * * *." Elaborating upon the term "suitable staff," the Commission states that an exchange could not meet its rule enforcement obligations by utilizing member officers or committees as its sole enforcement staff. Guideline II further recommends that a "suitable staff" could consist of exchange employees or persons hired on a contract basis to conduct an exchange rule enforcement program. The Commission continues to believe that an independent enforcement staff is best able to investigate trading activities as they occur, since such persons are not preoccupied with or constrained by their own participation or interest in the market during trading periods. Accordingly, § 8.05(a) provides that the enforcement staff must be comprised of employees of the exchange and/or persons hired on a contract basis.

One exchange commented that members who are actively engaged in trading in the pit and who are on a business conduct committee are much more aware of the nuances of trading and are able to discern quickly whether certain evidence warrants further investigation. Where a member is witness to a questionable incident, it is expected that he will furnish such information to the enforcement staff and, when necessary, will be subsequently interviewed by it. It is the Commission's view that anyone with reason to believe that a violation has been or will be committed should report that information to the enforcement staff. Members serving on a business conduct committee have an even greater responsibility in this regard.

The Commission wishes to make clear that the prohibition against a member serving on an enforcement staff or supervising its activities is not so broad as to pevent the staff from seeking members' expert advice in appropriate circumstances. The Commission expects that members' invaluable expertise will be available to the enforcement staff. This prohibition is not intended to impugn to any degree the propriety of such member assistance. It is designed to prevent possible conflicts of interest by insuring a working distance between an enforcement staff and exchange members.

Certain exchanges criticized the Commission's statement in proposed part 8 that the vigorous and thorough investigation and prosecution of rule violations is best accomplished by persons with no inherent conflicts of interest. Those exchanges argued that there would be a greater conflict of interest if staff persons investigate and prosecute rule violations than if other members assume those duties. They reasoned that an employee on the enforcement staff of an exchange would have to look to the exchange, to the governing board or to a committee of exchange members for his job security and advancement. In contrast, they asserted, a member can act vigorously against another member without concern that it will affect his business or his future.

The Commission emphasizes that the adoption of the requirements of part 8 is not intended to question, in any way, the integrity or honesty of the exchange community. Rather, the Commission has endeavored to devise standards for disciplinary procedures in which potential conflicts of interest will be minimized. Because members may be subject to exchange disciplinary action, the investigation and prosecution of possible rule violations should be performed by nonmembers to eliminate any potential conflicts of interest. The Commission is indeed concerned by exchange comments that members of the enforcement staff may be influenced in carrying out their duties by concern for job security. However, there will not be a problem if, as is required, the enforcement staff is truly independent. In furtherance of that requirement and in recognition of the fact that some members of the enforcement staff may serve concurrently in a market surveillance or other nondisciplinary administrative role, the Commission has amended § 8.05 of the adopted regulations to provide that when carrying out an enforcement responsibility, a member of the enforcement staff may not operate under the direct supervision or control of any person with trading privileges or any exchange body composed of such persons.[8] The Commission will reexamine this issue from time to time and will amend the regulation if appropriate.

Some exchanges asked the Commission to distinguish between the power of a disciplinary committee to direct the activities of the enforcement staff and the function of a disciplinary committee in an oversight role which involves regular review and evaluation of the enforcement staff's performance and includes reports to the board of governors. Neither the statement in the preamble of the proposed regulations nor the present requirements of § 8.05 prohibits general committee oversight of the enforcement staff, provided that such oversight does not involve direct participation in or supervision of day-to-day activities of the staff. In fact, the Commission views general operation and performance evaluations of the enforcement staff by exchange committees as fully consistent with an exchange's obligation under § 8.05(b) to insure the effective and diligent enforcement of all rules within its disciplinary jurisdiction. However, to a large extent committee review of enforcement staff performance can be accomplished by careful study of the staff's completed reports and recommendations under § 8.07. It need not require extensive involvement in the staff's enforcement activities.

Finally, one exchange asked whether the disciplinary committee was precluded from directing the enforcement staff to conduct an investigation. As adopted, § 8.06(a)(2) requires the enforcement staff to commence an investigation upon receipt of information

[8] Although the prohibition against members supervising the enforcement staff was not set forth in the text of the proposed regulations, the Commission stated in the preamble: "This prohibition against member participation on the enforcement staff extends not only to their direct participation but also to any supervisory capacity as well; that is, the enforcement staff may not operate under the direction of a contract market committee such as a Business Conduct Committee which is composed of members." 42 FR 11142 (February 25, 1977).

which, in its judgment, indicates a possible basis for finding that a violation has occurred or will occur. As stated above, exchange members have an affirmative duty to report to the staff information concerning possible rule violations. The provision in § 8.05 that the enforcement staff may not operate under the direction or control of persons with trading privileges is not intended to alter this duty in any way. But it does mean that a procedure in which an investigation must be authorized by a committee of members before the enforcement staff may take action will not be permitted.

INVESTIGATIONS

Section 8.06(a) requires each exchange to establish and maintain a disciplinary procedure which requires the enforcement staff to conduct investigations of possible rule violations within the disciplinary jurisdiction of the exchange. The regulation provides in general that such an investigation must be commenced (1) upon the request of the Commission, its Executive Director or his delegee or (2) upon the discovery or receipt of information by the exchange which indicates a possible rule violation has occurred or will occur. The enforcement staff must commence its investigation promptly and, as stated above, without further authorization from any exchange official or entity.

As adopted, § 8.06(a)(1) provides that an investigation must be commenced not only upon the request of the Commission but, in addition, upon the request of its Executive Director or his delegee. Such delegee could be the General Counsel, the Director of the Division of Enforcement, or the Director of the Division of Trading and Markets. The Commission cautions that the foregoing examples are given for illustrative purposes only; they are not meant to be all-inclusive.

One exchange commented that it believed that a request by the Commission for the commencement of an investigation should be in writing and should include a statement giving the basis for the request. As a practical matter, § 8.06(a)(1) requests normally will be made in writing.

The Commission wishes to make clear that § 8.06(a)(1) refers to requests to commence an investigation. Neither it nor any other part 8 regulation affects in any way the authority given the Commission and its staff under the Act to make routine requests for information on surveillance or other matters. Such requests will continue to be treated as general in nature. Similarly, nothing in the part 8 regulations should be construed to alter the full inspection powers given the Commission and its staff under the Act.

As adopted, § 8.06(a)(2) provides that an investigation must be commenced upon the discovery or receipt of credible information by an exchange. The broad language of the adopted regulation is intended to cover both those situations specified in the proposed regulation and all other appropriate cases.

Accordingly, while no longer explicitly stated in the regulation, an investigation continues to be required upon receipt of a complaint from a customer, exchange member, or any other person. Adequate investigation of such complaints should consist of a meaningful inquiry into every complaint which, if true, would constitute a violation of exchange rules or conduct inconsistent with just and equitable principles of trading, or which otherwise would be detrimental to the exchange. An investigation should be made in all instances unless the exchange has sufficient knowledge concerning the matter complained of to determine it is clearly unworthy of belief.

Similarly, an investigation must commence upon receipt of appropriate information from or request by an exchange official. Failure of an exchange to apprise its enforcement staff of a possible rule violation would be a failure to act pursuant to, and therefore a violation of, § 1.51

The enforcement staff must investigate all credible charges and significant indications of violations, regardless of how they come to the attention of an exchange. This is true whether such matters are brought to the attention of the exchange by members, by anonymous charges, by press reports, or by any other source. Further, the enforcement staff itself should take affirmative action to be alert to any indications of a possible rule violation. For example, information that a person holding membership on two exchanges has been found by one exchange to have violated a rule would likely be grounds under § 8.06(a)(2) for an investigation by the enforcement staff of the other exchange to determine whether similar violations may have been committed by the member at the second exchange, but not grounds for a summary type action.

It is the present practice of one exchange to distinguish between those matters that require an investigation and those that are accorded the lesser treatment of an inquiry. The Commission emphasizes that an investigation is required in all of the situations encompassed by § 8.06(a). The scope and kind of investigation which is conducted, however, is a matter of enforcement staff discretion. The regulation is intended to insure that the staff will, at a minimum, take a long enough look at each case to determine whether it is frivolous or not. An adequate investigation should include, where appropriate, examining records and documents, interviewing members and their employees and agents, and making whatever other inquiries may have a bearing on the matter.

One exchange commented that it is wasteful for both the Commission and an exchange to investigate the same transaction or conduct at the same time. It therefore recommended that an exchange not be required to conduct an investigation where the Commission staff is investigating the same transaction or conduct unless the Commission staff specifically so requests. Similarly, the exchange suggested that the Commission should defer proceeding with an investigation while an exchange investigation is in progress unless either an ongoing violation is involved or the exchange requests the Commission to act.

The language of section 5a(8) of the Act unconditionally requires each contract market to enforce all of its rules approved by the Commission under section 5a(12) of the Act. Underscoring the importance of this obligation, section 6b specifically refers to a contract market's failure to enforce its rules as grounds for the issuance of a Commission cease-and-desist order and the assessment of civil penalties of up to $100,000 for each violation.[9] The fact that the Commission may be investigating a situation which falls within the disciplinary jurisdiction of an exchange does not excuse that exchange from meeting its statutory obligation to enforce its own rules. Of course, in the normal course of the Commission's investigative efforts and those of the several exchanges, situations will arise in which the most productive and effective action will involve a cooperative effort. In meeting its obligations to carry out the purposes of the Act, the Commission will seek to take advantage of all such opportunities. In rare situations, the Commission may want to assume full investigative responsibility for a particular matter. However, a Commission policy which would excuse exchanges from any of their self-regulatory responsibilities would be inconsistent with the Commission's obligations.

The Commission must carry out its own statutory duty to regulate and oversee trading on the exchanges and, thus, will continue to examine those matters deemed appropriate for Commission investigation. Of course, the need to allocate the Commission's limited resources most efficiently means

[9] See secs. 5a(8) and 6b of the Act, 7 U.S.C. 7a(8) and 13a (1976). In addition, § 1.53 of the regulations requires each contract market to enforce those of its rules in effect as of July 18, 1975 unless such rules have been disapproved by the Commission pursuant to sec. 5a(12).

there should be little work overlap if an exchange has promptly undertaken its task and pursues it thoroughly. But even with diligent exchange action, there nevertheless may be occasions when the Commission finds that it is necessary to commence an investigation while an exchange is proceeding with its own investigation.[10] This decision continues to be a matter of Commission discretion.

Paragraph (b) of § 8.06 provides that investigations shall be completed within 4 months, unless there exists significant reason to extend them beyond such period. The following three amendments were made in this section as a result of exchange comments: The period for completing investigations, previously 3 months, was increased to 4 months; the "significant reason" exemption replaces that of "complexity" contained in the proposed regulation; and the periodic reporting requirement for incompleted investigations was deleted.

Several exchanges requested that the period for completing investigations be extended to 6 months. They argued that the proposed investigation period was too short, and that the paperwork required for investigations pending after 3 months would divert the enforcement staff from completing its work. In response to these comments, § 8.06(b) now requires that investigations be completed within 4 months.[11] If as a general practice an exchange cannot complete most investigations within 4 months, its enforcement staff may not be adequate to carry out that exchange's enforcement responsibilities. The 4-month period thus serves as a general guideline for completing exchange investigations.

A number of exchanges commented that extended investigations often result from factors other than "complexity." They cited as examples delays in transmitting needed documents, unavailability of persons with information who may be away on business or vacations, and the volume of work that an enforcement staff may be engaged in at any given time. The Commission agrees that valid reasons other than "complexity" may prevent an enforcement staff from promptly completing an investigation. Accordingly, § 8.06(b) contains a broad exemption from the 4 month requirement for an investigation for which there exists significant reason to extend it beyond the prescribed period.

Several exchanges objected to the proposed periodic reporting requirement for investigations not completed within the time prescribed by the regulation on the grounds that is would create burdensome and unnecessary additional costs. While the Commission has deleted this reporting requirement from the regulation as adopted, it reiterates its position as stated in guideline II that the capstone of any effective rule enforcement program is a procedure which results in the taking of prompt, effective disciplinary action. Accordingly, the Commission reminds the exchanges that in the course of its rule enforcement inspections it will be looking closely at those cases where investigations lasted more than 4 months, and for evidence in their files of significant reason for such duration.

The Commission has determined not to adopt paragraph (c) of the proposed regulation on investigations, which pertained to an exchange's obligation to respond to a complaint. The proposed regulation gave discretion to an exchange to provide that if a complainant wanted a response, his complainant had to be in writing. While this provision has not been adopted by the Commission, pursuant to § 8.01 an exchange has the authority to provide in its disciplinary rules that a complaint must be in writing before it must provide the complaint with a response. However, the adoption of such a rule would not relieve the exchange of its self-regulatory responsibility to investigate all credible charges and significant indications of violations, regardless of how they are brought to its attention.

INVESTIGATION REPORTS

At the conclusion of an investigation, § 8.07 of the adopted regulations requires the enforcement staff to prepare a written investigation report. This report will serve two purposes. First, it will provide the disciplinary committee with the basis upon which to decide whether to issue changes of a violation. Second, it will serve as a record of the investigation and resultant conclusions by the enforcement staff which may be examined by the Commission during its periodic inspections of the exchange's rule enforcement procedures.

Several exchanges were concerned about the "conclusions and recommendations" proposed to be included in an enforcement staff report. One exchange believed it was inappropriate for the enforcement staff to recommend sanctions in its report. This exchange urged that any recommendation be limited to a general statement that the disciplinary committee should hear the case. In response to these comments, § 8.07(a) now requires that the investigation report must contain a summary of any complaint, the relevant facts, the enforcement staff's conclusions as to whether a reasonable basis exists for finding a violation and a recommendation as to whether the disciplinary committee should proceed with the matter.

The Commission wishes to make clear that an enforcement staff conclusion that a reasonable basis for finding a violation does or does not exist is not a determination that a violation has or has not occurred. Rather, it is a threshold finding of whether a sufficient basis exists to merit proceeding with the case. Thus, under § 8.07(a), if the enforcement staff concludes a reasonable basis exists for finding a violation, its report must be submitted promptly to the disciplinary committee. Under § 8.07(b), if the enforcement staff concludes that no reasonable basis exists for finding a violation, the investigation report becomes part of the case file and the file there after may be closed. Although § 8.07(b) does not require the enforcement staff to send its report to the disciplinary committee in these case, pursuant to § 8.01 an exchange may include this requirement in its rules if it so desires.

As adopted, paragraphs (a) and (b) of § 8.07 have been amended to require that the enforcement staff also include in each investigation report the reason why the investigation was conducted. This requirement may be satisfied by a simple statement that the investigation was initiated at the request of the disciplinary committee or because a customer complaint was received. The provision was added in order to provide the Commission with information on what proportion of investigations are commenced pursuant to Commission and exchange requests and customer or member complaints as compared to the number which are initiated directly by the enforcement staff. This information will aid the Commission in its evaluation of an exchange's responsiveness to customer complaints.

The Commission does not intend for the investigation report requirement to be unnecessarily burdensome. For example, many investigation files may

[10] For example, the remedies available to the Commission and an exchange are different and the situation may require a remedy which belongs exclusively to the Commission. Under sec. 6c of the Act, if a person has engaged, is engaging, or is about to engage in any action or practice constituting a violation of any provision of the Act or a Commission regulation or order, the Commission may bring an action to enjoin such act and enforce compliance with the provision in question. The scope or purpose of a Commission investigation may differ from that of an exchange. The Commission's investigation may be only part of its overall rule enforcement inspection or it may be an investigation conducted pursuant to sec. 8 of the Act for the purpose of apprising Congress of developments in a matter in which it is interested.

[11] Section 8.06 was adopted, in part, in response to recommendations by the Comptroller General that the Commission should establish and enforce standards for completing investigations made by commodity exchanges. Comptroller General of the United States, Report to the Congress, Improvement needed in the Regulation of Commodity Futures Trading 39 (June 24, 1975).

DENIAL OF CHARGES AND RIGHT TO

appropriately be closed with a one page memorandum and many customer complaint files probably can be closed merely with a copy of the letter of response, so long as these documents contain full information regarding the final disposition of the matter and the reasons therefor.

A new paragraph (c) has been added to § 8.07, which permits an exchange to issue a warning letter without an express finding that a violation has been committed. Proposed part 8 included a warning letter in the definition of a penalty. As such this letter could not, under the proposed regulations, be sent until there in fact had been a finding that a violation had occurred. Several exchanges provided examples where a disciplinary proceeding would be inappropriate but where a warning or cautionary letter might have a remedial effect—such as a situation in which it was strongly suspected that a rule had been violated but probative evidence was at that time lacking. The Commission agrees that warning letters may have a prophylactic effect in this and other situations. Therefore, a warning letter issued under § 8.07(c) will not be considered a penalty because it will not be issued pursuant to a finding that a violation has been committed. A warning letter will be considered a penalty, however, if it is issued pursuant to a finding by the disciplinary committee that a violation has occurred.

DISCIPLINARY COMMITTEE

Under the regulations as proposed and as adopted, each exchange is required to establish one or more disciplinary committees to perform the following functions: (1) Determining what action should be taken after the enforcement staff submits an investigation report of a possible violation (§ 8.07); (2) accepting offers of settlement (§ 8.16); (3) hearing evidence (§ 8.17); (4) determining whether a violation has been committed (§§ 8.14 and 8.18); and (5) assessing and imposing appropriate penalties (§§ 8.14 and 8.18). The disciplinary committee may consist of exchange members and/or employees; however, no enforcement staff member may serve on a disciplinary committee. This provision is a counter-part to § 8.05(a), which prohibits persons on a disciplinary committee from serving on or directing the operations of the enforcement staff. As previously indicated, these provisions are designed to insure fair treatment to a respondent and to eliminate potential conflicts of interest.

Pursuant to the regulations, the various functions of the "disciplinary committee" may be retained by the exchange board of governors or may be delegated, in full or in part, to one or more bodies of the exchange. The present disciplinary procedure followed by some exchanges divides among two or more groups those functions required of the disciplinary committee. Section 8.08 permits an exchange to divide the disciplinary committee's responsibilites on either a functional or subject matter basis. For example, one "disciplinary committee" may have the authority to determine whether there is sufficient evidence of a violation to go forward with a notice of charges, while another "disciplinary committee" may thereafter hear evidence, make a decision, and assess a penalty. An exchange could also establish a "disciplinary committee" to handle floor violations and another to handle violations of financial requirements.

REVIEW OF INVESTIGATION REPORT

Section 8.09 requires the disciplinary committee to review the investigation report prepared by the enforcement staff and to determine whether to adjudicate the possible violation. In the event the committee determines that additional investigation or evidence is needed, it must promptly direct the enforcement staff to conduct its investigation further. After receipt and review of a completed report, the committee could determine to go forward with the case, could disagree with the enforcement staff regarding whether information had been adduced which indicates a reasonable basis exists for finding a violation, or could determine that even though the staff had presented evidence which indicates a reasonable basis exists for finding a violation, the violation is one which, in light of all of the circumstances, should not be adjudicated.

One exchange objected on the grounds of vagueness to the standard in the proposed regulation that the disciplinary committee take action on an investigation report within "a reasonable period of time." The Commission has accordingly amended the regulation to provide that the disciplinary committee must act within a reasonable period of time not to exceed 30 days.

In response to other exchange comments, § 8.09(a) has been amended to make clear that the disciplinary committee has the perogative not to issue a notice of charges even if the enforcement staff has recommended such action and has concluded that a reasonable basis exists for finding that a violation has occurred. As adopted, the regulation provides that if the disciplinary committee determines that no reasonable basis exists for finding a violation or that prosecution is otherwise unwarranted, it may direct that no further action be taken. Section 8.09(a) further provides that if the disciplinary committee determines, for any reason, not to adjudicate a possible violation brought to its attention by an investigation report, that decision must be in writing and contain a statement of the reasons therefor. While the section as adopted does not explictly require the transmission of the determination to the Commission, an exchange would be required to comply with a Commission request for the determination in the event one is made.

PREDETERMINED PENALTIES

Section 8.10 gives an exchange discretion to adopt rules which set specific maximum penalties for particular violations. Unlike the proposed regulation, it does not also authorize the disciplinary committee to set penalties for other violations on an ad hoc basis in advance of a hearing.

Comments on the concept of predetermined penalties were mixed. Some exchanges argued that it would be a mistake to set penalties before the facts have been presented and the gravity of the offense determined. The Commission points out, however, that predetermined penalties are designed to expedite the disciplinary procedure and their use is entirely a matter of exchange discretion. Furthermore, § 8.10 gives the disciplinary committee discretion in each case whether to employ the predetermined penalty. For example, where a respondent continuously violates a rule for which a predetermined penalty has been established, the disciplinary committee has the discretion to impose a greater penalty with a more remedial effect. However, if the predetermined penalty is employed, the disciplinary committee is restricted to imposing it or some appropriate lesser penalty after a hearing on a denied charge for which a respondent is found to have committed the violation charged.

NOTICE OF CHARGES

Once the disciplinary committee has determined that a matter is one which should be adjudicated, the enforcement staff would assume the role of prosecutor, preparing the notice of charges and proceeding with the hearing when one is requested by the respondent.

Section 8.11 sets forth the requirements concerning the minimum information which must be included in a notice charging a person with a violation. One exchange objected to the provision requiring it to specify the rules alleged to have been violated (or about to be violated). The Commission does not feel this comment has merit, as it believes it is a fundamental right of a respondent to know which rules he is charged with violating. This exchange stated that a respondent does not always violate a specific rule but is

sometimes charged with engaging in conduct that is detrimental to the best interests of the exchange or is inconsistent with just and equitable principles of trade. The Commission agrees that an exchange may enforce general standards for professional conduct and practices. It is suggested that those exchanges which wish to enforce general professional standards adopt rules setting forth such standards.

RIGHT TO REPRESENTATION

Section 8.12 differs from the proposed regulation in two significant respects. First, the right to representation now commences with the service of a notice of charges. Second, a respondent no longer is limited to representation by legal counsel. The regulation as adopted provides for representation by an attorney or any other representative of the respondent's choosing.

Several exchanges commented that the provision in the proposed regulation which would have allowed representation in every aspect of the disciplinary procedure was too broad. They argued that participation by counsel could impede an investigation and could result in more protracted and costly proceedings. The Commission believes these comments have some merit. More importantly, the Commission has concluded that fairness does not require that a person whose conduct is under investigation have the right to be represented during that investigation. Rather, the Commission believes that the fundamental rights of a respondent will be adequately protected by affording him the right to be represented upon being charged with a violation and thereafter throughout the remainder of the proceeding. Section 8.12 as adopted reflects this belief. The Commission points out that while the adopted regulations do not provide for a right to be represented during an investigation, an exchange is not precluded from providing such a right.

One exchange objected to the right to representation in the adjudicatory stage of the proceeding. However, as the Commission has stated, it is necessary to insure a respondent's fundamental rights.

The Commission is aware that representation by an attorney may not be suitable in all situations. For example, a respondent associated with a futures commission merchant might find it more appropriate to be represented by the chief executive officer of his organization. Accordingly, § 8.12 now allows a respondent to be represented by legal counsel or any other person of his choosing.

The representation afforded under § 8.12 should not be construed to mean merely providing advice. Such representation could include, if desired by the respondent, preparing documents, assisting with discovery, negotiating settlements, presenting evidence, including examining and cross-examining witnesses, oral argument and any other assistance requested by the respondent.

ANSWER TO CHARGES

Section 8.13 requires that each person charged with a violation be given the opportunity to answer the charges. Under the proposed regulations failure to deny a charge or to file an answer was deemed as admission of a charge. Three exchanges objected to the rigidity of this provision. One exchange asserted that a respondent should have the right to refuse to answer and the exchange should have the burden of proving that a violation has occurred before a penalty is levied. Two other exchanges also argued that the requirement to answer a notice of charges is frivolous inasmuch as they require a hearing to be conducted following every issuance of charges, regardless of whether a respondent has requested a hearing. To provide each exchange with flexibility in this area, the Commission has amended the regulation to provide that an answer to charges is permitted but not required. In addition, § 8.13 gives each exchange discretion to adopt default provisions for failure to file an answer on a timely basis or failure to deny expressly all charges contained in a notice of charges.

ADMISSION OR FAILURE TO DENY CHARGES

Paragraph (a) of § 8.14 permits an exchange to adopt rules which allow the disciplinary committee to impose penalties when a respondent admits the charges or fails to deny them. Subparagraph (a)(1) restricts the disciplinary committee to imposing the predetermined penalty, where applicable, or an appropriate lesser penalty.

Paragraph (a) leaves to the discretion of each exchange whether to provide for a hearing where a respondent admits the charges or fails to deny them. For example, one exchange contemplates using a system in which a hearing on the charges is mandatory. Under this system, when a respondent fails to answer a notice of charges or defaults at a hearing, the disciplinary committee is nevertheless required to hear evidence submitted in support of the charges and to determine an appropriate sanction based upon the evidence.

Paragraph (b) of § 8.14 requires the disciplinary committee to promptly advise the respondent in writing of any penalty imposed pursuant to paragraph (a) for charges admitted or not specifically denied and that, where appropriate, he is entitled to request a hearing on the penalty before it may be imposed.

DENIAL OF CHARGES AND RIGHT TO HEARING

Section 8.15 provides that a respondent must be given an opportunity for a hearing on charges denied or on a penalty imposed pursuant to § 8.14(a)(2). Under the proposed regulations, the scope of a hearing was limited to those charges denied or penalties for which a hearing was requested. This limitation is no longer mandatory under the adopted regulations. Thus, for example, an exchange which prefers to conduct a hearing on all of the charges in the notice of charges, including those admitted by a respondent, is free to do so.

One exchange commented that a respondent who failed to request a hearing on charges in the notice should not be entitled to a hearing on a penalty set by the disciplinary committee under § 8.14(a)(2). The Commission disagrees. If a respondent charged with a relatively minor violation failed to answer the charge, under § 8.14(a)(2) the disciplinary committee could set a penalty which to the respondent seemed to be disproportionate to the offense. Accordingly, a respondent should be given an opportunity for a hearing on a penalty set under § 8.14(a)(2).

SETTLEMENT OFFERS

Section 8.16 provides in general that an exchange may adopt rules which permit a respondent to submit a written offer of settlement to the disciplinary committee at any time after the investigation report is completed. If the offer of settlement is accepted, the disciplinary committee is required to issue a written decision specifying the rule violations it has reason to believe were committed and any penalty to be imposed. If the offer is withdrawn by the respondent or rejected by the committee, the respondent cannot be deemed to have made any admissions therein. As is discussed below, § 8.16 varies significantly from the proposed regulation.

Many exchanges were critical of the proposed provisions for settlement, contending that the procedure was too rigid and cumbersome. They objected to the proposed requirements that: (1) An offer of settlement could not be submitted before a notice of charges was issued; (2) the enforcement staff had to be involved in the negotiation of settlement agreements; (3) findings and conclusions of rule violations had to be made; and (4) sanctions had to be adequate to deter future violations.

The Commission agrees that the proposed involvement of the enforcement staff in settlement negotiations is unnecessary and has deleted such

involvement from the regulation as adopted. The Commission similarly agrees with the objection to the proposed requirement that an offer of set-

involvement from the regulation as adopted. The Commission similarly agrees with the objection to the proposed requirement that an offer of settlement could not be submitted before a notice of charges was issued. Accordingly, settlement may now commence after the investigation report is completed.

The Commission has also deleted from the regulation the specific requirement to impose a penalty sufficient enough to deter future violations, which was objected to on the ground of vagueness. However, this deletion should not be interpreted to mean that an inadequate penalty would be appropriate. In imposing a penalty pursuant to § 8.16 the disciplinary committee must take into consideration the same factors it would employ in setting a penalty after a hearing. These factors are discussed in the text under § 8.18.

The Commission stated in the preamble to the proposed regulations that "[a]ny settlement agreed to by the disciplinary committee would constitute an exchange disciplinary action under section 8c(1)(A) of the Act as if the matter were fully adjudicated." [12] Because settlements are disciplinary actions which are subject to Commission review under section 8c(2) of the Act, it is necessary to have a record of the reasons for such actions taken by an exchange. In accordance with new § 8.16(b), an exchange may adopt rules which permit a respondent to accept a penalty without either admitting or denying the rule violations upon which the penalty is based. Pursuant to new § 8.16(c), the disciplinary committee must specify in its decision the rule violations it has reason to believe were committed. These new provisions may expedite the disciplinary procedure by encouraging settlement without sacrificing information which is critical to the Commission's oversight responsibilities.

Section 8.16(d) broadens the scope of protection given to a respondent in the event an offer of settlement proves unsatisfactory. As adopted, it provides that if the offer is withdrawn by the respondent or rejected by the disciplinary committee, the respondent cannot be deemed to have made any admissions by reason of the offer and otherwise cannot be prejudiced thereby.

The Commission emphasizes that the submission of an offer of settlement is not reason to suspend compliance with the requirement of § 8.17(a)(3) that a hearing be promptly convened.

HEARING

Substantial comment was received on the requirements for a hearing. The use of the terms "fair" and "due process" in the proposed regulation evoked objections from several exchanges. They argued that these terms would invite litigation and were unnecessary in view of the Commission's authority to review exchange actions under section 8 of the Act. One exchange also commented that the term "due process" was not applicable to private action. The Commission believes that the right to a fair hearing is so fundamental that this principle must be embodied in the regulations, despite any exchange fears of additional litigation. Moreover, it is not sufficient that an exchange action may be subject to Commission review; a respondent is entitled to a fair hearing in the first instance. However, the regulation as adopted replaces the term "due process" with that of "fair hearing."

Other commenters were unsure of the meaning of "disinterested" members of a disciplinary committee. The Commission has amended § 8.17(a)(1) by providing a more specific conflict of interest standard. The regulation now prohibits a member from serving on the hearing panel if he or any firm with which he is affiliated has a financial, personal, or other direct interest in the matter under consideration.

Seven exchanges took issue with the proposed discovery provision under which a respondent could examine all relevant documents in the possession or under the control of the exchange which were to be relied upon by the enforcement staff in presenting its case, or which were relevant to the notice of charges or could lead to relevant evidence. The greatest objection was voiced against the right to examine documents which could lead to relevant evidence. These exchanges were concerned that this provision would be used to delay the proceedings or to seek confidential documents in exchange files which were unrelated to the disciplinary action. They stated that the provision was not necessary to protect the rights of a person charged with a violation and pointed out that the rules of practice governing proceedings before the Commission do not contain such a provision. The Commission has deleted the requirement that a respondent be given access to documents which may lead to relevant evidence, primarily because the rights of a respondent appear to be adequately protected without access to such information.

Two exchanges would have narrowed access even further, by limiting discovery to those documents to be relied upon by the enforcement staff in presenting its case. The Commission disagrees with this suggestion. Such a narrow provision might be used to suppress exculpatory evidence which is relevant to charges contained in the notice of charges but which would not be relied upon by the enforcement staff in presenting its case.

The futures commission merchant which commented presented a rather different view from that expressed by the exchanges. It suggested that discovery be expanded to permit a respondent to serve up to 20 interrogatories on the exchange, to be answered or objected to within 30 days. The commenter also proposed that objections should be accompanied by reasons, and that if the enforcement staff and respondent were unable to resolve their differences, the matter should be submitted to the disciplinary committee. Additional provisions would permit a respondent to file exceptions if the disciplinary committee sustained the objections.

The Commssion does not believe that the use of interrogatories is necessary for a fair proceeding. A respondent is adequately protected if he is entitled to discover from the exchange all books, documents, or other tangible evidence which are relevant to his case, as provided for in § 8.17(a)(2), and is assured of the presence of all witnesses and the right to examine and cross-examine such persons at a hearing, as provided for in §§ 8.17(a)(7)–(9). The Commission believes, however, that these comments, from a person who like other futures commission merchants may be the subject of a disciplinary proceeding, underscore the need for the procedures provided in these regulations which have been developed to assure the rights of a respondent by establishing minimum standards of procedural and substantive fairness.

The Commission has also added § 8.17(a)(7) to the regulations. This section requires persons within the exchange's jurisdiction who are called as witnesses to appear at the hearing and to produce evidence. An exchange must also make a reasonable effort to secure the presence of all other persons called as witnesses whose testimony would be relevant. This provision insures that a respondent will be able to call witnesses whose testimony is material to his defense, and conversely enables the enforcement staff, which lacks subpena power, to call hostile witnesses who might otherwise be unwilling to testify.

The Commission had specifically requested comments concerning the type of record required to be made of the hearing. One exchange commented that the Commission should not specify the kind of record but should leave that decision to each exchange. Two exchanges stated that in most instances a summary record, perhaps in the form of minutes of the proceeding, would be adequate. However, where a proceeding was unusually complex or an appeal seemed likely, a stenographic record or tape recording could be required unless waived by the respondent, in which event a summary record would be made. Two exchanges recommended that a stenographic record be kept but only transcribed if the action were appealed. They further suggested that if a regulation requiring a stenographic record were adopted, it should provide that the party requesting the transcription should bear its cost.

Because of the need for an accurate and complete record, the adopted regulations provide that where a respondent has requested a hearing, the record of the proceeding must be a substantially verbatim record that is capable of being accurately transcribed. This standard clearly does not permit a summary record. It does, however, leave to each exchange's discretion the specific type of record it wishes to develop. Thus, an exchange may use a hand- or machine-made stenographic record or an electronic tape recording supervised by an individual having a proficiency in the area. In order to minimize costs, § 8.17(a)(10) further provides that the record need not be transcribed unless the transcript is requested by the respondent or Commission staff, or the decision is appealed to the board of appeals or is reviewed by the Commission.

In addition, the Commission has provided in § 8.17(a)(10)(i) that the exchange rules may provide that the cost of transcribing the record shall be borne by a respondent who appeals a decision to the board of appeals, or whose application for Commission review of the disciplinary action has been granted under section 8c of the Act. An exchange, in its discretion, may adopt a policy of compensating respondents for transcript expenses in the event that the appellate body decides in the respondent's favor. Where the board of appeals or the Commission undertakes review on its own or where the Commission staff has requested a copy of the recording, the exchange must pay the cost of transcription.

To complement § 8.17(a)(9), the Commission has also added § 8.17(b). This section provides that an exchange may adopt a rule providing for the summary imposition of sanctions upon any person within its jurisdiction whose actions are impeding the progress of the hearing. Such a rule could authorize sanctions upon a witness who fails to appear at a hearing without good cause or upon a person at a hearing who engages in disruptive conduct.

DECISION

Section 8.18 provides that at the conclusion of a hearing the disciplinary committee must render a written decision based upon the weight of the evidence contained in the record of the proceeding. The decision must include the following: (1) The notice of charges or a summary; (2) the respondent's answer, if any, or a summary; (3) a brief summary of the evidence produced at the hearing or, if appropriate, incorporation by reference to the investigation report; (4) a statement of findings and conclusions with respect to each charge, including the specific rules which the respondent is found to have violated; and (5) a declaration of any penalty imposed and the effective date of such penalty.

The Commission received one comment that the section was too detailed and should be revised to provide only that the committee render a decision in writing based upon the record. Another commenter urged that the requirement for a summary of the evidence be deleted.

The decision serves two functions. First, it serves to apprise the respondent of the conclusion of the disciplinary committee on each of the charges. Second, the decision is a concise record of the proceeding which can be reviewed by the Commission as part of its oversight of exchange enforcement programs and can assist in determining whether formal review of the action under section 8c of the Act may be appropriate.

It is essential for these purposes that the decision be based upon a fair and constant standard and include not only the issues and any penalties imposed, but also the reasons for the decision. A respondent is entitled to know the basis of any finding or conclusion that he violated exchange rules so that he may determine whether to request an appeal, if appeal is permitted by the exchange rules, or to petition the Commission for review. Accordingly, the adopted regulations provide in § 8.18 that the decision must be based upon the weight of the evidence contained in the record of the proceeding and contain a brief summary of the evidence and findings and conclusions concerning each charge.

One exchange asserted that there was little chance that the Commission will require a summary of the evidence in reviewing a disciplinary proceeding and therefore the convenience of using the information on an occasional basis must be weighed against the burden on the exchange. The Commission staff anticipates reviewing the summary of the evidence in every instance in which the disciplinary committee determines pursuant to a hearing that a violation has occurred. The Commission's experience in reviewing the notices of disciplinary action required to be provided to the Commission under section 8c(1)(B) of the Act has shown that the notices are generally inadequate for determining whether a review proceeding should be initiated by the Commission in accordance with section 8(c)(2) of the Act. This was one of the primary reasons for requiring the disciplinary committee to summarize the evidence and to include the summary in the decision. [13]

The Commission does understand the concern that requiring a summary of the evidence in all cases could impose an unnecessary burden on an exchange. Accordingly, § 8.18(c) allows an exchange in appropriate circumstances to incorporate by reference relevant portions of the investigation report instead of summarizing the same evidence presented at the hearing.

The proposed regulations provided a separate section which set forth the standards to be followed by the disciplinary committee in setting penalties. The Commission has determined not to adopt such a regulation. However, that is not to say that these same standards should not be employed.

One of these standards requires the disciplinary committee to consider whether the penalty will be sufficiently remedial to deter future violations in view of the size of the respondent's business and other factors. One exchange questioned whether this would require a disciplinary committee to be more lenient in the imposition of penalties if a respondent's business is small. The Commission wishes to clarify that this provision is not meant to imply that small businesses should necessarily be treated more leniently. Rather, the provision is intended to address the situation in which a standard penalty is inadequate because a respondent finds that it is more profitable to engage in the violation and pay a fine than to refrain from the violative act or practices, particularly where there has been a continued pattern of violative conduct.

Another of these standards requires the disciplinary committee to consider the impact of the penalty on the respondent's business. One exchange asked whether this requirement would preclude an exchange from expelling a member. This is not the purpose or intention of the standards. If an expul-

[12] 42 FR 11144-11145 (Feb. 25, 1977).

[13] Note that under the proposed regulations for Commission review of exchange disciplinary or other adverse actions, part 9, the Commission specifically provided that a copy of the decision issued under Part 8 may serve as the notice of disciplinary action under § 9.11(a). Further, paragraph (c) of that section states that the Division of Trading and Markets may request additional information regarding the disciplinary action taken. 42 FR 30476 (June 14, 1977).

sion is an appropriate penalty under the circumstances, clearly the exchange should take that action.

The Commission wishes to point out

Each exchange must adopt a rule specifying the standard of review to be applied by the board of appeals in making its decision. What that standards and that the Commission is reviewing final decisions.

SUBPART C—SUMMARY PROCEDURE

ate for such hearings and the enforcement staff would not have been involved at any stage of the committee deliberations which culminated in the

to take summary action against members on the floor who are violating an exchange's rules of decorum. Such action is within the scope of § 8.27.

SUBPART D—DENIAL OF MEMBERSHIP [RESERVED]

In proposing part 8, the Commission specifically sought comment on the

sion is an appropriate penalty under the circumstances, clearly the exchange should take that action.

The Commission wishes to point out that the adopted provisions regarding assessment of penalties have been structured to give an exchange flexibility. It may establish pre-set penalties in its rules for certain violations (§ 8.10), may summarily impose a penalty for charges admitted or not specifically denied subsequent to the notice of charges (§ 8.14(a)) or may establish a penalty after a hearing on the case (§ 8.18). However, no penalties may be imposed until there is a finding based upon an admission or failure to deny charges, a settleent agreement, or the record of the proceeding, that a respondent has committed a violation. Thus, for example, the fact that a person having membership on two exchanges has been sanctioned by one exchange for violating its rules provides no basis in and of itself for the imposition of a penalty on such person by the other exchange.

APPEAL

Section 8.19 provides that an exchange may adopt rules which permit a respondent to appeal promptly an adverse decision of a disciplinary committee in all or certain classes of cases. If the exchange rules permit appeal, they must provide for the establishment of a board of appeals and contain the minimum standards governing appeals set forth in § 8.19. In addition, the exchange rules may authorize the board of appeals to initiate review of a disciplinary committee decision and may provide that an appeal or review proceeding be conducted before all or a panel of such board.

The adopted regulation differs significantly from the proposed regulation. Most importantly, the right to appeal a disciplinary committee decision is now entirely discretionary with each exchange. Some exchanges commented that the proposed right to appeal all adverse decisions would be unduly burdensome and time-consuming. The Commission agrees, and in adopting § 8.19 has left to the discretion of each exchange the determination of whether appeals shall be permitted and, if they are, which cases shall be appealable.

Section 8.19(b) now provides that an exchange may authorize any body or committee to perform the appellate review function. The proposed regulation required the board of governors to hear all appeals. The regulation was modified because the board of governors of an exchange may lack the time, in view of its other duties, to act as the appellate body in all cases where exchange review of a disciplinary committee decision is permitted.

Each exchange must adopt a rule specifying the standard of review to be applied by the board of appeals in making its decision. What that standard will be has been left to the discretion of each exchange. However, the Commission cautions that the standard of review must be set forth clearly in the rule and that it must not be capable of arbitrary or inconsistent application.

One exchange asked if under the regulations the disciplinary committee's function could be limited to making findings and conclusions as to whether a violation had been committed, with the board of appeals setting and imposing penalties. If the rules of an exchange provide for appeal, such an arrangement would be permitted under § 8.08, which states that each exchange shall establish one or more disciplinary committees to determine whether violations have been committed and to set and impose penalties. In the above example, the board of appeals would be serving as the disciplinary committee when it sets and imposes penalties.

FINAL DECISION

Section 8.20 is new. It requires each exchange to establish rules setting forth when a decision rendered pursuant to Subpart B becomes the final decision of the exchange and is not subject to further review under the exchange's own disciplinary procedures. Since § 8.19 provides exchanges wide discretion in permitting appeals of adverse decisions, the determination of when a decision becomes final can only be made by an exchange after it determines whether, and to what extent, to permit appeals. Accordingly, it is appropriate that each exchange, and not the Commission, establish rules regarding the finality of decisions rendered pursuant to its disciplinary procedures.

In commenting on the proposed regulations, one exchange noted that they did not recognize that the board of governors may be acting as the disciplinary committee in the first instance. This is the type of situation to which § 8.20 addresses itself. It is quite likely that if the rules of an exchange permit appeal, they will provide that under such circumstances the decision of the disciplinary committee is final and unappealable within the exchange's disciplinary procedure.

Any person who is suspended, expelled, disciplined or denied access by exchange action is permitted under section 8c of the Act to petition for Commission review of such action. The purpose of § 8.20 is to ensure that a respondent availing himself of section 8c has exhausted all of his remedies under exchange disciplinary procedures and that the Commission is reviewing final decisions.

SUBPART C—SUMMARY PROCEDURE

MEMBER RESPONSIBILITY ACTIONS

Section 8.25 of the adopted regulations authorizes an exchange to take immediate, summary action upon a reasonable belief that such action is necessary to protect the best interests of the marketplace. Unlike the proposed regulation, it does not specifically set forth when such action would be appropriate. Instead, the necessity of such action has been left to the discretion of each exchange.

Two exchanges urged the Commission to adopt, for the purposes of these regulations, the definition of "emergency" which appears in § 1.41(a)(4). They reasoned this would eliminate any potential confusion regarding what could be considered appropriate circumstances for an exchange to take summary action. Such an amendment to the regulation as adopted is unnecessary, since the broad language of § 8.25 includes those provisions of §1.41 which would be applicable in defining the circumstances in which summary action by an exchange against persons within its jurisdiction would be appropriate.[14]

One exchange expressed concern that the regulation as proposed would not permit an exchange to take action to enforce its minimum capital rules. Clearly, the regulation as adopted authorizes such action.

PROCEDURE FOR MEMBER RESPONSIBILITY ACTIONS

The Commission agrees with several exchanges' comments that it would be inappropriate to apply the requirements of subpart B to hearings held subsequent to summary actions by an exchange. Accordingly, § 8.26 of subpart C details the special notice requirements applicable when an exchange takes a summary action, and specifically sets forth those disciplinary proceeding requirements which are applicable to hearings required subsequent thereto. Furthermore, in consideration of the special nature of member responsibility actions, the particular requirements of the form and content of the decision resulting from such hearings are contained in § 8.26(c).

Two exchanges objected to the requirement contained in § 8.17(a)(5), and made applicable to membership responsibility actions by § 8.26(c), that the enforcement staff present the charges at the hearing held subsequent to the summary action taken by an exchange. These exchanges argued that since the formal disciplinary proceeding requirements were inappropriate for such hearings and the enforcement staff would not have been involved at any stage of the committee deliberations which culminated in the summary action being taken, the committee which authorized the summary action should be the body responsible for presenting the charges at the hearing. The Commission has already noted that the requirements governing such hearings are substantially reduced from those imposed on subpart B disciplinary proceedings. These reduced requirements do not, however, lessen the importance of involvement by the enforcement staff. The Commission's position as to the purpose of requiring a truly independent enforcement staff has been explained previously above in the discussion of § 8.05 as an attempt to avoid potential conflicts of interest. It is the opinion of the Commission that the participation of the enforcement staff in a hearing held pursuant to § 8.26(c) is necessary at this stage to insure a thorough review of any evidentiary material already developed by the committee and an objective, vigorous presentation of the full facts and circumstances of the case. Nothing in this requirement is intended to prohibit participation by committee members in the development of the case in an advisory capacity or as witnesses at the hearing.

[14] See 17 CFR § 1.41(a)(4)(ii)(f) and (g).

One exchange strongly opposed the proposed requirement, adopted in § 8.26, for a hearing after summary action is taken. However, the Commission believes that fundamental principles of fairness require that a person who is the subject of a summary action be afforded an opportunity to be heard on the matter. Like that of § 8.18, the decision rendered pursuant to such a hearing is to be based upon the weight of the evidence contained in the record of the proceeding. And, in accordance with § 8.19, the rules of an exchange may permit an appeal from the decision.

VIOLATIONS OF RULES REGARDING DECORUM, SUBMISSION OF RECORDS, OR OTHER SIMILAR ACTIVITIES

Section 8.27 of the adopted regulations provides that an exchange may adopt rules governing the summary imposition of minor penalties for violations of rules regarding decorum, attire, submission of records, or other similar activities. Unlike the proposed regulation, it does not require that such rules provide for a right to representation, hearing, decision, and appeal. Instead, § 8.02(b) now gives to each exchange the discretion to adopt such rules as it deems appropriate to implement § 8.27.

The six exchanges commenting on this section of the proposed regulations agreed that committees such as floor or pit committees should be able to take summary action against members on the floor who are violating an exchange's rules of decorum. Such action is within the scope of § 8.27.

Two of these exchanges objected to the proposed regulation on the grounds that it would have the effect of reducing enforcement of exchange rules by curtailing the authority of the floor or pit committees to deal in summary fashion with objectionable conduct by members unrelated to decorum, such as trading practices which disrupt or are inconsistent with orderly trading. The regulations are not intended to preclude floor or pit committees from taking necessary action in appropriate circumstances. However, to the extent disruptive activities or similar trade practice abuses might be part of more serious or systematic efforts which affect the integrity of the marketplace, the Commission believes the matter requires the more thorough proceedings prescribed under subpart B. Floor or pit committees may take summary action against persons for disruptive or disorderly trading practices only to the extent such action would be appropriate under § 8.25 or § 8.27.

The second area of major objection by exchanges to the proposed regulation concerned the right of appeal from a summary action imposed for a violation of a rule of decorum. Several exchanges stated that an unqualified right of appeal would result in an inordinate number of appeals which were frivolous in nature or related only to minor infractions, such as abusive language. One exchange also expressed the view that no appeals should be permitted below a certain dollar amount in fines. The Commission believes these comments have merit. As stated above, the adopted regulation leaves to the discretion of each exchange whether to permit appeals from an action taken pursuant to § 8.27. Such discretion will be exercised when the exchange adopts implementing rules pursuant to § 8.02(b).

FINAL DECISION

Since §§ 8.26 and 8.27 give discretion to exchanges to determine whether to provide for appeal, a new § 8.28 has been adopted. This regulation requires each exchange to establish rules setting forth when a decision rendered pursuant to subpart C becomes the final decision of the exchange and is not subject to further review under the exchange's own disciplinary procedures.

The purpose of § 8.28 is analagous to that of § 8.20, previously discussed above.

SUBPART D—DENIAL OF MEMBERSHIP [RESERVED]

In proposing part 8, the Commission specifically sought comment on the type of procedure which would be appropriate for membership denial actions, which the Commission considers denials of access subject to Commission review under section 8c of the Act.[15] The regulations as proposed would have required an exchange to follow the disciplinary procedure in determining that an application for membership should not be granted. The Commission, however, recognizes that procedures which are appropriate for determining whether a person has committed a disciplinary-type violation may not be appropriate for determining whether a person should be accepted as a member of an exchange. Accordingly, the Commission asked commenters to suggest how the proposed regulations might be modified or what other regulations might be adopted to achieve appropriate safeguards for persons who are denied exchange membership without requiring a proceeding pursuant to subpart B.

The Commission received comments on this issue from nine exchanges. The commenters unanimously recommended that procedures for membership denial actions not be identical to disciplinary procedures. One exchange voiced strong objection to the Commission's interpreting denials of membership as denials of access, asserting that the latter phrase was intended to affirm the legal right of an exchange to bar nonmembers from trading privileges on its facilities and from physical entry to its premises for security and other reasons. Nevertheless, this exchange indicated that its present practice is to permit an applicant to appear personally at an informal hearing before its board of governors whenever there are significant questions concerning his application. The exchange indicated further that such applicants have occasionally been represented by counsel. One exchange stated that no specific rules of procedure were necessary. Other exchanges proposed various procedures if an application is initially disapproved by the committee on membership, including a hearing before the board of governors and written notice to the applicant stating the reasons for denial in the event the board sustains the membership committee decision. One exchange also recommended that the notice of the denial of membership, required to be given to the Commission under section 8c of the Act, be declared confidential to protect the applicant and the exchange. This exchange expressed concern that it may be unfair to the applicant not to grant

[15] See 42 FR 30472 n. 1 (June 14, 1977).

confidential treatment to the notice containing the reasons for disapproval, since these reasons could reflect negatively on the applicant's character and

(c) In addition to the action required

is employed, it shall be stated in the notice of charges. In such case, after a hearing on a denied charge where a re-

confidential treatment to the notice containing the reasons for disapproval, since these reasons could reflect negatively on the applicant's character and reputation. The Commission was also urged to permit an exchange to require that an applicant relinquish his right to sue the exchange, its members and employees for any statements concerning the applicant's qualification for membership made in connection with a membership denial action. It was argued that neither an exchange nor its members should be liable when they attempt in an honest manner to apply standards for membership and are obligated by law to disclose the reasons for disapproval of membership.

The Commission agrees with the views expressed by its Office of General Counsel that an exchange has the burden of insuring that there are sufficient grounds upon which to deny an application for membership and that an applicant must be given an opportunity to rebut the reasons which were the basis of the denial.[16]

The Commission has considered the foregoing comments and has determined that membership denial actions should not be subject to the same procedures which are required for adjudicating rule violations. As indicated above, certain modifications of the proposed regulations have been made to reflect this determination.

The Commission has also determined that it is appropriate to adopt regulations which will set standards for the procedures to be used by an exchange in membership denial actions. Subpart D of part 8 has been reserved for that purpose.

This notice of rulemaking is issued under the authority of sections 5a, 8a(5), and 8c of the Act, 7 U.S.C. 7a, 12a(5), and 12c (1976).

In consideration of the foregoing, the Commission hereby amends 17 CFR chapter I by adding a new part 8 as follows:

Subpart A—General Provisions

Sec.
8.01 Scope of rules.
8.02 Implementing exchange rules.
8.03 Definitions.

8.27 Violations of rules regarding decorum, submission of records or other similar activities.
8.28 Final decision.

Subpart D—[Reserved]

AUTHORITY: Secs. 5a, 8a(5) and 8c of the Act, 7 U.S.C. 7a, 12a(5) and 12c (1976).

Subpart A—General Provisions

§ 8.01 Scope of rules.

This part sets forth the standards to be followed by an exchange in establishing procedures for investigating and adjudicating possible rule violations within the disciplinary jurisdiction of the exchange, for taking summary action in member responsibility cases and in cases involving violations of rules regarding decorum, submission of records or other similar activities, and for adjudicating membership denial determinations. Nothing in this part shall be construed to prohibit an exchange from adopting additional rules and practices not inconsistent with those set forth herein.

§ 8.02 Implementing exchange rules.

(a) Each exchange shall submit to the Commission for its approval rules implementing the following regulations: §§ 8.11, 8.13, 8.15, 8.17, 8.18 and 8.20 of subpart B and §§ 8.26 and 8.28 of subpart C. Any such rule not previously submitted to the Commission shall not be put into effect prior to Commission approval.

(b) An exchange may adopt rules implementing any or all of the following regulations: §§ 8.10, 8.16 and 8.19 of subpart B and § 8.27 of subpart C. Each rule so adopted and not previously submitted to the Commission shall be submitted to the Commission for its approval and shall not be put into effect prior to Commission approval.

§ 8.03 Definitions.

For purposes of this part:

(a) "Board of appeals" means that body provided for in § 8.19.

(b) "Charge" or "charges" means any charge or charges contained in the notice of charges.

(c) "Disciplinary committee" means that body or bodies provided for in § 8.08.

(d) "Disciplinary procedure" means the rules of an exchange governing the investigation and adjudication of possible rule violations and the imposition of appropriate penalties under subpart B of this part.

(e) "Enforcement staff" means that body provided for in § 8.05.

(f)) "Exchange" means any board of trade which has been designated as a contract market for one or more commodities pursuant to section 5 of the Act.

(g) "Investigation report" means the report required by § 8.07.

(h) "Notice of charges" means the notice required by § 8.11.

(i) "Penalty" means any restriction, limitation, censure, fine, expulsion, suspension, revocation, reprimand, cease and desist order, sanction or any other disciplinary action for any amount or of any definite or indefinite period imposed upon any person within the disciplinary jurisdiction of an exchange upon a finding by the disciplinary committee that a violation has been committed or pursuant to the terms of a settlement agreement.

(j) "Person(s) within the jurisdiction of an exchange" means any exchange employee, staff member or official, any member or person with membership privileges or any person employed by or affiliated with a member or person with membership privileges, including any agent or associated person, and any other person under the supervision or control of the exchange or of any member.

(k) "Record of the proceeding" means all testimony, exhibits, papers and records produced at or filed in a disciplinary or summary proceeding or served on a respondent or an exchange.

(l) "Respondent" means any person named in a notice of charges who has been served with such notice or who is the subject of a summary action.

(m) "Rule(s) of an exchange" means any constitutional provision, article of incorporation, bylaw, rule, regulation, resolution, interpretation, stated policy or instrument corresponding thereto.

(n) "Violation" means any violation within the disciplinary jurisdiction of the exchange.

Subpart B—Disciplinary Procedure

§ 8.05 Enforcement staff.

(a) Each exchange shall establish an adequate enforcement staff which shall be authorized by the exchange to initiate and conduct investigations, to prepare reports incident to such investigations and to prosecute possible rule violations within the disciplinary jurisdiction of the exchange. The enforcement staff shall consist of employees of the exchange and/or persons hired on a contract basis. It may not include either members of the exchange or persons whose interests conflict with enforcement duties. When carrying out any responsibility under this part 8 or any rule adopted pursuant thereto, a member of the enforcement staff may not operate under the direction or control of any person or persons with trading privileges.

(b) Each exchange is responsible for assuring the effective and diligent enforcement of all rules within its disciplinary jurisdiction, regardless of whether its enforcement staff consists of employees or persons hired on a contract basis.

§ 8.06 Investigations.

(a) Each exchange shall establish and maintain a disciplinary procedure which requires the enforcement staff of the exchange to conduct investigations of possible rule violations within the disciplinary jurisdiction of the exchange. Such an investigation shall be commenced:

(1) Upon the receipt of a request from the Commission, its Executive Director or his delegee, or

(2) Upon the discovery or receipt of information by the exchange which, in the judgment of the enforcement staff, indicates a possible basis for finding that a violation has occurred or will occur.

(b) Each enforcement staff investigation shall be completed within four months, unless there exists significant reason to extend it beyond such period. If for any reason the enforcement staff closes an investigation before determining whether a reasonable basis exists for finding that a violation has occurred, the staff shall fully set forth the reasons for so closing the investigation in its report.

§ 8.07 Investigation reports.

(a) The enforcement staff shall submit a written investigation report to the disciplinary committee of the exchange in every instance in which the enforcement staff has determined from surveillance or from an investigation that a reasonable basis exists for finding a violation. The investigation report shall include the reason the investigation was initiated, a summary of the complaint, if any, the relevant facts, the enforcement staff's conclusions and a recommendation as to whether the disciplinary committee should proceed with the matter.

(b) If after conducting an investigation the enforcement staff has determined that no reasonable basis exists for finding a violation, it shall prepare a written report including the reason the investigation was initiated, a summary of the complaint, if any, the relevant facts, the enforcement staff's conclusions and, if applicable, any recommendation that the disciplinary committee issue a warning letter in accordance with paragraph (c) of this section. The report shall become part of the investigation file which thereafter may be closed.

(c) In addition to the action required to be taken under either paragraph (a) or (b) of this section, the rules of an exchange may authorize the enforcement staff to issue a warning letter to a person under investigation or to recommend that the disciplinary committee issue such a letter. A warning letter issued in accordance with this section is not a penalty or an indication that a finding of a violation has been made. A copy of such warning letter issued by the enforcement staff shall be included in the investigation report required by paragraph (a) or (b) of this section.

§ 8.08 Disciplinary committee.

Each exchange shall establish one or more disciplinary committees which shall be authorized by the exchange to determine whether violations have been committed, to accept offers of settlement and to set and impose appropriate penalties. Each such disciplinary committee shall consist of one or more members of the exchange or persons on the staff of the exchange; however, persons on the enforcement staff may not serve on a disciplinary committee.

§ 8.09 Review of investigation report.

The disciplinary committee shall promptly review each investigation report. In the event the disciplinary committee determines that additional investigation or evidence is needed, it shall promptly direct the enforcement staff to conduct its investigation further. Within a reasonable period of time not to exceed 30 days after the receipt of a completed investigation report, the disciplinary committee shall take one of the following actions:

(a) If the disciplinary committee determines that no reasonable basis exists for finding a violation or that prosecution is otherwise unwarranted, it may direct that no further action be taken. Such determination must be in writing and contain a brief statement setting forth the reasons therefor.

(b) If the disciplinary committee determines that a reasonable basis exists for finding a violation which should be adjudicated, it shall direct that the person alleged to have committed the violation be served with a notice of charges and shall proceed in accordance with the rules of this subpart.

§ 8.10 Predetermined penalties.

An exchange may adopt rules which set specific maximum penalties for particular violations. If the rules of an exchange establish predetermined penalties, the disciplinary committee shall have discretion in each case whether to employ the predetermined penalty. If the predetermined penalty is employed, it shall be stated in the notice of charges. In such case, after a hearing on a denied charge where a respondent is found to have committed the violation charged, the disciplinary committee shall impose the predetermined penalty or an appropriate lesser penalty.

§ 8.11 Notice of charges.

The notice of charges shall:

(a) State the acts, practices, or conduct in which the person is alleged to have engaged;

(b) State the rule alleged to have been violated (or about to be violated);

(c) State the predetermined penalty, if any;

(d) Prescribe the period within which a hearing on the charges may be requested;

(e) Advise the person charged that:

(1) He is entitled, upon request, to a hearing on the charges;

(2) If the rules of the exchange so provide, failure to request a hearing within the period prescribed in the notice, except for good cause, shall be deemed a waiver of the right to a hearing; and

(3) If the rules of the exchange so provide, failure in an answer to deny expressly a charge shall be deemed to be an admission of such charge.

§ 8.12 Right to representation.

Upon being served with a notice of charges the respondent shall have the right to be represented by legal counsel or any other representative of his choosing in all succeeding stages of the disciplinary proceeding.

§ 8.13 Answer to charges.

The respondent shall be given a reasonable period of time to file an answer to the charges. The rules of an exchange may provide that:

(a) The answer must be in writing and include a statement that the respondent admits, denies or does not have and is unable to obtain sufficient information to admit or deny each allegation. A statement of a lack of sufficient information shall have the effect of a denial of an allegation.

(b) Failure to file an answer on a timely basis shall be deemed an admission of all allegations contained in the notice of charges.

(c) Failure in an answer to deny expressly a charge shall be deemed to be an admission of such charge.

§ 8.14 Admission or failure to deny charges.

(a) The rules of an exchange may provide that if the respondent admits or fails to deny any of the charges the disciplinary committee may find that the rule violation alleged in the notice of charges for which the respondent admitted or failed to deny any of the

charges has been committed. If the exchange rules so provide, then:

(1) The disciplinary committee shall impose a penalty no greater than the

either admitting or denying the rule violations.

(d) The respondent may withdraw his offer of settlement at any time

transcribed; however, it need not be transcribed unless the transcript is requested by Commission staff or the respondent, the decision is appealed

period of time after the decision has been rendered.

(b) No member of the board of appeals shall serve on an appeal or

sel or any other representative of his choosing in all proceedings subsequent to the summary action taken pursuant to § 8.25.

[6740-02]

Title 18—Conservation of Power and Water Resources

charges has been committed. If the exchange rules so provide, then:

(1) The disciplinary committee shall impose a penalty no greater than the predetermined penalty, if any, stated in the notice of charges for the corresponding violation found to have been committed.

(2) If no predetermined penalty was stated, the disciplinary committee shall impose a penalty for each violation found to have been committed.

(b) The disciplinary committee shall promptly notify the respondent in writing of any penalty to be imposed pursuant to paragraph (a) of this section and shall advise him that he may request a hearing on such penalty within a reasonable period of time, which shall be stated in the notice, but that except for good cause shown no hearing shall be permitted on a penalty imposed pursuant to subparagraph (a)(1) of this section.

(c) The rules of an exchange may provide that if a respondent fails to request a hearing within the period of time stated in the notice he shall be deemed to have accepted the penalty.

§ 8.15 Denial of charges and right to hearing.

In every instance where the respondent has requested a hearing on a charge which is denied, or on a penalty set by the disciplinary committee under § 8.14(a)(2), he shall be given an opportunity for a hearing in accordance with the requirements of § 8.17. The exchange rules may provide that, except for good cause, the hearing shall be concerned only with those charges denied and/or penalties set by the disciplinary committee under § 8.14(a)(2) for which a hearing has been requested.

§ 8.16 Settlement offers.

(a) The rules of an exchange may permit a respondent to submit a written offer of settlement to the disciplinary committee at any time after the investigation report is completed. The disciplinary committee may accept the offer of settlement, but may not alter its terms unless the respondent agrees.

(b) The rules of an exchange may provide that the disciplinary committee, in its discretion, may permit the respondent to accept a penalty without either admitting or denying the rule violations upon which the penalty is based.

(c) If an offer of setlement is accepted by the disciplinary committee, it shall issue a written decision specifying the rule violations it has reason to believe were committed and any penalty to be imposed. Where applicable, the decision shall also include a statement that the respondent has accepted the penalties imposed without either admitting or denying the rule violations.

(d) The respondent may withdraw his offer of settlement at any time before final acceptance by the disciplinary committee. If an offer is withdrawn after submission, or is rejected by the disciplinary committee, the respondent shall not be deemed to have made any admissions by reason of the offer of settlement and shall not be otherwise prejudiced by having submitted the offer of settlement.

§ 8.17 Hearing.

(a) The following minimum requirements shall apply to any hearing required by this subpart:

(1) The hearing shall be fair and shall be conducted before members of the disciplinary committee. The hearing may be conducted before all of the members of the disciplinary committee or a panel thereof, but no member of the disciplinary committee may serve on the committee or panel if he or any person or firm with which he is affiliated has a financial, personal, or other direct interest in the matter under consideration.

(2) The respondent shall be entitled in advance of the hearing to examine all books, documents, or other tangible evidence in the possession or under the control of the exchange which are to be relied upon by the enforcement staff in presenting the charges contained in the notice of charges or which are relevant to those charges.

(3) The hearing shall be promptly convened after reasonable notice to the respondent.

(4) The formal rules of evidence need not apply; nevertheless, the procedures for the hearing may not be so informal as to deny a fair hearing.

(5) The enforcement staff shall be a party to the hearing and shall present its case on those charges and penalties which are the subject of the hearing.

(6) The respondent shall be entitled to appear personally at the hearing.

(7) The respondent shall be entitled to cross-examine any persons appearing as witnesses at the hearing.

(8) The respondent shall be entitled to call witnesses and to present such evidence as may be relevant to the charges.

(9) The exchange shall require persons within its jurisdiction who are called as witnesses to appear at the hearing and to produce evidence. It shall make reasonable efforts to secure the presence of all other persons called as witnesses whose testimony would be relevant.

(10) If the respondent has requested a hearing, a substantially verbatim record of the hearing shall be made and shall become a part of the record of the proceeding. The record must be one that is capable of being accurately transcribed; however, it need not be transcribed unless the transcript is requested by Commission staff or the respondent, the decision is appealed under § 8.19, or is reviewed by the Commission pursuant to section 8c of the Act or part 9 of this chapter. In all other instances a summary record of a hearing is permitted.

(i) The rules of an exchange may provide that the cost of transcribing the record of the hearing shall be borne by a respondent who requests the transcript, appeals the decision pursuant to § 8.19, or whose application for Commission review of the disciplinary action has been granted under part 9 of this chapter. In all other instances, the cost of transcribing the record shall be borne by the exchange.

(b) The rules of an exchange may provide that a penalty may be summarily imposed upon any person within its jurisdiction whose actions impede the progress of a hearing.

§ 8.18 Decision.

Promptly following a hearing conducted in accordance with § 8.17, the disciplinary committee shall render a written decision based upon the weight of the evidence contained in the record of the proceeding and shall provide a copy to the respondent. The decision shall include:

(a) The notice of charges or a summary of the charges;

(b) The answer, if any, or a summary of the answer;

(c) A brief summary of the evidence produced at the hearing or, where appropriate, incorporation by reference of the investigation report;

(d) A statement of findings and conclusions with respect to each charge, including the specific rules which the respondent is found to have violated; and

(e) A declaration of any penalty imposed and the effective date of such penalty.

§ 8.19 Appeal.

The rules of an exchange may permit a respondent to appeal promptly an adverse decision of a disciplinary committee in all or in certain classes of cases. Such rules may require a respondent's notice of appeal to be in writing and to specify the findings, conclusions, and/or penalty to which objection is taken. If the rules of an exchange permit appeal, they shall provide for the following:

(a) The exchange shall establish a board of appeals which shall be authorized to hear appeals of respondents. In addition, the rules of an exchange may provide that the board of appeals may, on its own initiative, order review of a decision by the disciplinary committee within a reasonable period of time after the decision has been rendered.

(b) No member of the board of appeals shall serve on an appeal or review panel if such member participated in any prior stage of the disciplinary proceeding or if he or any person or firm with which he is affiliated has a financial, personal, or other direct interest in the matter. The rules of an exchange may provide that the appeal or review proceeding may be conducted before all of the members of the board of appeals or a panel thereof. Except for good cause shown, the appeal or review shall be conducted solely on the record before the disciplinary committee, the written exceptions filed by the parties, and the oral or written arguments of the parties.

(c) Promptly following the appeal or review proceeding, the board of appeals shall issue a written decision and shall provide a copy to the respondent. The decision shall include a statement of findings and conclusions with respect to each charge or penalty reviewed, including the specific rules which the respondent was found to have violated by the disciplinary committee, and a declaration of any penalty imposed and the effective date of such penalty.

§ 8.20 Final decision.

Each exchange shall establish rules setting forth when a decision rendered pursuant to this subpart B shall become the final decision of such exchange.

Subpart C—Summary Actions

§ 8.25 Member responsibility actions.

An exchange may suspend at any time, or take other summary action against, a person subject to its jurisdiction upon a reasonable belief that such immediate action is necessary to protect the best interest of the marketplace.

§ 8.26 Procedure for member responsibility actions.

An action pursuant to § 8.25 shall be taken in accordance with an exchange procedure which provides for the following:

(a) The respondent shall, whenever practicable, be served with a notice before the action is taken. If prior notice is not practicable, the respondent shall be served with a notice at the earliest possible opportunity. The notice shall:

(1) State the action,

(2) Briefly state the reasons for the action, and

(3) State the effective time and date and the duration of the action.

(b) The respondent shall have the right to be represented by legal counsel or any other representative of his choosing in all proceedings subsequent to the summary action taken pursuant to § 8.25.

(c) The respondent shall promptly be given opportunity for a subsequent hearing. The hearing shall be fair and shall be held before one or more persons authorized by the exchange to conduct hearings pursuant to this section. The hearing shall be conducted in accordance with the requirements set forth in §§ 8.17(a)(4)–(9) and (b).

(d) Promptly following the hearing provided for in paragraph (c) of this section, the exchange shall render a written decision based upon the weight of the evidence contained in the record of the proceeding and shall provide a copy to the respondent. The decision shall include:

(1) A description of the summary action taken,

(2) The reasons for the summary action,

(3) A brief summary of the evidence produced at the hearing,

(4) Findings and conclusions,

(5) A determination that the summary action should be affirmed, modified or reversed, and

(6) A declaration of any action to be taken pursuant to the determination specified in paragraph (d)(5) of this section and the effective date and duration of such action.

(e) The rules of an exchange may permit the respondent to appeal promptly an adverse decision. Such rules shall be established in accordance with the requirements set forth in § 8.19.

§ 8.27 Violations of rules regarding decorum, submission of records or other similar activities.

An exchange may adopt rules which permit the enforcement staff or a designated committee of officials to summarily impose minor penalties against persons within its jurisdiction for violating rules regarding decorum, attire, the timely submission of accurate records required for clearing or verifying each day's transactions or other similar activities.

§ 8.28 Final decision.

Each exchange shall establish rules setting forth when a decision rendered pursuant to this subpart C shall become the final decision of such exchange.

Issued in Washington, D.C., by the Commission on September 14, 1978.

WILLIAM T. BAGLEY,
Chairman, Commodity Futures Trading Commission.

CHAPTER I—FEDERAL ENERGY REGULATORY COMMISSION; DEPARTMENT OF ENERGY

PART 1—RULES OF PRACTICE AND PROCEDURE

CFR Correction

AGENCY: Federal Energy Regulatory Commission.

ACTION: CFR correction.

SUMMARY: This document makes technical changes to paragraph (c) of § 1.36 of Title 18 of the Code of Federal Regulations revised as of April 1, 1977. This correction is necessary because there are now two subparagraphs designated as (15).

FOR FURTHER INFORMATION CONTACT:

Lois Cashell, 202-275-4166.

In 18 CFR § 1.36(c), revised as of April 1, 1977, the second subparagraph numbered (15) should be corrected to read:

(16) Any reasonably segregable portion of a record after deletion of the portions which are exempt under this section.

The subparagraph numbered (16) should be renumbered as (17).

Dated: September 13, 1978.

KENNETH F. PLUMB,
Secretary.

Title 21—Food and Drugs

CHAPTER I—FOOD AND DRUG ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

SUBCHAPTER E—ANIMAL DRUGS, FEEDS, AND RELATED PRODUCTS

PART 556—TOLERANCES FOR RESIDUES OF NEW ANIMAL DRUGS IN FOOD

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

Virginiamycin

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The agency is amending the animal drug regulations to reflect approval of a supplemental new animal drug application (NADA) filed

by Smith Kline Animal Health Products for additional uses of virginiamycin in swine feeds. Concurrently, this final rule revises the regulation re-

1. In part 556, § 556.750 is revised to read as follows:

SUBCHAPTER B—NATIONAL FLOOD INSURANCE PROGRAM

quires the purchase of flood insurance as a condition of Federal or federally related financial assistance for acquisi-

The Federal Insurance Administrator finds that delayed effective dates would be contrary to the public inter-

In each entry, a complete chronology of effective dates appears for each listed community. The entry reads as follows:

by Smith Kline Animal Health Products for additional uses of virginiamycin in swine feeds. Concurrently, this final rule revises the regulation regarding tolerances for safe residues of virginiamycin to reflect residue levels based on relative consumption rates of edible tissues.

EFFECTIVE DATE: September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Jack C. Taylor, Bureau of Veterinary Medicine (HFV-136), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857, 301-443-5247.

SUPPLEMENTARY INFORMATION: Smith Kline Animal Health Products, Division of Smith Kline Corp., 1500 Spring Garden Street, Philadelphia, Pa. 19101, filed supplemental NADA's (95-513, 91-467) providing for the safe and effective use of virginiamycin for addition to the feed of swine weighing from 120 pounds to market weight at 5 to 10 grams (g) per ton for increased rate of weight gain and at 5 g per ton for improved feed efficiency.

The Agency is revising the current tolerance for residues of virginiamycin in edible swine tissues, taking into consideration the following relevant factors:

1. Probable consumption of food bearing or containing residues of the drug.
2. The cumulative effect of consumption of residues of such drug in food.
3. Safety factors appropriate for the use of the drug.

On the basis of these factors, the current tolerance of 0.1 part per million (p.p.m.) for negligible residues is revised to provide for 0.4 p.p.m. in kidney, skin, and fat, 0.3 p.p.m. in liver, and 0.1 p.p.m. in muscle. This approval does not constitute a reaffirmation of the safety and effectiveness of the previously approved conditions of use of the drug.

In accordance with the freedom of information regulations and § 514.11(e)(2)(ii) of the animal drug regulations (21 CFR 514.11(e)(2)(ii)), a summary of safety and effectiveness data and information submitted to support approval of this application is released publicly. The summary is available for public examination at the office of the Hearing Clerk (HFA-305), Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, from 9 a.m. to 4 p.m., Monday through Friday.

Therefore, under the Federal Food, Drug, and Cosmetic Act (sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Parts 556 and 558 are amended as follows:

1. In part 556, § 556.750 is revised to read as follows:

§ 556.750 Virginiamycin.

Tolerances are established for negligible residues of virginiamycin in edible tissues of swine as follows:

(a) 0.4 part per million in kidney, skin, and fat.

(b) 0.3 part per million in liver.

(c) 0.1 part per million in muscle.

2. In Part 558, § 558.635 is amended by revising paragraph (f)(4) and adding new paragraph (f)(5) to read as follows:

§ 558.635 Virginiamycin.

* * * * *

(f) * * *

(4) *Amount per ton.* Administer 10 grams per ton from weaning to 120 pounds body weight followed by 5 grams per ton to market weight.

(i) *Indications for use.* Increased rate of weight gain and improved feed efficiency.

(ii) *Animal weight.* For continuous use from weaning to market weight.

(5) *Amount per ton.* Administer 10 grams per ton from weaning to 120 pounds body weight followed by 5 to 10 grams per ton to market weight.

(i) *Indications for use.* Increased rate of weight gain and improved feed efficiency for swine up to 120 pounds body weight; increased rate of weight gain for swine from 120 pounds to market weight.

(ii) *Animal weight.* For continuous use from weaning to market weight.

Effective date. This regulation is effective September 19, 1978.

(Sec. 512(i), 82 Stat. 347 (21 U.S.C. 360b(i)).)

Dated: September 11, 1978.

LESTER M. CRAWFORD,
Director, Bureau of Veterinary Medicine.

Title 24—Housing and Urban Development

CHAPTER X—FEDERAL INSURANCE ADMINISTRATION, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

SUBCHAPTER B—NATIONAL FLOOD INSURANCE PROGRAM

[Docket No. FI-4482]

PART 1914—COMMUNITIES ELIGIBLE FOR THE SALE OF INSURANCE

Status of Participating Communities

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: This rule lists communities participating in the national flood insurance program (NFIP). These communities have applied to the program and have agreed to enact certain flood plain management measures. The communities' participation in the program authorizes the sale of flood insurance to owners of property located in the communities listed.

EFFECTIVE DATES: The date listed in the fourth column of the table.

ADDRESSES: Flood insurance policies for property located in the communities listed can be obtained from any licensed property insurance agent or broker serving the eligible community, or from the national flood insurance program (NFIP) at: P.O. Box 34294, Bethesda, Md. 20034, phone 800-638-6620.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The national flood insurance program (NFIP), administered by the Federal Insurance Administration, enables property owners to purchase flood insurance at rates made reasonable through a Federal subsidy. In return, communities agree to adopt and administer local flood plain management measures aimed at protecting lives and new construction from future flooding. Since the communities on the attached list have recently entered the NFIP, subsidized flood insurance is now available for property in the community.

In addition, the Federal Insurance Administration has identified the special flood hazard areas in some of these communities by publishing a flood hazard boundary map. The date of the flood map, if one has been published, is indicated in the fifth column of the table. In the communities listed where a flood map has been published, section 102 of the Flood Disaster Protection Act of 1973, as amended, requires the purchase of flood insurance as a condition of Federal or federally related financial assistance for acquisition or construction of buildings in the special flood hazard area shown on the map.

The Federal Insurance Administrator finds that delayed effective dates would be contrary to the public interest. The Administrator also finds that notice and public procedure under 5 U.S.C. 553(b) are impracticable and unnecessary.

In each entry, a complete chronology of effective dates appears for each listed community. The entry reads as follows:

Section 1914.6 is amended by adding in alphabetical sequence new entries to the table.

§ 1914.6 List of eligible communities.

State	County	Location	Effective date of authorization of sale of flood insurance for area	Hazard area identified	Community No.

[4210-01]

[Docket No. FI 4483]

PART 1915—IDENTIFICATION AND MAPPING OF SPECIAL HAZARD AREAS

List of Communities With Special Hazard Areas

AGENCY: Federal Insurance Administration.

ACTION: Final rule.

SUMMARY: This rule identifies communities with areas of special flood, mudslide, or erosion hazards as authorized by the national flood insurance program (NFIP). The identification of such areas is to provide guidance to communities on the reduction of property losses, by the adoption of appropriate flood plain management, or other measures to minimize damage. It will enable communities to guide future construction, where practicable, away from locations which are threatened by flood or other hazards.

EFFECTIVE DATES: The date listed in the 8th column of the table or 30 days after the date of this FEDERAL REGISTER publication (Oct. 19, 1978), whichever is later.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: The Flood Disaster Protection Act of 1973 (Pub. L. 93-234), as amended, requires the purchase of flood insurance as a condition of Federal financial assistance of insurable property if such assistance is:

(1) For acquisition and construction of buildings as defined in part 1909 of title 24 of the Code of Federal Regulations, and

(2) For buildings located in a special flood hazard area identified by the Secretary of Housing and Urban Development.

For communities participating in the NFIP (see the 5th column in the table for a community's program status), this requirement applies on the date listed in the 8th column. For communities not participating in the program, section 202 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), as amended, provides that no direct Federal financial assistance (except assistance pursuant to the Disaster Relief Act of 1974 not in connection with a flood) may legally be provided for construction or acquisition of buildings in the identified special flood hazard area effective 1 year from the hazard identification date (the date in the 8th column of the table).

This 30-day period before the map action becomes effective does not supersede the statutory requirement that a community, whether or not participating in the program, be given the opportunity for a period of 6 months to establish that it is not seriously flood prone or that such flood hazards

as may have existed have been corrected by floodworks or other flood control methods. The 6 months period

Similarly, the 1 year period a community has to enter the program under section 201(d) of the Flood Disaster

This identification is made in accordance with Part 1915 of Title 24 of the Code of Federal Regulations as au-

State, county, community name and number of panels	Community number and suffix	Program and change code	Inland or coastal	Hazard F/M/E	Identification date(s)	Effective date of this map action	Local map repository

as may have existed have been corrected by floodworks or other flood control methods. The 6 months period shall be considered to begin 30 days after the date of publication in the FEDERAL REGISTER (Oct. 19, 1978) or the effective date of the flood hazard boundary map, whichever is later.

Similarly, the 1 year period a community has to enter the program under section 201(d) of the Flood Disaster Protection Act of 1973 shall be considered to begin 30 days after publication in the FEDERAL REGISTER (Oct. 19, 1978) or the effective date of the flood hazard boundary map, whichever is later.

This identification is made in accordance with Part 1915 of Title 24 of the Code of Federal Regulations as authorized by the national flood insurance program (42 U.S.C. 4001-4128).

Section 1915.3 is amended by adding in alphabetical sequence a new entry to the table:

§ 1915.3 List of communities with special hazard areas (FHBMs in effect).

Title 30—Mineral Resources

CHAPTER III—BOARD OF SURFACE MINING AND RECLAMATION APPEALS, DEPARTMENT OF THE INTERIOR

PART 301—PROCEDURES UNDER SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977

PART 302—PROCEDURES UNDER FEDERAL METAL AND NONMETALLIC MINE SAFETY ACT OF 1966

Revision and Revocation of Procedural Rules

SEPTEMBER 8, 1978.

AGENCY: Office of Hearings and Appeals, Interior.

ACTION: Final rule.

SUMMARY: This action amends the heading to chapter III of Title 30, Code of Federal Regulations, and revises part 301 to provide a cross reference to subpart L of 43 CFR Part 4, which contains procedural regulations applicable to adjudicatory proceedings before administrative law judges and the Interior Board of Surface Mining and Reclamation Appeals. It also revokes part 302 of chapter III of title 30, which is now obsolete. The amendments are technical in nature and will reflect organizational changes made as a result of recent mining legislation.

EFFECTIVE DATE: September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Ms. Frances A. Patton, Special Assistant to the Director, Office of Hearings and Appeals, U.S. Department of the Interior, 4015 Wilson Boulevard, Arlington, Va. 22203, 703-557-1500.

SUPPLEMENTARY INFORMATION: The Department has established the Interior Board of Surface Mining and Reclamation Appeals, with authority to exercise appellate and other review functions of the Secretary under the Surface Mining Control and Reclamation Act of 1977, 91 Stat. 445, 30 U.S.C. 1201 et seq., and has promulgated regulations applicable to adjudicatory proceedings before administrative law judges and the Interior Board of Surface Mining and Reclamation Appeals, in surface mining control and reclamation matters, within 43 CFR Part 4, Subpart L—Special Rules Applicable to Surface Coal Mining Hearings and Appeals. Also, the Department has abolished the Interior Board of Mine Operations Appeals, effective March 9, 1978, upon the creation of the Federal Mine Safety and Health Review Commission, pursuant to the Federal Mine Safety and Health Act of 1977, 83 Stat. 742, 30 U.S.C. 801 et seq. Accordingly, as shown below, this action effects the necessary revision of part 301, and amendment to the heading of Chapter III, Title 30 of the Code of Federal Regulations, to cross reference to regulations applicable to surface coal mining hearings and appeals within the jurisdiction of administrative law judges and the Interior Board of Surface Mining and Reclamation Appeals. Additionally, the cross reference in part 302, pertaining to regulations formerly applicable to hearings, appeals and other review proceedings before the Interior Board of Mine Operations Appeals, now obsolete, is revoked.

The author of this document is Ms. Frances A. Patton, Office of Hearings and Appeals.

Because these amendments involve technical changes only, no purpose would be served in obtaining public comment pursuant to 5 U.S.C. 553. The amendments are, therefore, made effective as of the date of their publication in the FEDERAL REGISTER.

1. The heading to Chapter III, Title 30 of the Code of Federal Regulations,

is amended, and Part 301 of that chapter is revised, to read:

SUMMARY: The present regulation, which provides procedural guidance to Corps of Engineers field personnel on

Title 32—National Defense

CHAPTER V—DEPARTMENT OF THE ARMY

[EP 405-1-2; formerly ER 405-1-663]

PART 641—UNIFORM RELOCATION ASSISTANCE AND REAL PROPERTY ACQUISITION POLICIES

AGENCY: U.S. Army Corps of Engineers, DOD.

ACTION: Final rule.

SUMMARY: The present regulation, which provides procedural guidance to Corps of Engineers field personnel on the implementation of Pub. L. 91-646 and information to the public concerning the Army's relocation program, is being amended to clarify procedures, update application procedures, and clarify the intent of corps regulations. The amendments will benefit the public by simplifying the application procedure and making the regulations easier to read and understand.

EFFECTIVE DATE: August 22, 1978.

FOR FURTHER INFORMATION CONTACT:

Mr. Garland P. Thompson, 202-693-6786 or write to: Chief, Policy and Operations Branch, Homeowners Assistance Division, Real Estate Directorate, Office of the Chief of Engineers, Washington, D.C. 20314.

In consideration of the above, 32 CFR Part 641 is amended by revising §§ 641.4(a), 641.63(c), 641.104(c)(5), and 641.252(a) as set forth below:

§ 641.4 Basic policy and procedural requirements.

* * * * *

(a) A written notice of intention to acquire must be given to each individual family, business or farm operation to be displaced. Such notice shall by served personally or be certified (or registered) first-class mail at the earliest possible time. (See figure 6-1)

* * * * *

§ 641.63 Nonallowable moving expenses and losses.

* * * * *

(c) Improvements to the replacement site, except when required by law in connection with the movement and reinstallation of personal property referred to in § 641.62(a)(6).

* * * * *

§ 641.104 Differential payment for replacement housing.

* * * * *

(c) * * *

(5) Even though the dwelling being acquired may be located on a tract larger than the average residential lot in the area or on a tract whose value is based on a higher and better use than residential, section 203 of the Act requires that the replacement housing payment be based on the "acquisition cost" of the dwelling. This means that a portion of the purchase price paid for the entire property must be attributed to the dwelling and homesite. In such cases, the appraiser will be requested to insert a statement in the appraisal report reading substantially as follows:

"The total appraised value of this property is $X, of which $Y constitutes the appraised value of the dwelling and homesite." The sum of $Y will be considered the "acquisition cost" of the dwelling for the purpose of calculating section 203 benefits. However, if the eventual purchase price of the entire property should exceed the Government's appraised value, a proportionate share of any increase over the entire property's appraised value will be applied to the dwelling unless there is evidence justifying a different acquisition cost for the dwelling in relation to the value of the tract.

* * * * *

§ 641.252 Application.

(a) The application to be used in processing claims for relocation assistance is comprised of various forms developed by the General Services Administration and approved by the Office of Management and Budget, standard forms 262 through 267 (figure 6-4). Although these forms are self-explanatory, the District Engineer will render such assistance to the applicant as may be necessary for their completion. The application, when submitted to the District Engineer, must be accompanied by supporting invoices, receipts or other items to substantiate payment for each item in the amount claimed.

* * * * *

Since these regulations only provide procedural guidance to Corps of Engineers field personnel on the implementation of Pub. L. 91-646, notice of proposed rulemaking and the procedures thereto are considered unnecessary.

NOTE.—The Chief of Engineers has determined that this rule does not contain a major proposal requiring preparation of an inflation impact statement under Executive Order 11821 and OMB Circular A-107. (Pub. L. 90-483.)

Dated: September 8, 1978.

For the Chief of Engineers:

THORWALD R. PETERSON,
Colonel, Corps of Engineers,
Executive Director, Engineer Staff.

Title 37—Patents, Trademarks, and Copyrights

CHAPTER II—COPYRIGHT OFFICE, LIBRARY OF CONGRESS

[Docket RM 78-2]

PART 202—REGISTRATION OF CLAIMS TO COPYRIGHT

Deposit Requirements

AGENCY: Library of Congress, Copyright Office.

ACTION: Final regulations.

SUMMARY: This notice is issued to inform the public that the Copyright Office of the Library of Congress is adopting amendments to §§ 202.19, 202.20, and 202.21 of our regulations. The effect of the amendments is: (i) To liberalize the deposit requirements for certain types of three-dimensional works; (ii) to provide expressly for the means of termination of continuing arrangements under which the Copyright Office has granted a request for special relief as an exception to the general deposit requirements; (iii) to permit the deposit of only one copy of musical compositions in certain cases; (iv) to permit the deposit of photographs or similar identifying reproductions in the case of unpublished pictorial and graphic works; (v) to clarify the deposit requirements for machine-readable works; (vi) to clarify the meaning of a "complete copy" in the case of motion pictures; (vii) to liberalize the deposit requirements for works reproduced in or on sheetlike materials; (viii) to liberalize the requirements governing the size and mounting of photographic transparencies deposited as identifying material, and to revise certain requirements concerning separate drawings of the copyright notice appearing in identifying material; (ix) to clarify the definition of a "complete" copy or phonorecord; (x) to clarify the deposit requirements for registration of works published in separable parts; and (xi) to add clarifying provisions concerning the deposit of works appearing on containers, wrappers, holders, and similar receptacles.

DATES: The regulations, as amended, are effective on September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Jon Baumgarten, General Counsel, U.S. Copyright Office, Library of Congress, Washington, D.C. 20559, 703-557-8731.

SUPPLEMENTARY INFORMATION: Under 17 U.S.C. 407 the owner of copyright, or of the exclusive right of publication, in a work published with notice of copyright in the United States is required to deposit copies of the work in the Copyright Office for the use or disposition of the Library of Congress. Section 408 of the statute also requires deposit of material in connection with applications for copyright registration of unpublished and published works. After establishing general rules governing the nature of the required deposit, section 408 authorizes the Register of Copyrights to prescribe regulations governing "the nature of the copies or phonorecords to be deposited" and to "require or permit * * * the deposit of identifying material instead of copies or phonorecords * * *."

On January 4, 1978, we published in the FEDERAL REGISTER (43 FR 763) final regulations implementing the deposit requirements of sections 407 and 408. Those regulations, among other things, generally required the deposit of "identifying material," such as photographs or drawings, instead of actual copies of three-dimensional works. This requirement was designed to improve our records of copyright registrations and to reduce the substantial administrative costs and burdens faced by the Copyright Office in handling and storing material of a wide variety of shapes and sizes.

After reconsideration in the light of our experience under those regulations, on March 21, 1978 (43 FR 11701) we made several interim changes in their application to three-dimensional works.[1] Those changes:

(1) Amended §§ 202.20(b)(2) and 202.20(c)(2)(ix) to remove the requirement that an applicant submit photographs or similar reproductions of uncopyrightable three-dimensional articles (for example, yarn and knitting needles) as a condition to registration of two-dimensional works (for example, instructions or illustrations) with which they are packaged;

(2) Amended § 202.20(d)(1) to permit the deposit of actual copies of three-dimensional works, instead of photographs or the like, as "special relief" in particular cases;

(3) Amended § 202.20(c)(2)(ix) to make clear that, unless special relief is asked for and granted, the general requirement that identifying material be submitted in lieu of actual copies of three-dimensional works does apply to boxed or similarly contained works; and

(4) Amended § 202.21 in several respects: To liberalize the requirements governing the minimum size of identifying material, thereby permitting the deposit of inexpensive photographs of works; to make clear that the entire section, as amended, pertains to the deposit of identifying material of both published and unpublished works; and to make clear that, where drawings of a copyright notice must be submitted as part of identifying material, the drawing need not be of the same size as the material reproducing the work itself.

Interested parties were given until April 28, 1978, to comment on the interim amendments. No comments were received on the specific changes noted above, and they are adopted as final.

Our ongoing experience with deposits of three-dimensional works has prompted us to make another liberalizing amendment. Under the regulations as issued, applicants for registration of works consisting of multiple three-dimensional parts were required to deposit identifying material showing each copyrightable part, instead of actual copies of the work. This meant that, for example, in the case of a board game, the applicant would have to prepare and submit a number of photographs or drawings showing each separate copyrightable piece composing the game, including all copyright notices on the various parts.

We believe that, in cases where the work consists of multiple parts that are contained in a box or similar container of reasonable size, the substantial burden on the applicant in preparing multiple photographs or other identifying reproductions probably outweighs the problems caused the Copyright Office in processing and storing the deposit. We are therefore amending § 202.20(c)(2)(ix) to exempt from the requirement for the submission of identifying material, works consisting of multiple parts that include among the copyrightable elements of the work, in addition to any copyrightable elements on the box or other container, three or more three-dimensional, physically separable parts, and that are packaged and published in a box or similar container with flat sides and with dimensions of no more that 12 x 24 x 6 inches. The most typical examples of this type of material are board games, but other examples include model kits, and certain kinds of craft kits. We have also added a new paragraph (H) to § 202.20(c)(2)(i) to permit the deposit of only one copy in these cases.

The Copyright Office is continuing an active study of all of its processing and recordkeeping activities, and a major focus of the study involves the costs (both direct and hidden) of creating, maintaining, preserving, and accessing deposit records. The handling and storage of bulky material, even if boxed, involves very substantial costs, and we must therefore consider these amendments as experimental for the time being. We will be monitoring their effect on our costs and operations and, depending upon our findings, we may have to consider returning to the requirement for identifying material. In any event, the Office distinctly prefers the deposit of identifying material in these cases, even where the deposit of a boxed copy is permitted.

This change in our regulations has considerable practical importance but, since it is primarily a liberalization of a procedural requirement imposed on the public by the Copyright Office, we are issuing it as final with this notice. The same is true of several other amendments which, on the basis of our experience with the deposit regulations over the past several months, are needed to liberalize or clarify the requirements. Specifically:

(1) *Special relief.* In developing the deposit regulations it became apparent that it would not be possible to establish categorical rules, exemptions, or alternatives to cover all cases where the general deposit provisions might cause unnecessary hardship. Accordingly, §§ 202.19(e) and 202.20(d) permit requests to be made for "special relief" in particular cases. Our original intent was to consider requests for special relief on a case-by-case basis. In some cases, however, there have been requests for ongoing or continuous relief applicable to a specific copyright owner, aimed at particular categories of works or particular circumstances encountered by that owner. In order for the Copyright Office to grant special relief on an ongoing basis where warranted in these cases, while at the same time reserving the right to insist upon the general deposit requirements if circumstances later change, we are adding a termination provision to both sections. Although the right of termination was implicit in the reference to grants of relief upon "such conditions as the Register (of Copyrights) may determine" in the original regulations, we believe we should prevent confusion and unnecessary paperwork by stating this principle expressly. To avoid any possible question, the amendment provides that a termination of special relief will not affect the validity of any earlier deposit.

(2) *Musical compositions published by rental, lease, or lending.* Sections 202.19(d)(2)(v) and 202.20(c)(2)(i)(F) of the regulations permit the deposit of one copy in the case of musical compositions published "only by rental, lease, or lending (rather than sale) of copies." Sections 202.19(b)(2) and 202.20(b)(2) define a "complete" copy in these cases as a full score or a conductor's score. These provisions were made in response to public comments pointing out that in musical rental cases only a limited number of copies exist for distribution, and that application of the normal requirement for two copies of the full score and parts would be unjustifiably burdensome and expensive.

The wording of the regulation as issued presented a technical problem. In cases where a musical work had been published both in the form of a rental score and in the form of phonorecords, the regulations, in combination with the Library of Congress "Best Edition" criteria, seemed to require the deposit of two copies of the score. This was not intended, and we are revising the regulations to make clear that only one copy is required in these cases.

(3) *Unpublished pictorial and graphic works.* Section 202.20(c)(2)(iv) of the regulations permits the deposit of identifying reproductions, instead of actual copies, of both published and unpublished pictorial and graphic works only where an "individual author" is the copyright owner. This provision, which parallels a provision in section 407(c) of the statute, was intended primarily to give individual artists the option of depositing photographs of their published prints under certain circumstances, but to withhold this option from a copyright owner (employer-for-hire or transferee) who is not the author of the published work, thus requiring deposit of copies of the actual print for the collections of the Library of Congress in these cases. The same considerations do not apply to unpublished works however, and we are therefore amending the section to allow the deposit of photographs or like reproductions of all unpublished pictorial or graphic works, including those in which copyright is owned by an employer-for-hire or transferee of the author.

(4) *Machine-readable works.* Section 202.20(c)(2)(vii) of the regulations specifies the deposit requirements for registration of machine-readable computer programs, automated data bases, and the like. In these cases, visually perceptible deposits are necessary for examining purposes, but the entire work need not be deposited in visual form; the regulations require only specified portions of the work to be deposited. However, as issued, the regulations on this point were limited to machine-readable works published in the United States, thus leaving unclear the deposit requirements for registration of machine-readable works published abroad. We are therefore revising the section to remove the reference to publication in the United States.[2]

(5) *Motion pictures.* We are also amending §§ 202.19(b)(2) and 202.20(b)(2) to clarify the meaning of a "complete copy" in the case of motion pictures. To be considered complete, and therefore acceptable for registration, a copy of a motion picture must be clean, undamaged, undeteriorated, and free of splices; both the copy itself and its physical housing must be free of any defects that would interfere with the performance of the work or that would cause mechanical, visual, or audible defects or distortions. (Deposit copies of motion pictures that are returned under the Library's Motion Picture Agreement are subject to the requirements of that agreement.)

(6) *Works reproduced in or on sheetlike materials.* Section 202.20(c)(2)(viii) requires that the deposit for a work reproduced in or on sheetlike materials which consists of a repeated pictorial or graphic design show the complete design and at least one repetition. However, on the basis of experience, we feel that the nature of a work reproduced in this fashion is sufficiently revealed by a deposit which shows the complete design and at least part of one repetition. We are liberalizing this section of the regulations accordingly.

(7) *Deposit of identifying material instead of copies.* Section 202.21(c) requires that transparencies, when submitted as identifying material in lieu of copies, must be 35 mm in size and fixed in cardboard, plastic, or similar mounts. Our experience has shown that it is too restrictive to require all transparencies to be 35 mm. The regulation has been amended to require photographic transparencies to be "at least" 35 mm, thus giving depositors the option of depositing larger transparencies if they prefer.

To facilitate handling and storage, we prefer all transparencies to be fixed in cardboard, plastic, or similar mounts. We recognize, however, that it could be unjustifiably burdensome to require the mounting of large transparencies in all cases. We have therefore amended the regulation to retain the requirement of mounting for transparencies that are 3" x 3" inches or smaller, but not to make mounting an absolute requirement for larger transparencies. However, the amended regulation reserves to the Office the right to require mounting in particular cases for transparencies larger than 3" x 3".

We have also sought to clarify the requirements governing the separate drawing or similar reproduction of the copyright notice, which must accompany identifying material in certain cases. Under amendments of paragraphs (c) and (e) of § 202.21, the separate drawing need not be uniform in size with the other pieces of identifying material, but it must be no smaller than 3" x 3" and no larger than 9" x 12". We have dropped the provision requiring that the dimensions of the notice be shown on the drawing, since this additional requirement seems, in practice, to be more trouble than it is worth.

(8) *Definition of "complete" copy or phonorecord.* The deposit regulations necessarily contain two definitions of "complete" copy or phonorecord: One in § 202.19(b)(2) for purposes of satisfying the mandatory deposit requirements of section 407 of the statute, and another in § 202.20(b)(2) for purposes of satisfying the registration requirements of section 408. Although these two definitions interrelate, there are significant differences between them.

The amendments we are making in the definition of "complete" copy or phonorecord in § 202.20(b)(2) add substantially to the length of that paragraph. For the sake of clarity and consistency, we have recast the paragraph somewhat, and have organized it under six subheadings: unpublished works; published works; contributions to collective works; sound recordings; musical scores; and motion pictures.

(9) *Works published in separable parts.* As part of the revision of the definition of "complete" copy or phonorecord in § 202.20(b)(2), we have dealt with the general question of works published in separable parts, where only certain elements are deposited for registration. In the case of published works other than sound recordings, the amendment makes clear that, if the work is subject to the mandatory deposit requirements of section 407, registration under section 408 requires deposit of one or two "complete" copies, including "all elements comprising the unit of publication of the best edition of the work, including elements that, if considered separately, would not be copyrightable subject matter or would otherwise be exempt from mandatory deposit requirements * * *." However, if the work is not subject to the mandatory deposit requirements, the amendment generally con-

[1] In a separate proceeding (docket RM 78-3) we also amended the deposit regulations to reflect the availability of the Library of Congress "Motion Picture Agreement." That agreement (i) provides for the return of published motion pictures to depositors under certain conditions; and (ii) establishes certain rights and obligations of the Library of Congress with respect to such works. See 43 FR 12320 (Mar. 24, 1978; interim regulations) and 43 FR 31132 (July 20, 1978; final regulations).

[2] In § 202.19(c)(5), which provides a complete exemption from the mandatory deposit requirements, we have retained the reference to "published in the United States." The mandatory deposit requirements of sec. 407 of the statute apply only to works published in the United States. Sec. 202.19(c)(5) of the regulations is intended to grant an exemption in the situation where a work has been published abroad in hard-copy form, but has been published in the United States only in machine-readable form.

V 43 / 182 SE 19 78

siders a copy or phonorecord "complete" even if some elements of the unit of publication are missing, under

choreographic works and pantomimes for registration on the basis of a deposit copy notated in Sutton Move-

questions and problems that have arisen. For this reason we would welcome any suggestions or comments

Part 202 of 37 CFR Chapter II is amended by revising §§ 202.19, 202.20, and 202.21 to read as follows:

(2) A "complete" copy includes all elements comprising the unit of publication of the best edition of the work,

phonorecords. This category does not exempt the owner of copyright, or of the exclusive right of publication, in a

siders a copy or phonorecord "complete" even if some elements of the unit of publication are missing, under two conditions: (1) The deposit must contain everything for which the applicant is seeking registration; and (2) the separation of the missing elements must not leave the deposit physically marred or garbled.

(10) *Containers and other receptacles.* A special problem arises with respect to containers, wrappers, holders, and other receptacles, where the only material for which copyright registration is sought appears on the receptacle. Many of these works are exempt from the mandatory deposit requirements and therefore, under the amendment of § 202.20(b)(2), could be considered "complete" for purposes of registration without their contents. For example, an envelope containing hairnets should be deposited without the hairnets, and a slipcase containing stationery could be deposited without the stationery.

However, there are a number of cases—book jackets and record sleeves are common examples among many—where there is no exemption from the mandatory deposit requirements, but it would be burdensome or unfair to require the author or other owner of copyright in the material appearing on the jacket or other receptacle to deposit the complete unit of publication. To solve this problem we have added a special exception covering containers, wrappers, holders, and other receptacles.

A related problem arises wih respect to three-dimensional containers and holders such as boxes, cases, and cartons. Where the material for which registration is sought is printed on a label attached to the container, the label can be removed and deposited for registration separately. However, where the copyrighted work is printed or otherwise reproduced directly on the container, the applicant will generally be required to deposit identifying material rather than a three-dimensional copy.

Our experience with the deposit regulations suggests that an exception should be made where the empty container on which the copyrighted work appears can be readily opened, folded, slit at the corners, or in some other way made adaptable for flat storage. We have therefore amended § 202.20(c)(2)(ix) to permit the applicant to deposit an actual copy rather than identifying material in cases of this sort.

Two comments were received in response to our March 21 notice on matters other than those dealt with in the specific interim amendments contained in that notice. One of these comments urged that we amend the regulations to state that we accept choreographic works and pantomimes for registration on the basis of a deposit copy notated in Sutton Movement Shorthand. Under the new Copyright Act it is clear that choreography and mime are proper subject matter of copyright if they are "fixed" in some tangible medium, 17 U.S.C. 102. This medium may consist of a copy in any form of "written" notation, including (but not limited to) Sutton Movement Shorthand, Labanotation, Benesh notation, and other forms of notation, pictorial or narrative description of movements; or it may take the form of film, videotape, videodisk, hologram, or any other method of recording dance or mime cinematographically. The coined word "choreology" covers, among other things, the writing down of dances by various means, and the fixation envisioned by the law would include any form of written record of a choreographic work made by a "choreologist."

So far in our experience with registering choreographic works and pantomimes under the new law, we have not felt it necessary to lay out specific deposit requirements for these works in our regulations. For unpublished choreographic works and pantomimes the general requirement is for deposit of "one complete copy"—that is, a copy "representing the entire copyrightable content of the work for which registration is sought." For published works in these classes, the Library of Congress "Best Edition" criteria [3] are applicable, and within these criteria the depositor may deposit whatever form or copy it believes best to represent the work.

Although we are not now amending our deposit regulations to add a provision dealing with choreographic works and pantomimes, we plan to review this question on the basis of experience in the future, and to consider any questions and problems that have arisen. For this reason we would welcome any suggestions or comments from depositors of choreographic works and pantomimes deriving from their experience under the new copyright law.

A second comment in response to our March 21 notice requested that we exempt "multiple weekly television series by other than the major producers or networks" from the deposit requirements of section 407 of the Act. This comment also suggests that "a single half hour program during any year should (be considered to) cover the deposit requirement for the entire year," apparently for the purposes of both sections 407 and 408.

We recognize that further regulatory provisions are needed to implement section 407(b) of the statute (dealing with unpublished transmission programs) and section 113 of the statute's transitional and supplementary provisions (establishing the American Television and Radio Archives in the Library of Congress). A number of policy decisions, some of which depend upon available funding, remain to be made. Meanwhile, the determining factor in considering exemptions from the statutory deposit requirements are the general acquisition policies of the Library of Congress.

Where television serial installments are distributed in such manner that they fall within the statutory definition of "publication," the Library of Congress does want to add them to its collections and thereby build an archival record of our country's television heritage. The burden upon the copyright owner is lessened by our reduction of the normal two-copy deposit requirement to one copy and, even more so, by the availability of the Motion Picture Agreement (see footnote 1, above). Moreover, in some cases these works are not "published" under the Act. In these cases, the mandatory deposit provisions of section 407 are not applicable and, in seeking registration under section 408, the copyright owner may deposit "identifying material" (a description of the motion picture with either an audio cassette or other phonorecord, or a set of frame enlargements or similar reproductions) in lieu of an actual copy of the work under § 202.21(g) of our regulations.

The deposit regulations are amended as stated, and are set forth in full below.

BARBARA RINGER,
Register of Copyrights.

Approved:

WILLIAM J. WELSH,
Acting Librarian of Congress.

[3] The Library's "Best Edition" criteria for published works are set out at 43 FR 766. Within these criteria: (i) If a choreographic work or pantomime is published in the form of both "written notation" and film (or videotape or disk), the written notation must be deposited (Best Edition Statement, par. VIIIB); (ii) if such a work is published only in the form of a written notation, or in the form of different written notations, there is no preference among the Laban, Sutton, Benesh, or other forms and the depositor may choose that form it has available or believes best to represent the work; and (iii) if such a work is published only in the form of film, videotape, or videodisk copies, certain preferences between film and tape, and among film gages and tape formats, are established (Best Edition Statement, par. III). The "Best Edition" criteria deal only with works that are fixed and published in varying formats or editions. Nothing in these criteria requires the creator of a choreographic work or pantomime to choose any particular form in which to fix or publish a work.

Part 202 of 37 CFR Chapter II is amended by revising §§ 202.19, 202.20, and 202.21 to read as follows:

§ 202.19 Deposit of published copies of phonorecords for the Library of Congress.

(a) *General.* This section prescribes rules pertaining to the deposit of copies and phonorecords of published works for the Library of Congress under section 407 of title 17 of the United States Code, as amended by Pub. L. 94-553. The provisions of this section are not applicable to the deposit of copies and phonorecords for purposes of copyright registration under section 408 of title 17, except as expressly adopted in § 202.20 of these regulations.

(b) *Definitions.* For the purposes of this section:

(1) (i) The "best edition" of a work is the edition, published in the United States at any time before the date of deposit, that the Library of Congress determines to be most suitable for its purposes.

(ii) Criteria for selection of the "best edition" from among two or more published editions of the same version of the same work are set forth in the statement entitled "Best Edition of Published Copyrighted Works for the Collections of the Library of Congress" (hereafter referred to as the "Best Edition Statement") in effect at the time of deposit. Copies of the Best Edition Statement are available upon request made to the Acquisitions and Processing Division of the Copyright Office.

(iii) Where no specific criteria for the selection of the "best edition" are established in the Best Edition Statement, that edition which, in the judgment of the Library of Congress, represents the highest quality for its purposes shall be considered the "best edition". In such cases: (A) When the Copyright Office is aware that two or more editions of a work have been published it will consult with other appropriate officials of the Library of Congress to obtain instructions as to the "best edition" and (except in cases for which special relief is granted) will require deposit of that edition; and (B) when a potential depositor is uncertain which of two or more published editions comprises the "best edition", inquiry should be made to the Acquisitions and Processing Division of the Copyright Office.

(iv) Where differences between two or more "editions" of a work represent variations in copyrightable content, each edition is considered a separate version, and hence a different work, for the purpose of this section, and criteria of "best edition" based on such differences do not apply.

(2) A "complete" copy includes all elements comprising the unit of publication of the best edition of the work, including elements that, if considered separately, would not be copyrightable subject matter or would otherwise be exempt from mandatory deposit requirements under paragraph (c) of this section. In the case of sound recordings, a "complete" phonorecord includes the phonorecord, together with any printed or other visually perceptible material published with such phonorecord (such as textual or pictorial matter appearing on record sleeves or album covers, or embodied in leaflets or booklets included in a sleeve, album, or other container). In the case of a musical composition published in copies only, or in both copies and phonorecords; (i) if the only publication of copies in the United States took place by the rental, lease, or lending of a full score and parts, a full score is a "complete" copy; and (ii) if the only publication of copies in the United States took place by the rental, lease, or lending of a conductor's score and parts, a conductor's score is a "complete" copy. In the case of a motion picture, a copy is "complete" if the reproduction of all of the visual and aural elements comprising the copyrightable subject matter in the work is clean, undamaged, undeteriorated, and free of splices, and if the copy itself and its physical housing are free of any defects that would interfere with the performance of the work or that would cause mechanical, visual, or audible defects or distortions.

(3) The terms "copies", "collective work", "device", "fixed", "literary work", "machine", "motion picture", "phonorecord", "publication", "sound recording", and "useful article", and their variant forms, have the meanings given to them in section 101 of title 17.

(4) "Title 17" means title 17 of the United States Code, as amended by Pub. L. 94-553.

(3) *Exemptions from deposit requirements.* The following categories of material are exempt from the deposit requirements of section 407(a) of title 17:

(1) Diagrams and models illustrating scientific or technical works or formulating scientific or technical information in linear or three-dimensional form, such as an architectural or engineering blueprint, plan, or design, a mechanical drawing, or an anatomical model.

(2) Greeting cards, picture postcards, and stationery.

(3) Lectures, sermons, speeches, and addressses when published individually and not as a collection of the works of one or more authors.

(4) Literary, dramatic, and musical works published only as embodied in phonorecords. This category does not exempt the owner of copyright, or of the exclusive right of publication, in a sound recording resulting from the fixation of such works in a phonorecord from the applicable deposit requirements for the sound recording.

(5) Literary works, including computer programs and automated data bases, published in the United States only in the form of machine-readable copies (such as magnetic tape or disks, punched cards, or the like) from which the work cannot ordinarily be visually perceived except with the aid of a machine or device. Works published in a form requiring the use of a machine or device for purposes of optical enlargement (such as film, filmstrips, slide films and works published in any variety of microform), and works published in visually perceivable form but used in connection with optical scanning devices, are not within this category and are subject to the applicable deposit requirements.

(6) Three-dimensional sculptural works, and any works published only as reproduced in or on jewelry, dolls, toys, games, plaques, floor coverings, wallpaper and similar commercial wall coverings, textile and other fabrics, packaging material, or any useful article. Globes, relief models, and similar cartographic representations of area are not within this category and are subject to the applicable deposit requirements.

(7) Prints, labels, and other advertising matter published in connection with the rental, lease, lending, licensing, or sale of articles of merchandise, works of authorship, or services.

(8) Tests, and answer material for tests, when published separately from other literary works.

(9) Works first published as individual contributions to collective works. This category does not exempt the owner of copyright, or of the exclusive right of publication, in the collective work as a whole, from the applicable deposit requirements for the collective work.

(10) Works first published outside the United States and later published in the United States without change in copyrightable content, if: (i) Registration for the work was made under 17 U.S.C. 403 before the work was published in the United States: or (ii) registration for the work was made under 17 U.S.C. 406 after the work was published in the United States but before a demand for deposit is made under 17 U.S.C. 407(d).

(11) Works published only as embodied in a soundtrack that is an integral part of a motion picture. This category does not exempt the owner of copyright, or of the exclusive right of publication, in the motion picture,

from the applicable deposit requirements for the motion picture.

(12) Motion pictures that consist of

(iv) In any case where an individual author is the owner of copyright in a published pictorial or graphic work

clusive right of publication in the work, and shall set forth specific reasons why the request should be grant-

and format of the copy or phonorecord deposited, together with the date of receipt.

paper, the entire section including the contribution;

(iv) *Sound recordings.* In the case of

for registration of claim to copyright under section 408 of title 17 shall consist of:

from the applicable deposit requirements for the motion picture.

(12) Motion pictures that consist of television transmission programs and that have been published, if at all, only by reason of a license or other grant to a nonprofit institution of the right to make a fixation of such programs directly from a transmission to the public, with or without the right to make further uses of such fixations.

(d) *Nature of required deposit.* (1) Subject to the provisions of paragraph (d)(2) of this section, the deposit required to satisfy the provisions of section 407(a) of title 17 shall consist of (i) in the case of published works other than sound recordings, two complete copies of the best edition; and (ii) in the case of published sound recordings, two complete phonorecords of the best edition.

(2) In the case of certain published works not exempt from deposit requirements under paragraph (c) of this section, the following special provisions shall apply:

(i) In the case of published three-dimensional cartographic representations of area, such as globes and relief models, the deposit of one complete copy of the best edition of the work will suffice in lieu of the two copies required by paragraph (d)(1) of this section.

(ii) In the case of published motion pictures, the deposit of one complete copy of the best edition of the work will suffice in lieu of the two copies required by paragraph (d)(1) of this section. Any deposit for a published motion picture must be accompanied by a separate description of its contents, such as a continuity, pressbook, or synopsis. The Library of Congress may, at its sole discretion, enter into an agreement permitting the return of copies of published motion pictures to the depositor under certain conditions and establishing certain rights and obligations of the Library with respect to such copies. In the event of termination of such an agreement by the Library it shall not be subject to reinstatement, nor shall the depositor or any successor in interest of the depositor be entitled to any similar or subsequent agreement with the Library, unless at the sole discretion of the Library it would be in the best interests of the Library to reinstate the agreement or enter into a new agreement.

(iii) In the case of any published work deposited in the form of a hologram, the deposit shall be accompanied by: (A) Two sets of precise instructions for displaying the image fixed in the hologram; and (B) two sets of identifying material in compliance with § 202.21 of these regulations and clearly showing the displayed image.

(iv) In any case where an individual author is the owner of copyright in a published pictorial or graphic work and (A) less than five copies of the work have been published, or (B) the work has been published and sold or offered for sale in a limited edition consisting of no more than three hundred numbered copies, the deposit of one complete copy of the best edition of the work or, alternatively, the deposit of photographs or other identifying material in compliance with § 202.21 of these regulations, will suffice in lieu of the two copies required by paragraph (d)(1) of this section.

(v) In the case of a musical composition published in copies only, or in both copies and phonorecords, if the only publication of copies in the United States took place by rental, lease, or lending, the deposit of one complete copy of the best edition will suffice in lieu of the two copies required by paragraph (d)(1) of this section.

(vi) In the case of published multimedia kits that are prepared for use in systematic instructional activities and that include literary works, audiovisual works, sound recordings, or any combination of such works, the deposit of one complete copy of the best edition will suffice in lieu of the two copies required by paragraph (d)(1) of this section.

(e) *Special relief.* (1) In the case of any published work not exempt from deposit under paragraph (c) of this section, the Register of Copyrights may, after consultation with other appropriate officials of the Library of Congress and upon such conditions as the Register may determine after such consultation: (i) Grant an exemption from the deposit requirements of section 407(a) of title 17 on an individual basis for single works or series or groups of works; or (ii) permit the deposit of one copy or phonorecord, or alternative identifying material, in lieu of the two copies or phonorecords required by paragraph (d)(1) of this section; or (iii) permit the deposit of incomplete copies or phonorecords, or copies or phonorecords other than those normally comprising the best edition.

(2) Any decision as to whether to grant such special relief, and the conditions under which special relief is to be granted, shall be made by the Register of Copyrights after consultation with other appropriate officials of the Library of Congress, and shall be based upon the acquisition policies of the Library of Congress then in force.

(3) Requests for special relief under this paragraph shall be made in writing to the Chief, Acquisitions and Processing Division of the Copyright Office, shall be signed by or on behalf of the owner of copyright or of the exclusive right of publication in the work, and shall set forth specific reasons why the request should be granted.

(4) The Register of Copyrights may, after consultation with other appropriate officials of the Library of Congress, terminate any ongoing or continuous grant of special relief. Notice of termination shall be given in writing and shall be sent to the individual person or organization to whom the grant of special relief had been given, at the last address shown in the records of the Copyright Office. A notice of termination may be given at any time, but it shall state a specific date of termination that is at least 30 days later than the date the notice is mailed. Termination shall not affect the validity of any deposit earlier made under the grant of special relief.

(f) *Submission and receipt of copies and phonorecords.* (1) All copies and phonorecords deposited in the Copyright Office will be considered to be deposited only in compliance with section 407 of title 17 unless they are accompanied by: (i) An application for registration of claim to copyright, or (ii) a clear written request that they be held for connection with a separately forwarded application. Copies or phonorecords deposited without such an accompanying application or written request will not be connected with or held for receipt of separate applications, and will not satisfy the deposit provisions of section 408 of title 17 or § 202.20 of these regulations. Any written request that copies or phonorecords be held for connection with a separately forwarded application must appear in a letter or similar document accompanying the deposit; a request or instruction appearing on the packaging, wrapping or container for the deposit will not be effective for this purpose.

(2) All copies and phonorecords deposited in the Copyright Office under section 407 of title 17, unless accompanied by written instructions to the contrary, will be considered to be deposited by the person or persons named in the copyright notice on the work.

(3) Upon request by the depositor made at the time of the deposit, the Copyright Office will issue a certificate of receipt for the deposit of copies or phonorecords of a work under this section. Certificates of receipt will be issued in response to requests made after the date of deposit only if the requesting party is identified in the records of the Copyright Office as having made the deposit. In either case, requests for a certificate of receipt must be in writing and accompanied by a fee of $2. A certificate of receipt will include identification of the depositor, the work deposited, and the nature

and format of the copy or phonorecord deposited, together with the date of receipt.

§ 202.20 Deposit of copies and phonorecords for copyright registration.

(a) *General.* This section prescribes rules pertaining to the deposit of copies and phonorecords of published and unpublished works for the purpose of copyright registration under section 408 of title 17 of the United States Code, as amended by Pub. L. 94-553. The provisions of this section are not applicable to the deposit of copies and phonorecords for the Library of Congress under section 407 of title 17, except as expressly adopted in § 202.19 of these regulations.

(b) *Definitions.* For the purposes of this section:

(1) The "best edition" of a work; has the meaning set forth in § 202.19(b)(1) of these regulations.

(2) A "complete" copy or phonorecord means the following:

(i) *Unpublished works.* Subject to the requirements of paragraph (vi) of this § 202.20(b)(2), a "complete" copy or phonorecord of an unpublished work is a copy or phonorecord representing the entire copyrightable content of the work for which registration is sought;

(ii) *Published works.* Subject to the requirements of paragraphs (iii) through (vi) of this § 202.20(b)(2), a "complete" copy or phonorecord of a published work includes all elements comprising the applicable unit of publication of the work, including elements that, if considered separately, would not be copyrightable subject matter. However, even where certain physically separable elements included in the applicable unit of publication are missing from the deposit, a copy or phonorecord will be considered "complete" for purposes of registration where: (A) The copy or phonorecord deposited contains all parts of the work for which copyright registration is sought; and (B) the removal of the missing elements did not physically damage the copy or phonorecord or garble its contents; and (C) the work is exempt from the mandatory deposit requirements under section 407 of title 17 of the United States Code and § 202.19(c) of these regulations, or the copy deposited consists entirely of a container, wrapper, or holder, such as an envelope, sleeve, jacket, slipcase, box, bag, folder, binder, or other receptacle acceptable for deposit under paragraph (c)(2) of this section;

(iii) *Contributions to collective works.* In the case of a published contribution to a collective work, a "complete" copy or phonorecord is the entire collective work including the contribution or, in the case of a newspaper, the entire section including the contribution;

(iv) *Sound recordings.* In the case of published sound recordings, a "complete" phonorecord has the meaning set forth in § 202.19(b)(2) of these regulations;

(v) *Musical scores.* In the case of a musical composition published in copies only, or in both copies and phonorecords: (i) If the only publication of copies took place by the rental, lease, or lending of a full score and parts, a full score is a "complete" copy; and (ii) if the only publication of copies took place by the rental, lease, or lending of a conductor's score and parts, a conductor's score is a "complete" copy;

(vi) *Motion pictures.* In the case of a published or unpublished motion picture, a copy is "complete" if the reproduction of all of the visual and aural elements comprising the copyrightable subject matter in the work is clean, undamaged, undeteriorated, and free of splices, and if the copy itself and its physical housing are free of any defects that would interfere with the performance of the work or that would cause mechanical, visual, or audible defects or distortions.

(3) The terms "copy," "collective work," "device," "fixed," "literary work," "machine," "motion picture," "phonorecord," "publication," "sound recording," "transmission program," and "useful article," and their variant forms, have the meanings given to them insection 101 of title 17.

(4) A "secure test" is a nonmarketed test administered under supervision at specified centers on specific dates, all copies of which are accounted for and either destroyed or returned to restricted locked storage following each administration. For these purposes a test is not marketed if copies are not sold but it is distributed and used in such a manner that ownership and control of copies remain with the test sponsor or publisher.

(5) "Title 17" means title 17 of the United States Code, as amended by Pub. L. 94-553.

(6) For the purposes of determining the applicable deposit requirements under this § 202.20 only, the following shall be considered as unpublished motion pictures: motion pictures that consist of television transmission programs and that have been published, if at all, only by reason of a license or other grant to a nonprofit institution of the right to make a fixation of such programs directly from a transmission to the public, with or without the right to make further uses of such fixations.

(c) *Nature of required deposit.* (1) Subject to the provisions of paragraph (c)(2) of this section, the deposit required to accompany an application for registration of claim to copyright under section 408 of title 17 shall consist of:

(i) In the case of unpublished works, one complete copy or phonorecord.

(ii) In the case of works first published in the United States before January 1, 1978, two complete copies or phonorecords of the work as first published.

(iii) In the case of works first published in the United States on or after January 1, 1978, two complete copies or phonorecords of the best edition.

(iv) In the case of works first published outside of the United States, whenever published, one complete copy or phonorecord of the work as first published. For the purposes of this section, any works simultaneously first published within and outside of the United States shall be considered to be first published in the United States.

(2) In the case of certain works, the special provisions set forth in this clause shall apply. In any case where this clause specifies that one copy or phonorecord may be submitted, that copy or phonorecord shall represent the best edition, or the work as first published, as set forth in paragraph (c)(1) of this section.

(i) *General.* In the following cases the deposit of one complete copy or phonorecord will suffice in lieu of two copies or phonorecords: (A) Published three-dimensional cartographic representations of area, such as globes and relief models; (B) published diagrams illustrating scientific or technical works or formulating scientific or technical information in linear or other two-dimensional form, such as an architectural or engineering blueprint, or a mechanical drawing; (C) published greeting cards, picture postcards, and stationery; (D) lectures, sermons, speeches, and addresses published individually and not as a collection of the works of one or more authors; (E) published contributions to a collective work; (F) musical compositions published in copies only, or in both copies and phonorecords, if the only publication of copies took place by rental, lease, or lending; (G) published multimedia kits that are prepared for use in systematic instructional activities and that include literary works, audiovisual works, sound recordings, or any combination of such works; and (H) works exempted from the requirement of depositing identifying material under § 202.20(c)(2)(ix)(B)(5) of these regulations.

(ii) *Motion pictures.* In the case of published motion pictures, the deposit of one complete copy will suffice in lieu of two copies. The deposit of a copy or copies for any published or unpublished motion picture must be ac-

companied by a separate description of its contents, such as a continuity, pressbook, or synopsis. The Library of

entire page or pages upon which it appears may be submitted in lieu of the entire larger work. In the case of

files, representative portions of each separate data file consisting of either 50 complete data records from each

ing cases the deposit must consist of identifying material complying with § 201.21 of these regulations instead of

by this section exceeds ninety-six inches in any dimension, identifying material complying with § 202.21 of

deposit provisions of this section if they are accompanied by an application for registration of claim to copy-

companied by a separate description of its contents, such as a continuity, pressbook, or synopsis. The Library of Congress may, at its sole discretion, enter into an agreement permitting the return of copies of published motion pictures to the depositor under certain conditions and establishing certain rights and obligations of the Library of Congress with respect to such copies. In the event of termination of such an agreement by the Library, it shall not be subject to reinstatement, nor shall the depositor or any successor in interest of the depositor be entitled to any similar or subsequent agreement with the Library, unless at the sole discretion of the Library it would be in the best interests of the Library to reinstate the agreement or enter into a new agreement. In the case of unpublished motion pictures (including television transmission programs that have been fixed and transmitted to the public, but have not been published), the deposit of identifying material in compliance with § 202.21 of these regulations may be made and will suffice in lieu of an actual copy.

(iii) *Holograms.* In the case of any work deposited in the form of a hologram, the copy or copies shall be accompanied by: (A) Precise instructions for displaying the image fixed in the hologram; and (B) photographs or other identifying material complying with § 202.21 of these regulations and clearly showing the displayed image. The number of sets of instructions and identifying material shall be the same as the number of copies required.

(iv) *Certain pictorial and graphic works.* In the case of any unpublished pictorial or graphic work, deposit of identifying material in compliance with § 202.21 of these regulations may be made and will suffice in lieu of deposit of an actual copy. In the case of a published pictorial or graphic work, deposit of one complete copy, or of identifying material in compliance with § 202.21 of these regulations, may be made and will suffice in lieu of deposit of two actual copies where an individual author is the owner of copyright, and either: (A) Less than five copies of the work have been published; or (B) the work has been published and sold or offered for sale in a limited edition consisting of no more than 300 numbered copies.

(v) *Commercial prints and labels.* In the case of prints, labels, and other advertising matter published in connection with the rental, lease, lending, licensing, or sale of articles of merchandise, works of authorship, or services, the deposit of one complete copy will suffice in lieu of two copies. Where the print or label is published in a larger work, such as a newspaper or other periodical, one copy of the entire page or pages upon which it appears may be submitted in lieu of the entire larger work. In the case of prints or labels physically inseparable from a three-dimensional object, identifying material complying with § 202.21 of these regulations must be submitted rather than an actual copy or copies except under the conditions of paragraph (c)(2)(ix)(B)(*6*) of this section.

(vi) *Tests.* In the case of tests, and answer material for tests, published separately from other literary works, the deposit of one complete copy will suffice in lieu of two copies. In the case of any secure test the Copyright Office will return the deposit to the applicant promptly after examination: *Provided,* That sufficient portions, description, or the like are retained so as to constitute a sufficient archival record of the deposit.

(vii) *Machine-readable works.* In cases where an unpublished literary work is fixed, or a published literary work is published only in the form of machine-readable copies (such as magnetic tape or disks, punched cards, or the like) from which the work cannot ordinarily be perceived except with the aid of a machine or device,[4] the deposit shall consist of:

(A) For published or unpublished computer programs, one copy of identifying portions of the program, reproduced in a form visually perceptible without the aid of a machine or device, either on paper or in microform. For these purposes, "identifying portions" shall mean either the first and last 25 pages or equivalent units of the program if reproduced on paper, or at least the first and last 25 pages or equivalent units of the program if reproduced in microform, together with the page or equivalent unit containing the copyright notice, if any,

(B) For published and unpublished automated data bases, compilations, statistical compendia, and other literary works so fixed or published, one copy of identifying portions of the work, reproduced in a form visually perceptible without the aid of a machine or device, either on paper or in microform. For these purposes: (*1*) "identifying portions" shall mean either the first and last 25 pages or equivalent units of the work if reproduced on paper, or at least the first and last 25 pages or equivalent units of work if reproduced on microform, or, in the case of automated data bases comprising separate and distinct data files, representative portions of each separate data file consisting of either 50 complete data records from each file or the entire file, whichever is less; and (*2*) "data file" and "file" mean a group of data records pertaining to a common subject matter, regardless of the physical size of the records or the number of data items included in them. (In the case of revised versions of such data bases, the portions deposited must contain representative data records which have been added or modified.) In any case where the deposit comprises representative portions of each separate file of an automated data base as indicated above, it shall be accompanied by a typed or printed descriptive statement containing: The title of the data base; the name and address of the copyright claimant; the name and content of each separate file within the data base, including the subject matter involved, the origin(s) of the data, and the approximate number of individual records within the file; and a description of the exact contents of any machine-readable copyright notice employed in or with the work and the manner and frequency with which it is displayed (e.g., at user's terminal only at sign-on, or continuously on terminal display, or on printouts, etc.). If a visually perceptible copyright notice is placed on any copies of the work (such as magnetic tape reels) or their container, a sample of such notice must also accompany the statement.

(viii) *Works reproduced in or on sheetlike materials.* In the case of any unpublished work that is fixed, or any published work that is published, only in the form of a two-dimensional reproduction on sheetlike materials such as textile and other fabrics, wallpaper and similar commercial wall coverings, carpeting, floor tile, and similar commercial floor coverings, and wrapping paper and similar packaging material, the deposit shall consist of one copy in the form of an actual swatch or piece of such material sufficient to show all elements of the work in which copyright is claimed and the copyright notice appearing on the work, if any. If the work consists of a repeated pictorial or graphic design, the complete design and at least part of one repetition must be shown. If the sheetlike material in or on which a published work has been reproduced has been embodied in or attached to a three-dimensional object, such as wearing apparel, furniture, or any other three-dimensional manufactured article, and the work has been published only in that form, the deposit must consist of identifying material complying with § 202.21 of these regulations instead of a copy.

(ix) *Works reproduced in or on three-dimensional objects.* (A) In the following cases the deposit must consist of identifying material complying with § 201.21 of these regulations instead of a copy or copies: (*1*) Any three-dimensional sculptural work, including any illustration or formulation of artistic expression or information in three-dimensional form. Examples of such works include statues, carvings, ceramics, moldings, constructions, models, and maquettes; and (*2*) any two-dimensional or three-dimensional work that, if unpublished, has been fixed, or, if published, has been published only in or on jewelry, dolls, toys, games, or any three-dimensional useful article.

(B) In the following cases. the requirements of paragraph (A) of this § 202.20(c)(2)(ix) for the deposit of identifying material shall not apply: (*1*) Works that are reproduced by intaglio or relief printing methods on two-dimensional materials such as paper or fabrics; (*2*) three-dimensional cartographic representations of area, such as globes and relief models; (*3*) works that have been fixed or published in or on a useful article that comprises one of the elements of the unit of publication of an educational or instructional kit which also includes a literary or audiovisual work, a sound recording, or any combination of such works; (*4*) published works exempt from the deposit of copies under section 407 of title 17 and § 202.19(c) of these regulations, where the "complete" copy of the work within the meaning of paragraph (b)(2) of this section consists of a reproduction of the work on two-dimensional materials such as paper or fabrics; (*5*) published works consisting of multiple parts that are packaged and published in a box or similar container with flat sides and with dimensions of no more than 12 x 24 x 6 inches, and that include among the copyrightable elements of the work, in addition to any copyrightable element on the box or other container, three or more three-dimensional, physically separable parts; and (*6*) works reproduced on three-dimensional containers or holders such as boxes, cases, and cartons, where the container or holder can be readily opened out, unfolded, slit at the corners, or in some other way made adaptable for flat storage, and the copy, when flattened, does not exceed 96 inches in any dimension.

(x) *Soundtracks.* For separate registration of an unpublished work that is fixed, or a published work that is published, only as embodied in a soundtrack that is an integral part of a motion picture, the deposit of identifying material in compliance with § 202.21 of these regulations will suffice in lieu of an actual copy or copies of the motion picture.

(ix) *Oversize deposits.* In any case where the deposit otherwise required by this section exceeds ninety-six inches in any dimension, identifying material complying with § 202.21 of these regulations must be submitted instead of an actual copy or copies.

(d) *Special relief.* (1) In any case the Register of Copyrights may, after consultation with other appropriate officials of the Library of Congress and upon such conditions as the Register may determine after such consultation: (i) Permit the deposit of one copy or phonorecord, or alternative identifying material, in lieu of the one or two copies or phonorecords otherwise required by paragraph (c)(1) of this section; (ii) permit the deposit of incomplete copies or phonorecords, or copies or phonorecords other than those normally comprising the best edition; or (iii) permit the deposit of an actual copy or copies, in lieu of the identifying material otherwise required by this section.

(2) Any decision as to whether to grant such special relief, and the conditions under which special relief is to be granted, shall be made by the Register of Copyrights after consultation with other appropriate officials of the Library of Congress, and shall be based upon the acquisition policies of the Library of Congress then in force and the archival and examining requirements of the Copyright Office.

(3) Requests for special relief under this paragraph may be combined with requests for special relief under § 202.19(e) of these regulations. Whether so combined or made solely under this paragraph, such requests shall be made in writing to the Chief, Examining Division of the Copyright Office, shall be signed by or on behalf of the person signing the application for registration, and shall set forth specific reasons why the request should be granted.

(4) The Register of Copyrights may, after consultation with other appropriate officials of the Library of Congress, terminate any ongoing or continuous grant of special relief. Notice of termination shall be given in writing and shall be sent to the individual person or organization to whom the grant of special relief had been given, at the last address shown in the records of the Copyright Office. A notice of termination may be given at any time, but it shall state a specific date of termination that is at least 30 days later than the date the notice is mailed. Termination shall not affect the validity of any deposit or registration earlier made under the grant of special relief.

(e) *Use of copies and phonorecords deposited for the Library of Congress.* Copies and phonorecords deposited for the Library of Congress under section 407 of title 17 and § 202.19 of these regulations may be used to satisfy the deposit provisions of this section if they are accompanied by an application for registration of claim to copyright in the work represented by the deposit, or connected with such an application under the conditions set forth in § 202.19(f)(1) of these regulations.

§ 202.21 Deposit of identifying material instead of copies.

(a) *General.* Subject to the specific provisions of paragraphs (f) and (g) of this section, in any case where the deposit of identifying material is permitted or required under § 202.19 or § 202.20 of these regulations for published or unpublished works, the material shall consist of photographic prints, transparencies, photostats, drawings, or similar two-dimensional reproductions or renderings of the work, in a form visually perceivable without the aid of a machine or device. In the case of pictorial or graphic works, such material shall reproduce the actual colors employed in the work. In all other cases, such material may be in black and white or may consist of a reproduction of the actual colors.

(b) *Completeness; number of sets.* As many pieces of identifying material as are necessary to show clearly the entire copyrightable content of the work for which deposit is being made, or for which registration is being sought, shall be submitted. Except in cases falling under the provisions of § 202.19(d)(2)(iii) or § 202.20(c)(2)(iii) with respect to holograms, only one set of such complete identifying material is required.

(c) *Size.* All pieces of identifying material (except separate drawings or similar reproductions of copyright notices deposited under the second sentence of paragraph (e) of this section) must be of uniform size. Photographic transparencies must be at least 35 mm in size and, if such transparencies are 3 x 3 inches or less, must be fixed in cardboard, plastic, or similar mounts to facilitate identification, handling, and storage. The Copyright Office prefers that transparencies larger than 3 x 3 inches be mounted in a way that facilitates their handling and preservation, and reserves the right to require such mounting in particular cases. All types of identifying material other than photographic transparencies must be not less than 3 x 3 inches and not more than 9 x 12 inches, but preferably 8 x 10 inches. Except in the case of transparencies, the image of the work must be either lifesize or larger, or if less than lifesize must be large enough to show clearly the entire copyrightable content of the work.

(d) *Title and dimensions.* At least one piece of identifying material must,

[4] Works published in a form requiring the use of a machine or device for purposes of optical enlargement (such as film, filmstrips, slide films, and works published in any variety of microform), and works published in visually perceptible form but used in connection with optical scanning devices, are not within this category.

on its front, back, or mount, indicate the title of the work and an exact measurement of one or more dimen-

nications from the scenes of events to cable television studios or headends.

on its front, back, or mount, indicate the title of the work and an exact measurement of one or more dimensions of the work.

(e) *Copyright notice.* In the case of works published with notice of copyright, the notice and its position on the work must be clearly shown on at least one piece of identifying material. Where necessary because of the size or position of the notice, a separate drawing or similar reproduction shall be submitted. Such reproduction shall be no smaller than 3 x 3 inches and no larger than 9 x 12 inches, and shall show the exact appearance and content of the notice, and its specific position on the work.

(f) For separate registration of an unpublished work that is fixed, or a published work that is published, only as embodied in a soundtrack that is an integral part of a motion picture, identifying material deposited in lieu of an actual copy or copies of the motion picture shall consist of: (1) A transcription of the entire work, or a reproduction of the entire work on a phonorecord; and (2) photographs or other reproductions from the motion picture showing the title of the motion picture, the soundtrack credits, and the copyright notice for the soundtrack, if any. The provisions of paragraphs (b), (c), (d), and (e) of this § 202.21 do not apply to identifying material deposited under this paragraph (f).

(g) In the case of unpublished motion pictures (including transmission programs that have been fixed and transmitted to the public, but have not been published), identifying material deposited in lieu of an actual copy shall consist of either: (1) An audio cassette or other phonorecord reproducing the entire soundtrack or other sound portion of the motion picture, and a description of the motion picture; or (2) a set consisting of one frame enlargement or similar visual reproduction from each 10-minute segment of the motion picture, and a description of the motion picture. In either case the "description" may be a continuity, a pressbook, or a synopsis but in all cases it must include: (i) The title or continuing title of the work, and the episode title, if any: (ii) the nature and general content of the program; (iii) the date when the work was first first and whether or not fixation was simultaneous with first transmission; (iv) the date of first transmission, if any; (v) the running time; and (vi) the credits appearing on the work, if any. The provisions of paragraphs (b), (c), (d), and (e) of this § 202.21 do not apply to identifying material submitted under this paragraph (g).

Title 39—Postal Service

CHAPTER I—UNITED STATES POSTAL SERVICE

SUBCHAPTER D—ORGANIZATION AND ADMINISTRATION

PART 221—GENERAL PRINCIPLES OF ORGANIZATION

PART 224—GROUPS AND DEPARTMENTS

Establishment of Research and Technology Group

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: This document reflects the establishment of the Research and Technology Group, which is headed by a Senior Assistant Postmaster General who is a member of the Executive Committee. This group is composed of the International Electronics Message System Office, the Research and Development Laboratories (previously called the Research and Development Department), and the Office of Strategic Planning. Of these component offices, only the first-named office, the International Electronics Message System Office, is a new office. The other two offices were previously part of the administration group.

EFFECTIVE DATE: September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Paul J. Kemp, 202-245-4638.

Accordingly, 39 CFR is amended as follows:

1. In § 221.5 redesignate paragraph (d)(1)(vii), (viii), (ix) and (x) as (d)(1)(viii), (ix), (x) and (xi) respectively, and add new paragraph (d)(1)(vii) and revise the first sentence of paragraph (a) to read as follows:

§ 221.5 Groups and departments.

(a) Postal Service Headquarters is primarily divided into five groups—Administration, Employee and Labor Relations, Finance, Operations, and Research and Technology. • • •

• • • • • •

(d)(1) • • •

(vii) The Senior Assistant Postmaster General, Research and Technology;

• • • • • •

2. In § 224.1 strike out the word "four" in the first and second sentences of paragraph (c) and insert "three" in lieu thereof; delete paragraphs (c)(3) and (c)(7), and redesignate paragraphs (c)(4), (c)(5), and (c)(6) as paragraphs (c)(3), (c)(4), and (c)(5) respectively; and revise paragraph (a) to read as follows:

§ 224.1 Administration group.

(a) The administration group is headed by the Senior Assistant Postmaster General, Administration, who reports to the Deputy Postmaster General. The administration group has responsibility for the following functions: Procurement and supply, real estate and buildings, customer services, international postal affairs, and the judicial officer.

• • • • • •

§§ 224.5-224.9 [Redesignated as] §§ 224.6-224.10.

3. Redesignate §§ 224.5, 224.6, 224.7, 224.8, and 224.9 as §§ 224.6, 224.7, 224.8, 224.9 and 224.10 respectively; and add new § 224.5 reading as follows:

§ 224.5 Research and Technology Group.

(a) The Research and Technology Group is headed by the Senior Assistant Postmaster General, Research and Technology, who reports to the Postmaster General. It has overall responsibility for the direction of strategic planning, applied research and development of new technology, and the design of new systems and equipment.

(b) The Research and Technology Group is divided into three units whose heads report to the Senior Assistant Postmaster General, Research and Technology:

(1) *Office of Strategic Planning.* The Office of Strategic Planning is responsible for:

(i) Providing top management with information on trends and developments which may impact on the Postal Service during the period of 5-15 years in the future;

(ii) Identifying and evaluating economic, political, social, technical, and market trends and events impacting on the USPS;

(iii) Identifying potential future needs, problems, threats, or opportunities to aid top management in strategic policy decisions;

(iv) Augmenting or redefining Postal Service goals as needed for review and concurrence by the Board of Governors; and

(v) Developing a projection of long-range business targets as a basis for setting operational objectives.

(2) *Research and development laboratories.* The research and development laboratories is headed by the Executive Director, Research and Development. It is responsible for development and application of new technology to mail handling problems. It conducts original research to develop and promote new concepts and approaches to systems and mechanization for the collection, processing and delivery of mail. It monitors new developments over a broad spectrum of technology and assesses them for possible application to Postal Service functions. It is also responsible for the design and development of new equipment, and equipment modifications. It operates the Postal Laboratory conducting research, test, and evaluation programs.

(3) *International Electronics Message System Office.* The International Electronics Message System Office is responsible for exploring potential new international electronic message systems, and negotiating and monitoring contracts to demonstrate the feasibility of international transmission of electronic messages.

(39 U.S.C. 401(a).)

ROGER P. CRAIG,
Deputy General Counsel.

PAUL J. KEMP,
Alternate Liaison Officer for the U.S. Postal Service.

Title 47—Telecommunication

CHAPTER I—FEDERAL COMMUNICATIONS COMMISSION

PART 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

Editorial Amendments

AGENCY: Federal Communications Commission.

ACTION: Final rule (editorial amendments).

SUMMARY: The Federal Communications Commission amends its general rules and regulations relating to frequency allocations and radio treaty matters. The amendments are editorial in nature and are necessary to reflect amendments made to other regulations and which were inadvertently omitted at the time.

EFFECTIVE DATE: September 22, 1978

ADDRESS: Federal Communications Commission, 2025 M Street NW., Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Fred Thomas/George Sarver, Office of Chief Engineer, 202-632-6350.

SUPPLEMENTARY INFORMATION:

Adopted: September 7, 1978.

Released: September 11, 1978.

In the matter of editorial amendments to part 2 of the Commission's rules and regulations.

1. Amendment of §§ 2.1 and 2.106 of the Commission's rules is necessary to reflect amendments to §§ 74.602, 78.5 and 78.18 of the rules, adopted in Docket Nos. 15586, 16424, and 20539. The § 2.106 amendments were inadvertently omitted in the Commission's orders in those dockets.

2. Accordingly, *It is ordered,* pursuant to authority contained in sections 4(i), 5(d) and 303(r) of the Communications Act of 1934, as amended, that effective September 22, 1978, §§ 2.1 and 2.106 of the rules are amended as set forth in the appendix. Because the amendments are editorial in nature, the prior notice and effective date provisions of the Administrative Procedure Act, 5 U.S.C. 553, do not apply.

FEDERAL COMMUNICATIONS COMMISSION,
RICHARD D. LICHWARDT,
Executive Director.

APPENDIX

In Part 2 of Chapter I of Title 47 of the Code of Federal Regulations, §§ 2.1 and 2.106 are amended as follows:

1. In § 2.1 the definitions for the cable television relay service and the cable television relay service stations are amended to read as follows:

§ 2.1 Definitions.

• • • • • •

Cable Television Relay Service (CARS). A fixed mobile service the stations of which are used for the transmission of television and related audio signals, signals of standard and FM broadcast stations, signals of instructional television fixed stations, and cablecasting from the point of reception to a terminal point from which the signals are distributed to the public.

Cable Television Relay Service Station. A fixed or mobile station in the cable television relay service.

• • • • • •

2. Further § 2.1 is amended by adding in alphabetical order the following definition for cable television relay service pickup station:

§ 2.1 Definition.

• • • • • •

Cable Television Relay Service Pickup Station. A land mobile CARS station used for the transmission of television signals and related communications from the scenes of events to cable television studios or headends.

• • • • • •

§ 2.106 [Amended.]

3. Section 2.106, of the table of frequency allocations, is amended by deleting footnote designator NG11 in the bands 1990-2110 MHz, 6875-7125 MHz and 12.95-13.2 GHz, by deleting the text of footnote NG11 following the table, by amending the text of footnote NG53, by adding new footnote designator NG118 in bands 1990-2110 MHz, 6875-7125 MHz, 12.7-12.75 GHz, 12.75-12.95 GHz and 12.95-13.2 GHz, by adding in proper numerical sequence the text of footnote NG118 following the table, by adding "Television intercity relay" as a primary class of station to the bands 1990-2110 MHz, 6875-7125 MHz and 12.95-13.2 GHz and by changing "community antenna relay" to "cable television relay" in the 12.7-12.75 and 12.75-12.95 band, as shown below:

• • • • • •

Band (MHz) 7	Service 8	Class of station 9
1990-2110 (NG118)	• • •	Television pickup. Television STL. Television intercity relay.
• • • • •		
6875-7125 (NG118)	• • •	Space. Television pickup. Television STL. Television intercity relay.

• • • • • •

Band (GHz) 7	Service 8	Class of station 9
12.7-12.75	• • •	Cable television relay. (NG53) Earth. Television intercity relay. Television pickup. (NG53) Television STL.
12.75-12.95 (NG118)	• • •	Cable television relay. (NG53) Television intercity relay. Television pickup. (NG53) Television STL.
12.95-13.2 (NG118)	•••	Television intercity relay. Television pickup. Television STL.

• • • • • •

NG53. In the band 12.7-12.95 GHz television pickup stations and CARS pickup sta-

tions shall be assigned channels on a coequal basis and shall operate on a secondary basis to stations operating in accordance with the Table of Frequency Allocations.

[6712-01]

PART 87—AVIATION SERVICES

Editorial Amendments Deleting Obsolete Dates and Provisions in Part 87 of the rules

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Federal Communications Commission amends its regulations relating to aviation services by deleting obsolete dates and provisions which are no longer applicable. The amendments are editorial in nature and the effect is to update the current regulations.

EFFECTIVE DATE: September 26, 1978.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554

FOR FURTHER INFORMATION CONTACT:

Kemp J. Beaty, Safety and Special Radio Services Bureau, 202-632-7197.

SUPPLEMENTARY INFORMATION:

In the matter of editorial amendment to delete obsolete dates and provisions in Part 87 of the Commission's rules; Order.

Adopted: September 11, 1978.

Released: September 12, 1978.

1. Sections 87.295(c) and 87.331(g) of our rules contain dates that have passed and are no longer applicable to our rules. Originally these dates "grandfathered" certain practices to allow for an orderly change from one procedure to another.

2. Section 87.77(d)(6) contains a provision regarding the type acceptance of transmitters in the 10550-10680 MHz band. This section exempted certain transmitters in use prior to July 20, 1962 from type acceptance requirements. Since the aviation services have no current authorizations in the 10550-10680 MHz band, this section is no longer needed in our rules. Any new station must be equipped with a type accepted transmitter.

3. We are deleting these obsolete dates and sections from our rules. Therefore, under the authority of sections 4(i) and 303(c) and (r) of the Communications Act of 1934, as amended, and § 0.231(d) of the Commission's rules, we are amending §§ 87.77(d)(6), 87.295(c) and 87.331(g) as shown below. Since this amendment is editorial in nature, the public notice, procedure and effective date provisions of the Administrative Procedure Act, 5 U.S.C. 553, are not applicable.

4. Regarding questions on matters covered in this document contact Kemp J. Beaty, telephone 202-632-7197.

5. In view of the above, *it is ordered*, That the rule amendment set forth below is adopted effective September 26, 1978.

FEDERAL COMMUNICATIONS COMMISSION,
R. D. LICHTWARDT,
Executive Director.

Part 87 of Chapter I of Title 47 of the Code of Federal Regulations is amended to read as follows:

1. In § 87.77, paragraph (d)(6) is deleted and designated [Reserved].

§ 87.77 Acceptability of transmitters for licensing.

• • • • •

(d) • • •

(6) [Reserved]

• • • • •

2. In § 87.295, paragraph (c) is amended to read as follows:

§ 87.295 Continental U.S. (excluding Alaska).

• • • • •

(c) A telecommunications system of interconnected aeronautical enroute stations which provides communications over an area of air route(s) may employ the offset carrier technique. The use of the offset carrier technique is limited to discrete VHF Carrier frequencies grounded around a frequency listed in paragraph (b) of this section. The carrier frequencies of the individual transmitters of such systems shall not be offset with respect to the authorized frequency by more than ±8 kHz. The tolerance set forth in § 87.65 for transmitters first authorized after January 1, 1974, shall be applicable to the offset carrier frequency when employed. Prior to the use of offset techniques, the Commission must be notified by letter as to the precise offset from the authorized frequency.

3. § 87.331, paragraph (g), footnotes (2) and (3) are amended to read as follows:

§ 87.331 Frequencies available.

• • • • •

(g) • • •

[2]This frequency is available only to stations used in itinerant operations which require that the station be transferred temporarily from time to time to various locations.

[3]Assignments for ground mobile operations on these frequencies will be limited to an area within a 200 mile radius of an associated flight test station at a fixed point.

• • • • •

[FR Doc. 78-26291 Filed 9-18-78; 8:45 am]

[6712-01]

PART 87—AVIATION SERVICES

Editorial Amendments Concerning Availability of Frequencies

AGENCY: Federal Communications Commission.

ACTION: Order.

SUMMARY: We are amending our rules concerning aircraft stations to indicate the availability of certain maritime mobile VHF frequencies for communications between ship and aircraft. Our rules, concerning ships, were previously amended to permit these communications and our aircraft rules should indicate this availability. This action will accomplish the amendment.

EFFECTIVE DATE: September 28, 1978.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Kemp J. Beaty, Safety and Special Radio Services Bureau, 202-632-7197.

SUPPLEMENTARY INFORMATION:

ORDER

Adopted: September 13, 1978.

Released: September 13, 1978.

In the matter of editorial amendment of § 87.183 of the Commission's rules.

1. Part 83 (stations on shipboard in the maritime services) of our rules contains a provision that permits aircraft to use certain maritime mobile VHF frequencies (§ 83.351(b)(76)). However, this provision is not included in part 87 (aviation services).

2. We are amending § 87.183(j) to reflect the availability of these frequencies and the conditions applicable to the use of maritime mobile VHF frequencies by aircraft. Therefore, under the authority of sections 4(i) and 303(c) and (r) of the Communications Act of 1934, as amended, and § 0.231(d) of the Commission's rules, we are amending § 87.183(j) as shown below. Since this amendment is editorial in nature, the public notice, procedure, and effective date provisions of 5 U.S.C. 553 do not apply.

3. Regarding questions on matters covered in this document contact Kemp J. Beaty, telephone 202-632-7197.

4. In view of the above, *it is ordered*, That the rule amendment set forth below is adopted effective September 28, 1978.

(Secs. 4, 303, 48 Stat., as amended, 1066, 1082; 47 U.S.C. 154, 303.)

FEDERAL COMMUNICATIONS COMMISSION,
R. D. LICHTWARDT,
Executive Director.

Part 87 of chapter I of title 47 of the Code of Federal Regulations is amended to read as follows:

In § 87.183, paragraph (j)(3) is added to read as follows:

§ 87.183 Frequencies available.

• • • • •

(j) • • •

(3) The frequencies 156.3, 156.375, 156.4, 156.425, 156.450, 156.525, 156.625, 156.8 and 156.9 MHz may be used by aircraft stations to communicate with ship stations under these conditions:

(i) The altitude of aircraft stations shall not exceed 1000 feet, except for reconnaissance aircraft participating in icebreaking operations where an altitude of 1500 feet is allowed;

(ii) The mean power of aircraft station transmitters shall not exceed five watts; however, a power of one watt or less shall be used to the maximum extent possible;

(iii) Aircraft stations shall use intership frequencies only;

(iv) Communications of an aircraft station shall be brief and limited to operations in which stations of the maritime mobile service are primarily involved and where direct communications between the aircraft and ship or coast station is required;

(v) The frequency 156.3 MHz may be used by aircraft stations for safety purposes only and the frequency 156.8 MHz may be used for distress, safety and calling purposes only.

[Docket No. 20846]

PART 89—PUBLIC SAFETY RADIO SERVICES

Prescribing Policies and Regulations To Govern Interconnection of Private Land Mobile Radio Systems With the Public, Switched, Telephone Network; Correction

AGENCY: Federal Communications Commission.

ACTION: Final rule; corrections.

SUMMARY: The Federal Communications Commission corrects a final rule relating to the interconnection of private land mobile radio systems with the public, switched, telephone network published at 43 FR 38396, August 28, 1978. The correction adds a provision relating to reporting requirements which are contained in part 89 and General Accounting Office clearance and effectiveness.

EFFECTIVE DATE: October 16, 1978.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

John B. Letterman, Industrial and Public Safety Rules Division, Federal Communications Commission, Washington, D.C. 20554, telephone 202-632-6497.

In the matter of amendment of parts 89, 91, 93, and 95 (General Mobile Radio Service, only) of the Commission's rules to prescribe policies and regulations to govern interconnection of private land mobile radio systems with the public, switched, telephone network; correction.

Released: September 12, 1978.

The first report and order in docket No. 20846 (FCC 78-622), adopted August 17, 1978, and released August 23, 1978 (43 FR 38396, August 28, 1978), is corrected to read as follows:

1. On page 38403, first column, paragraph 60 is corrected to read:

"60. Accordingly, *it is ordered*, effective October 16, 1978, That Parts 89, 91, 93, and 95 of the Rules are amended as shown in Appendix B, attached hereto. The reporting requirement specified in Section 89.951(e) is adopted subject to GAO clearance and unless advised to the contrary will be effective November 15, 1978. The authority for this action is found in Sections 4(i) and 303 of the Communications Act of 1934, as amended."

2. On page 38404, third column, in § 89.907(b), the third line, is corrected to read: "by private or leased wire line or fixed".

3. On page 38406, first column, in § 89.953, the third line, is corrected to read: "complished either manually, by a con-".

Title 49—Transportation

CHAPTER VI—URBAN MASS TRANSPORTATION ADMINISTRATION, DEPARTMENT OF TRANSPORTATION

PART 609—TRANSPORTATION FOR ELDERLY AND HANDICAPPED PERSONS

Amendment To Permit Ramp or Lift at Front Door

AGENCY: Urban Mass Transportation Administration, Department of Transportation.

ACTION: Final rule.

SUMMARY: New, standard, full-sized urban transit buses ordered with financial assistance from the Urban Mass Transportation Administration (UMTA) after September 30, 1979, must, in accordance with UMTA regulation, be procured by using the Transbus Procurement Requirements bid package. The technical specifications section of that package previously required, among other features, a mandatory front door ramp for boarding and exiting. The specification has been changed to require either a front door ramp or a front door lift. This amendment revises the existing UMTA regulation to reflect this change to the specifications. The preamble to this regulation also announces that the Transbus technical specifications will require a tandem rear axle and that, at a later date, the September 30, 1979, mandate date will probably have to be extended.

EFFECTIVE DATE: This amendment is effective September 14, 1978.

FOR FURTHER INFORMATION CONTACT:

Charles J. Daniels, Chief, Bus Technology Development Program (UTD-21), Urban Mass Transporta-

tion Administration, Department of Transportation, Washington, D.C. 20590, telephone 202-426-4035.

larger tires, wheels, and power transmission components that would be used with a single rear axle, in contested bus manufacturers will have the opportunity to compete for contracts.

The Transbus specification has therefore been revised to provide for a purchaser-specified choice, to be indi-

§ 609.15 Buses.

(a) Effective with procurement solicitations containing UMTA-approved

tion Administration, Department of Transportation, Washington, D.C. 20590, telephone 202-426-4035.

SUPPLEMENTAL INFORMATION: The attorney-drafter of this regulation is Michael S. Bates, Office of UMTA Chief Counsel.

BACKGROUND

On May 19, 1977, Secretary of Transportation Brock Adams announced his decision to mandate the "Transbus." Transbus is the result of a major Urban Mass Transportation Administration (UMTA) research project to develop an improved, low floor, transit bus that would attract mass ridership, be accessible to those elderly and handicapped persons for whom the high floor and steps of current buses provide serious obstacles, and encourage continued competition among the manufacturers of transit buses. The mandate requires the use of the Transbus Procurement Requirements bid document for all federally assisted procurements of new, standard, full-sized urban transit buses advertised after September 30, 1979. In accordance with the Secretary's decision statement, the complete Transbus Procurement Requirements bid document was issued by UMTA in June 1977.

On September 9, 1977, UMTA's regulations on transportation for elderly and handicapped persons were amended to reflect the Transbus mandate (42 FR 48339, September 23, 1977).

The mandate specifically applied only to federally assisted bus procurements advertised after September 30, 1979. However, UMTA determined that the best method of implementing the mandate was to encourage voluntary Transbus procurements well in advance of that date.

In preparation for the first procurement, UMTA undertook to refine the Transbus Procurement Requirements document in ways that would make timely delivery more likely or improve the bus but would not compromise the basic requirements of the mandate. On March 21, 1978, UMTA published a notice (43 FR 11779) which invited comments on a proposed revision of the original June 1977 specification.

REAFFIRMATION OF TANDEM REAR AXLE

The March 1978 specifications proposed a change from the June 1977 specifications to require a single rear axle instead of a tandem rear axle. It was hoped that this suggested change would reduce costs and make the bus available earlier without compromising the major features of the Transbus mandate or causing significant problems in the design of the bus.

A variety of comments on the proposed single rear axle Transbus specifications was received. Because of the larger tires, wheels, and power transmission components that would be used with a single rear axle, in conjunction with the required low (22 inch) floor at the front door, a sloped interior floor (either a single slope or a double slope), would result. Many resisted the single slope floor version because of the higher rear entrance with an extra interior step that would result. The double slope version, which was generally preferred by transit operators, would not have had the high rear entrance problem, but it would require major redesign by manufacturers and could not be achieved on a schedule significantly shorter than the tandem rear axle bus.

In addition, it was likely that the exterior of the single rear axle bus would be higher in the rear than in the front, and at least some of the inward-facing, longitudinal seats over the forward wheel-wells would be somewhat higher from the floor than standard, again because of the larger tires in conjunction with the low floor at the front door.

Finally, transit operators and some manufacturers expressed concern that a single rear axle Transbus would exceed Federal and many State and local axle weight limits.

UMTA believes that the possibilities that the single rear axle approach seemed to offer in terms of earlier availability, proven components, and lower costs justified the time and effort of proposing such a design for comment. However, in view of what has been learned through the public comment process, we firmly believe that the shortcomings of the single rear axle design would make it an unsatisfactory, interim approach.

As a result, UMTA is convinced that the original tandem rear axle requirement should not be changed. Therefore, the Transbus Procurement Requirements document, which UMTA is releasing for use in the first procurement provides for the original tandem rear axle requirement.

EFFECTIVE DATE OF THE MANDATE

Doubt remains over the actual time required by manfacturers to produce Transbus. Two bus manufacturers have informed us that they do not now believe they can actually begin delivery of Transbuses by early 1981 as had originally been estimated. UMTA believes that the best method at this time to resolve these doubts is to conduct a procurement within the very near future which will require firm bids and firm delivery dates.

Until this process has been completed and firm delivery dates established, the current mandate date of September 30, 1979 will be retained. UMTA also intends to encourge additional early procurements so that all interested bus manufacturers will have the opportunity to compete for contracts.

HANDICAPPED ACCESSIBILITY FEATURES

As a result to the Transbus research and development program in 1976, the recommended Transbus specification permitted either a front door ramp or a door lift for Transbus. A strong preference for the ramp expressed by representatives of the handicapped and elderly at the Department's March 15, 1977 Transbus hearing and in written comments to the docket, as well as the perceived advantages of the ramp over the lift, convinced the Secretary to require a front door ramp in the Transbus mandate in May of 1977. The September 1977 revision of the UMTA regulation, 49 CFR 609.15 (42 FR 48339, September 23, 1977), to reflect the Secretary's mandate referenced the mandatory ramp provision of that mandate.

As a result of public review of the June 1977 and March 1978 versions of the Transbus Procurement Requirements, the Transbus specification has undergone the most thorough review—by way of comments, critique, and suggestions by transit operators, manufacturers, groups representing the elderly and handicapped, and other interested members of the public—ever afforded a bus specification. Comments received as part of this process, including some received as formal comments to the UMTA docket in response to the March 21, 1978 FEDERAL REGISTER invitation, have raised questions about the desirability of the ramp in certain cases. Many have, for example, raised questions regarding the desirability of a ramp in communities with few curbs. In addition, a coalition of 13 organizations of the handicapped and elderly with an active membership of over 5 million has issued a paper supporting the incorporation into the specifications of a local option for a front door lift or ramp. Additionally, wheelchair lift technology appears to be maturing, and improvements can be expected to continue over the next few years. Thus it can be anticipated that both ramps and lifts will be viable options when the first Transbuses are delivered.

After examining the comments and developments described above, we are now persuaded that the ramp and the lift should be allowed as alternatives by local choice for the front entrance. The low floor design of Transbus makes the ramp approach possible and the lift approach simpler. The Department continues to believe that the ramp will prove to be superior in most situations, but feels it appropriate to defer to local choice to accommodate varying needs and circumstances.

The Transbus specification has therefore been revised to provide for a purchaser-specified choice, to be indicated in the bid request document, of either a ramp or a lift at the front entrance. The following amendment to our existing regulation reflects that change in the specification.

Accordingly, 49 CFR 609.15(a) is revised to read as set forth below.

Issued in Washington, D.C. on September 14, 1978.

RICHARD S. PAGE,
Urban Mass Transportation Administrator.

§ 609.15 Buses.

(a) Effective with procurement solicitations containing UMTA-approved specifications issued after September 30, 1979, UMTA grantees may procure new, standard, full-size urban transit buses only if the procurement solicitation utilizes UMTA's bid package entitled "Transbus Procurement Requirements", which requires a stationary floor height of not more than 22 inches, an effective floor height including a kneeling feature of not more than 18 inches, and a front door ramp or front door lift for boarding and exiting.

Agricultural Marketing Service

[7 CFR Part 1004]

[Docket No. AO-160-A55]

MILK IN THE MIDDLE ATLANTIC MARKETING AREA

Hearing on Proposed Amendments to Tentative Marketing Agreement and Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Public hearing on proposed rulemaking.

SUMMARY: The hearing is being held to consider industry proposals to amend certain provisions of the Middle Atlantic milk order. The proposed changes would permit a federation of cooperative associations to operate a pool reserve processing plant, reduce the pooling requirements for both distributing plants and reserve processing plants, and relax diversion provisions. Another proposal would require regulated handlers who buy certain milk from another Federal order market to pay not less than the applicable Middle Atlantic order prices for the milk. Proponents contend that the proposed changes are needed to reflect changed supply-demand conditions and methods of handling the market's reserve milk supplies and to assure orderly milk marketing in the area.

DATE: October 3, 1978.

ADDRESS: Holiday Inn—Center City, 1800 Market Street, Philadelphia, 19103.

FOR FURTHER INFORMATION CONTACT:

Clayton H. Plumb, Marketing Specialist, Dairy Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250, 202-447-6273.

SUPPLEMENTAL INFORMATION: Notice is hereby given of a public hearing to be held at the Holiday Inn—Center City, 1800 Market Street, Philadelphia, Pa. 19103, beginning at 9:30 a.m., on October 3, 1978, with respect to proposed amendments to the tentative marketing agreement and to the order, regulating the handling of milk in the Middle Atlantic marketing area.

The hearing is called pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900).

The purpose of the hearing is to receive evidence with respect to the economic and marketing conditions which relate to the proposed amendments, hereinafter set forth, and any appropriate modifications thereof, to the tentative marketing agreement and to the order.

Evidence also will be taken to determine whether emergency marketing conditions exist that would warrant omission of a recommended decision under the rules of practice and procedure (CFR Part 900.12(d)) with respect to proposals 1 through 4.

The proposed amendments, set forth below, have not received the approval of the Secretary of Agriculture.

PROPOSED BY PENNMARVA DAIRYMEN'S FEDERATION, INC.

PROPOSAL NO. 1

Revise § 1004.7 (a) and (d) as follows:

§ 1004.7 Pool plant.

* * * * *

(a) A plant from which during the month a volume not less than 40 percent of its receipts described in paragraph (a) (1) or (2) of this section is disposed of as class I milk (except filled milk) and a volume not less than 15 percent of such receipts is disposed of as route disposition (other than as filled milk) in the marketing area:

* * * * *

(d) A reserve processing plant operated by a cooperative association or federation of cooperative associations at which milk from dairy farmers or member cooperatives is received if the total of fluid milk products (except filled milk) transferred from such federation or cooperative association plant(s) to, and the milk of member cooperative or member producers physically received at pool plants pursuant to § 1004.7(a) is not less than 40 percent of the total milk of members of the federation or of member producers during the month: *Provided,* That in the case of a cooperative association that owns and operates both a reserve processing plant and a pool plant pursuant to § 1004.7(a), the provisions of this paragraph shall have been met so long as the volume of the cooperative's member milk pooled at the reserve processing plant does not exceed the volume of sales of class I milk (except filled milk) from the cooperative's pool distributing plant, plus the milk of member producers received directly at pool plants pursuant to § 1004.7(a) of other handlers during the month; *And provided further,* That a cooperative or federation of cooperatives operating a pool reserve processing plant qualified pursuant to this paragraph shall notify the market administrator each month, at the time of filing reports pursuant to § 1004.30 in the detail prescribed by the market administrator, with respect to any receipts from member dairy farmers delivering to such plant not meeting the health requirements for disposition as fluid milk in the marketing area.

* * * * *

PROPOSAL NO. 2

Establish a § 1004.19 as follows:

§ 1004.19 Federation.

Federation means a cooperative formed by two or more cooperative agricultural associations and duly incorporated under the laws of a State.

PROPOSAL NO. 3

Revise the following provisions to require that regulated handlers pay not less than Middle Atlantic order minimum prices for milk received by transfer from a plant pooled under another Federal order by a cooperative association.

§ 1004.73 [Amended]

(a) In § 1004.73(c), after the words "pool plant" add the following: "under this part or any other Federal Order".

§ 1004.79 [Amended]

(b) In § 1004.79, after the words "producer milk" add the following: "or milk from a cooperative association pooled under another Federal Order and".

(c) In § 1004.79, after the words "1004.9(c)" add the following: "or under another Federal Order".

PROPOSED BY MICHAELS DAIRIES, INC.

PROPOSAL NO. 4

§ 1004.12 [Amended]

Reduce the limits on diversions to nonpool plants by amending § 1004.12(d) as follows:

Place a period after the words "nonpool plant", and delete the remainder of § 1004.12(d) including subsections (1) and (2) in their entirety.

PROPOSED BY THE DAIRY DIVISION, AGRICULTURAL MARKETING SERVICE

PROPOSAL NO. 5

Make such changes as may be necessary to make the entire marketing agreement and the order conform with any amendments thereto that may result from this hearing.

Copies of this notice of hearing and the order may be procured from the Market Administrator, P.O. Box 710, Alexandria, Va. 22313, or from the Hearing Clerk, Room 1077, South Building, U.S. Department of Agriculture, Washington, D.C. 20250, or may be there inspected.

From the time that a hearing notice is issued and until the issuance of a final decision in a proceeding, Department employees involved in the decisional process are prohibited from discussing the merits of the hearing issues on an ex parte basis with any person having an interest in the proceeding. For this particular proceeding, the prohibition applies to employees in the following organizational units:

Office of the Secretary of Agriculture.
Office of the Administrator, Agricultural Marketing Service.
Office of the General Counsel.
Dairy Division, Agricultural Marketing Service (Washington office only).
Office of the Market Administrator, Middle Atlantic Marketing Area.

Procedural matters are not subject to the above prohibition and may be discussed at any time.

Signed at Washington, D.C., on September 14, 1978.

WILLIAM T. MANLEY,
Deputy Administrator,
Marketing Program Operations.

[FR Doc. 78-26283 Filed 9-18-78; 8:45 am]

Commodity Credit Corporation

[7 CFR Part 1464]

TOBACCO PLAN PROGRAM

Proposed 1978 Crop Grade Loan Rates—Burley Tobacco

AGENCY: Commodity Credit Corp., USDA.

ACTION: Proposed rule.

SUMMARY: The Commodity Credit Corp. (USDA), is considering the grade loan rates to be applied to the various grades of 1978-crop burley tobacco to provide price support as required by the Agricultural Act of 1949, as amended. You are invited to submit views and recommendations concerning the proposed rates.

DATES: Written comments must be received by November 3, 1978, in order to be sure of consideration.

ADDRESS: Send comments to Acting Director, Price Support and Loan Division, ASCS, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT:

R. P. Hieronymus, 202-447-6695.

SUPPLEMENTARY INFORMATION: Section 106 of the Agricultural Act of 1949, as amended, requires that the 1978 crop of burley tobacco be supported at the level of 124.7 cents per pound. It is anticipated that price support will be provided through loans to producer associations which will receive the tobacco from the producers and make price support advances to the producers for the tobacco received. The price support advances would be based on the proposed grade loan rates, which would average the required level of support when weighted by the estimated grade percentages, in accordance with section 403 of the act. The price support advances to producers would be the amounts determined by multiplying the pounds of each grade received by the respective grade loan rate less 1 cent per pound which the producers' associations are authorized to deduct and to apply against overhead costs.

PROPOSED RULE

Accordingly, it is proposed that 7 CFR Part 1464 be amended by revising § 1464.21 to read as follows effective for the 1978 crop of burley tobacco:

§ 1464.21 1978 Crop Burley Tobacco, type 31, loan schedule [1]

[1] The loan rates listed are applicable to burley tobacco which is tied in hands or packed in bales and which is eligible tobacco as defined by the regulations. Only the original producer is eligible to receive advances. Tobacco graded "U" (unsound), "W" (wet), "No-G" (no grade), or scrap will not be accepted. Cooperatives are authorized to deduct $1 per hundred pounds to apply against overhead costs.

Prior to making any determination, the Department will give consideration to comments, views and recommendations submitted in writing to the acting director, Price Support and Loan Division.

All written submission will be made available for public inspection from 8:15 a.m. to 4:45 p.m. Monday through Friday in Room 3741, South Building, USDA, 14th and Independence Avenue SW., Washington D.C., 20013.

NOTE: CCC has determined that this document does not contain a significant proposal having major economic consequences for the general economy requiring preparation of a regulatory analysis under Executive Order 12044.

Based on an assessment of the environmental impacts of the proposed action, it has also been determined that an Environmental Impact Statement need not be prepared since the proposals will have no significant effect on the quality of the human environment.

Signed at Washington, D.C. on September 12, 1978.

STEWART N. SMITH,
Acting Executive Vice President, Commodity Credit Corporation.

FEDERAL RESERVE SYSTEM

[12 CFR Part 226]

[Reg. Z; FC-0154]

COMPUTATION OF ANNUAL PERCENTAGE RATES FOR HUD/FHA SECTION 245 GRADUATED PAYMENT MORTGAGES

Proposed Official Staff Interpretation

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Proposed official staff interpretation.

SUMMARY: The Board is publishing for comment a proposed official staff interpretation approving the use of certain tables and accompanying instructions prepared by the U.S. Department of Housing and Urban Development to be used to compute the annual percentage rate on graduated payment mortgages under the HUD/FHA section 245 Experimental Financing Program. The proposed interpretation is intended to assist in computation of the annual percentage rate in such mortgages.

DATE: Comments must be received on or before October 19, 1978.

ADDRESS: Comments including reference to FC-0154 to Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

FOR FURTHER INFORMATION CONTACT:

Glenn E. Loney, Section Chief, Division of Consumer Affairs, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, 202-452-3867.

SUPPLEMENTARY INFORMATION: (1) In order to assist in the computation of annual percentage rates in graduated payment mortgages made under the HUD/FHA section 245 Experimental Financing Program, the Board staff proposes to approve use of tables and accompanying instructions prepared by the Actuarial Division of the U.S. Department of Housing and Urban Development.

The Board staff has reviewed the tables and instructions prepared by HUD and has determined that they yield accurate annual percentage rates. The staff would appreciate any comments the public might have on this matter, particularly regarding whether the instructions and tables, which are attached to the proposed official staff interpretation, are clear, understandable, and easy to use.

(2) To aid in the consideration of this matter, interested persons are invited to submit relevant data, comments or arguments. All such materials should be submitted in writing to Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, and should be received not later than October 19, 1978. Such information will be made available for inspection and copying upon request, except as provided in § 261.6(a) of the Board's Rules Regarding Availability of Information (12 CFR 261.6(a)).

(3) Pursuant to the authority granted in 15 U.S.C. 1640(f), the Board staff proposes to issue the following official staff interpretation:

MR. CHESTER C. FOSTER,
Acting Director, Actuarial Division, Department of Housing and Urban Development, , Washington, D.C.

DEAR MR. FOSTER: This letter is in response to our recent correspondence and conversations concerning proper computation of the annual percentage rate for graduated payment mortgages made under the Department of Housing and Urban Development's FHA Section 245 Experimental Financing Program. You have requested that the Board staff review and verify that the attached tables, when used in accordance with the attached instructions, yield an accurate annual percentage rate for purposes of Regulation Z.

The staff has reviewed the attached materials and concludes that, subject to the limitations set forth below, use of the tables in accordance with the instructions which accompany them results in an accurate annual percentage rate.

It should be noted that this approach may be used only when the first payment period, i.e., the period from the date on which the finance charge begins to accrue to the date of the first payment, falls within the ranges described in the minor irregularities provisions of Regulation Z, § 226.5(d) and Interpretation § 226.503. This means that the first payment must be due not more than 62 days after consummation of the loan in order for use of the tables to yield an accurate annual percentage rate. Use of this method also presumes that the monthly payments have been properly calculated using HUD Handbood 4240.2, dated October 27, 1976. Finally, we note that these tables and instructions cannot be used for graduated payment plans involving private mortgage insurance premiums, unless such insurance premiums are computed in the same manner as the FHA mortgage insurance premiums involved in the Section 245 Graduated Payment Mortgage program.

This is an official staff interpretation of Regulation Z, issued in accordance with § 226.1(d)(2) of the regulation, and it is strictly limited to the situation discussed herein.

Sincerely,

NATHANIEL E. BUTLER,
Associate Director.

Attachments.

Board of Governors of the Federal Reserve System, September 5, 1978.

GRIFFITH L. GARWOOD,
Deputy Secretary of the Board.

INSTRUCTIONS FOR COMPUTING ANNUAL PERCENTAGE RATES FOR COMPLIANCE WITH REGULATION Z

These instructions are to be used in conjunction with the attached annual percentage rate tables prepared by the Actuarial Division, Office of Housing and Urban Development. The tables are applicable only to FHA-insured 30-year level payment and graduated payment (section 245) loans where the annual mortgage insurance premium (MIP) is one-half of 1 percent.

The annual percentage rate (APR) computation in the tables assumes that the closing takes place exactly 1 month prior to the due date of the first payment. The following three examples show how to adjust the net proceeds when the date of closing is not 1 month prior to the first payment, in order to provide a more accurate APR.

NOTE.—For purposes of this computation, closings must be not more than 62 days before the due date of the first payment.

Example No. 1—*Closings held more than 1 month prior to due date of first payment and interim interest collected at closing.*

(a) Contract interest rate—8¾ percent.
(b) Loan type—GPM Plan V.
(c) Due date of first payment—June 1, 1978.
(d) Date of closing—April 10, 1978.
(e) Loan amount—$42,000.
(f) Prepaid finance charges—$2,311.44.
(g) Net proceeds (e-f)—$39,688.56.
(h) Initial mortgage interest (also included in (f))—$211.44.

Compute adjusted net proceeds per $100 of face.

$39,688.56 (net proceeds from (g)) plus $211.44 (initial mortgage interest from (h)) times 100, divided by $42,000 (loan amount from (e)) equals 95.000.

Find closest net proceeds per hundred from the APR table for 8¾ percent interest and column for GPM Plan V.

Closest net proceeds per hundred—95.036.

Read across for APR—9 80 percent.

Example No. 2—*Closing held more than 1 month prior to due date of first payment*

TABLES SHOWING ANNUAL PERCENTAGE RATES INCLUDING MORTGAGE INSURANCE PREMIUMS FOR FHA-INSURED LEVEL

Read across for APR—9 80 percent.

Example No. 2—*Closing held more than 1 month prior to due date of first payment and interim interest collected with the first payment or 1 month prior to first payment.*

(a) Contract interest rate—8½ percent.
(b) Loan type—GPM Plan III.
(c) Due date of first payment—May 1, 1978.
(d) Date of closing—March 17, 1978.
(e) Loan amount—$20,000
(f) Prepaid finance charges—$1,200.
(g) Net proceeds (e–f)—$18,800
(h) Initial mortgage interst (not included in (f))—$69 86.

Compute adjusted [1] net proceeds per $100 of face.

$18,800 (net proceeds from (g)) times 100 divided by $20,000 (loan amount from (e)) equals 94.00.

Find closest net proceeds per hundred from the APR table for 8½ percent interest and column for GPM Plan III.

Closest net proceeds per hundred—93 972.
Read across for APR 9 67 percent.

Example No. 3—*Closing is held less than 1 month prior to due date of first payment and interest from date 1 month prior to first payment date to the closing date is rebated to purchaser at closing.*

(a) Contract interest rate—8½ percent.
(b) Loan type—GPM Plan II.
(c) Due date of first payment -April 1, 1978.
(d) Date of closing—March 11, 1978.
(e) Loan amount– $35,000.
(f) Prepaid finance charges –$1,843.49.
(g) Net proceeds (e-f) $33,156 51
(h) Initial mortgage interest paid to bor rower at closing or credited to closing costs (Note: In this example, interest (h) has been deducted from prepaid charges (f)). -$81 51.

Compute adjusted net proceeds per $100 of face.

$33,156 51 (net proceeds from (g)) plus $81 51 (initial mortgate interest from (h)) times 100 divided by $35,000 (loan amount from (e)) equals 94.500.

Find closest net proceeds per hundred from the APR table for 8½ percent interest and column for GPM Plan II

Closest net proceeds per hundred 94.507
Read across for APR -9 62 percent.

[1] When interim mortgage interest is col lected (or rebated) at any time other than at closing, it has not been deducted from net proceeds (g) and therefore it is not necessary to add it to (or subtract it from, in the case of rebate) the net proceeds before determining the APR.

TABLES SHOWING ANNUAL PERCENTAGE RATES INCLUDING MORTGAGE INSURANCE PREMIUMS FOR FHA-INSURED LEVEL PAYMENT AND GRADUATED PAYMENT MORTGAGE AMORTIZATION PLANS AUTHORIZED UNDER SECTION 245

Description of the Graduated Payment Mortgage (GPM) Plans Shown in the Accompanying Tables

PLAN	DESCRIPTION
I	5 years of increasing payments at 2-1/2 percent each year
II	5 years of increasing payments at 5 percent each year
III	5 years of increasing payments at 7-1/2 percent each year
IV	10 years of increasing payments at 2 percent each year
V	10 years of increasing payments at 3 percent each year

SMALL BUSINESS ADMINISTRATION

[13 CFR Part 123]

DISASTER LOANS

Procedure for Requesting Disaster Declarations and Time Limit for Request

AGENCY: Small Business Administration.

ACTION: Proposed rule.

SUMMARY: SBA issued a regulation § 123.1(a) on March 31, 1977 (42 FR 17102), setting forth the criteria for an SBA disaster declaration. However, the procedure to be followed in requesting a declaration was not included. The procedure as set forth in this rule would be the same as has been followed except that a time limitation of 60 days after the occurence of the disaster in which the request will be accepted is included. Although requests for drought declarations must be submitted within 60 days of the occurrence of the drought, loans will not be processed for partial losses until the harvesting of the affected crop is completed in order that damage assessments will be accurate. Total losses will be processed when a disaster is declared.

DATE: Comments should be forwarded by November 20, 1978.

ADDRESS: Associate Administrator for Finance and Investment, Small Business Administration, 1441 L Street NW., Washington, D.C. 20416.

FOR FURTHER INFORMATION CONTACT:

Richard L. Wray, Financial Analyst, Small Business Administration, 1441 L Street NW., Washington, D.C. 20416, 202-653-6470.

SUPPLEMENTARY INFORMATION: SBA's statutory authority for making physical disaster loans is limited to repair and replacement of the damaged property and certain limited refinancing. See 42 U.S.C. 4451(a) (2) and (3). Delays in seeking a declaration based on a physical disaster deny victims of a disaster the speedy financial assistance intended by the program and also result in difficulty in determining the actual damage suffered for which SBA assistance may be available. This difficulty ensues because of repairs which may have been made, removal of damaged and destroyed property, and postdisaster damage which is not eligible for SBA assistance. These factors make it difficult for both the disaster victim and SBA to determine the legal amount of a loan. The agency has determined that a 60-day period from the occurrence of a disaster provides sufficient time for State authorities to survey the damage and request needed assistance from SBA, while the effects of the disaster will still be evident for loss verification by the SBA. In practice, most requests are presently received within 2 or 3 weeks of the disaster and the amendment will affect very few requests. The Administrator retains authority to make an exception to the 60-day requirement but does not expect to exercise it except in most unusual circumstances to avoid undue hardship to disaster victims. This regulation would also state the procedure which will continue to be followed in forwarding the request for a disaster declaration from the Governor of a State to the Administrator of SBA for decision. SBA has carefully considered the impact of the proposed regulation limiting the time within which SBA disasters may be requested. By insuring that early efforts are made to have a disaster declared, victims are more apt to receive assistance soon after the disaster when it is needed most rather than after months of delay. This will also help to prevent claims for nonrelated damage which cannot be covered by an SBA loan. No changes are being made in the criteria which must be met before SBA declares a disaster nor is any additional information being required from the Governors than is presently submitted with their requests. The proposed regulation will simply serve to advise the public of the necessity for determining the extent of damage and whether it meets SBA's disaster declaration criteria while the damage is ascertainable and help may be most urgently needed. If no request for a declaration is received, no disaster assistance is available from SBA either for physical or economic injury. In proposing this regulation, SBA recognizes that determining when a drought has reached sufficient proportions to constitute a disaster is a real problem. We have considered defining the occurrence to be when the moisture level in the soil reaches minus 2.5, the measurement used by the Presidential Drought Committee in 1977; we have considered using the dates during which it can be established that irreversible damage has been done to the growing crop and after which no amount of moisture will restore the crop; we have considered making no declarations until the normal harvest season is over so that the actual damage in the drought-stricken area can be ascertained along with the damage suffered by individual farmers. However, we believe that early determinations may be helpful to farmers in planning for remedial measures they may take and in arranging needed financing but the later the declaration is made, the more accurate damage assessments can be. We also recognize that Farmers Home Administration assistance on an individual basis is available and that SBA assistance may not be necessary by harvest season.

SBA is requesting comments on the alternatives suggested above or other factors which can be used in finalizing this regulation.

SBA intends, in those cases in which a disaster occurs over a period of several days, to use the first date to determine the interest rate for that disaster and the last date as the date on which the 60-day period for requesting a declaration begins to run.

The proposed regulation would have no effect on procedures utilized by the Federal Disaster Assistance Administration or the Department of Agriculture or SBA's operations in response to major or agricultural disasters.

The proposed regulation would also formalize existing instructions that applications for loans for partial crop losses will not be processed or approved until after the normal harvest season for that crop. Total losses will be processed will be processed as at present upon declaration of a disaster area. This makes SBA procedure comparable to procedures established by Farmers Home Adminstration (FmHA) and allows SBA to process a loan for the actual damage incurred rather than an estimated loss and eliminates paperwork for both the applicant and SBA. SBA disaster declarations will allow for the time between the incident date and the normal harvest date so that no eligible applicants will be denied the opportunity to apply for a loan.

SBA has determined that no ecomomic impact statement is required since these proposed regulations formalize existing procedures.

SBA will continue to evaluate the changes proposed and implemented to determine their effect on disaster loan recipients and make such changes as will promote efficiency in the delivery of program benefits.

Pursuant to the authority of sections 5(b)(6) (15 U.S.C. 634(b)) and 7(b)(1) (15 U.S.C. 636(b)) of the Small Business Act, as amended, part 123 of chapter I, title 13 of the Code of Federal Regulations would be amended as follows:

1. Section 123.1(a) would be amended by adding a new paragraph (3) as follows:

§ 123.1 General.

(a) *Disaster loan authority.* • • •

(3) When the Governor of a State desires SBA to issue a disaster declaration with respect to a physical disaster in that State, such request with supporting documentation shall be sent to the SBA Regional Office having jurisdiction over that State within 60 days of the occurrence of the disaster. The Regional Office will evaluate the request and forward it, with a recommendation for decline or approval to the Associate Administrator for Operations, who will forward it to the Administrator with a recommendation for approval or decline. The Administrator will take final action and if the request is approved, publish a notice of disaster declaration in the FEDERAL REGISTER. The Administrator may in case of undue hardship extend the filing time for requests.

2. Section 123.2(a)(2)(i) would be amended by adding a sentence to the existing paragraph so that the paragraph as amended would read as follows:

§ 123.2 Eligibility.

(a) • • •

(2) • • •

(i) Assistance may be extended for full or partial farm product losses (crop losses or dead livestock) which have been suffered as a result of a physical disaster. However, no loans will be approved for partial crop losses until the normal harvest season has passed in order that the actual loss will have been ascertained.

Extension of Time

AGENCY: Federal Trade Commission.

ACTION: Comment period extended for 61 days.

SUMMARY: The period of time for filing comments on the consent agreement has been extended for 61 days to November 15, 1978.

DATES: Comments must be received on or before November 15, 1978.

ADDRESS: Comments should be directed to: Office of the Secretary, Federal Trade Commission, Sixth Street and Pennsylvania Avenue NW., Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT:

William C. Erxleben, Director, Seattle Regional Office, Federal Trade Commission, 28th Floor, Federal Building, 915 Second Avenue, Seattle, Wash. 98174, 206-442-4655.

SUPPLEMENTARY INFORMATION: The consent agreement and analysis to aid public comment were published in the FEDERAL REGISTER on Wednesday, July 19, 1978, 43 FR 31022.

By letter dated September 1, 1978, the National Labor Relations Board has requested the Commission to extend the comment period to November 15, 1978, in order to facilitate filing of comments by the Board. Accordingly, notice is hereby given that the Commission has extended the comment period for an additional 61 days to and including November 15, 1978.

By direction of the Commission dated September 13, 1978.

CAROL M. THOMAS,
Secretary.

Social Security Administration

[20 CFR Part 404]

[Reg. No. 4]

FEDERAL OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE

Old-Age, Disability, Dependents' and Survivors' Insurance Benefits

AGENCY: Social Security Administration, HEW.

ACTION: Notice of Decision to Recodify Regulations.

SUMMARY: The Social Security Administration is planning to recodify into one subpart, its current regulations on the requirements for social security benefits under Title II of the Social Security Act. These regulations describe what is required to qualify for benefits, what the benefit rates are, when a person's right to benefits begins and ends, and how family relationship determinations are made. The recodified regulation will accomplish the following goals:

(1) Provide rules in one subpart that are clearer, simpler, and meet the Department's "Operation Common Sense" standards.

(2) Reflect in the regulations two changes in the program which have resulted from court decisions. One of these changes is that children born out of wedlock who have the right to inherit their parent's property under the inheritence laws of the State where the worker has permanent residence are assumed to meet the dependency requirement for child's benefits. The other change is that the divorced husband of a worker may receive husband's benefits.

(3) Include in the regulations to provisions of the Social Security Amendments of 1977. One of these provisions, effective for months after December 1978, permits widows and widowers who remarry at age 60 or later to continue to receive their full widow's or widower's benefit. The other provision also effective for months after December 1978, reduces from 20 years to 10 years, the time a divorced spouse must have been married to the worker to qualify for wife's, husband's, or widow's benefits.

This recodified regulation will affect Subparts D and L of 20 CFR Part 404. The Department has classified the recodified regulation as policy significant.

Patricia Foulk, Public Affairs Office, Office of Surface Mining, U.S. Department of the Interior, Washington, D.C. 20240; 202-343-4719.

SUPPLEMENTARY INFORMATION: The Office of Surface Mining will hold a public information briefing between the hours of 10 and 12 noon on Friday, September 22, 1978. The purpose of this public briefing is to highlight provisions in the proposed permanent program regulations, published in the FEDERAL REGISTER on September 18, 1978, and respond to questions which members of the audience may have concerning the format of the regulations and the procedures to be followed during the public comment period and preparation of the final regulations. Members of the press and all interested individuals are invited to attend. Walter N. Heine, P.E., Director, Office of Surface Mining, and members of his staff will be present to conduct the information briefing and respond to questions. A court reporter will be present to prepare a verbatim transcript of the briefing session for use by the Office in preparing final regulations.

This meeting is intended to assist interested members of the public at an early stage in the public comment period to understand the major concepts and the structural format of the proposed permanent program regulations. The Office hopes that as a result of this public briefing the public will be better able to understand and comment during the public comment period on the proposed permanent program regulations.

Dated: September 15, 1978.

PAUL L. REEVES,
Acting Director, Office of Surface Mining Reclamation and Enforcement.

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 52]

[FRL 970-2]

APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

Proposed Revision to the New Jersey State Implementation Plan

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency is proposing approval of two requests from the State of New Jersey to revise its air quality implementation plan. One request will be to incorporate into the implementation plan changes made by the State to its regulation, "Sulfur in Coal." The other request will be to incorporate into the implementation plan a Consent Judgment that requires that the Atlantic City Electric Co.'s Units No. 1 and No. 2 at its B.L. England Generating Station comply with the States applicable particulate emission requirements by 1981. With one exception, the changes in the State's sulfur-in-coal regulation only serve to reorganize and clarify the provisions of the regulation. The only substantive change made by the State has the effect of allowing an increase in the sulfur content of coal burned at the Atlantic City Electric Co. B.L. England Generating Station, Units 1 and 2, located in Cape May County.

DATES: Comments must be received on or before October 19, 1978.

ADDRESS: All comments should be addressed to: Eckardt C. Beck, Regional Administrator, U.S. Environmental Protection Agency, Region II Office, 26 Federal Plaza, New York, N.Y. 10007.

Copies of the proposal are available for public inspection during normal business hours at:

U.S. Environmental Protection Agency, Region II Office, Air Programs Branch, Room 908, 26 Federal Plaza, New York, N.Y. 10007.

U.S. Environmental Protection Agency, Central Docket Section, Room 2903 B Waterside Mall, 401 M Street SW., Washington, D.C. 20460.

New Jersey Department of Environmental Protection, John Fitch Plaza, P.O. Box 2807, Trenton, N.J. 08625.

FOR FURTHER INFORMATION CONTACT:

Wiliam S. Baker, Chief, Air Programs Branch, U.S. Environmental Protection Agency, Region II Office, 26 Federal Plaza, New York, N.Y. 10007, 212-264-2517.

SUPPLEMENTAL INFORMATION: On July 6, 1978 the State of New Jersey submitted to the Environmental Protection Agency (EPA) two proposed revisions to its State Implementation Plan (SIP). The State requested that certain changes it made to its regulation, N.J.A.C. 7:27-10.1 et seq., "Sulfur in Coal," and a Consent Judgment by which Units 1 and 2 of the Atlantic City Electric Co.'s B.L. England Generating Station would be required to comply with the State's applicable particulate emission requirements by 1981 be approved by IPA for incorporation into the SIP. A public hearing had been held on these two revisions by New Jersey on April 21, 1978.

With one exception, all of the changes to the New Jersey regulation made by the State only serve to reorganize and clarify its provisions. The one substantive change to the regulation appears at subsection 10.2(d) and concerns the sulfur content of bituminous coal which may be used in Atlantic, Cape May, Cumberland, and Ocean Counties, N.J. in steam or electric power generating facilities.

Bituminous coal burning facilities in this area of the State were limited to the use of coal with a maximum sulfur content by weight of 1.5 percent, as prescribed in subsection 10.2(c) of the previous regulation. However, existing steam or electric power facilities in this area may now be authorized by the New Jersey Department of Environmental Protection (NJDEP) to use, for a period not exceeding 5 years, bituminous coal with a maximum sulfur content of 3.5 percent, by weight. Such authorization is based on the following conditions which appear in subsection 10.2(d):

1. The person responsible for the use of bituminous coal demonstrates that bituminous coal, containing 1 percent sulfur or less by weight and suitable for use in the specific steam or electric power generating facility, is not reasonably available in sufficient quantities; and

2. Sulfur dioxide levels in the ambient atmosphere will at no time exceed or jeopardize the ambient air quality standards set forth in subchapter 13 of this chapter; and

3. The sulfur content of the coal burned by the facility represents the minimum sulfur content coal which can be used by the facility and is reasonably available in sufficient quantity; and

4. The person responsible for the use of bituminous coal agrees to such monitoring and reporting requirements as the Department may deem appropriate to insure compliance with the conditions set forth in this subsection; and

5. The person responsible for the use of bituminous coal submits to the Department for such authorization an application which considers and addresses as a minimum, in addition to the above, the following criteria:

i. Physical surroundings of the coal fired steam or electric power generating facility;

ii. Population density of the surrounding area;

iii. Dispersion characteristics of the source;

iv. Topography of the immediate vicinity;

v. Esthetic or nuisance effects.

The effect of this change will be to allow the Atlantic City Electric Co. to use 3.5 percent sulfur content bituminous coal at its B.L. England powerplant, units 1 and 2. This plant is located at Beesley's Point in Cape May County, N.J., an area which is currently attaining primary and secondary ambient air quality standards for both sulfur dioxide and particulate matter.

As a part of its implementation plan revision request, New Jersey submitted to EPA a study done to evaluate the effects on ambient air quality of the proposed changes to "Sulfur in Coal." Based on EPA's review of this report and other technical material provided by the State, EPA has determined that the proposed revision, to "Sulfur in Coal," if approved, will not result in the contravention of any applicable ambient air quality standard.

The Consent Judgment between the Atlantic City Electric Co., and NJDEP which involves a joint enforcement effort by NJDEP and EPA provides compliance schedules for particulate emissions from Units 1 and 2 at the B.L. England Generating Station. These compliance schedules require the company to issue purchase orders for control equipment for particulate emissions by September 1978 and ultimately to comply with applicable particulate emission requirements by 1981. At the time of the July 6, 1978 submittal the Consent Judgment had not been finally approved, but on August 7, 1978 the State submitted a copy of the fully executed Judgment.

EPA finds the compliance schedules in Consent Judgment to be approvable but points out that they are summary in nature. The specific detailed substance of these schedules is provided in the following three references which are available along with the copies of the proposal for public inspection:

1. Letter dated December 6, 1977 from J. L. Jacobs, Atlantic City Electric Co., to H. Wortreich, NJDEP.

2. Detailed compliance schedule and accompanying explanatory material provided by Atlantic City Electric Co. to representatives of EPA at a November 29, 1977 meeting attended by the parties.

3. Final report prepared by GCA for EPA entitled "ESECA Compliance Schedule Evaluation" and dated July 1978.

EPA also points out that after July 1, 1979 failure by the company to accomplish any increment by the date called for in the compliance schedules may be cause for the company to be subject to a noncompliance penalty under section 120 of the Clean Air Act.

In view of the preceding remarks concerning the air quality impact of the revised "Sulfur-in-Coal" regula-

planning services, in an otherwise approvable project which offers a broad range of services.

the Secretary to utilize his experience and expertise in making discretionary

a national standard or index. Of the comments recommending a specific

grant programs, and (2) national data are available with respect to individ-

V 43/182 SEP 1978 V 43

In view of the preceding remarks concerning the air quality impact of the revised "Sulfur-in-Coal" regulation and the acceptability of the compliance schedules in the Consent Judgment, EPA proposes to approve these revisions.

This notice is issued as required by section 110 of the Clean Air Act, as amended, to advise the public that comments may be submitted as to whether the proposed revisions to the New Jersey State Implementation Plan should be approved or disapproved. The Administrator's decision regarding approval or disapproval of these proposed plan revisions will be based on whether they meet the requirements of section 110(a)(2)(A)-(K) of the Clean Air Act and EPA regulations in 40 CFR part 51.

(Secs. 110 and 301 of the Clean Air Act, as amended (42 U.S.C. 7410, 7601).)

Dated: September 13, 1978.

ECKARDT C. BECK,
Regional Administrator,
Environmental Protection Agency.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Public Health Service

[42 CFR Part 59]

GRANTS FOR FAMILY PLANNING SERVICES

Proposed Rulemaking

AGENCY: Public Health Service, HEW.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Assistant Secretary for Health proposes changes in the regulation governing the award and administration of grants for family planning services. The proposed regulation, in fulfillment of statutory amendments, requires projects to offer natural family planning methods; raises the income levels below which individuals may receive services without charge; and assures local and regional entities that have been consolidated into larger projects, a voice in the decisionmaking of the consolidated grantee.

DATE: Comments must be received by November 3, 1978.

ADDRESSES: Written comments, preferably in triplicate, should be sent to the Director, Division of Policy Development, Bureau of Community Health Services, Health Services Administration, Room 6-17, 5600 Fishers Lane, Rockville, Md. 20857. All comments received in timely response to this notice will be considered and will be available for public inspection and copying at the above address on weekdays (Federal holidays excepted) between the hours of 8:30 a.m. and 5 p.m.

FURTHER INFORMATION CONTACT:

Mr. Samuel Taylor, Public Health Advisor, Office for Family Planning, Bureau of Community Health Services, Room 7-49, Parklawn Building, 5600 Fishers Lane, Rockville, Md. 20857, telephone 301-443-2430.

SUPPLEMENTARY INFORMATION: This Notice sets forth proposals for implementing the amendments to title X of the Public Health Service Act (42 U.S.C. 300 et seq.) for the administration of grants for family planning services. The statute, as amended, requires the Secretary to issue regulations to implement these amendments. On April 11, 1977, the Secretary published a Notice of Intent to issue proposed rules and invited public comments. Summaries of the substantive comments received in response to that Notice and proposed changes to the regulation are set forth below.

1. Pub. L. 94-63 amended section 1001(a) of the Public Health Service Act (42 U.S.C. 300) to require that the range of family planning methods offered by family planning projects include natural family planning methods.

Sixty-six comments were received regarding natural family planning services under title X of the Act. Most of the comments urged that the regulation be amended to permit direct grant assistance to organizations which offer only natural family planning methods. This suggestion was rejected as contrary to the statute.

The statutory amendment states that family planning projects "shall offer a broad range of acceptable and effective family planning methods (including natural family planning methods)." The amendment reinforces the original requirement in the Family Planning Services and Population Research Act of 1970 that each project offer comprehensive family planning services. Therefore, grants cannot be made to entities which propose to offer only one method or a limited scope of methods, regardless of whether the single method is natural family planning or a particular intervention type. This requirement is consistent with the legislative intent to enable persons to make informed choices on the methods which best suit their needs and are compatible with their personal beliefs.

It should be noted, however, that a facility or entity offering only natural family planning methods can receive assistance under title X by participating, as a provider of natural family planning services, in an otherwise approvable project which offers a broad range of services.

2. There were recommendations to omit the requirement for medical services (e.g., a physician's examination, laboratory services, and referral to other medical facilities when indicated) as a component when providing natural family planning services. The requirement that projects offer a broad range of family planning methods is designed to assure that an individual seeking services is given sufficient information to make an informed choice of method. Medical services are necessary to assure that each individual may be fully informed. The requirement for a medical examination and other appropriated medical services is, therefore, retained.

3. Several comments recommended revision of data reporting requirements for the natural family planning components of projects so that more accurate data regarding current use of such methods would be available. Requiring specific data elements is inappropriate in regulations; therefore, no change in the regulation is necessary.

4. Several comments recommended inclusion of a definition of "natural family planning methods." This recommendation was not accepted because it is felt that, for program implementation, the term is adequately understood, and a definition at the present time might prove to be unduly restrictive as research in this area makes new information available.

5. Section 1001(b) of the act, as amended, assures local and regional entities of the right to apply directly for title X grants, and requires the Secretary by regulation to "fully provide for and protect such right." The legislative history shows that the intent of this provision is to prevent "systematic" consolidation of grantees. As the Secretary does not intend to undertake further extensive consolidation, and the present regulation fully protects the right of local and regional entities to apply directly for such assistance, no regulatory revision is necessary to protect this right.

One respondent requested that the regulation contain specific evaluation and award criteria to fulfill the requirement that the Secretary "fully provide for and protect" the right of local or regional entities to apply for title X grants, and implied that the lack of more detailed grant review and evaluation criteria effectively diminishes the right to apply and fairly complete. The six review criteria set forth in the regulation include four contained in the statute. The criteria are constructed to provide an adequate standard by which to judge among competing applicants, and thus permit

the Secretary to utilize his experience and expertise in making discretionary judgments based on varying and competing circumstances and interests. Yet the criteria are sufficiently explicit to provide prospective applicants with guidance on the project elements which are significant in making funding decisions. Therefore the present criteria are being retained. The respondent also objected to the absence of an appeals mechanism for unsuccessful initial applicants. In accordance with Department policy, because title X grants are discretionary project grants, no appeals procedure is provided for unsuccessful initial applicants.

The legislative history of section 1001(b) of the act, as amended, shows the further intent to assure local and regional entities of the right to participate in consolidation decisions which would affect their operations, as well as to assure potential and existing subgrantees of the right to participate in the ongoing decisionmaking of their respective consolidated grantees. Views were solicited as to the need for additional requirements to assure such participation.

Most responses to this issue favored a general approach so as to permit flexibility in arrangements for securing appropriate participation. Therefore it is proposed to require documentation in applications that entities which are potential subgrantees have been given an opportunity to participate in consolidation decisions, and existing (or potential) subgrantees are to be given the opportunity to participate in the ongoing decisionmaking of their respective consolidated grantees.

6. Pub. L. 94-63 amended section 1006(c) of the act to require that the Secretary define the term "low-income family" so as to ensure that economic status will not be a deterrent to participation in the programs assisted under title X. By statute, low-income individuals are the priority group to receive family planning services and may not be charged for such services. The present regulatory definition places low income at fixed dollar levels, for example, $5,000 annual income for a family of four. The legislative history of the amendment shows that it was intended that the levels be raised to dollar amounts which are more appropriate in today's economy. To revise these dollar levels, it was proposed in the Notice of Intent (NOI) that one approach could be for the Secretary to tie the income cut-off to an annually revised national standard or index. Alternative proposals and comments were invited.

Twenty-four comments were received, the majority of which supported the approach of defining "low income" by trying an income cut-off to a national standard or index. Of the comments recommending a specific level, most favored using 150 percent of the income levels established by the Community Services Administration (CSA) Income Poverty Guidelines.

Several comments recommended use of 80 percent of a State's median income, an income criterion used under title XX of the Social Security Act; and one writer urged that the Bureau of Labor Statistics (BLS) income levels be used as the standard instead of the CSA data.

These latter proposals were not accepted. Defining "low income" as 80 percent of each State's median income represents levels significantly higher than 150 percent of the CSA levels, and, therefore would tend to dilute the statutory priority. Because of the statutory prohibition on charges, adopting such a level could result in having persons who are able to pay receive services without charge, thereby using scarce resources inappropriately. In addition, it should be noted that, under title XX, 80 percent of each State's median income is not set forth as a criterion for "low income" but rather, as a ceiling above which individuals must be charged. State title XX agencies are not prohibited from charging persons with annual incomes below this level, and several States do charge such individuals for family planning services. The BLS levels also are too high for the purpose of the title X program, and, unlike the availability of nationwide data with respect to the CSA levels, national data are not available on the number of persons with incomes below the BLS levels. Such information would be needed to assure that program resources are utilized effectively.

A recommendation to delete income eligibility requirements for family planning services in low-income areas was also rejected. The statute imposes the requirement that procedures be established to define "low income" so as to assure that low-income persons receive priority for services and receive services without charge.

The Secretary has therefore concluded that "low income" is appropriately defined as 150 percent of the CSA Income Poverty Guidelines for the purpose of implementing the title X program. Defining "low income" at the 150 percent level provides a reasonable cut-off to assure that economic status will not be a deterrent to participation in the program, and it represents a significant increase over the levels set forth in the present regulation. This appears to be the most feasible current approach because (1) it provides uniformity in the administration of the progran and is compatible with eligibility criteria for several other Public Health Service (PHS) grant programs, and (2) national data are available with respect to individuals at or below the 150 percent level.

It is recognized that all measures of poverty and "low income" have serious limitations, and adoption of the CSA Income Poverty Guidelines as an index for implementing the family planning program does not mean that this measure is regarded as superior; simply, it is considered the most suitable within the statutory framework and the aims of the program.

Several comments recommended that the income eligibility and priority levels of the various PHS programs be consolidated. The Department is sensitive to this concern and is striving to bring about more uniformity. The differing goals and statutory bases of the various programs, however, often preclude consolidation or uniformity.

7. Seventeen comments were received in regard to payment for services. Although several respondents recommended waiving fees for certain groups. such as unemancipated minors, students, and persons with excessive medical expenses, the majority recommended inclusion of general criteria for such waivers on the basis that a detailed listing could be burdensome and limit flexibility. This recommendation was accepted and the regulatory language has been revised to reflect a general approach rather than a detailed enumeration of specific economic or other circumstances which would constitute the basis for a waiver. For the purpose of the program, individuals who do not meet the established income cut-offs, but who are nevertheless unable to pay for family planning services, would be considered "low income" if their economic or other circumstances warrant such a determination (e.g., teenageers who do not have access to their parents' income would be considered "low income" on the basis of their own resources).

Several comments recommended that voluntary contributions from low-income patients be authorized. Although both the statute and the regulation prohibit the imposition of fees with regard to low-income familes, There are no restrictions on receiving voluntary contributions. Thus, no change in the regulation is necessary.

8. In the NOI, the Secretary proposed, as a matter of policy, to require grantee assurance, without exception, that family planning services be available without discrimination on the basis of age, sex, or marital status. The present regulation prohibits such discrimination except when grantees can receive a waiver by demonstrating "good cause" for such a waiver. Public views were solicited in the NOI as to what problems would be created if the

exception for "good cause" were eliminated.

unable, for good cause shown, to pay for family planning services.

out application of any discounts. Where the cost of services is to be re-

the Project Director or his designee on the project staff.

(2) Evidence that local and regional entities (including existing and poten-

ral to other medical facilities when medically indicated.

(7) Provision for social services relat-ed to family planning, including coun-

(12) A description of the standards and qualifications which will be required for personnel (including the project director) and facilities used in

exception for "good cause" were eliminated.

The majority of the respondents objected to removal of the exception with respect to age discrimination. It was felt that legal problems could be created for physicians practicing in States with laws requiring parental consent for a minor to receive such services. In view of this potential conflict, the Secretary has retained the present regulatory provision which prohibits discrimination on the basis of age but does authorize a waiver for "good cause."

9. Several comments recommended the inclusion of regulatory procedures for notifying State agencies of Federal grants to entities in their statewide areas, so that planning can be more effective in regard to the need for services. Current program policy reflects the applicability of Part I of Office of Management and Budget (OMB) Circular No. A-95 and Title XV of the Public Health Service Act (which relates to review and approval by appropriate health planning agencies at local and State levels), although title XV was enacted after the publication of the present regulation. The revised regulation states the applicability of OMB Circular No. A-95 and title XV to family planning grants administered under title X.

The Secretary proposes to amend 42 CFR Part 59 as set forth below.

NOTE.—The Department of Health, Education, and Welfare has determined that this document does not contain a major proposal requiring preparation of an Inflationary Impact Statement under Executive Order 11821 and OMB Circular A-107.

Dated: April 25, 1978.

JULIUS B. RICHMOND,
Assistant Secretary for Health.

Approved: September 11, 1978.

HALE CHAMPION,
Acting Secretary.

42 CFR Part 59 is proposed to be amended as follows:

1. Section 59.2(e) is revised to read as follows:

§ 59.2 Definitions.

* * * * *

(e) "Low-income family" means a social unit composed of one or more individuals living together as a household whose total annual income does not exceed 150 percent of the most recent applicable "CSA Income Poverty Guideline" issued by the Community Services Administration (45 CFR 1060.2), except that "low-income family" also includes members of families whose annual family income exceeds this amount but who, as determined by the project director, are unable, for good cause shown, to pay for family planning services.

* * * * *

§ 59.4 [Amended]

2. Section 59.4(c) is revised to read as follows:

* * * * *

(c) An applicant must indicate that prior to submission of the application, it has notified both the State and the Areawide A-95 Clearinghouse of its intent to apply for Federal assistance, in accordance with the requirements of OMB Circular No. A-95 Revised. Applications will not be formally reviewed without Clearinghouse comment or verification that no comments were made within the applicable period available to the Clearinghouses for comment.

* * * * *

3. Section 59.4 is amended by adding a new paragraph (d) to read as follows:

* * * * *

(d) An application must contain evidence that the applicable requirements of section 1513(e) of the Act relating to review and approval by the appropriate health planning agencies have been met.

4. Section 59.5 is revised to read as follows:

§ 59.5 Project requirements.

(a) An approvable application must contain the following:

(1) Assurances satisfactory to the Secretary that:

(i) Priority in the provision of services will be given to persons from low-income families; and

(ii) No charge will be made for services provided to any person from a low-income family except to the extent that payment will be made by a third party (including a Government agency) which is authorized or is under legal obligation to pay this charge. Charges will be made for services to persons other than those from low-income families in accordance with a schedule of discounts based on ability to pay, except that

(A) Charges to persons from families whose annual family income exceeds 250 percent of the CSA Income Poverty Guidelines will be made in accordance with a schedule of fees designed to recover the reasonable cost of providing services; and

(B) Where a third party (including a Government agency) is authorized or legally obligated to pay for services, effort will be made to obtain the appropriate third-party payments without application of any discounts. Where the cost of services is to be reimbursed under Title XIX or Title XX of the Social Security Act, a written agreement with the Title XIX or Title XX agency is required.

(iii) The project will not provide abortion as a method of family planning;

(iv) Acceptance by any individual of services provided by the project will be solely on a voluntary basis and no individual will be subjected to any coercion to receive services or to employ any particular method of family planning, and acceptance of services will not be a prerequisite to eligibility for, or receipt of, any other service or any other program of the applicant;[2] and

(v) Services will be made available in a manner which protects the dignity of the individual.

(2) Provisions for a broad range of acceptable and effective medically approved methods of family planning including natural family planning methods. (A facility or entity offering only natural family planning methods, or any other single method of family planning, can participate in a project as long as the entire project offers a broad range of family planning services.)

(b) In addition to the requirements of paragraph (a) of this section, an approved application must contain each of the following unless the Secretary determines that the applicant has established good cause for its omission:

(1) Assurances satisfactory to the Secretary that:

(i) Services will be made available without the imposition of any durational residency requirement or requirement that a physician has referred the patient;

(ii) Services will be made available without regard to religion, creed, age sex, parity, or marital status;

(iii) Family planning medical services will be performed under the direction of a physician with special training or experience in family planning; and

(iv) All services purchased for project participants will be authorized by

[2] Section 205 of Pub. L. 94-63 provides as follows:

"Any: (1) officer or employee of the United States, (2) officer or employee of any State, political subdivision of a State, or any other entity, which administers or supervises the administration of any program receiving Federal financial assistance, or (3) persons who receive, under any program receiving Federal assistance, compensation for services, who coerces or endeavors to coerce any person to undergo an abortion or sterilization procedure by threatening such person with the loss of, or disqualification for the receipt of, any benefit or service under a program receiving Federal financial assistance shall be fined not more than $1,000 or imprisoned for not more than one year, or both."

the Project Director or his designee on the project staff.

(2) Evidence that local and regional entities (including existing and potential subgrantees), which have previously provided or propose to provide family planning services to the area proposed to be served by the applicant, have been given an opportunity to participate to the maximum extent feasible in the development of the application to the extent that it relates to the consolidation of their service areas or health resources or would otherwise affect their operations.

(3) Provision for an opportunity for participation by existing or potential subgrantees to the maximum extent feasible in the ongoing policy decision-making of the project.

(4) Provisions of an opportunity for participation by persons broadly representative of all significant elements of the population to be served and by others in the community knowledgeable about the community's needs for family planning services, in the development, implementation, and evaluation of the project.

(5) Provision for preservice and in-service training for all project personnel.

(6) Provisions for medical services related to family planning, including physician's consultation, examination, prescription, and continuing supervision; laboratory examination; contraceptive supplies; and necessary referral to other medical facilities when medically indicated.

(7) Provision for social services related to family planning, including counseling, referral to and from other social and medical service agencies, and ancillary services which may be necessary to facilitate clinic attendance.

(8) Provision for diagnostic and treatment services for infertility.

(9) Provisions for coordination and use of referral arrangements with other providers of health care services, with local health and welfare departments, hospitals, voluntary agencies, and health services projects supported by other Federal programs.

(10) Provisions for informational and educational programs designed to achieve community understanding of the objective of the program, to inform the community of the availability of services and to promote continued participation in the project by persons to whom family planning services may be beneficial.

(11) In cases where the project will provide family planning services by contract or other similar arrangements with the actual provider of services, a plan which establishes rates and methods of payment for medical care. These payments must be made under agreements with a schedule of rates and payment procedures maintained by the grantee. The grantee must be prepared to prove that rates are reasonable and necessary.

(12) A description of the standards and qualifications which will be required for personnel (including the project director) and facilities used in carrying out the project.

5. Section 59.6(b) is revised to read as follows:

§ 59.6 Evaluation and grant awards.

* * * * *

(b)(1) The Secretary will determine the amount of any award on the basis of his determination of project costs (which shall be based on his estimate of the total costs necessary for the performance of the project) except that no grant may be made for a project for less than 90 percent of the project's costs as so determined, unless the grant is to be made for a project for which a grant was made under section 1001 of the Act for the fiscal year ending June 30, 1975, for less than 90 percent of its costs. In that case, the grant shall be made for a percentage of project costs which shall not be less than the percentage of costs for which the fiscal year 1975 was made.

(2) No grant may be made for an amount equal to 100 percent of the project's estimated costs.

TOBACCO INSPECTION; THOMAS B. HALL, JR., AND MARVIN E. INGE, JR.

Public Hearing Regarding Application

Notice is hereby given of a public hearing to be held in the Conference Room of the Agricultural Building, Commerce Street, Kenbridge, Va. 29344, beginning at 10 a.m., e.s.t., on October 26, 1978, upon the application of Mr. Thomas B. Hall, Jr., T/A Virginia Dark Fired Tobacco Growers' Marketing Association, Inc., Farmville, Va., and Mr. Marvin E. Inge, Jr., T/A Planters Warehouse, Blackstone, Va., for tobacco inspection and price support services. Such public hearing will be conducted and evidence received pursuant to the concurrent and identical policy statements and regulations governing the extension of tobacco inspection and price support services to new markets and to additional sales on designated markets (37 FR 24693, June 18, 1976).

Done at Washington, D.C., this 14th day of September 1978.

P. R. "BOBBY" SMITH,
Assistant Secretary for Marketing Services.

Forest Service

LUMBER PRICE INDEX TRENDS, PONDEROSA PINE

Final Policy

AGENCY: Forest Service, USDA.

ACTION: Final policy.

SUMMARY: This policy sets forth Forest Service procedures for the replacement of the current ponderosa pine index used for adjustment of contract rates in timber sale contracts with two new indices based on geographical areas.

FOR FURTHER INFORMATION CONTACT:

M. E. Chelstad or George M. Leonard, Timber Management Staff, Forest Service, USDA, P.O. Box 2417, Washington, D.C. 20013, 202-447-4051.

SUPPLEMENTARY INFORMATION: On July 13, 1978, the Chief, Forest Service, published a Notice of Intent (43 FR 30086) which set forth procedures for replacing the single Western Wood Products Association (WWPA) ponderosa pine index with two indices based on geographical areas. These indices are used by Government agencies in the appraisal of public timber and to adjust prices paid for timber under certain timber sale contracts.

DISCUSSION OF RESPONSES TO NOTICE: Respondents suggested that holders of existing contracts be given the option of retaining the current index or converting to the appropriate replacement index. Western Wood Products Association proposes to discontinue publication of the present index. When this index becomes unavailable, existing contract language authorizes substitution of an acceptable index.

These differentials are:

Twenty-four month average indices (weighted) second quarter calendar year 1977 through second quarter calendar year 1978.

	Board feet (thousands)	Per 1,000 board feet
Ponderosa pine (1971 basis)	4,506,129.847	$286.87
Ponderosa pine, Coast-North Inland (1975-78 basis)	3,870,577.587	286.40
Per 1,000 difference		−0.47
Ponderosa pine (1971 basis)	4,506,129.847	286.87
Ponderosa pine, Rocky Mountain (1975-78 basis)	604,993.392	234.98
Per 1,000 difference		−51.89
Ponderosa pine (1971 basis)	4,506,129.847	286.87
Whitewoods (1974-75 basis)	1,864,180.867	178.88
Per 1,000 difference		−107.99

IMPLEMENTATION OF REPLACEMENT INDICES: The formula to adjust present contract base indices for ponderosa pine is:

New Base Index=(weighted 24-month average for replacement index)−(weighted 24-month average current index)+(present contract base index).

Transition of present contracts to the appropriate new index will be made during the fourth quarter of 1978.

New sale offerings advertised after October 1, 1978, will use the appropriate new indices.

Publication of the Ponderosa Pine Index (1971 Basis) will be discontinued after September 30, 1978, because continued publication would provide misleading price trends at an unnecessary administrative expense.

Some respondents suggested that because the Regional Forester in Denver has decided that new timber sales on the Black Hills National Forest should utilize the WWPA Whitewoods Index, the replacement index for ponderosa pine on existing contracts there should be the WWPA Whitewoods Index. To provide consistency of application in the use of WWPA indices in the appraisal of timber and adjustment of prices paid for timber under certain existing contracts in the Black Hills appraisal zone, the Ponderosa Pine Index (1971 Basis) in the contracts may be replaced with the WWPA Whitewoods Index (1974-75 Basis).

It was suggested that the period of time selected to calibrate the index change give due consideration to any bias resulting from seasonal variances.

In the opinion of the Forest Service, new indices are satisfactory indicators of market price trends of lumber if appropriate changes are made in present contract base indices, so that the same stumpage rates result under the new basis as under the old basis over a representative changeover period. It has been determined that the 24-month period, June 1976 through June 1978 is appropriate to establish the differential for replacement indices in existing timber sale contracts. This 24-month period will properly alleviate any seasonal bias.

Holders of existing contracts that are subject to base index changes will be notified in writing of the change by the appropriate Forest Service official.

Dated: September 12, 1978.

JOHN L. MCGUIRE,
Chief, Forest Service.

Office of the Secretary

CITIZENS ADVISORY COMMITTEE ON EQUAL OPPORTUNITY

Intent To Establish

Notice is hereby given that the Secretary of Agriculture proposes to establish a Citizens Advisory Committee on Equal Opportunity. The Committee will provide an impartial review of the Department's efforts to promote equal opportunity and will recommend needed changes in the Department's rules, regulations and orders to assure discrimination-free activities.

The Secretary has determined that establishment of the Committee is necessary and in the public interest in connection with the duties imposed on the Department of Agriculture by law.

Comments of interested persons concerning the establishment of this Committee may be submitted to the Director, Office of Equal Opportunity, Room 247-E, Administration Building, U.S. Department of Agriculture, Washington, D.C. 20250, by October 4, 1978.

All written comments made pursuant to this notice will be available for public inspection at the above office during regular business hours.

JOAN S. WALLACE,
Assistant Secretary for Administration.

SEPTEMBER 13, 1978.

DEPARTMENT OF COMMERCE

Maritime Administration

[Docket No. S-603, Sub. 1]

Amendment to Applications

Notice is hereby given that the notice titled docket S-603 as published in the FEDERAL REGISTER on April 26, 1978 (43 FR 47856), is modified as follows to reflect an amendment dated August 25, 1978, filed on behalf of Suwannee River Finance, Inc., Suwannee River SPA Finance, Inc., and Suwannee River Phosphate Finance, Inc.:

The following language in the first paragraph of the notice of applications (docket No. S-603) is deleted:

• • • that will engage in the carriage of liquid phosphoric acid from ports on the east coast and gulf coast of the United States to destinations in the Union of Soviet Socialist Republics, directly or by transshipment, and the carriage of liquid and dry bulk cargoes in the foreign to foreign commerce or the U.S. import commerce on the return voyage in such ports in the United States • • •.

The following language is substituted in lieu of the deleted language:

• • • that will engage in the carriage of liquid and dry bulk cargoes in the export and import foreign commerce of the United States and between foreign ports • • •.

Interested parties may inspect this amendment to the applications described in docket No. S-603 in the Office of the Secretary, Maritime Subsidy Board, Room 3099-B, Department of Commerce Building, 14th and E Streets NW., Washington, D.C. 20230.

Any person, firm, or corporation having an interest in such application and who desires to offer views and comments thereon for consideration by the Maritime Subsidy Board should submit such views and comments in writing, in triplicate, to the Secretary, Maritime Subsidy Board, by the close of business on September 25, 1978. The Maritime Subsidy Board will consider such views and comments and take such actions with respect thereto as may be deemed appropriate.

(Catalog of Federal Domestic Assistance Program No. 11.504 Operating-Differential Subsidies (ODS).)

By order of the Maritime Subsidy Board.

Dated: September 13, 1978.

JAMES S. DAWSON, JR.,
Secretary.

[3510-15]

MARITIME APPROPRIATION AUTHORIZATION ACT FOR FISCAL YEAR 1979

Notice is hereby given the Pub. L. 95-298 (92 Stat. 339), the Maritime Appropriation Authorization Act for fiscal year 1979, provides as follows with regard to construction-differential and operating-differential subsidy:

SEC. 2. Funds are authorized to be appropriated without fiscal year limitation as the appropriation Act may provide for the use of the Department of Commerce, for the fiscal year 1979, as follows: (1) For acquisition, construction, or reconstruction of vessels and construction-differential subsidy and cost of national defense features incident to the construction, reconstruction, or reconditioning of ships, not to exceed $157,000,000: *Provided*, That no funds authorized by this paragraph may be paid to subsidize the construction of any vessel which will not be offered for enrollment in a Sealift Readiness program approved by the Secretary of Defense: *Provided further*, That in paying the funds authorized by this paragraph, the construction subsidy rate otherwsie applicable may be reduced by 5 percent unless the Secretary of Commerce, in his discretion, determines that the vessel to be constructed is part of an existing or future vessel series;

(2) For payment of obligations incurred for operating-differential subsidy, not to exceed $262,800,000: *Provided*, That no funds authorized by this paragraph may be paid for the operation of any vessel which is not offered for participation in a Sealift Readiness program approved by the Secretary of Defense; • • •

A sealift readiness program has been established by the Military Sealift Command (MSC), Department of the Navy, for liner and for bulk cargo vessel operators, and the program has been approved by the Secretary of Defense.

By separate correspondence, current holders of operating-differential subsidy (ODS) contracts as well as former contract holders with open ODS accounts that could be settled and paid in fiscal year 1979, have been advised of the requirements of the program, the procedure for the submittal of vessel offers to the MSC, and that the offers are to be made prior to September 29, 1978.

With respect to construction-differential subsidy (CDS), applicants for CDS to aid in the construction of new vessels or reconstruction of existing vessels must, prior to the award of CDS, agree to offer such vessels to the MSC for enrollment in the sealift readiness program before CDS can be awarded which would obligate all or part of the $157,000,000 in CDS funds authorized for fiscal year 1979 by Pub. L. 95-298. Current and prospective CDS applicants may obtain information regarding the requirements of the sealift readiness program and the procedure for submittal of vessel offers to the MSC either from the Secretary, Maritime Administration, Department of Commerce, Washington, D.C. 20230, or the Commander, Military Sealift Command, Department of the Navy, Washington, D.C. 20390.

By order of the Maritime Subsidy Board, Maritime Administration.

Dated: September 13, 1978.

JAMES S. DAWSON, JR.,
Secretary.

DEPARTMENT OF DEFENSE

Department of the Army

PRIVACY ACT OF 1974

New System of Records

AGENCY: Department of the Army, DOD.

ACTION: Notice of a new system of records.

SUMMARY: The Department of the Army proposes to add a new system of records to its inventory subject to the Privacy Act of 1974.

DATES: This system shall be effective as proposed without further notice in 30 calendar days from the date of this publication (October 19, 1978) unless comments are received on or before October 19, 1978, which would result in a contrary determination and require republication for further comments.

ADDRESS: Any comments, including written data, views or arguments concerning this system should be addressed to the System Manager identified in the system of records.

FOR FURTHER INFORMATION CONTACT:

Mr. Guy B. Oldaker, Administrative Management Directorate, The Adjutant General Center, Department of the Army, Forrestal Building, 1000 Independence Avenue SW., Washington, D.C. 20314, telephone 202-693-0973.

SUPPLEMENTARY INFORMATION: The Department of the Army systems of records notices as prescribed by the Privacy Act of 1974, 5 U.S.C. 552a, Pub. L. 93-579, have been published in the FEDERAL REGISTER as follows:

FR Doc. 77-28255 (42 FR 50396), September 28, 1977; FR Doc. 77-32975 (42 FR 50999), November 15, 1977; FR Doc. 78-1855 (43 FR 3151), January 23, 1978; FR Doc. 78-9239 (43 FR 14713), April 7, 1978; FR Doc. 78-9713 (43 FR 15353), April 12, 1978; FR Doc. 78-17146 (43 FR 26606), June 21, 1978; FR Doc. 78-17737 (43 FR 27882), June 27, 1978; FR Doc. 78-18880 (43 FR 29600), July 10, 1978; FR Doc. 78-19614 (43 FR 30594), July 17, 1978; FR Doc. 78-21772 (43 FR 34520), August 4, 1978; FR Doc. 78-23953 (43 FR 38070), August 25, 1978.

The Department of the Army has submitted a new system report for this system on August 17, 1978, under the provisions of 5 U.S.C. 552a(o) of the Privacy Act.

MAURICE W. ROCHE,
Director Correspondence and Directives Washington Headquarters Services Department of Defense.

SEPTEMBER 13, 1978.

A1014.08cDAAG

System name:

College Transcript Registry System

System location:

Primary System: American College Testing Program (ACT), P.O. Box 168, Iowa City, Iowa 52240.

Decentralized Segments: Education Directorate, The Adjutant General Center (TAGCEN), Forrestal Building, Washington, D.C. 20314; Army Education Center, Fort Eustis, Va. 23604; and Army Education Center, Fort Polk, La. 71459.

Categories of individuals covered by the system:

All military personnel assigned or attached to Forts Eustis and Polk who have participated in the Army Continuing Education System and who have attended Army service schools.

Categories of records in the system:

Records include Education Services Officer File, Course/Test File, Soldier File, Confirmation Rosters—Courses, Confirmation Rosters—Tests, separation lists, and correspondence or documents containing similar or related information.

The Soldier File contains the following information: name, social security number (SSN), date of birth, racial/ethnic data (optional), sex (optional), pay grade, unit number, primary and secondary military occupational specialties, and record of each course or test the individual has taken—in the form of course/test number, test scores, and education services officer identification code.

Separation lists contain home addresses.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Purpose of the system is to provide a transcript, properly authenticated and endorsed by an independent agency recognized by the academic institutions, to the individual or to academic institutions, or other agencies designated by the affected member to allow advanced placement of the individual in an educational program, which precludes a retake of basic college courses; for verification of training and experiences recognized by the civilian labor market; and to conduct research.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Records are stored on computer magnetic tapes and drums at ACT and TAGCEN.

Paper records in file folders, cards in card files, and computer printouts may be filed at any/all locations participating in the system.

Retrievability:

Records are retrieved by SSN and name or by one, or a combination of, data elements contained in the system.

Safeguards:

At ACT the physical security of the registry data is guarded in a variety of ways. Data are collected and distributed via first class mail. The data-collection forms are retained in security containers for a year after the data have been entered into the system. All programs and data files are kept in a secure environment, which includes closed-circuit video monitoring, the use of identification cards and passes, with restricted areas (such as the tape library) open only to certain employees. The building also includes fire detection and suppression equipment.

At other locations buildings employ security guards. Records are maintained in areas accessible only to authorized personnel who are properly screened, cleared, and trained.

Retention and disposal:

Data-collection forms and related correspondence are destroyed 1 year after data are transferred to the register. The individual record will be dropped from the active register when there are too few event segments (records of courses/tests taken) for an individual in any given quarter or the individual is separated from the Army. No data for persons with too few event segments will be kept. Data on separated individuals will be stored on an inactive register, retained at ACT for 3 years, transferred to TAGCEN, held for 10 years and destroyed. (This retention period is subject to approval by the National Archives and Records Service.)

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army (HQDA), The Pentagon, Washington, D.C. 20310.

Notification procedure:

Information may be obtained from: HQDA (DAAG-ED), Forrestal Building, Washington, D.C. 20314, telephone: 202-693-7748.

Record access procedures:

Transcript requests from individuals should be addressed to Education Services Officer at Fort Eustis or Fort Polk, as applicable.

Written request for information should contain the full name of the individual, SSN, current address, and telephone number.

Visits are permitted to the Education Directorate, TAGCEN (DAAG-ED), Forrestal Building, Washington, D.C. 20314, and at the Army Education Centers at posts where data are maintained.

For personal visits, the individual should be able to give sufficient identification, i.e., military identification card, driver's license, and give some verbal information that could be verified with his/her records.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations by the individual concerned may be obtained from the SYSMANAGER.

Record source categories:

Completed forms from individuals, forms from Education Services Officers at Forts Eustis and Polk which include: Department of the Army (DA) Form 4540, Apprenticeship Applica-

V 43 / 182 SEP 19 78

tion; DA Form 1821, Army Continuing Education System; DA Form 669, Educational Development Record; DA Form 2171, Request for Tuition Assistance; and VA Form 22-1990, Request for Educational Assistance; U.S. Army Military Personnel Center (MILPERCEN) Officer Master Files (OMF) and Enlisted Master Files (EMF).

Systems exempted from certain provisions of the act:

None.

[3128-01]

DEPARTMENT OF ENERGY

Economic Regulatory Administration

CANADIAN CRUDE OIL ALLOCATION PROGRAM

Allocation Notice for the October 1 Through December 31, 1978, Allocation Period

In accordance with the provisions of the Mandatory Canadian Crude Oil Allocation Regulations, 10 CFR Part 214, the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) hereby publishes the allocation notice specified in § 214.32 for the allocation period commencing October 1, 1978.

The issuance of Canadian crude oil rights for the October 1, 1978, allocation period to refiners and other firms is set forth in the appendix to this notice. As to this allocation period, the appendix lists: (1) The name of each refiner and other firm to which rights have been issued; (2) the base period volume[1] of Canadian crude oil for each first or second priority refinery; (3) the base period volume of Canadian light and heavy crude oil, respectively, for each first or second priority refinery; (4) the nominations to ERA for Canadian light and heavy crude oil, respectively, of each refiner or other firm; (5) the number of rights for Canadian light and heavy crude oil, respectively, expressed in barrels per day, issued to each such refiner or other firm; and (6) the specific first or second priority refineries for which rights are applicable.

The issuance of Canadian crude oil rights is made pursuant to § 214.31, which provides that rights may be issued to refiners or other firms that own or control a first or second priority refinery based on the number of barrels of Canadian light and heavy crude oil, respectively, included in the refinery's volume of crude oil runs to stills or consumed or otherwise utilized by a facility during the base period, November 1, 1974, through October 31, 1975. These calculations have been made and are shown on a barrels per day basis.

The listing contained in the appendix also reflects any adjustments made by ERA to base period volumes to compensate for reductions in volumes due to unusual or nonrecurring operating conditions or to reflect current operating conditions as provided by § 214.31(d).

Based on its review of the affidavits, supplemental affidavits and reports filed pursuant to Subpart D of Part 214, and other information available to the agency, ERA has designated each refinery or other facility listed in the appendix as a first or second priority refinery as defined in § 214.21. If a refinery or other facility has not been designated as a priority refinery by ERA, such refinery or other facility is not entitled to process or otherwise consume Canadian crude oil subject to allocation under the program.

As provided by § 214.31(e), in the allocation period commencing October 1, 1978, each refinery or other firm which has been issued Canadian crude oil rights for light and heavy crude oil, respectively, is entitled to process, consume or otherwise utilize in the priority refinery or refineries specified in the appendix to this notice a number of barrels of Canadian light and heavy crude oil, respectively, subject to allocation under Part 214, equal to the number of rights specified in the appendix.

The Canadian National Energy Board (NEB) has advised ERA that the total volumes of Canadian light and heavy crude oil authorized for export to the United States, and therefore subject to allocation under Part 214, for the 3-month allocation period commencing October 1, 1978, will be as follows: The average export level for Canadian light crude oil will be 55,000 barrels per day (B/D) for October, November, and December. The average export level for Canadian heavy crude oil will be 110,000 B/D for October, 127,000 B/D for November, and 139,000 B/D for December. For purposes of determining allocations of Canadian heavy crude oil, it has been assumed that the average export level will be 125,315 B/D for the 3 months. Any change in the export levels for Canadian light crude oil, including condensate, and Canadian heavy crude oil anticipated for this allocation period will be reflected in revised allocations that will be issued in a supplemental allocation notice or notices.

The NEB has formally advised ERA of the following operational constraint with respect to the export of Canadian light crude oil for the allocation period: 50 B/D of light crude oil through the Union Oil pipeline from the Reagan field in Canada to the Thunderbird refinery (second priority) at Cut Bank, Montana.

ERA has given effect to this operational constraint in the allocations set forth in the appendix.

Allocation of Canadian Light Crude Oil

The authorized export level for Canadian light crude oil for this allocation period is 55,000 B/D. The adjusted base period volumes of Canadian light crude oil for all first priority refineries nominating for light crude oil total 136,678 B/D. Accordingly, with the exception of allocations of light crude oil required by the operational constraint, no allocations of light crude oil are shown for second priority refineries. The export level of light crude oil, as adjusted to reflect the operational constraint, was allocated among first priority refineries nominating for light crude oil on a pro rata basis in the following manner. First, an allocation factor of 0.402040[2] was applied to each first priority refinery's adjusted base period volume of light crude oil. Second, the resulting allocation for Consumers Power Co. was reduced to conform to their nomination for light crude oil for their first priority facility. Third, the allocation factor was recomputed[3] to reflect these adjustments and was reapplied to each first priority refinery's (excluding Consumers Power's Marysville facility) adjusted base period volume of light crude oil to arrive at the final allocations.

Allocation of Canadian Heavy Crude Oil

The authorized export level for Canadian heavy crude oil for October, November, and December 1978, is an average of 125, 315 B/D. First priority refineries nominating for heavy crude oil have been allocated a total of 106,553 B/D of Canadian heavy crude oil, which was calculated by combining their respective base period volumes of Candian light and heavy crude oil or their nominations for heavy crude oil,

[1] Base period volume for the purposes of this notice means average number of barrels of Canadian crude oil included in a refinery's crude oil runs to stills or consumed or otherwise utilized by a facility other than a refinery during the base period (November 1, 1974, through October 31, 1975) on a barrels per day basis.

[2] 0.402040 = Adjusted export level for Canadian light crude oil (55,000 B/D less 50 B/D to Thunderbird refinery = 54,950 B/D), divided by sum of adjusted base period volumes of Canadian light crude oil for first priority refineries nominating for Canadian light crude oil (136,678 B/D).

[3] The factor as recomputed is 0.488699 = Adjusted export level for light crude oil (54,950 B/D, less allocation to Consumers Power Marysville facility (1,500 B/D) = 53,450 B/D), divided by sum of first priority refineries' (excluding Consumers Power) adjusted base period volumes of light crude oil (109,372 B/D).

whichever was less, and subtracting their allocations of light crude oil. In no case do the allocations of heavy crude oil to first priority refineries exceed their nominations for heavy crude oil.

The remaining supply of Canadian heavy crude oil, 18,762 B/D, was allocated among second priority refineries nominating for heavy crude oil on a pro rata basis by applying an allocation factor of 0.978155 [4] to each second priority refinery's base period volume of heavy crude oil to arrive at the final allocations for heavy crude oil.

On or prior to the 13th day preceding each allocation period, each refiner or other firm that owns or controls a first priority refinery shall file with ERA the supplemental affidavit specified in § 214.41(b) to confirm the continued validity of the statements and representations contained in the previously filed affidavit or affidavits, upon which the designation for that priority refinery is based. Each refiner or other firm owning or controlling a first or second priority refinery shall also file the periodic report specified in § 214.41(d)(1) on or prior to the 13th day preceding each allocation period, provided, however, that the information as to estimated nominations specified in § 214.41(d)(1)(i) is not required to be reported.

Within 30 days following the close of each 3-month allocation period, each refiner or other firm that owns or controls a priority refinery shall file the periodic report specified in § 214.41(d)(2) certifying the actual volumes of Canadian crude oil and Canadian plant condensate included in the crude oil runs to stills of or consumed or otherwise utilized by each such priority refinery (specifying the portion thereof that was allocated under Part 214) for the allocation period.

This notice is issued pursuant to Subpart G of ERA's regulations governing its administrative procedures and sanctions, 10 CFR Part 205. Any person aggrieved hereby may file an appeal with DOE's Office of Hearings and Appeals in accordance with Subpart H of 10 CFR Part 205. Any such appeal shall be filed on or before 30 days from the publication of this notice.

Issued in Washington, D.C., on September 13, 1978.

BARTON R. HOUSE,
Assistant Administrator, Fuels Regulation, Economic Regulatory Administration.

[FR Doc. 78-26215 Filed 9-18-78; 8:45 am]

[4] 0.978155 = Export level of Canadian heavy crude oil available to second priority refineries (18,762 B/D), divided by base period volume of Canadian heavy crude oil of second priority refineries nominating for heavy crude oil (19,181 B/D).

ENERGY SUPPLY AND ENVIRONMENTAL COORDINATION ACT

Requirements To Complete DOE Early Planning Process Identification Report

Pursuant to section 13 of the Federal Energy Administration Act of 1974 (FEAA), as amended, 15 U.S.C. 761 et seq., the Department of Energy (DOE) [1] hereby gives notice of the requirement that each Major Fuel Burning Installation (MFBI) which on or after December 27, 1976 was in or has thereafter entered, or which hereafter enters, the "reporting interval" and meets the "design firing rate requirements" as hereafter specified, complete and submit to DOE the "Major Fuel Burning Installation-Early Planning Process Identification Report" (Report), FEA Ferm C-607-S-O. Notice of this requirement for filing was previously given by the Federal Energy Administration (FEA) in the FEDERAL REGISTER (42 FR 6622) on February 3, 1977. The present notice pertains to all MFBI's which are currently in, or about to enter, the early planning process, as well as to those MFBI's which have not complied with the February 3, 1977 notice, but upon which the continuing responsibility to file rests.

The purpose of the reporting requirement is to enable DOE to identify MFBI's, including individual combustors, which should be considered for the issuance of Construction Orders pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974 (ESECA), as amended, 15 U.S.C. 791 et seq. A Construction Order would require the MFBI to be designed and constructed with the capability of using coal as its primary energy source.

For the purposes of this reporting requirement—

(a) A "combined cycle unit" is an electric power generation unit that consists of a combination of one or more combustion gas turbine units and one or more steam turbine units with the required energy input of the steam turbine(s) provided by and approximately matched to the energy in the exhaust gas from the combustion gas turbine unit(s). Use of small amounts of supplemental firing for the steam turbine does not preclude the unit from being a combined cycle unit;

(b) A "combustion gas turbine unit" is a combination of a rotary engine driven by a gas under pressure that is created by the combustion of a fuel, usually natural gas or a petroleum product, with an electric power generator driven by such engine;

(c) The "foundation" is the base supporting an MFBI consisting of pilings, a concrete pad or an equivalent structure;

(d) A "Major Fuel Burning Installation" is an installation or unit other than a powerplant that has or is a fossil-fuel fired boiler, burner or other combustor of fuel or any combination of combustors at a single site, that has individually or in combination, a design firing rate of 100 million Btu/hr. or greater, and includes any person who owns, leases, operates, controls or supervises any such installation or unit. Combustion gas turbines and combined cycle units are excluded from this classification;

(e) A "powerplant" is a fossil-fuel fired steam electric generating unit that produces electric power for purposes of sale or exchange; and includes any person who owns, leases, operates, controls or supervises any such unit;

(f) A "person" is any association, firm, company, corporation, estate, individual, joint-venture, partnership, or sole proprietorship or any entity however organized, including charitable, educational or other eleemosynary institutions, and the Federal Government, including cooperations, departments, Federal agencies, and other instrumentalities, and state and local governments, and includes any officer, director, owner, or duly authorized representative thereof. DOE may treat as a person:

(1) A parent and the consolidated and unconsolidated entities (if any) which it directly or indirectly controls,

(2) A parent and its consolidated entities,

(3) An unconsolidated entity, or

(4) Any part of a person.

(g) The "preliminary feasibility study" is that analysis, formal or otherwise, which concludes that new, additional, or replacement capacity appears to be required and which precedes the managerial decision to initiate the design of an MFBI;

(h) The "reporting interval" is that period which commences upon completion of a preliminary feasibility study for the MFBI and ends upon completion of the foundation for MFBI. If no preliminary feasibility study can be identified, the reporting interval commences at the earlier of 1) the formation of a contract, express or implied, for design of the MFBI, or if such design is not to be performed in accordance with a contract, the date the managerial decision to initiate design work is made, or 2) the approval of construction funds for the MFBI by responsible officials.

(i) The "Report" is Form FEA C-607-S-O, consisting of three parts: Schedules A-1, A-2, and A-3.

(1) Schedule A-1 identifies the responding company and facility. One Schedule A-1 must accompany each submission. If the reporting requirements do not apply to the MFBI at this time, however, only Schedule A-1 is to be completed and filed by the MFBI, indicating this fact.

(2) Schedule A-2 specifically identifies the MFBI and includes such information as combustor designation, combustor capacity and type, i.e. whether it is a boiler, burner or other type of unit, primary energy souce capability, combustor design and construction schedule, and significant impediments to designing and constructing the subject combustor with coal-burning capability.

(3) Schedule A-3 gathers financial and coal availability information pertaining to the specific MFBI. This schedule is not furnished to responding MFBI's with Schedules A-1 and A-2 as it will not be applicable to all responding facilities and will be required to be filed only upon specific DOE request. Forms for filing will be furnished by DOE at the time the request is made, and filing must be accomplished within 30 days after the MFBI's receipt of the request.

Each MFBI which meets the design firing rate requirements (detailed below), which was in the reporting interval as of December 27, 1976 or has thereafter entered the reporting interval, and which has not yet been reported to DOE, is required to file a Schedule A-2 of the Report within 30 days of the date of this notice. Each MFBI which meets the design firing rate requirements and which hereafter enters the reporting interval is required to file a Schedule A-2 of the Report on or before the 15th day of the month subsequent to the month that the reporting interval is entered.

Filing of Schedule A-2 is required if the MFBI has (1) a design firing rate of 100 million Btu/hr. or greater, or (2) a design firing rate of 50 million Btu/hr. or greater and a design firing rate of 100 million Btu/hr. or greater when taken in the aggregate with other combustors at the same location which have design firing rates of 50 million Btu/hr. or greater and which entered the reporting interval on or after December 27, 1976.

If an MFBI enters the reporting interval but does not initially meet the design firing rate requirements on that date, but subsequently meets the design firing rate requirements due to the entrance into the reporting interval of other qualifying MFBI's at the same location, it is required to file the Report on or before the 15th day of the month subsequent to the month in which it meets such requirements.

If any information previously submitted to DOE, or hereafter submitted to DOE, on FEA Form C-607-S-0, Schedules A-1, A-2, and/or A-3, changes, revised schedules must be submitted to DOE within 30 days of such change.

Copies of the Report, FEA Form C-607-S-0, are available from DOE at the address below. Detailed filing requirements and instructions are contained with the forms.

Completed Reports, requests for forms, and questions should be addressed to: Mrs. Ellen Russell, Division of Coal Utilization, Department of Energy, Room 7202, 2000 M Street NW., Washington, D.C. 20461, telephone 202-254-8310.

Issued in Washington, D.C., on September 14, 1978.

LINCOLN E. MOSES,
Administrator, Energy Information Administration, Department of Energy.

[FR Doc. 78-26344 Filed 9-18-78; 8:45 am]

[1] Effect Oct. 1, 1977, the responsibility for implementing the Energy Supply and Environmental Coordination Act was transferred by Executive Order No. 12009 from the Federal Energy Administration to the Department of Energy pursuant to the Department of Energy Organization Act, Pub. L. No. 95-91 (42 U.S.C. 7101).

Office of Assistant Secretary for International Affairs

PEACEFUL USES OF ATOMIC ENERGY

Proposed Subsequent Arrangement; Government of the United States and the European Atomic Energy Community (EURATOM)

Pursuant to section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160), notice is hereby given of proposed "subsequent arrangements" under which DOE will enter into contractual arrangements for the furnishing of the following material under the additional agreement for cooperation between the Government of the United States of America and the European Atomic Energy Community (EURATOM) concerning the peaceful uses of atomic energy.

Application No., Countries, and Description of Material

MS—EU—330—91—United States to West Germany—500 mg of uranium containing U-236 (89.2 percent enriched as oxide) to the Max Planck Institute in West Germany where the material will be used as targets for nuclear physical examination.

MS—EU—330—90—United States to Belgium—1 g of plutonium containing Pu-239 (99.1 percent enriched) and 250 mg of plutonium containing Pu-241 (93.22 percent enriched to Bureau Central de Mesures Nucleaires in Geel, Belgium, for use in fernary fission studies, fission fragment, kinetic energy, and mass distribution measurements.

MS—EU—330—89—United States to Belgium—10 g of uranium containing U-235 (99.94 percent enriched); 8 g of plutonium containing Pu-240 (98.3 percent enriched) to the Bureau Central de Mesures Nucleaires in Geel, Belgium, for use as synthetic mixtures in spikes and reference material in mass spectrometry.

In accordance with section 131 of the Atomic Energy Act of 1954, as amended, it has been determined that these subsequent arrangements will not be inimical to the common defense and security of the United States.

These subsequent arrangements will take effect no sooner than October 4, 1978.

Dated: September 13, 1978.

For the Department of Energy.

HAROLD D. BENGELSDORF,
Director for Nuclear Affairs, International Programs.

[3128-01]

Economic Regulatory Administration

RULEMAKING DOCKET SYSTEM

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of Rulemaking Docket System.

SUMMARY: The Economic Regulatory Administration (ERA) hereby gives notice that it has established a docket system for completed, current and future rulemakings. The system is intended to provide the public with a means of readily identifying completed and current rulemakings and public records related thereto.

Attached as an appendix to this notice is a list of docket numbers of rulemakings that are currently pending before ERA or have been completed by ERA subsequent to activation of the Department of Energy on October 1, 1977. "ERA" in the docket number identifies the rulemaking as being within the jurisdiction and authority of the Economic Regulatory Administration. The letter "R" designates that it is a rulemaking action, and will distinguish it from adjudicatory and other proceedings that will later be incorporated into this docket system. The first digit or set of digits in the docket number refers to the calendar year in which the particular rulemaking was initiated, which in general means the year in which the notice of proposed rulemaking (or notice of inquiry, if that was the initiating document) was published in the FEDERAL REGISTER. The second digit or set of digits in the docket number refers to the sequence in which the document initiating the rulemaking was issued in a particular year.

Thus, "ERA-R-77-2" refers to the second rulemaking initiated in 1977 by ERA (or a predecessor agency).

We have also indicated on the attached list for each docket item the most recent date on which a significant notice (notice of inquiry, notice of proposed rulemaking (NOPR), final rule, etc.) was published in the FEDERAL REGISTER and have indicated those rulemakings which have been completed.

We will periodically publish lists of new docket numbers and indicate the status of all docketed rulemakings.

You may obtain further public information relating to any current rulemaking appearing on the docket list, including copies of rulemaking documents, press releases, and supplementary analyses, if any, by contacting the Public Information Office, Economic Regulatory Administration, Room B-110, 2000 M Street NW., Washington, D.C 20461, telephone 202-634-2170.

Issued in Washington, D.C., September 13, 1978.

DOUGLAS G. ROBINSON,
Assistant Administrator, Regulations and Emergency Planning, Economic Regulatory Administration.

APPENDIX

Docket No.	Rulemaking	Publication date of most recent significant notice
ERA-R-76-1	Amendments to the east coast residual fuel oil entitlements program	June 20, 1978 (further NOPR).
ERA-R-77-1	Incentives for tertiary enhanced crude oil recovery	Aug. 1, 1978 (final rule and NOPR).
ERA-R-77-2	Production and sale of imputed stripper well crude oil from unitized properties.	Aug. 1, 1978 (final rule).
ERA-R-77-3	Amendments to allow the allocation of additional increased costs to gasoline.	Feb. 17, 1977 (NOPR).
ERA-R-77-4	Amendments to the entitlements program for crude oil produced in California.	June 20, 1978 (final rule).
ERA-R-77-5	General revision of NGL processors' price regulations	June 9, 1977 (NOPR)
ERA-R-77-6	Amendments to include certain petroleum substitutes in the entitlements program.	May 18, 1978 (final rule and NOPR).

ENVIRONMENTAL PROTECTION AGENCY

[FRL 970-5]

ENVIRONMENTAL IMPACT STATEMENTS

Notice of Receipt

Pursuant to the President's Reorganization Plan No. 1, the Environmental Protection Agency is the official recipient for environmental impact statements (EIS's) and is required to publish the availability of each EIS received weekly. The following is a list of environmental impact statements received by the Environmental Protection Agency from September 4, 1978 through September 8, 1978. The date of receipt for each statement is noted in the statement summary. Under the Guidelines of the Council on Environmental Quality the minimum period for public review and comment on draft environmental impact statements is forty-five (45) days; the date of submission of comments is October 30, 1978. The thirty (30) day period for each final statement begins the day the statement is made available to the Environmental Protection Agency and to commenting parties.

Copies of individual statements are available for review from the originating agency. Back copies are also available at 10 cents per page from the Environmental Law Institute, 1346 Connecticut Avenue, Washington, D.C. 20036.

Dated: September 14, 1978.

WILLIAM D. DICKERSON,
Acting Director,
Office of Federal Activities.

DEPARTMENT OF AGRICULTURE

Contact: Mr. Barry Flamm, Coordinator, Environmental Quality Activities, U.S. Department of Agriculture, room 412 A, Washington, D.C. 20250, 202-447-4423.

RURAL ELECTRIC ADMINISTRATION

Draft

Cajun electric coal-fired powerplant, Pointe Coupee County, La., September 8, 1978: Proposed is the construction and operation of a new steam electric generating facility by the Cajun Electric Power Cooperative. The project will be located at the Big Cajun No. 2 site, Pointe Coupee Parish, La. The principal features of the project are: (1) a nameplate rating of 565 MW, (2) fuel obtained from two deposits of western sub-bituminous coal, (3) production of 4,300,000 lbs per hour of steam, (4) limit oxides of nitrogen emissions to maximum of 0.7 lbs per million Btu heat input, (5) particulate removal treatment, (6) water supplied from the Mississippi River, (7) tie-in lines from the switchyard to existing distribution systems. (USDA-REA-EIS (ADM)-78-11-D.) (EIS order No. 80987.)

SOIL CONSERVATION SERVICE

Final

Rural clean water program, September 8, 1978: This statement analyzes alternative methods of administration of the rural clean water program (RCWP), which provides financial assistance for implementing plans under the clean water act of 1977. The purpose of RCMP is to control nonpoint sources of pollution on private rural lands. Selected high priority areas will be eligible for special technical assistance and cost-sharing to rural land users applying best management practices to improve water quality. Participation in the program is voluntary. Comments made by: DOC, USDA, EPA, State agencies, groups, individuals and businesses (EIS Order No. 80981.)

ENVIRONMENTAL PROTECTION AGENCY

Contact: Mr. Edward Vest, Environmental Protection Agency, Region VII, 1735 Baltimore Street, Kansas City, Mo. 64108, 816-374-2921.

Final

Ottumwa Generating Station, NPDES permit, Iowa, September 5, 1978: Proposed is the issuance of a new source NPDES permit for discharge of wastewaters from Iowa Southern Utilities' proposed Ottumwa generating station (OGS). The proposed site for the 727 MW coal-fired steam-electric generating station is located adjacent to the Des Moines River, approximately 8 miles northwest of Ottumwa, Iowa. OGS will utilize a closed-cycle cooling system and will require makeup water at a rate of 17 c.f.s. at maximum load conditions. Total discharge to the Des Moines River is estimated to be 1.4 c.f.s. at maximum load conditions. The Des Moines River will be impacted by water withdrawal and wastewater discharge. (EPA-907/9-78-001.) Comments made by: DOI, DOT, DOC, HUD, State and local agencies, groups, individuals and businesses.) (EIS Order No. 80977.)

Contact: Mr. Jeff Kempter, Environmental Protection Agency, Special Pesticide Review Division (TS-971), 401 M Street SW., Washington, D.C. 20460, 202-755-8053.

Final

Dibromochloropropane, registration cancellation, September 8, 1978: This statement announces the EPA Administrator's intent to cancel the registrations of all dibromochloropropane (DBCP) for a number of vegetables and use restriction of DBCP on certain vegetables and fruits to certified applicators wearing specified pro-

tective equipment. DBCP is widely used by growers to control nematodes on crops and has been found to reduce sperm counts in men exposed to it and has been found to cause cancer in laboratory animals. The Administrator waived all external review of and comment upon the proposed action in accordance with section 6(B) of the Federal Insecticide, Fungicide, and Rodenticide Act. (EIS Order No. 80997.)

Contact: Mr. Wallace Stickney, Environmental Protection Agency, Region I, John F. Kennedy Federal Building, room 2203, Boston, Mass. 02203, 617-223-4635.

Draft Supplement

Wastewater collection and treatment facilities, Dukes County, Mass., September 8, 1978: This statement supplements a draft EIS filed in September 1977, concerning wastewater collection and treatment facilities for Tisbury, Oak Bluffs, and West Tisbury, Dukes County, Mass. The statement considers a construction program of: (1) Wastewater collection facilities in Tisbury, (2) a secondary treatment/nightsoil composting facility on site located between Vineyard Haven and Lake Tashmoo, and (3) implementation of nonstructural measures to improve on-lot wastewater disposal. (EIS Order No. 80993.)

DEPARTMENT OF ENERGY

Contact: Mr. Robert Stern, Office of NEPA Affairs, Department of Energy, 1200 Pennsylvania Avenue NW., room 7119, Washington, D.C. 20461, 202-566-9760.

Draft

230-KV electrical transmission line, Miles City, several counties in Montana, North Dakota, South Dakota, September 6, 1978: Proposed is the construction of a 328-mile, 230kV transmission line between Miles City and Baker, Mont., Hettinger, N. Dak., and New Underwood, S. Dak., in Custer and Fallon Counties in Montana, Adams, Bowman, and Slope Counties in North Dakoka, and Meade, Pennington, and Perkins Counties in South Dakota. Wood-pole, H-frame structures with three conductors and two overhead static wires are planned. Four alternatives are considered which include: (1) Nonconstruction, (2) buried cable, (3) an alternate terminal point at South Dakota end of line, and (4) other potential alternate routes. (DOE/EIS-0025D.) (EIS Order No. 80983.)

DEPARTMENT OF HUD

Contact: Mr. Richard H. Broun, Director, Office of Environmental Quality, Department of Housing and Urban Development, 451 7th Street SW., Washington, D.C. 20410, 202-755-6308

Draft

Three Lakes Subdivision, Harris County, Tex., September 5, 1978: Proposed is the issuance of home mortgage insurance for the Three Lakes Subdivision located in Harris County, Tex. The proposed development plan for the project provides for the construction of approximately 1,665 single-family homes and encompasses approximately 370 acres. This proposal was submitted by Homecraft Land Development, Inc., on behalf of Home Land, Inc. (HUD-RO6-EIS-78-42-D.) (EIS Order No. 80979.)

Westgate Heights Subdivision, Albuquerque, Bernalillo County, N. Mex., September 6, 1978: Proposed is the issuance of home mortgage insurance for the Westgate Heights Subdivision, Albuquerque, Bernalillo County, N. Mex. When completed, the subdivision, which encompasses approximately 904 acres, is expected to consist of single-family, multifamily, and apartment housing units, as well as schools, churches, commercial, park and recreation facilities. The proposal was submitted by the Associated Investment Co. (HUD-RO6-EIS-78-38D.) (EIS Order No. 80980.)

SECTION 104(h)

The following are community development block grant statements prepared and circulated directly by applicants pursuant to section 104(h) of the 1974 Housing and Community Development Act. Copies may be obtained from the office of the appropriate local executive. Copies are not available from HUD.

Draft

Citron-Date housing project, McCully, Honolulu County, Hawaii, September 5, 1978: Proposed is the issuance of block grant funds for the construction of a seven-story multifamily tower over a two-level parking structure, to be known as the Citron-Date housing project located in McCully, Honolulu County, Hawaii. The project will contain 99 units and 107 parking spaces. Three alternatives are considered which include: (1) Retain in present use, (2) develop as higher density residential, (3) develop as single family residential. (EIS Order No. 80978.)

East Temple residential project, Bell County, Tex., September 6, 1978: Proposed is a multiyear project under the community development block grant program located in Temple, Bell County, Tex. The project, to be known as the East Temple residential project, will encompass approximately 115 acres of land, and will consist of the construction of a single-family residential subdivision of about 450 units for low- and moderate-income homebuyers. Also included is the expansion of Wilson Park, and the dedication of right-of-way for the extension of a major thoroughfare. (EIS Order No. 80982.)

Port/Marina project, Richmond, Contra Costa, Calif., September 6, 1978: Proposed is a marina/port development project which encompasses 935 acres within a redevelopment project located in Richmond, Contra Costa County, Calif. The marina portion of the project includes a 2,000-berth marina for small boats; 2,000-4,000 new residential units; new commercial uses; parking; and a significant amount of recreational space. The port element includes construction of one to four container berths; a support area and the interfacing of rail, water, and land transportation. (HUD-RO5.) (EIS Order No. 80984.)

IDAHO AND WASHINGTON STATE DEPARTMENTS OF AGRICULTURE

Issuance of Specific Exemptions To Use TEPP To Control Twospotted Spider Mite on Hop Crop

The Environmental Protection Agency (EPA) has granted specific exemptions to the Idaho and Washington State Departments of Agriculture (hereafter referred to as "Idaho" and "Washington") to use TEPP (tetraethyl pyrophosphate) for the control of twospotted spider mites which are threatening the commercial hop crop in one county in Idaho and three counties in Washington. These exemptions were granted in accordance with, and are subject to, the provisions of 40 CFR Part 166, which precribes requirements for exemption of Federal and State agencies for use of pesticides under emergency conditions.

This notice contains a summary of information required by regulation to be included in the notice. For more detailed information, interested parties are referred to the application on file with the Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street SW., Room E-315, Washington, D.C. 20460.

According to Idaho and Washington, the twospotted spider mite (*Tetranychus urticae* Koch) is normally present in Idaho and Washington hopyards. Current climatic and growing conditions are ideal for pest population buildup now. Although several miticides are registered for use on hops, Idaho and Washington State University entomologists alleged that none of the registered miticides were viable options for one or more of various reasons: (1) The spider mites were resistant to the other miticides; (2) aerial applications were precluded because of ineffectiveness or labeling restrictions; and/or (3) the required preharvest interval excluded application at the time required. Ground pesticide applications were not feasible because of possible damage to hop foliage, lodged hops, and irrigation equipment. According to Idaho and Washington, TEPP has prevented economic damage to the commercial hop crop by this pest in previous years.

The Washington infestation was to have been controlled by the specific exemption to use Carzol granted earlier this year. However, Washington claimed that sufficient supplies of Carzol were unavailable for the two to three treatments necessary to effect season-long mite control. Thus, the emergency still exists.

Both Idaho and Washington requested permission to use 2 pounds of actual TEPP per acre in a single aerial application. In Idaho, application will be made on 1,000 acres of commercial hops in Canyon County; in Washington, application will be made on 20,000 acres limited to Yakima, Benton, and Pierce Counties.

Idaho stated that potential losses which could result without an effective miticide program could be $1 million. The State of Washington produces about 71 percent of the national

V4

hop crop; Washington stated that the potential economic loss from a major outbreak of the twospotted spider mite could reach $10,000,000, repre-

actual TEPP may be applied in Washington;

4. A 3-day preharvest interval will be observed;

tin hydroxide) on 1,200 acres of eggplants to control twospotted spider mites (*Tetranychus urticae*) in New Jersey. This exemption was granted in

twospotted spider mites on eggplants has occurred or is likely to occur; (b) resistance has developed to the pesti-

[6560-01]

[FRL 969-6; OPP-180230]

North Carolina and Virginia because it was considered to be most efficacious for control of *S. sclerotiorum*. In addition, Botran 75W is registered for the

hop crop; Washington stated that the potential economic loss from a major outbreak of the twospotted spider mite could reach $10,000,000, representing one-third of Washington's hop production and 20 percent of the U.S. production.

Idaho and Washington cited the following factors which contribute to relatively low probability of exposure of man to harmful residues of TEPP from hops: (1) Raw hops are never consumed by humans and hops are kiln-dried following harvest; (2) one-fourth pound of hops is added to each 31 gallons of beer, a 1:1,000 dilution by weight; (3) fermentation in the brewing vats results in additional breakdown of pesticide residues; and (4) a 2-pound application on hops presents less residue potential to humans than applications on six other food crops which have tolerances of 0.01 ppm. The dilution of 1 to 1,000 would allow establishment of a tolerance adequate to protect human health. Idaho and Washington further stated that all data reviewed indicated no residue transfer from a 3-day preharvest interval to finished beer.

However, TEPP exhibits acute toxicity to fish and wildlife species, especially avian species. The Office of Endangered Species, U.S. Department of the Interior, has reported that the American peregrine falcon (*Falco peregrinus anatum*), an endangered species, is endemic within the counties proposed for treatment.

After reviewing the applications and other available information, EPA has determined that (a) pest outbreaks of twospotted spider mites have occurred or are about to occur; (b) there is no pesticide presently registered and available for use to control the twospotted spider mite in Idaho and Washington State; (c) there are no alternative means of control, taking into account the efficacy and hazard; (d) significant economic problems may result if the twospotted spider mites are not controlled; and (e) the time available for action to mitigate the problems posed is insufficient for a pesticide to be registered for this use. Accordingly, Idaho and Washington have been granted specific exemptions to use the pesticides noted above until September 30, 1978, to the extent and in the manner set forth in the applications. The specific exemptions are also subject to the following restrictions:

1. Aerial applications of TEPP are limited to one at the rate of 2 pounds of active ingredient per acre;

2. Total acreage treated shall not exceed 1,000 acres in Idaho and 20,000 acres in Washington;

3. A maximum of 2,000 pounds of actual TEPP may be applied in Idaho and a maximum of 40,000 pounds of actual TEPP may be applied in Washington;

4. A 3-day preharvest interval will be observed;

5. Treatment area is limited to the three counties in Washington and the one county in Idaho listed in this notice;

6. Idaho and Washington are responsible for monitoring the aerial applications of TEPP in their respective States;

7. Liaison shall be established between the Idaho Departments of Agriculture and Fisheries and Game and the Washington State Departments of Agriculture and Fisheries and Game in their respectives States to minimize any adverse effects on fish and wildlife resources:

8. The EPA shall be immediately informed of any adverse effects resulting from the use of this pesticide in connection with these exemptions;

9. All applicable directions, restrictions, and precautions on the EPA-registered label will be observed;

10. All precautions will be taken to avoid or minimize spray drift to nontarget areas;

11. Hops with residue levels not exceeding 0.1 ppm of TEPP may be offered in interstate commerce. The Food and Drug Administration of the U.S. Department of Health, Education, and Welfare has been advised of this action;

12. If the twospotted spider mite is likely to continue to be a pest of hops in Idaho and Washington, these States and their concerned growers must pursue tolerances for TEPP and/or Carzol through regular channels; and

13. Idaho and Washington must submit final reports on their respective programs to EPA by September 30, 1979.

(Sec. 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (86 Stat. 973; 89 Stat. 751; 7 U.S.C. 136 et seq.).)

Dated: September 12, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

[FR Doc. 78-26230 Filed 9-18-78; 8:45 am]

[6560-01]

[FRL 969-7; OPP-180231]

NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION

Issuance of a Specific Exemption To Use Cyhexatin To Control Twospotted Spider Mites

The Environmental Protection Agency (EPA) has granted a specific exemption to the New Jersey Department of Environmental Protection (hereafter referred to as the "Applicant") to use cyhexatin (tricyclohexyltin hydroxide) on 1,200 acres of eggplants to control twospotted spider mites (*Tetranychus urticae*) in New Jersey. This exemption was granted in accordance with, and is subject to, provisions of 40 CFR Part 166, which prescribes requirements for exemption of Federal and State agencies for use of pesticides under emergency conditions.

This notice contains a summary of certain information required by regulation to be included in the notice. For more detailed information, interested parties are referred to the application on file with the Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street SW., Room E-315, Washington, D.C. 20460.

According to the Applicant, twospotted mites cause considerable damage to the eggplant crop; mites pierce the leaf epidermis with their mouth parts and suck sap, initially causing the leaf to appear stippled with yellow spots. Heavy infestations result in yellow-colored leaves that eventually become nonproductive and drop from the plant causing loss in plant vigor and crop yield reduction. Hot and dry weather accelerates mite buildup.

According to the Applicant, mite resistance to EPA-registered products, such as ethion, naled, malathion, and mevinphos, has caused these products to be ineffective. The Applicant further claims that although carbophenothion and oxydemetonmethyl are EPA-registered and somewhat effective, the preharvest interval of 7 days is incompatible with harvesting every 3 to 4 days.

Based on 1977 data, the Applicant reports that growers experienced an economic loss of $225 per acre on acreage where mite control was not practiced. Although with currently EPA-registered miticides the loss may be reduced by 50 percent, the Applicant feels that the use of cyhexatin may reduce losses to a very low level.

The Applicant proposes to use a maximum of 3,840 pounds of Plictran 50W Miticide, a cyhexatin formulation manufactured by Dow Chemical Co., EPA Reg. No. 464-363. State-certified private or commercial applicators will make a maximum of four applications by air or ground at a rate of 0.4-pound active ingredient (a.i.) per acre on a maximum of 1,200 acres.

EPA has found that adequate data are available to support the request. Permanent tolerances for cyhexatin have been established in a range from 0.05 part per million (ppm) to 60 ppm. Residue data indicate that residues of cyhexatin and its organotin metabolite under this use would not be expected to exceed 0.5 ppm. EPA has imposed a 3-day preharvest interval.

After reviewing the application and other available information, EPA has determined that (a) a pest outbreak of twospotted spider mites on eggplants has occurred or is likely to occur; (b) resistance has developed to the pesticides presently registered and available for use to control this pest in New Jersey; (c) there are no alternative means of control, taking into account the efficacy and hazard; (d) significant economic problems may result if these mites are not controlled; and (e) the time available for action to mitigate the problems posed is insufficient for a pesticide to be registered for this use. Accordingly, the Applicant has been granted a specific exemption to use the pesticide noted above until October 1, 1978, to the extent and in the manner set forth in the application. The specific exemption is also subject to the following conditions:

1. The product Plictran 50W Miticide, EPA Reg. No. 464-363, manufactured by Dow Chemical Co., is authorized;

2. Applications may be made by ground or air at a rate of 0.4 pound cyhexatin per acre;

3. A maximum of 1,200 acres of eggplant crop may be treated;

4. A maximum of 3,840 pounds Plictran 50W may be applied;

5. A maximum of four applications may be made and a preharvest interval of 3 days must be observed;

6. Applications shall be made by State-certified private or commercial applicators;

7. A residue level of cyhexatin not exceeding 0.5 ppm in or on eggplants has been determined as adequate to protect the public health. The Food and Drug Administration, U.S. Department of Health, Education, and Welfare, has been advised of this action;

8. All label precautions shall be followed;

9. The EPA shall be informed immediately of any adverse effects to man or the environment resulting from this use;

10. The Applicant shall be responsible for insuring that all provisions of this specific exemption are followed; and

11. A final report summarizing the results of this program shall be submitted to EPA by December 31, 1978.

(Sec. 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (86 Stat. 973; 89 Stat. 751; 7 U.S.C. 136 et seq.).)

Dated: September 12, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

[FR Doc. 78-26231 Filed 9-18-78; 8:45 am]

[6560-01]

[FRL 969-6; OPP-180230]

NORTH CAROLINA DEPARTMENT OF AGRICULTURE AND VIRGINIA DEPARTMENT OF AGRICULTURE AND COMMERCE

Issuance of Specific Exemptions To Use Botran 75W To Control Sclerotinia Blight of Peanuts

The Environmental Protection agency (EPA) has granted specific exemptions to the North Carolina Departmnent of Agriculture and the Virginia Department of Agriculture and Commerce (hereafter referred to as "North Carolina" and "Virginia") to use Botran 75W for the control of *Sclerotinia* blight on 53,000 acres of peanuts in North Carolina and on 52,000 acres of peanuts in Virginia. These exemptions were granted in accordance with, and are subject to, the provisions of 40 CFR Part 166, which prescribes requirements for exemption of Federal and State agencies for use of pesticides under emergency conditions.

This notice contains a summary of certain information required by regulation to be included in the notice. For more detailed information, interested parties are referred to the applications on file with the Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street SW., Room E-315, Washington, D.C. 20460.

According to North Carolina and Virginia, the *Sclerotinia* blight which is caused by the plant pathogen *Sclerotinia sclerotiorum* (syn. *S. minor*) is a relatively new disease on peanuts in the United states, being first reported in 1971. *S. Sclerotiorum* invades the taproot, lateral branches, and pegs at the soil ine and eventually causes rotting of the peanut pods. Losses in yield in excess of 50 percent have been reported in North Carolina and Virginia due to this pathogen, the applicants stated. In Virginia, the applicant stated that nine major peanut-growing counties located in the southeastern part of the State are likely to be subject to infection by this pest. The total acreage in these counties is 104,000; however, only 50 percent (52,000) of this acreage has been designated for treatment.

There are no EPA-registered fungicides for the control of *S. sclerotiorum* on peanuts. Several fungicides have been tested and shown to be effective for the control of *Sclerotinia* blight on peanuts. Pentachloronitrobenzene (PCNB) when used at maximal label rates did control *S. sclerotiorum* in some instances, but not in others. Multiple applications of Benomyl also provided adequate control. Neither of these fungicides is registered although PCNB has a registration for peanut pod rot complex. For the control of this pest, Botran 75W was chosen by North Carolina and Virginia because it was considered to be most efficacious for control of *S. sclerotiorum*. In addition, Botran 75W is registered for the control of *Sclerotinia* on several vegetable crops (beans, celery, cucumbers, lettuce, onions, and potatoes).

North Carolina will use Botran 75W (EPA Reg. No. 1023-36), containing the active ingredient 2,6-dichloro-4-nitroaniline, once at a dosage rate of 4 to 5 pounds of product per acre or twice at a dosage rate of 2.66 pounds of product per acre. If two applications are made, they will be made 10 to 14 days apart. Applications of Botran will be made by peanut growers. The diagnosis of this plant pathogen must be made before Botran 75W is applied. The product should be applied in 30 to 50 gallons of water over the row using a flat-type spray nozzle (floodjet nozzle or equivalent) that produces large droplets rather than a mist and with a pressure high enough to drive the chemical to the soil surface. Thorough coverage of the peanut plant and soil is essential. Copies of this procudure will be furnished to dealers marketing Botran.

Virginia proposes essentially the same program as North Carolina on a total of 52,000 acres in the following counties: Brunswich, Dinwiddie, Greenville, Isle of Wight, Prince George, Southampton, Suffolk City, Surry, and Sussex. If split applications are made in Virginia, they will be at a dosage rate of 2 to 2.5 pounds of product in 25 to 50 gallons of water.

North Carolina estimates that yield losses can be reduced by 60 to 75 percent with proper application of Botran 75W. In 1976, North Carolina estimated losses due to *S. sclerotiorum* at $1.8 million; in 1977 at $450,000. Virginia estimates that peanut yield losses of $3 million could occur without a suitable control program.

This use of Botran 75W will not pose a threat to the public health, since the residue expected to occur on peanut meat and hulls (less than 0.1 part per million (ppm)) is insignificant. It is recommended that treated peanut vines or hay should not be used as livestock feed items.

After reviewing the applications and other available information, EPA has determined that (a) pest outbreaks of *Sclerotinia* blight have occurred or are about to occur in North Carolina and Virginia; (b) there is no pesticide presently registered and available for use to control this pest in North Carolina and Virginia; (c) there are no alternative means of control, taking into account the efficacy and hazard; (d) significant economic problems may result if the pest is not controlled; and (e) the time available for action to mitigate the problems posed is insufficient for a pesticide to be registered for this

V 43 / 182 SE 19 78

use. Accordingly, North Carolina and Virginia have been granted specific exemptions to use the pesticide noted above until September 30, 1978, to the extent and in the manner set forth in the applications. The specific exemptions are also subject to the folowing conditions:

1. Botran 75W (EPA Reg. No. 1023-36) may be applied either at a dosage rate of 4 to 5 pounds of product (3 to 3.75 pounds active ingredient) per acre or as a split application, 10 to 14 days apart at a dosage rate in North Carolina of 2 to 2.66 pounds of product (1.5 to 2.0 pounds active ingredient) per acre and in Virginia at a dosage rate of 2.25 pounds of product (1.5 to 1.88 pounds active ingredient) per acre. The product should be applied in North Carlina in 30 to 50 gallons of water and in Virginia in 25 to 50 gallons of water over the row using a flat-type spray nozzle that produces large droplets rather than a mist and with sufficient pressure to drive the fungicide to the soil surface;

2. Fifty-three thousand acres of peanuts located in the North Carolina coastal plain and 52,000 acres of peanuts in the Virginia counties previously listed may be treated;

3. Applications may be made by peanut growers;

4. The use of Botran 75W in conjunction with these specific exemptions is authorized only when personnel of the North Carolina Department of agriculture or county extension personnel in North Carolina, or personnel of the Virginia Cooperative Extension Service in Virginia determine the presence of *Sclerotinia* blight in a given growing area;

5. The North Carolina Extension Service recommendations and the Virginia Cooperative Extension Service recommendations concerning application methods and equipment must be made available to growers in the respective States;

6. A residue level of 2,6-dichloro-4-nitroaniline in or on peanut meat and hulls not exceeding 0.1 ppm has been deemed adequate to protect the public health, The Food and Drug Administration of the U.S. Department of Health, Education, and Welfare, has been advised of this action;

7. Botran-treated peanut vines or hay must not be used as livestock feed items. A minimum preharvest interval of 30 days must be observed;

8. Botran 75W is toxic to fish. Care must be taken to prevent contamination of water by cleaning of equipment or disposal of waste or containers. It may not be applied under conditions favoring sheet runoff;

9. All label directions, precautions, and restrictions must be adhered to;

10. The EPA shall be immediately informed of any adverse effects resulting from the use of Botran 75W in conjunction with these exemptions; and

11. North Carolina and Virginia are each required to submit a full report summarizing the results of this program in their respective States to the EPA by March 31, 1979.

(Sec. 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (86 Stat. 973; 89 Stat. 751; 7 U.S.C. 136(a) et seq.).)

Dated: September 12, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

FEDERAL MARITIME COMMISSION

AGREEMENTS FILED

The Federal Maritime Commission hereby gives notice that the following agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of each of the agreements and the justifications offered therefor at the Washington Office of the Federal Maritime Commission, 1100 L Street NW., Room 10218; or may inspect the agreements at the field Offices located at New York, N.Y.; New Orleans, La.; San Francisco, Calif.; Chicago, Ill.; and San Juan, PR. Interested parties may submit comments on each agreement, including requests for hearing, to the Secretary, Federal Maritime Commission, Washington, D.C., 20573, by October 9, 1978. Comments should include facts and arguments concerning the approval, modification, or disapproval of the proposed agreement. Comments shall discuss with particularity allegations that the agreement is unjustly discriminatory or unfair as between carriers, shippers, exporters, importers, or ports, or between exporters from the United States and their foreign competitors, or operates to the detriment of the commerce of the United States, or is contrary to the public interest, or is in violation of the Act.

A copy of any comments should also be forwarded to the party filing the agreements and the statement should indicate that this has been done.

Agreement No. T-3708.

Filing party: A. J. Boyle, Vice President, International Terminal operating Co. Inc., 17 Battery Place, New York, N.Y. 10004.

Summary: Agreement No. T-3708, between I.T.O. Corp. of Baltimore (ITO) and Japan Line, Ltd., Kawasaki Kisen Kaisha, Ltd., Mitsui O.S.K. Line, Ltd., Nippon Yusen Kaisha and Yamashita-Shinnihon Steamship Co. Ltd. (the Lines), is a renewable, 1-year container terminal stevedore and LCL service agreement. The agreement provides that ITO will furnish the Lines terminal, stevedore, and container freight station services in connection with the Lines' containerships calling at Dundalk Marine Terminal, Baltimore, Md. The Lines will compensate ITO in accordance with a schedule of rates agreed upon by both parties and filed with the Federal Maritime Commission.

By order of the Federal Maritime Commission.

Dated: September 14, 1978.

JOSEPH C. POLKING,
Assistant Secretary.

GENERAL ACCOUNTING OFFICE

REGULATORY REPORTS REVIEW

Receipt of Report Proposals

The following requests for clearance of reports intended for use in collecting information from the public were received by the Regulatory Reports Review Staff, GAO, on September 13, 1978. See 44 U.S.C. 3512(c) and (d). The purpose of publishing this notice in the FEDERAL REGISTER is to inform the public of such receipt.

The notice includes the title of each request received; the name of the agency sponsoring the proposed collection of information; the agency form number, if applicable; and the frequency with which the information is proposed to be collected.

Written comments on the proposed FCC, FTC, and NRC requests are invited from all interested persons, organizations, public interest groups, and affected businesses. Because of the limited amount of time GAO has to review the proposed requests, comments (in triplicate) must be received on or before October 10, 1978, and should be addressed to Mr. John M. Lovelady, Assistant Director, Regulatory Reports Review, United States General Accounting Office, Room 5106, 441 G Street NW., Washington, D.C. 20548.

Further information may be obtained from Patsy J. Stuart of the Regulatory Reports Review staff, 202-275-3532.

FEDERAL COMMUNICATIONS COMMISSION

The FCC requests clearance of revisions to form P, Annual Report of Miscellaneous Common Carriers. Form P is used for obtaining operating and financial data from miscellaneous and specialized common carriers. Due to the recent expansion of the microwave radio service brought about by the entry of the specialized carriers, a revision to form P was found to be necessary. The form is being revised to permit more detailed breakdowns of the carriers' assets structure, revenues, expenses, and returns and also to bring the form into conformity with generally accepted accounting practices and with systems of accounts now applied to the telecommunications industry. The form is required by sections 219(a), 303(j), 303(r), and 308(b) of the Communications Act of 1934, as amended, and sections 1.785, 21.3000, and 43.21 of the FCC rules and regulations. The FCC estimates approximately 100 respondents will complete the report and that respondent burden will average 15 hours per response.

FEDERAL TRADE COMMISSION

The FTC requests clearance of a new, voluntary, single-time questionnaire to be sent to 20,000 households in 24 States who participate in the Market Facts Consumer Mail Panel. The questionnaire will gather information to assist the Commission in making policy decisions related to the duplication of eyeglass lenses. Questionnaires will be sent to individuals who wear eyeglasses to determine if, when, and why they had a lens or pair of lenses duplicated and dates of eye examinations. The FTC estimates respondent burden will average 10 minutes per questionnaire.

The FTC requests clearance of a new, voluntary, single-time questionnaire to be sent to 10,000 households who participate in the market facts consumer panel. The questionnaire will gather information to assist the Commission in making policy decisions related to contact lenses. Questionnaires will be sent to current and former users of contact lenses to obtain information on costs to consumers, source of purchase, and for former users, the reason for no longer wearing contact lenses. The FTC estimates respondent burden will average 10 minutes per questionnaire.

The FTC requests clearance of a new, voluntary, single-time questionnaire to be sent to 14,000 households who participate in the market facts consumer mail panel. The questionnaire will gather information for the purpose of assessing the impact of corrective advertising for Listerine brand mouthwash. Questionnaires will be sent to the mail panel to ascertain their beliefs and usage patterns of several brands of mouthwash. The FTC estimates respondent burden will average 20 minutes per questionnaire.

NUCLEAR REGULATORY COMMISSION

The NRC requests clearance of revisions to 10 CFR Part 20, Personnel Exposure and Monitoring Reports, specifically sections 20.407 and 20.408. The revision to section 20.407(a) will require each person described in section 20.408 to submit within the first quarter of each calendar year reports covering the preceding calendar year containing the total number of individuals for whom personnel monitoring was required during the calendar year. Section 20.407(b) will require a statistical summary report of the personnel monitoring information recorded by the licensee for individuals for whom personnel monitoring was either required or provided, as described in paragraph (a) of this section, indicating the number of individuals whose total whole body exposure recorded during the previous calendar year was in each of certain specified exposure ranges. Section 20.408 has been revised only to specify the four categories of licensees required to report. The NRC estimates that in addition to the 450 licensees currently required to report under these sections, respondents will now include 8,200 additional licensees for a period of 2 years and reporting burden will average 1.4 hours per annual report.

NORMAN F. HEYL,
Regulatory Reports Review Officer.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Federal Council on the Aging

LONG-TERM CARE COMMITTEE

Meeting

The Federal Council on the Aging was established by the 1973 amendments to the Older Americans Act of 1965 (Pub. L. 93-29, 42 U.S.C. 3015) for the purpose of advising the President, the Secretary of Health, Education, and Welfare, the Commissioner on Aging, and the Congress, on matters relating to the special needs of older Americans.

Notice is hereby given pursuant to the Federal Advisory Committee Act (Pub. L. 92-463, 5 U.S.C. app. 1, sec. 10, 1976) that the Council's Committee on Long Term Care will hold a meeting on Friday, October 13, from 9:30 a.m. to 5 p.m., in Room 4254, HEW North Building, 330 Independence Avenue SW., Washington, D.C. 20201.

The agenda will consist of consideration of mandated studies and followup of the Committee's recommendations to the Council on the Development of policy alternative for long-term care.

Further information on the Council may be obtained from the FCA Secretariat, Federal Council on the Aging. Washington, D.C. 20201, telephone

202-245-0441. FCA meetings are open for public observation.

Food and Drug Administration

[Docket No. 77N-0437; DESI Nos. 9149, 11020, 11127, and 12486]

PHYSICIAN LABELING FOR ANTIPSYCHOTIC DRUGS

Extension of Time for Comments on Precaution Statement

AGENCY: Food and Drug Administration (FDA).

ACTION: Notice.

SUMMARY: This notice extends the comment period announced in a previous FEDERAL REGISTER notice in order to permit sufficient time for all interested persons to submit comments on the proposed precaution statement for certain antipsychotic drugs and on the design and initiation of epidemiological studies of them.

DATE: Comments by October 18, 1978.

ADDRESSES: Communications forwarded in response to this notice should be identified with docket No. 77N-0437, directed to the attention of the appropriate office named below, and addressed to the Food and Drug Administration, 5600 Fishers Lane, Rockville, Md. 20857.

Written comments to Ann Greenstein, Division of Neuropharmacological Drug Products (HFD-120), Bureau of Drugs.

Requests for opinion of the applicability of this notice to a specific product: Division of Drug Labeling Compliance (HFD-310), Bureau of Drugs.

FOR FURTHER INFORMATION CONTACT:

Ronald L. Wilson, Bureau of Drugs (HFD-32), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857, 301-443-3650.

SUPPLEMENTARY INFORMATION: In the FEDERAL REGISTER of August 18, 1978 (43 FR 36696), the Director of the Bureau of Drugs proposed that the physician labeling for antipsychotic drugs, except for lithium carbonate, be revised to include under the precaution section the following statement:

"The chronic administration of antipsychotic drugs in rodents induces the development of mammary neoplasms under the appropriate experimental conditions. These drugs elevate prolactin levels in both animals and man, but the role of prolactin in human mammary tumorigenesis is uncertain. Studies conducted to date have not shown an association between chronic administration of antipsychotic drugs and mammary tumors in human beings, but the available evidence is considered too limited to be conclusive at this time. Inasmuch as a fraction of human breast tumors appears to be prolactin-dependent, periodic breast examinations are advised, especially in patients with a previously detected breast cancer or in those with a strong family history of breast cancer."

Interested persons were invited to submit comments by September 18, 1978, on the proposed statement, and on the design and initiation of epidemiological studies involving the chronic administration of these drugs.

The Food and Drug Administration has received a request from the Pharmaceutical Manufacturers Association to extend the comment period to October 18, 1978. The request argues that the comment period ending on September 18, 1978, does not provide its member companies sufficient time to analyze the action proposed by FDA and to submit comments.

The Director of the Bureau of Drugs is concerned that all interested persons have sufficient time to analyze the proposal and submit well-documented comments. Thus, he hereby extends the comment period to October 18, 1978.

Dated: September 13, 1978.

J. RICHARD CROUT,
Director, Bureau of Drugs.

National Institutes of Health

REPORT ON BIOASSAY OF ESTRADIOL MUSTARD FOR POSSIBLE CARCINOGENICITY

Availability

Estradiol mustard (CAS 22966-79-6) has been tested for cancer-causing activity with rats and mice in the Carcinogenesis Program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassay of the experimental anticancer drug estradiol mustard for possible carcinogenicity was conducted by administering the chemical by gavage to Sprague-Dawley rats and B6C3F1 mice.

Groups of 35 rats and 34-36 mice of each sex were administered estradiol mustard at one of the following doses, either 0.62 or 1.25 mg/kg body weight for rats and either 15 or 30 mg/kg body weight for mice. The vehicle used for the test chemical consisted of 0.05 percent polysorbate 80 in phosphate-buffered saline. The rats and mice were dosed three times per week for 52 weeks, then observed for an additional 30-34 weeks. Controls consisted of groups of 10 rats and 15 mice of each sex that were not administered the chemical (untreated controls) and also of groups of 10 rats of each sex, 14 male mice, and 16 female mice administered the vehicle alone (vehicle controls). Pooled controls were also used. All surviving rats were killed at 84-86 weeks and all surviving mice at 82-86 weeks.

Mean body weights of male rats and male and female mice administered estradiol mustard were lower throughout the greater part of the study than those of corresponding vehicle or untreated controls; mean body weights of dosed female rats were unaffected. Administration of the test chemical had no significant effect on the survival of either male or female rats. A large number of dosed mice died prior to the end of the study. The numbers of dosed male mice which were at risk as long as 52 weeks were sufficient, however, for development of tumors appearing up to that time. Time-adjusted analysis and life-table analyses were applied to data obtained with the mice.

It is concluded that under the conditions of this bioassay, estradiol mustard administered in a buffered saline vehicle was not carcinogenic in Sprague-Dawley rats. Estradiol mustard was carcinogenic in both male and female B6C3F1 mice, inducing lymphoma, sarcoma of the myocardium, elveolar adenoma, or carcinoma, and squamous-cell carcinoma of the stomach.

Single copies of the report are available from the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, National Institutes of Health, Bethesda, Md. 20014.

(Catalog of Federal Domestic Assistance Program No. 13.393, Cancer Cause and Prevention Research.)

Dated: August 18, 1978.

THOMAS E. MALONE,
Ph. D., Acting Director, National Institutes of Health.

[FR Doc. 78-26175 Filed 9-18-78; 8:45 am]

[4110-08]

REPORT ON BIOASSAY OF ICRF-159 FOR POSSIBLE CARCINOGENICITY

Availability

ICRF-159 (CAS 21416-87-5) has been tested for cancer-causing activity with rats and mice in the Carcinogenesis Program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassay of the experimental anticancer drug ICRF-159 for possible carcinogenicity was conducted by administering the compound by intraperitoneal injection to Sprague-Dawley rats and B6C3F1 mice.

Groups of 35 rats and 35 mice of each sex were injected three times per week with ICRF-159 in buffered saline at one of the following doses, either 48 or 96 mg/kg body weight for the rats and either 40 or 80 mg/kg body weight for the mice. Both rats and mice were dosed for 52 weeks, then observed for 29-34 additional weeks. Untreated-control and vehicle-control groups each consisted of 10 rats and 15 mice of each sex; pooled-control groups consisted of the 10 vehicle controls of each sex of the rats combined with 30 vehicle controls of each sex of rats from similar bioassays of three other chemicals and the 15 vehicle controls of each sex of the mice combined with 30 vehicle controls of each sex of mice from similar bioassays of two other chemicals. All surviving rats were killed at 81-86 weeks; all surviving mice, at 86 weeks.

Mean body weights were depressed in rats and mice administered ICRF-159, and mortality was dose related among male and female rats and male mice. The high mortality among the male rats may have been associated with inflammatory lesions observed in the lungs, the liver, and the pleural and peritoneal cavities. Sufficient numbers of female rats and of both male and female mice were at risk for development of late-appearing tumors. In the male rats, time-adjusted analysis of the incidence of tumors was used for determining statistical significance.

It is concluded that under the conditions of this bioassay, ICRF-159 was carcinogenic for female Sprague-Dawley rats, producing uterine adenocarcinomas, and was also carcinogenic for female B6C3F1 mice, producing lymphomas.

Single copies of the report are available from the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, National Institutes of Health, Bethesda, Md. 20014.

(Catalog of Federal Domestic Assistance Program No. 13.393, Cancer Cause and Prevention Research.)

Dated: August 18, 1978.

THOMAS E. MALONE, PH.D.,
Acting Director, National Institutes of Health.

[FR Doc. 78-26174 Filed 9-18-78; 8:45 am]

[4110-08]

REPORT ON BIOASSAY OF TRIMETHYLPHOSPHATE FOR POSSIBLE CARCINOGENICITY

Availability

Trimethylphosphate (CAS 512-56-1) has been tested for cancer-causing activity with rats and mice in the Carcinogenesis Program, Division of Cancer Cause and Prevention, National Cancer Institute. A report is available to the public.

Summary. A bioassy of trimethylphosphate for possible carciongenicity was conducted by administering the compound by gavage to Fischer 344 rats and B6C3F1 mice.

Groups of 50 rats and 50 mice of each sex were administerd trimethylphosphate in distilled water three times per week at one of two doses, either 50 or 100 mg/kg body weight for the rats and either 250 or 500 mg/kg body weight for the mice. Vehicle controls consisted of groups of 20 rats and 20 mice of each sex. The rats were dosed for 104 weeks and the mice for 103 weeks. All surviving rats were killed at week 105 and all surviving mice at week 103.

Mean body weights of dosed male and female rats and female mice were slightly lower than those of the corresponding vehicle controls throughout the study; mean body weights of the male mice were comparable to those of the vehicle controls. Survival rates of both rats and mice were high, and adequate numbers of animals were at risk for the development of later-appearing tumors.

It is concluded that under the conditions of this bioassay, trimethylphosphate was carcinogenic in female B6C3F1 mice, inducing adenocarcinomas of the uterus/endometrium. Trimethylphosphate was associated with the induction of benign fibromas of the subcutaneous tissue in male Fischer 344 rats. No evidence of carcinogenicity of the compound was obtained in female rates or in male mice.

Single copies of the report are available form the Office of Cancer Communications, National Cancer Institute, Building 31, Room 10A21, National Institutes of Health, Bethesda, Md. 20014.

[4110-85]

Public Health Service

OFFICE OF THE ASSISTANT SECRETARY FOR HEALTH

Statement of Organization, Functions, and Delegations of Authority

Part H, chapter HA (Office of the Assistant Secretary for Health) of the statement of organization, functions, and delegations of authority (38 FR 18571, July 12, 1973, as amended by 42 FR 61317, December 2, 1977, and most recently amended by 43 FR 33965, August 2, 1978) is amended to reflect a relocation of the Office of Health Maintenance Organizations (OHMO) from the Office of Health Programs to a staff office reporting directly to the Assistant Secretary for Health in order to provide additional emphasis and visibility. Also, reflected is a reorganization of OHMO in order to facilitate the development and expansion of health maintenance organizations (HMO's) as a desirable alternative for health care services delivery.

Under Section HA-10 Organization, add Office of Health Maintenance Organizations (HA2) as item 11, and renumber items 11, 12, and 13 to read 12, 13, and 14, respectively.

Under Section HA-20 Functions, change the code designation of Office of Health Maintenance Organizations from "(HAS4)" to "(HAS2)"; remove the current functional statement for the Office of Health Maintenance Organizations (HA2) and place after the Office on Smoking and Health (HAG). Delete in their entirety, the functional statements for the Division of Health Maintenance Organizations Development (HAS41) and the Division of Health Maintenance Organizations Qualification and Compliance (HAS42).

Insert the following statements after the Office of Health Maintenance Organizations (HA2):

Office of Program Support (HA2-1). (1) Plans, organizes, and directs a comprehensive program of general administrative, fiscal, and related management services, including the formulation and implementation of management policies, procedures, systems, and practices; (2) manages, coordinates, and implements for the central and regional offices all phases of the budget formulation, presentation, and execution process, and prepares budget plans and advice of allowances for grants and direct operations; (3) interprets fiscal directives from Congress and HEW as they affect OHMO; (4) coordinates OHMO personnel activities for civil service and commissioned corps personnel, including special consultant and expert activities; (5) provides correspondence management for control of written communi-

cations and action documents, including substantive policy review and followup to insure timely and appropri-

Division of Program Promotion (HA23). (1) Develops national promotion strategies and provides assistance

guidelines and regulations related to HMO compliance.

Dated: September 8, 1978.

and will form the basis for the later development of a multiyear strategy for health research in the Depart-

[4210-01]

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

ations and Consumer Protection. However, since research remains a major function of the Secretary under the Act, and since all research done by the

cations and action documents, including substantive policy review and followup to insure timely and appropriate action and clearances; (6) tracks and reports on progress in meeting program objectives; (7) manages the administrative aspects of OHMO contract activities; and (8) develops and monitors manpower management and work planning systems for the HMO central office staff.

Division of Development (HA21). (1) Encourages the development and expansion of HMO's, in coordination with the Division of Program Promotion, by providing and monitoring grants, contracts, loans, and loan guarantees to public, nonprofit, and private entities to pursue HMO planning and development activities; provides advice and assistance as needed to HMO's and entities seeking HMO status to enhance developmental activities; (2) establishes standards and procedures for HMO grant reviews and awards; (3) establishes standards and procedures for all loan applications, awards, and reviews; (4) directs and coordinates the HMO grant and loan management activities in the headquarters/regional offices; (5) conducts regular analyses for adequacy of developmental activities for individual HMO projects and prepares quarterly reports projecting the potential for success of developmental activities for budget planning purposes; (6) analyzes needs and develops forecasts for the national grant and loan/loan guarantee programs; and (7) performs congressional, HEW, and other intergovernmental liaison related to development activities.

Division of Qualification (HA22). (1) Establishes qualification standards, and determines the acceptability of entities seeking to become "qualified HMO's"; (2) refines review procedures as necessary to facilitate the qualification process; (3) coordinates and insures consistency of regional office activities related to the qualification process; (4) assists the Office of the General Counsel in the development of legal actions concerning HMO qualification status; (5) performs congressional, HEW, and other intergovernmental liaison related to qualification activities; (6) provides technical assistance to HMO's developed through public and private resources, in the fields of medical care organization, quality assurance, financial management, marketing, legal assistance, and health care administration; (7) develops policy and regulations related to HMO qualification; (8) evaluates impact of policies, legislation, and regulation on ability of projects to become qualified; and (9) provides guidance as to interpretation of policy guidelines and regulations related to qualification.

Division of Program Promotion (HA23). (1) Develops national promotion strategies and provides assistance to Federal, State, public, and private agencies and organizations to encourage the identification of potential areas for HMO development; (2) analyzes national needs to assess potential HMO development geographically and by sponsor; (3) generates an annual national HMO report to Congress; (4) coordinates Federal promotional activities with national professional and trade organizations, and business and labor communities to promote effective joint actions beneficial to HMO development; (5) develops, edits, and evaluates promotional educational and guidance materials and information pertinent to communicating and understanding HMO concepts, operations, and performance; (6) coordinates publication and distribution of public information materials and reports; and (7) coordinates promotional activities performed by regional offices.

Division of Compliance (HA24). (1) Assures the continuing compliance of HMO's with the statutory requirements of the HMO law; (2) assures compliance by employers with a mandatory offering of the HMO alternative in employee health benefits plans; (3) assists the Office of the General Counsel in the development of legal actions against HMO's and employers considered not to be in compliance with applicable standards and regulatory requirements; (4) reviews standards, procedures, and reporting requirements for monitoring of HMO's that receive financial assistance under grants, loans, and loan guarantees; (5) establishes and updates standards and procedures for compliance monitoring of qualified HMO's, and prepares status reports for internal and external use; (6) assures consistency of regional office activities related to compliance monitoring; (7) assures compliance by loan recipients with the legislative requirement for fiscal viability; (8) utilizes computerized data systems to maintain and monitor national HMO activity and statistics; (9) establishes and maintains liaison with concerned State and local regulatory and monitoring agencies; (10) provides technical assistance to qualified HMO's developed through public and private resources, in the fields of medical care organization, quality assurance, financial management, marketing, legal assistance, and health care administration; (11) develops policy and regulaions related to HMO compliance; (12) evaluates impact of policy; legislation, and regulation on ability of qualified HMO's to remain in compliance; and (13) provides guidance as to interpretation of policy guidelines and regulations related to HMO compliance.

Dated: September 8, 1978.

LEONARD D. SCHAEFFER,
Assistant Secretary for Management and Budget.

Office of the Secretary

NATIONAL CONFERENCE ON HEALTH RESEARCH PRINCIPLES

Meeting

Notice is hereby given of the National Conference on Health Research Principles to be held on October 3-4, 1978, at the National Institutes of Health, 9000 Rockville Pike, Bethesda, Md.

The National Conference is part of a new open process which has been initiated by the Secretary of Health, Education, and Welfare, and which is designed to solicit public advice in developing principles of a multiyear strategy to guide DHEW health research activities. All agencies engaging in health research within the Department, the Office of the Assistant Secretary for Health, and other Department staff offices are involved in the Secretary's initiative. The Director of the National Institutes of Health has been asked to take the lead in coordinating this effort.

Approximately 1,000 professional societies and health organizations as well as other Federal departments and agencies have been asked for their suggestions on the principles the Department should adopt. The comments received from the health community, the public, and other Federal agencies have been considered in formulating a statement of proposed DHEW health research principles to be presented to the National Conference.

The Conference will be open to the public and will serve both as a forum to elicit additional public advice and to revise the proposed DHEW principles based on a consideration of oral and written public testimony. The Conference will be structured around five major areas: Fundamental research, clinical applications and health services research, health regulation and promotion, research capability, and unifying concepts. Five panels will receive and consider testimony from preregistered witnesses on these five focuses. There will be two brief plenary sessions to open and close the Conference. Attendance by the public will be limited by the space available. The Conference will result in a draft report of health research principles for the Department. This report will be distributed widely for public comment and will form the basis for the later development of a multiyear strategy for health research in the Department.

Members of the public are invited to provide written comments on the statement of proposed DHEW health research principles which will be available in mid-September. Comments received by September 29 will be considered during the Conference. Written comments received after September 29 will be incorporated as part of the public record and considered during subsequent stages of the process. Individuals who wish to receive a copy of the statement of proposed DHEW health research principles for purposes of providing written comments or who want further information on Conference arrangements may write or telephone Mr. Kurt Habel, Office of the Director, National Institutes of Health, Building 1, Room 205, Bethesda, Md. 20014, 301-496-1454.

Dated: September 11, 1978.

JOSEPH A. CALIFANO, JR.,
Secretary of Health, Education, and Welfare.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

[Docket No. D-78-533]

ASSISTANT SECRETARY FOR NEIGHBORHOODS, VOLUNTARY ASSOCIATIONS AND CONSUMER PROTECTION

Delegation of Authority

AGENCY: Department of Housing and Urban Development.

ACTION: Delegation of authority.

SUMMARY: The Secretary is delegating to the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection all of her authority under the Lead Based Paint Poisoning Prevention Act, except the Secretary's authority with respect to research, which shall be exercised by the Assistant Secretary for Policy Development and Research in consultation with the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection.

EFFECTIVE DATE: September 2, 1977.

FOR FURTHER INFORMATION CONTACT:

Rebecca Johnson, Office of the Deputy Assistant Secretary for Regulatory Functions, Department of Housing and Urban Development, Room 3234, Washington, D.C. 20410, telephone 202-755-6526.

SUPPLEMENTARY INFORMATION: Under sections 301, 302, and 401 of the Lead Based Paint Poisoning Prevention Act, as amended, 42 U.S.C. 4801 et seq., the Secretary of Housing and Urban Development is required to carry out research to determine the nature and extent of lead paint poisoning in the United States, to establish procedures to eliminate the hazards of lead-based paint poisoning in certain existing housing, and to take steps and to impose such conditions as may be necessary to prohibit the use of lead-based paint in residential structures constructed or rehabilitated by the Federal Government or with Federal assistance. The primary responsibility for this program has to date been vested in the Assistant Secretary for Policy Development and Research.

With the establishment of the Office of the Deputy Assistant Secretary for Regulatory Functions under the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection, the Secretary has determined that the responsibility for assuring the implementation of the requirements of the Act should be carried out by the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection. However, since research remains a major function of the Secretary under the Act, and since all research done by the Department of Housing and Urban Development is carried out under the auspices of the Assistant Secretary for Policy Development and Research, the Secretary has determined that the responsibility for carrying out required research shall be vested in the Assistant Secretary for Policy Development and Research in consultation with the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection.

Accordingly, the Secretary delegates authority as follows:

SECTION A. *Authority delegated.* The Secretary delegates to the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection all of her power and authority under the Lead Based Paint Poisoning Prevention Act, as amended, 42 U.S.C. 4801 et seq., except that the Secretary directs that her authority under section 301(a) of the Act, 42 U.S.C. 4821(a) shall be exercised by the Assistant Secretary for Policy Development and Research, in consultation with the Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection.

SEC. B. *Authority excepted.* The power to sue and be sued is excepted from the authority delegated under section A.

SEC. C. *Authority to redelegate.* The Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection is authorized to redelegate to employees of the Department and to agents of the Department any of the power and authority delegated under section A of this delegation except the power to issue rules and regulations.

(Sec. 7(d), Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).)

Issued at Washington, D.C., September 11, 1978.

PATRICIA ROBERTS HARRIS,
Secretary of Housing and Urban Development.

OUTER CONTINENTAL SHELF OFFSHORE GULF OF MEXICO

Availability of Draft Environmental Statement and Holding of Public Hearing Regarding Proposed Oil and Gas Lease Sale No. 58

Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, the Department of the Interior has prepared a draft environmental statement relating to a proposed Outer Continental Shelf (OCS) oil and gas lease sale of 110 tracts consisting of 215,743 hectares (532,885 acres) of submerged lands on the OCS in the western and central Gulf of Mexico.

Single copies of the draft environmental statement can be obtained from the Office of the Manager, New Orleans Outer Continental Shelf Office, Bureau of Land Management, Suite 841, Hale Boggs Federal Building, 500 Camp Street, New Orleans, La. 70130, and from the Office of Public Affairs, Bureau of Land Management (130), Washington, D.C. 20240.

Copies of the draft environmental statement will also be available for review in the following public libraries: Austin Public Library, 401 West Ninth Street, Austin, Tex.; Houston Public Library, 500 McKinney, Houston, Tex.; Rosenburg Library, 2310 Sealy, Galveston, Tex.; Dallas Public Library, 1954 Commerce Street, Dallas, Tex.; Brazoria County Library, 410 Brazoport Boulevard, Freeport, Tex.; La Ratama Library, 505 Mesquite Street, Corpus Christi, Tex.; Texas Southmost College Library, 80 Fort Brown Street, Brownsville, Tex.; New Orleans Public Library, 219 Loyola Avenue, New Orleans, La.; Louisiana State Library, Baton Rouge, La.; Lafayette Public Library, 301 West Congress Street, Lafayette, La.; Calcasieu Parish Library System, Downtown Branch, Lake Charles, La.; Harrison County Library, 21st Avenue and Beach, Gulfport, Miss.; Mobile Public Library, 701 Government Street, Mobile, Ala.; and Montgomery Public Library, 445 South Lawrence Street, Montgomery, Ala.

In accordance with 43 CFR 3301.4, a public hearing will be held beginning at 9 a.m. on November 7, 1978, in the BLM Conference Room, Suite 841, Hale Boggs Federal Building, 500 Camp Street, New Orleans, La. 70130, for the purpose of receiving comments and suggestions relating to the proposed lease sale. Should expressed public interest warrant it, the hearing may extend into a second day.

The hearing will provide the Secretary with additional information from public and private groups to help evaluate fully the potential effects of the proposed offering of 110 tracts on the total environment, aquatic resources, esthetics, recreation, and other resources in the entire area during the exploration, development, and production phases of the OCS leasing program. The hearing will also provide the Secretary with the opportunity to receive additional comments and views of interested State and local agencies.

Interested individuals, representatives, or organizations, and public officials wishing to testify at the public hearing are requested to contact the Manager, New Orleans Outer Continental Shelf Office, Bureau of Land Management, at the above address by 4:15 p.m., November 3, 1978. Written comments from those unable to attend the hearing also should be addressed to the Manager, New Orleans Outer Continental Shelf Office, Bureau of Land Management at the above address. The Department will accept written testimony and comments on the draft environmental statement until November 14, 1978. This should allow ample time for those unable to testify at the hearing to make their views known and for the submission of supplemental materials by those presenting oral testimony. Time limitations make it necessary to limit the length of oral presentations to ten (10) minutes. An oral statement may be supplemented, however, by a more complete written statement which may be submitted to the Manager, New Orleans Outer Continental Shelf Office, at the time of presentation of the oral statement. Written statements presented in person at the hearing will be considered for inclusion in the hearing record. To the extent that time is available after presentation of oral statements by those who have given advance notice, others present will be given an opportunity to be heard.

After all testimony and comments have been received and analyzed, a final environmental statement will be prepared.

ARNOLD E. PETTY,
Acting Director,
Bureau of Land Management.

Approved: September 19, 1978.

LARRY E. MEIEROTTO,
Deputy Assistant,
Secretary of the Interior.

Geological Survey

RESEARCH AND DEVELOPMENT PROGRAM IN OCS OIL AND GAS OPERATIONS

Presentation of Selected Projects

The U.S. Geological Survey is presenting to the public a summary of selected projects from its contract research and development program in OCS oil and gas operations on November 14 and 15, 1978. Ten principal investigators from the universitites, Government laboratories, and private companies will present their projects which are in the fields of monitoring and inspection of offshore structures, well control, and pollution prevention. Following the technical sessions, an open discussion of the research program will be held.

Attendance is limited, and invitations will be sent to those who apply first. Interested parties should write to Mr. John B. Gregory, Research Program Manager, Branch of Marine Oil and Gas Operations, Conservation Division, 620 National Center, Reston, Va. 22092, telephone 703-860-7531.

DON E. KASH,
Acting Director.

DEPARTMENT OF LABOR

Employment and Training Administration

EMPLOYMENT TRANSFER AND BUSINESS COMPETITION DETERMINATIONS UNDER THE RURAL DEVELOPMENT ACT

Applications

The organizations listed in the attachment have applied to the Secretary of Agriculture for financial assistance in the form of grants, loans, or loan guarantees in order to establish or improve facilities at the locations listed for the purposes given in the attached list. The financial assistance would be authorized by the Consolidated Farm and Rural Development Act, as amended, 7 USC 1924(b), 1932, or 1942(b).

The Act requires the Secretary of Labor to determine whether such Federal assistance is calculated to or is likely to result in the transfer from one area to another of any employment or business activity provided by operations of the applicant. It is permissible to assist the establishment of a new branch, affiliate or subsidiary, only if this will not result in increased unemployment in the place of present operations and there is no reason to believe the new facility is being established with the intention of closing down an operating facility.

The Act also prohibits such assistance if the Secretary of Labor determines that it is calculated to or is likely to result in an increase in the production of goods, materials, or commodities, or the availability of services or facilities in the area, when there is not sufficient demand for such goods, materials, commodities, services, or facilities to employ the efficient capacity of existing competitive commercial or industrial enterprises, unless such financial or other assistance will not have an adverse effect upon existing competitive enterprises in the area.

The Secretary of Labor's review and certification procedures are set forth at 29 CFR Part 75. In determining whether the applications should be approved or denied, the Secretary will take into consideration of the following factors:

1. The overall employment and unemployment situation in the local area in which the proposed facility will be located.

2. Employment trends in the same industry in the local area.

3. The potential effect of the new facility upon the local labor market, with particular emphasis upon its potential impact upon competitive enterprises in the same area.

4. The competitive effect upon other facilities in the same industry located in other areas (where such competition is a factor).

5. In the case of applications involving the establishment of branch plants or facilities, the potential effect of such new facilities on other existing plants or facilities operated by the applicant.

All persons wishing to bring to the attention of the Secretary of Labor any information pertinent to the determinations which must be made regarding these applications are invited to submit such information in writing within 2 weeks of publication of this notice to: Deputy Assistant Secretary for Employment and Training, 601 D Street NW., Washington, D.C. 20213.

Signed at Washington, D.C., this 18th day of September 1978.

ERNEST G. GREEN,
Assistant Secretary for Employment and Training.

STATE OF NEW HAMPSHIRE DEPARTMENT OF EMPLOYMENT SECURITY

Correction to Rules of Procedure

This notice announces a correction to the rules of procedure applicable to the hearing for the Department of Employment Security of the State of New Hampshire to be held, pursuant to the last and first sentences of section 3304(c) of the Internal Revenue Code of 1954 (26 U.S.C. 3304(c)), at 9:30 o'clock in the morning on September 14, 1978, in courtroom C, seventh floor, Vanguard Building, 1111 20th Street NW., Washington, D.C.

The correction involves two sentences inadvertently omitted from rule of procedure No. 14 and a related grammatical revision necessitated by the insertion of such omitted sentences. Accordingly, rule of procedure No. 14, as published in the FEDERAL REGISTER on August 18, 1978, (vol. 43, No. 161, page 36722), is hereby deleted. Substituted therefor is the corrected rule of procedure No. 14, as follows:

* * * * *

14. The presiding administrative law judge shall prepare a recommended decision containing his findings of fact and conclusions of law on or before October 16, 1978. In the event that evidence is offered and admitted which is relevant to any constitutional issue properly raised under these rules, findings of fact shall be made with respect to such evidence. No conclusions of law regarding the constitutionality of any Federal statute shall be made. The presiding administrative law judge shall promptly certify to the Secretary of Labor his recommended decision and the entire record of the proceedings, and mail a copy of his certified and recommended decision to each party of record and to each interested party permitted to participate in the proceedings. Additionally, the presiding administrative law judge shall telephone each of the parties of record to advise that a copy of the recommended decision may be picked up by the parties of record at the address stated in paragraph 3.

Program for the Analysis of Science Resources: Personnel, Funding, Impacts, and Outputs

Summary: The National Science Foundation announces its ongoing program for the analysis of science resources: Personnel, funding, impacts, and outputs. Awards will be for in-depth analyses and integration of data on scientific and technical personnel, the funding of scientific and technological activities, for development of new measures of the impacts and outputs of scientific and technological activities, and for related studies. Most awards are expected to be in the $25,000 to $50,000 range.

Proposals received after February 2, 1979, are not likely to be considered for funding until the 1980 fiscal year. For copies of the Program Announcement, request: Program for the Analysis of Science Resources, NSF 78-47 or contact the following individuals in Division of Science Resources Studies, National Science Foundation, 1800 G Street NW., Washington, D.C. 20550: Funding—Norman Friedman, telephone 202-634-4625; personnel—Morris Cobern, telephone 202-634-4655; impacts and outputs—Donald Buzzelli, telephone 202-634-4682.

This is a revision of notice No. 7555-01, which appeared in the FEDERAL REGISTER of April 26, 1978. Respondents to that notice will receive this program announcement with no further request.

M. REBECCA WINKLER,
Committee Management Coordinator.

SUBCOMMITTEE FOR THE REVIEW OF NUCLEAR SCIENCE

Closed Meeting

In accordance with the Federal Advisory Committee Act, as amended, Pub. L. 92-463, the National Science Foundation announces the following meeting:

ADVISORY COMMITTEE FOR PHYSICS; SUBCOMMITTEE FOR THE REVIEW OF NUCLEAR SCIENCE.

Date and time: October 5-7, 1978; 9 a.m. to 5 p.m. each day.
Place: Rooms 340 and 341, National Science Foundation, 1800 G Street NW., Washington, D.C. 20550.
Type of meeting: Closed.
Contact person: Dr. Laura P. Bautz, Senior Staff Associate, Division of Physics, Room 341, National Science Foundation, Washington, D.C. 20550, telephone 202-632-4175.
Purpose of subcommittee: To provide program oversight concerning NSF support for research in nuclear science.
Agenda: To review NSF Nuclear Science Section documentation as part of the program oversight function.
Reason for closing: The meeting will deal with a review of grants and declinations in which the subcommittee will review materials containing the names of applicant institutions and principal investigators and privileged information from the files pertaining to the proposals. The meeting will also include a review of the peer review documentation pertaining to applicants. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.

Authority to close meeting: This determination was made by the Director, NSF, pursuant to provisions of section 10(d) of the Federal Advisory Committee Act.

M. REBECCA WINKLER,
Committee Management Coordinator.

NUCLEAR REGULATORY COMMISSION

ADVISORY COMMITTEE ON REACTOR SAFEGUARDS, SUBCOMMITTEE ON REGULATORY ACTIVITIES

Meeting

The ACRS Subcommittee on Regulatory Activities will hold an open meeting on October 4, 1978, in Room 1046, 1717 H Street NW., Washington, D.C. 20555. Notice of this meeting was published in the FEDERAL REGISTER on August 15, 1978 (43 FR 36152).

In accordance with the procedures outlined in the FEDERAL REGISTER on October 31, 1977 (56972), oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the Designated Federal Employee as far in advance as practicable so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements.

The agenda for subject meeting shall be as follows:

WEDNESDAY, OCTOBER 4, 1978

MEETING WILL COMMENCE AT 8:45 A.M.

The Subcommittee will hear presentations from the NRC staff and will hold discussions with this group pertinent to the following:

(1) Regulatory Guide 1.134, Revision 1, "Medical Evaluation of Personnel Requiring Operator Licenses."

(2) Regulatory Guide 1.28, Revision 2, "Quality Assurance Program Requirements (Design & Construction)."

(3) Regulatory Guide 1.104, Revision 1, "Overhead Crane Handling Systems for Nuclear Power Plants."

(4) Revisions to Appendices to 10 CFR, Part 50:

a. Appendix G, "Fracture Toughness Requirements."

b. Appendix H, "Reactor Vessel Surveillance Program Requirements."

(5) Draft Regulatory Guide 1.35, Draft 1, Revision 3, "Inservice Inspection of Ungrouted Tendons in Prestressed Concrete Containments."

V 4 3 / 1 8 2 SEP 19 78

V 43 / 182 SEP 1978

(6) Draft Regulatory Guide 1.35.1, Draft 1, "Determination of Prestressing Forces for Inspection of Prestressed Concrete Containments."

(7) Draft Regulatory Guide 1.XXX, Draft 1, "Nuclear Analysis and Design of Concrete Radiation Shielding for Nuclear Power Plants."

(8) Draft Regulatory Guide 1.XXX, Draft 1, "Ultrasonic Testing of Reactor Vessel Welds During Inservice Inspection."

Other matters which may be of a predecisional nature relevant to reactor operation of licensing activities may be discussed following this session.

Persons wishing to submit written statements regarding Regulatory Guides 1.134, Revision 1; 1.28, Revision 2; and 1.104, Revision 1, may do so by providing a readily reproducible copy to the Subcommittee at the beginning of the meeting. However, to insure that adequate time is available for full consideration of these comments at the meeting, it is desirable to send a readily reproducible copy of the comments as far in advance of the meeting as practical to Mr. Gary R. Quittschreiber (ACRS), the Designated Federal Employee for the meeting, in care of ACRS, Nuclear Regulatory Commission, Washington, D.C. 20555, or telecopy them to the Designated Federal Employee, 202-634-3319, as far in advance of the meeting as practical. Such comments shall be based upon documents on file and available for public inspection at the NRC Public Document Room, 1717 H Street NW., Washington, D.C. 20555.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the Designated Federal Employee, Mr. Gary R. Quittschreiber, telephone 202-634-3267, between 8:15 a.m. and 5 p.m, e.d.t.

Dated: September 14, 1978.

JOHN C. HOYLE,
Advisory Committee,
Management Officer.

Meeting

Correction

In FR Doc. 78-26073, appearing on page 41316 in the issue for Friday, September 15, 1978, the meeting time, now reading "8:30 a.m.", should read, "9:00 a.m.".

[7590-01]

[Docket Nos. 50-443-A and 50-444-A]

PUBLIC SERVICE CO. OF NEW HAMPSHIRE, ET AL., SEABROOK STATION, UNITS 1 AND 2

Notice of Receipt of Additional Antitrust Information: Time for Submission of Views on Antitrust Matters

Public Service Co. of New Hampshire, pursuant to section 103 of the Atomic Energy Act of 1954, as amended, filed on May 15, 1978, information requested by the Attorney General for Antitrust Review as required by 10 CFR Part 50, Appendix L. This information adds Massachusetts Municipal Wholesale Electric Co., Vermont Electric Cooperative, Inc., Maine Public Service Co., Taunton Municipal Lighting Plant Commission, and Bangor Hydro-Electric Co. as possible co-owners of the Seabrook Station, units 1 and 2.

The information was filed by Public Service Co. of New Hampshire, the United Illuminating Co., Central Maine Power Co., Central Vermont Public Service Corp., the Connecticut Light & Power Co., Fitchburg Gas & Electric Light Co., Montaup Electric Co., New Bedford Gas & Edison Light Co., New England Power Co., Vermont Electric Power Co., Inc., Massachusetts Municipal Wholesale Electric Co., Vermont Electric Cooperative, Inc., Maine Public Service Co., Taunton Municipal Lighting Plant Commission, Bangor Hydro-Electric Co., and town of Hudson, Mass., Light & Power Department in connection with their application for construction permits and operating licenses for the Seabrook Station, units 1 and 2. The site for this plant is located in Rockingham County, N.H.

The original antritrust portion of the application was submitted on July 9, 1973, and Notice of Receipt of Application for Construction Permits and Facility Licenses and Availability of Applicant's Environmental Report; Time for Submission of Views on Antitrust Matters, was published in the FEDERAL REGISTER on August 9, 1973 (38 FR 21522). The notice of hearing was published in the FEDERAL REGISTER on August 9, 1973 (38 FR 21519).

Copies of the above stated documents are available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. 20555, and at the Exeter Public Library, Front Street, Exeter, N.H.

Information in connection with the antitrust review of this application can be obtained by writing to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Antitrust and Indemnity Group, Office of Nuclear Reactor Regulation.

Any person who wishes to have his views on the antitrust matters with respect to the Massachusetts Municipal Wholesale Electric Co., Vermont Electric Cooperative, Inc., Maine Public Service Co., Taunton Municipal Lighting Plant Commission, and Bangor Hydro-Electric Co. presented to the Attorney General for consideration should submit such views to the U.S. Nuclear Regulatory Commission on or before November 6, 1978.

Dated at Bethesda, Md., this 21st day of August 1978.

For the Nuclear Regulatory Commission.

STEVEN A. VARGA,
Chief, Light Water Reactors Branch No. 4, Division of Project Management.

OFFICE OF SCIENCE AND TECHNOLOGY POLICY

INTERGOVERNMENTAL, SCIENCE, ENGINEERING, AND TECHNOLOGY ADVISORY PANEL

Meeting

In accordance with the Federal Advisory Committee Act, Pub. L. 92-463, the Office of Science and Technology Policy announces the following meeting:

INTERGOVERNMENTAL SCIENCE, ENGINEERING, AND TECHNOLOGY ADVISORY PANEL; HUMAN RESOURCES TASK FORCE

Date: October 6, 1978.
Place: New Executive Office Building, 726 Jackson Place NW., room 3104, Washington, D.C.
Type of meeting: Open.
Contact person: Mr. Louis Blair, Office of Science and Technology Policy, Executive Office of the President, telephone: 202-395-4596. Anyone who plans to attend should contact Mr. Blair by October 4, 1978.
Purpose of the panel: The Intergovernmental Science, Engineering, and Technology Advisory Panel was established to identify State, regional, and local government problems which research and technology may assist in resolving or ameliorating and to help develop policies to transfer research and development findings.
Minutes of the meeting: Executive minutes of the meeting will be available from Mr. Blair.
Tentative agenda: (1) Overview of selected Department of Labor R & D programs of concern to State and local governments; (2) overview of selected information dissemination programs in the Department of Health, Education, and Welfare; (3) discussion of future Task Force activities.

WILLIAM J. MONTGOMERY,
Executive Officer, Office of Science and Technology Policy.

OFFICE OF MANAGEMENT AND BUDGET

CLEARANCE OF REPORTS

List of Requests

The following is a list of requests for clearance of reports intended for use in collecting information from the public received by the Office of Management and Budget on September 12, 1978 (44 U.S.C. 3509). The purpose of publishing this list in the FEDERAL REGISTER is to inform the public.

The list includes the title of each request received; the name of the agency sponsoring the proposed collection of information; the agency form number(s), if applicable; the frequency with which the information is proposed to be collected; an indication of who will be the respondents to the proposed collection; the estimated number of responses; the estimated burden in reporting hours; and the name of the reviewer or reviewing division or office.

Requests for extension which appear to raise no significant issues are to be approved after brief notice through this release.

Further information about the items on this daily list may be obtained from the Clearance Office, Office of Management and Budget, Washington, D.C. 20503, 202-395-4529, or from the reveiwer listed.

NEW FORMS

U.S. COMMISSION ON CIVIL RIGHTS

Readership Survey, CCR 20, single time, persons and organizations with interest in civil rights, 500 responses, 165 hours, Laverne V. Collins, 395-3214.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Social Security Administration, Network for General Consumer Reaction, SSA-2955, single time, network mechanism, 1,000 responses, 167 hours, Reese, B. F., Human Resources Division, 395-3211.

Health Care Financing Administration (medicare), Medicaid Quality Control Statistical Summary Reports, HCFA 302 through 312, semi-annually, XIX State agencies, 3,928 responses, 3,928 hours, Richard Eisinger, 395-3214.

DEPARTMENT OF COMMERCE

Bureau of the Census, Agriculture Supplement to the National Annual Housing Survey, AHS-2A, single time, households in 461 PSU design, 60,000 responses, 1,000 hours, Office of Federal Statistical Policy and Standards, 673-7977.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education, a Process and Management Study of ESEA, title IV Consolidation, 566, single time, Sea's, Lea's and Nonpublic Schools, 5,276 responses, 4,537 hours, Human Resources Division, Laverne Collins, 395-3532.

NATIONAL SCIENCE FOUNDATION

Survey of Urban Cultural/Recreation facilities, single time, Parks and Recreation Dept. (48 SMSA's) all national accredited museums and zoos, 700 responses, 700 hours, Office of Federal Statistical Policy and Standards, 673-7977.

Observation Protocol, on occasion, College and Public School Science Teachers, 20 responses, 20 hours, Warren Topellus, 395-6134.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Community Planning and Development, Application for Federal Assistance, Community Development Program, and Assurances, HUD-6757, 7015, and 7015.12, on occasion, federally assisted new communities, 50 responses, 250 hours, Budget Review Division, 395-4775.

REVISIONS

VETERANS' ADMINISTRATION

Application for Dependency and Indemnity Compensation or Death Pension By Widow/er or Child, 21-534, on occasion, veterans; dependents, 175,000 responses, 306,250 hours, Caywood, D. P., 395-3443.

Information From Remarried Widow/er, 21-4103, on occasion, remarried widow/er, 43,500 responses, 14,500 hours, Caywood, D. P., 395-3443.

Request for Information Concerning Unreimbursed Family Medical Expenses, 21-8416A, on occasion, claimant, 175,000 responses, 43,750 hours, Caywood, D. P., 395-3443.

REVISIONS

VETERANS ADMINISTRATION

Statement of Termination of Marital Relationship, 21-8796, on occasion, claimants for death benefits, 5,000 responses, 1,666 hours, D. P. Caywood, 395-3443.

Veterans Supplemental Application for Assistance in Acquiring Specially Adapted Housing, 26-4555c, on occasion, veterans, 200 responses, 50 hours, D. P. Caywood, 395-3443.

DEPARTMENT OF AGRICULTURE

Food and nutrition service food stamp accountability report, FNS-250, monthly, all food stamp issuing agents and bulk storage and transfer points, 69,600 responses, 278,400 hours, C. A. Ellett, 395-6132.

DEPARTMENT OF COMMERCE

Bureau of Census, annual trade survey: 1978, b-450 and 451, other (see sf-83), merchant wholesalers, 13,000 responses, 6,500 hours, C. Louis Kincannon, 395-3211.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education, application for strengthening developing institutions, oe-1049-1, annually, lhe's 150 responses, 24,000 hours, Laverne V. Collins, 395-3214.

Social Security Administration, state's quarterly report of wages paid, ssa-3963 and 3963a, quarterly, subdivisions of all 50 states, 240,000 responses, 1,440,000 hours, B. F. Reese, 395-3211.

Office of Education, application for federal assistance (nonconstruction programs) instruction for right-to-read program, oe-295, annually, LEA's state community service agencies, 300 responses, 6,000 hours, Budget Review Division, 395-4775.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration, motorist sanction severity survey, single-time, licensed drivers, A. Strasser, 395-6132.

EXTENSIONS

ENVIRONMENTAL PROTECTION AGENCY

Study of Human Tissue Heavy Metal Burden in Nonferrous Smelter Communities, single-time, household and individuals in seven smelter communities, 1,800 responses, 3,600 hours, Office of Federal Statistical Policy and Standard, 673-7956.

DEPARTMENT OF DEFENSE

Department of the Navy Inquiry (references of candidates for commissions in naval service), NAVCRUIT, 1110/28, on occasion, former schools and employers, 850,000 responses, 425,000 hours, Marsha Traynham, 395-3773.

DEPARTMENT OF THE NAVY

SMALL BUSINESS ADMINISTRATION

[License No. 02/02-0333]

BBS EQUITIES, LTD.

Notice is hereby given that BBS Equities, Ltd. (BBS), Suite 2400 Gateway One, Newark, N.J. 07102, pursuant to the provisions of § 107.105 of the Regulations governing small business investment companies (13 C.F.R. § 107.105 (1978)), has surrendered its license to operate as a small business investment company (SBIC).

BBS was incorporated under the laws of the State of New Jersey to operate solely as an SBIC under the Small Business Investment Act of 1958, as amended (15 U.S.C. 661 et seq.), (the Act), and it was issued license number 02/02-0333 by the Small Business Administration on September 23, 1977.

On September 7, 1978, SBA approved the merger of BBS into Venturtech Capital, Inc., an SBIC located at Suite 706, Republic Tower, 5700 Florida Boulevard, Baton Rouge, La. 70806. A branch office will be maintained at 12 Bank Street, Summit, N.J. 07901.

Under the authority vested by the act and the rules and regulations promulgated thereunder, the surrender of the license of BBS is hereby accepted and accordingly, BBS is no longer licensed to operate as an SBIC.

[License No. 04/04-0147]

BENSON INVESTMENT CO., INC.

Issuance of License

On June 16, 1978, a notice was published in the FEDERAL REGISTER (43 FR 26172), stating that an application had been filed by Benson Investment Co., Inc., 406 South Commerce Street, Geneva, Ala. 36340, with the Small Business Administration, pursuant to § 107.102 of the Regulations governing small business investment companies (SBIC).

Interested parties were given until the close of business July 3, 1978, to submit their comments to SBA. No comments were received.

Notice is hereby given that, pursuant to Section 301(c) of the Small Business Investment Act of 1958, as amended, after having considered the application and all other pertinent information, the SBA issued License No. 04/04-0147 to Benson Investment Co., Inc., to operate as an SBIC.

[License No. 04/04-0150]

CORPORATE CAPITAL, INC.

Application for a License as a Small Business Investment Company (SBIC)

Notice is hereby given of the filing of an application with the Small Business Administration, pursuant to § 107.102 of the Regulations (13 C.F.R. 107.102 (1978)), under the name of Corporate Capital, Inc., 2001 Broadway, Riviera Beach, Fla. 33404, for a license to operate in the State of Florida as an SBIC under the provisions of the Small Business Investment Act of 1958 (Act), as amended (15 U.S.C. 661 et seq.).

The proposed officers and directors are as follows:

Jerry Thomas, Sea Oats, Beach Road, Jupiter, FL, Chairman of the Board, President and Director.

Vernon F. Raedisch, 3490 La Jardin Court, Apartment C-2, Greenacres City, FL 33463, Vice President, Treasurer and Director.

Patrick M. Gordon, 359 Green Briar Drive, Lake Park, FL, Secretary and Director.

Major stockholders and percentage of ownership are:

First Marine Bank & Trust Co. of the Palm Beaches, FL, 49 percent.

First Marine National Bank & Trust Co. of Lake Worth, FL, 35 percent.

First Marine National Bank & Trust Co., Jupiter/Tequesta, FL, 16 percent.

First Marine Banks, Inc., a registered bank holding company, is the major stockholder of the above mentioned banks. No one individual or corporation owns 10 percent or more of First Marine Banks, Inc., stock.

The Applicant will begin operations with a capitalization of $1,266,000 which will be a source of long-term loans and venture capital for diversified small business concerns. In addition to financial assistance, the Applicant intends to render management consulting services to its clients.

Matters involved in SBA's consideration of the application include the general business reputation and character of the proposed owners and management, including adequate profitability and financial soundness in accordance with the Act and Regulations.

Notice is further given that any interested person may, not later than October 4, 1978, submit written comments on the proposed company to the Deputy Associate Administrator for Investment, Small Business Administration, 1441 "L" Street NW., Washington, D.C. 20416.

A copy of this Notice shall be published in a newspaper of general circulation in Riviera Beach, Fla.

FIRST WALL STREET SMALL BUSINESS INVESTMENT CO., INC.

Issuance of License To Operate as a Small Business Investment Compnay

On May 3, 1978, a notice of application for a license as a Small Business Investment Co. was published in the FEDERAL REGISTER (43 FR 19093) stating that an application had been filed with the Small Business Administration (SBA) pursuant to section 107.102 of the Regulations governing small business investment companies (13 CFR 107.102 (1978)) for a license as a small business investment company by New Court Ventures, Inc., One Rockefeller Plaza, New York, N.Y. 10020.

Interested parties were given until the close of business May 18, 1978, to submit their comments to SBA. No comments were received.

Notice is hereby given that, pursuant to section 301(c) of the Small Business Investment Act of 1958, as amended, after having considered the application and all other pertinent information and the facts with regard thereto, SBA on August 31, 1978, issued License No. 02/02-0330 to First Wall Street Small Business Investment Co., Inc., to operate as a small business investment company.

(Catalogue of Federal Domestic Assistance Program No. 59.011 Small Business Investment Companies.)

Dated: September 8, 1978.

PETER F. MCNEISH,
Deputy Associate Administrator for Investment.

[License No. 09/09-0211]

FLORISTS CAPITAL CORP.

Notice of Issuance of Small Business Investment Company License

On December 23, 1977, a notice of application for a license as a small business investment company was published in the FEDERAL REGISTER (Vol. 42, No. 247) stating that an application had been filed with the Small Business Administration pursuant to section 107.102 of the regulations governing small business investment companies (13 CFR 107.102 (1977)), for a license to operate as a small business investment company by Florists Capital Corp., 10524 West Pico Boulevard, Los Angeles, Calif. 90064.

Interested parties were given until the close of business on January 9, 1978, to submit their comments. No comments were received.

Notice is hereby given that pursuant to section 301(c) of the Small Business Investment Act of 1958, as amended, after having considered the application and all other pertinent information and facts with regard thereto, SBA issued License No. 09/09-0211 to Florists Capital Corp. on August 28, 1978.

(Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: September 8, 1978.

Vice Chairman,
U.S. CCITT National Committee.

V 43 / 182 SEP 1978

Name and Title
George Augustus Simpson (Son), 103 Park Avenue, Suite 1110, New York, N.Y. 10017, President, Director.
Dr. George Augustus Simpson (Father), 3619 Percival Avenue, Miami, Fl. 33133, Treasurer, Director, 70 percent.
Dr. Harold Ramsey, 3201 Dorchester Road, Baltimore, Md. 21215, Secretary, 30 percent.

The applicant proposes to commence operations with a capitalization of $505,000 derived from the sale of 10 shares of common stock. Dr. Simpson will be the purchaser of 7 shares and Dr. Ramsey 3 shares.

The applicant will conduct its operations principally in the State of New York, expect to provide financing in the form of long-term loans or by purchasing equity securities in small concerns engaged in both the servicing or manufacturing business, and to those who are not sufficiently strong economically to obtain bank financing or other standard types of financing and, will employ a management advisor.

Matters involved in SBA's consideration of the application include the general business reputation of the owner and management, and the probability of successful operations of the new company, in accordance with the Act and Regulations.

Notice is further given that any person may, not later than October 4, 1978, submit to SBA, in writing, relevant comments on the proposed licensing of this company. Any such communications should be addressed to: Deputy Associate Administrator for Investment, Small Business Administration, 1441 L Street NW., Washington, D.C. 20416.

[Declaration of Disaster Loan Area No. 1525]

INDIANA

Declaration of Disaster Loan Area

Blackford County and adjacent counties within the State of Indiana constitute a disaster area as a result of damage caused by severe thunderstorm and flash flooding which occurred on August 18, 1978. Eligible persons, firms and organizations may file applications for loans for physical damage until the close of business on November 13, 1978, and for economic injury until the close of business on June 11, 1979 at: Small Business Administration, District Office, Federal Building, Fifth Floor, 575 North Pennsylvania Street, Indianapolis, Ind., or other locally announced locations.

[8025-01]

LOCAL DEVELOPMENT COMPANY LOANS, HANDICAPPED ASSISTANCE LOANS, AND BUSINESS LOANS

Waiver of Administrative Ceilings

SBA has adopted administrative ceilings limiting the amount of financial assistance generally available to applicants for local development company loans (LDC), handicapped assistance loans (HAL) and regular business loans. (§§ 108.502-1(d)(3), 118.31(a)(1) and 122.5(b) of Title 13 CFR.)

SBA has also adopted regulations authorizing the waiver of the applicable ceilings upon a determination by SBA that the particular loan furthers a "National Agency of Regional program objective." (§§ 108.502-1(d)(4), 118.31(a)(2) and 122.5(c).) These sections further provide that SBA may publish from time to time standards or examples illustrating National, agency, or regional objectives, and that SBA will not recognize any such objective until it has been published in the FEDERAL REGISTER.

In accordance with the above-cited regulations, the following examples of National, agency and regional objectives are published. To justify waiver of the applicable administrative ceiling, it must appear to SBA's satisfaction that any two of the listed objectives will be advanced by the loan in question. The objectives are:

1. Construction of medical facilities, the need for which has been certified by appropriate local authority;
2. Conservation or production of energy;
3. Creation or preservation of jobs;
4. Performance of a specific Government contract;
5. Stimulation of the economy of a labor surplus area;
6. Conservation of natural resources;
7. Improvement of mass transit facilities;
8. Economic development or depressed urban or rural areas;
9. Assistance to broadcasting and cable TV operations;
10. Revitalization of SBA-designated neighborhood business areas;
11. Assistance to businesses for the primary purpose of exporting goods and/or services. "Primary" is defined as at least 50 percent of the total loan disbursement will be used directly for exporting.

A. VERNON WEAVER,
Administrator.

ADVISORY COMMITTEE TO U.S. SECTION OF THE INTERNATIONAL COMMISSION FOR THE CONSERVATION OF ATLANTIC TUNAS

Meeting

Notice is hereby given, pursuant to the provisions of Pub. L. 92-463, that a meeting of the Advisory Committee to the U.S. Section of the International Commission for the Conservation of Atlantic Tunas will be held on October 4, 1978, in the Woodward Room of the National Wildlife Federation, 1412 16th Street, Washington, D.C., at 9 a.m.

The meeting will be open to the public and the public may participate in the discussion subject to the instructions of the Committee Chairman. Subjects to be discussed include: Review of the status of the stocks and research concerning Atlantic bluefin tuna; review of the status of stocks and research concerning billfish; review of the status of stocks and research concerning yellowfin, skipjack, albacore, and bigeye tunas; report on SCRS officers' meeting; report of bilateral discussions and their impact on foreign fishing for Atlantic bluefin tuna in the Gulf of Mexico and Northwest Atlantic; discussion of preliminary positions for ICCAT concerning bluefin, bigeye, and albacore tunas; and other business.

Requests for further information on the meeting should be Directed to Mr. Brian Hallman, OES/OFA/FA, Room 3214, Department of State, Washington, D.C. 20520. Mr. Hallman may be reached by telephone on 202-632-1073.

Dated: September 11, 1978.

SHIPPING COORDINATING COMMITTEE; SUBCOMMITTEE ON SAFETY OF LIFE AT SEA

Meeting

The working group on Radiocommunications of the Shipping Coordinating Committee's Subcommittee on Safety of Life at Sea (SOLAS) will conduct an open meeting at 1:30 p.m. on October 19, 1978, in Room 8442 of the Department of Transportation, 400 Seventh Street SW., Washington, D.C. 20590.

The purpose of the meeting is to prepare position documents for the 20th session of the subcommittee on Radiocommunications of the Intergovernmental Maritime consultative Organization (IMCO) to be held in London in the fall of 1979. In particular, the working group will discuss the following topics:

Results of the 19th session.
Code of safety requirements for mobile offshore drilling units.
Operational standards for shipboard radio equipment.
Revision of Resolution A.283(VIII) Maritime Distress System.

Requests for further information should be directed to Lt. R. F. Carlson, U.S. Coast Guard (G-OTM/74), Washington, D.C. 20590, telephone 202-426-1345.

The Chairman will entertain comments from the public as time permits.

Dated: September 5, 1978.

STUDY GROUP 4 OF THE U.S. ORGANIZATION FOR THE INTERNATIONAL TELEGRAPH AND TELEPHONE CONSULTATIVE COMMITTEE (CCITT)

Meeting

The Department of State announces that study group four of the U.S. Organization for the International Telegraph and Telephone Consultative Committee (CCITT) will meet on October 11, 1978 at 10 a.m. in room 6802 of the Department of Commerce, 14th Street NW. (between E Street and Constitution Avenue), Washington, D.C. This study group deals with matters in telecommunications relating to the development of international digital data transmission services.

The agenda for the October 11 meeting will include consideration of the following:

1. Late contributions to the meeting of CCITT study group XVII in Geneva, November 21-29, 1978;
2. U.S. participation at the study group XVII meeting;
3. Other business.

All participants are requested to use the main entrance to the Department of Commerce on 14th Street NW. Members of the general public who desire to attend the meeting on October 11 will be admitted up to the limit of the meeting room.

Requests for further information should be directed to Mr. Richard H. Howarth, State Department, Washington, D.C. 20520, telephone 202-632-1007.

Dated: September 11, 1978.

RICHARD H. HOWARTH,
Vice Chairman, U.S. CCITT National Committee.

[4810-40]

DEPARTMENT OF THE TREASURY

Office of the Secretary

[Dept. Circular; Public Debt Series—No. 22-78]

SERIES T-1980

Treasury Notes of September 30, 1980

SEPTEMBER 14, 1978.

1. INVITATION FOR TENDERS

1. 1. The Secretary of the Treasury, under the authority of the Second Liberty Bond Act, as amended, invites tenders for approximately $2,684,000,000 of United States securities, designated Treasury Notes of September 30, 1980, Series T-1980 (CUSIP NO. 912827 JB 9). The securities will be sold at auction with bidding on the basis of yield. Payment will be required at the price equivalent of the bid yield of each accepted tender. The interest rate on the securities and the price equivalent of each accepted bid will be determined in the manner described below. Additional amounts of these securities may be issued to Government accounts and Federal Reserve Banks for their own account in exchange for maturing Treasury securities. Additional amounts may also be issued for cash to Federal Reserve Banks as agents of foreign and international monetary authorities.

2. DESCRIPTION OF SECURITIES

2. 1. The securities will be dated October 2, 1978, and will bear interest from that date, payable on a semiannual basis on March 31, 1979, and each subsequent 6 months on September 30 and March 31, until the principal becomes payable. They will mature September 30, 1980, and will not be subject to call for redemption prior to maturity.

2. 2. The income derived from the securities is subject to all taxes imposed under the Internal Revenue Code of 1954. The securities are subject to estate, inheritance, gift or other excise taxes, whether Federal or State, but are exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, any possession of the United States, or any local taxing authority.

2. 3. The securities will be acceptable to secure deposits of public monies. They will not be acceptable in payment of taxes.

2. 4. Bearer securities with interest coupons attached, and securities registered as to principal and interest, will be issued in denominations of $5,000,

to submit tenders for their own account.

3. 5. Tenders will be received without deposit for their own account from

competitive tenders will only be notified if the tender is not accepted in full, or when the price is over par.

4. RESERVATIONS

5. 3. Registered securities tendered as deposits and in payment for allotted securities are not required to be as-

pending delivery of the definitive securities.

6. 2. The Secretary of the Treasury

sion, Section of Dockets, by requesting docket No. AB 52 (SDM).

H. G. HOMME, JR.

V 43 / 182 SEP 19 78

2. 4. Bearer securities with interest coupons attached, and securities registered as to principal and interest, will be issued in denominations of $5,000, $10,000, $100,000, and $1,000,000. Book-entry securities will be available to eligible bidders in multiples of those amounts. Interchanges of securities of different denominations and of coupon, registered and book-entry securities, and the transfer of registered securities will be permitted.

2. 5. The Department of the Treasury's general regulations governing United States securities apply to the securities offered in this circular. These general regulations include those currently in effect, as well as those that may be issued at a later date.

3. Sale Procedures

3. 1. Tenders will be received at Federal Reserve Banks and Branches and at the Bureau of the Public Debt, Washington, D.C. 20226, up to 1:30 p.m., Eastern Daylight Saving time, Wednesday, September 20, 1978. Noncompetitive tenders as defined below will be considered timely if postmarked no later than Tuesday, September 19, 1978.

3. 2. Each tender must state the face amount of securities bid for. The minimum bid is $5,000 and larger bids must be in multiples of that amount. Competitive tenders must also show the yield desired, expressed in terms of an annual yield with two decimals, e.g., 7.11 percent. Common fractions may not be used. Noncompetitive tenders must show the term "noncompetitive" on the tender form in lieu of a specified yield. No bidder may submit more than one noncompetitive tender and the amount may not exceed $1,000,000.

3. 3. All bidders must certify that they have not made and will not make any agreements for the sale or purchase of any securities of this issue prior to the deadline established in section 3.1. for receipt of tenders. Those authorized to submit tenders for the account of customers will be required to certify that such tenders are submitted under the same conditions, agreements, and certifications as tenders submitted directly by bidders for their own account.

3. 4. Commercial banks, which for this purpose are defined as banks accepting demand deposits, and primary dealers, which for this purpose are defined as dealers who make primary markets in Government securities and report daily to the Federal Reserve Bank of New York their positions in and borrowings on such securities, may submit tenders for account of customers if the names of the customers and the amount for each customer are furnished. Others are only permitted to submit tenders for their own account.

3. 5. Tenders will be received without deposit for their own account from commercial banks and other banking institutions; primary dealers, as defined above; federally-insured savings and loan associations; States, and their political subdivisions or instrumentalities; public pension and retirement and other public funds; international organizations in which the United States holds membership; foreign central banks and foreign states; Federal Reserve Banks; and Government accounts. Tenders from others must be accompanied by a deposit of 5 percent of the face amount of securities applied for (in the form of cash, maturing Treasury securities or readily collectible checks), or by a guarantee of such deposit by a commerical bank or a primary dealer.

3. 6. Immediately after the closing hour, tenders will be opened, followed by a public announcement of the amount and yield range of accepted bids. Subject to the reservations expressed in section 4, noncompetitive tenders will be accepted in full, and then competitive tenders will be accepted, starting with those at the lowest yields, through successively higher yields to the extent required to attain the amount offered. Tenders at the highest accepted yield will be prorated if necessary. After the determination is made as to which tenders are accepted, a coupon rate will be established, on the basis of a ⅛ of 1 percent increment, which results in an equivalent average accepted price close to 100.000 and a lowest accepted price above the original issue discount limit of 99.750. That rate of interest will be paid on all of the securities. Based on such interest rate, the price on each competitive tender allotted will be determined and each successful competitive bidder will be required to pay the price equivalent to the yield bid. Those submitting noncompetitive tenders will pay the price equivalent to the weighted average yield of accepted competitive tenders. Price calculations will be carried to 3 decimal places on the basis of price per hundred, e.g., 99.923, and the determinations of the Secretary of the Treasury shall be final. If the amount of noncompetitive tenders received would absorb all or most of the offering, competitive tenders will be accepted in an amount sufficient to provide a fair determination of the yield. Tenders received from Government accounts and Federal Reserve Banks will be accepted at the price equivalent to the weighted average yield of accepted competitive tenders.

3. 7. Competitive bidders will be advised of the acceptance or rejection of their tenders. Those submitting noncompetitive tenders will only be notified if the tender is not accepted in full, or when the price is over par.

4. Reservations

4. 1. The Secretary of the Treasury expressly reserves the right to accept or reject any or all tenders in whole or in part, to allot more or less than the amount of securities specified in section 1, and to make different percentage allotments to various classes of applicants when the Secretary considers it in the public interest. The Secretary's action under this Section is final.

5. Payment and Delivery

5. 1. Settlement for allotted securities must be made or completed on or before Monday, October 2, 1978, at the Federal Reserve Bank or Branch or at the Bureau of the Public Debt, wherever the tender was submitted. Payment must be in cash; in other funds immediately available to the Treasury; in Treasury bills, notes or bonds (with all coupons detached) maturing on or before the settlement date but which are not overdue as defined in the general regulations governing United States securities; or by check drawn to the order of the institution to which the tender was submitted, which must be received at such institution no later than:

(a) Thursday, September 28, 1978, if the check is drawn on a bank in the Federal Reserve District of the institution to which the check is submitted (the Fifth Federal Reserve District in case of the Bureau of the Public Debt), or

(b) Wednesday, September 27, 1978, if the check is drawn on a bank in another Federal Reserve District.

Checks received after the dates set forth in the preceding sentence will not be accepted unless they are payable at the applicable Federal Reserve Bank. Payment will not be considered complete where registered securities are requested if the appropriate identifying number as required on tax returns and other documents submitted to the Internal Revenue Service (an individual's social security number or an employer identification number) is not furnished. When payment is made in securities, a cash adjustment will be made to or required of the bidder for any difference between the face amount of securities presented and the amount payable on the securities allotted.

5. 2. In every case where full payment is not completed on time, the deposit submitted with the tender, up to 5 percent of the face amount of securities allotted, shall, at the discretion of the Secretary of the Treasury, be forfeited to the United States.

5. 3. Registered securities tendered as deposits and in payment for allotted securities are not required to be assigned if the new securities are to be registered in the same names and forms as appear in the registrations or assignments of the securities surrendered. When the new securities are to be registered in names and forms different from those in the inscriptions or assignments of the securities presented, the assignment should be to "The Secretary of the Treasury for (securities offered by this circular) in the name of (name and taxpayer identifying number)." If new securities in coupon form are desired, the assignment should be to "The Secretary of the Treasury for coupon (securities offered by this circular) to be delivered to (name and address)." Specific instructions for the issuance and delivery of the new securities, signed by the owner or authorized representative, must accompany the securities presented. Securities tendered in payment should be surrendered to the Federal Reserve Bank or Branch or to the Bureau of the Public Debt, Washington, D.C. 20226. The securities must be delivered at the expense and risk of the holder.

5. 4. If bearer securities are not ready for delivery on the settlement date, purchasers may elect to receive interim certificates. These certificates shall be issued in bearer form and shall be exchangeable for definitive securities of this issue, when such securities are available, at any Federal Reserve Bank or Branch or at the Bureau of the Public Debt, Washington, D.C. 20226. The interim certificates must be returned at the risk and expense of the holder.

5. 5. Delivery of securities in registered form will be made after the requested form of registration has been validated, the registered interest account has been established, and the securities have been inscribed.

6. General Provisions

6. 1. As fiscal agents of the United States, Federal Reserve Banks are authorized and requested to receive tenders, to make allotments as directed by the Secretary of the Treasury, to issue such notices as may be necessary, to receive payment for and make delivery of securities on full-paid allotments, and to issue interim certificates pending delivery of the definitive securities.

6. 2. The Secretary of the Treasury may at any time issue supplemental or amendatory rules and regulations governing the offering. Public announcement of such changes will be promptly provided.

PAUL H. TAYLOR,
Fiscal Assistant Secretary.

Amended System Diagram Map

Notice is hereby given that, pursuant to the requirements contained in title 49 of the Code of Federal Regulations, Part 121.23, that the Atchison, Topeka & Santa Fe Railway Co., has filed with the Commission its amended system diagram map in docket No. AB 52 (SDM). The maps reproduced here in black and white are reasonable reproductions of that amended system diagram map and the Commission on July 17, 1978, received a certificate of publication as required by said regulation which is considered the effective date on which the amended system diagram map was filed.

Color-coded copies of the map have been served on the Governor of each State in which the railroad operates and the Public Service Commission or similar agency and the State-designated agency. Copies of the map may also be requested from the railroad at a nominal charge. The maps also may be examined at the office of the Commission, Section of Dockets, by requesting docket No. AB 52 (SDM).

H. G. Homme, Jr.,
Acting Secretary.

THE ATCHISON, TOPEKA & SANTA FE RAILWAY CO.

DESCRIPTIONS OF LINE TO ACCOMPANY THE REVISED SYSTEM DIAGRAM AND DETAIL MAP

Category (1)

All lines or portions of lines which the carrier anticipates will be the subject of an abandonment or discontinuance application to be filed within the 3-year period following the date upon which the diagram, or any amended diagram, is filed with the Commission.

Map Code (Index No. 8)—Texas

(a) Skellytown to White Deer, a 10.4 mile industrial spur on the Second District, also referred to as the Skellytown spur.

(b) Located entirely in the State of Texas.
(c) Located entirely in Carson County.
(d) Skellytown spur connecting at White Deer, Main Line Milepost 512.8.
(e) Agency Station at White Deer (Main Line Milepost 512.8).

Category (1)

All lines or portions of lines which the carrier anticipates will be the subject of an abandonment or discontinuance application to be filed within the 3-year period following the date upon which the diagram, or any amended diagram, is filed with the Commission.

Map Code (Index No. 10)—Arizona

(a) Williams to Grand Canyon; entire Grand Canyon District 63.79 miles.
(b) Located entirely in the State of Arizona.
(c) Located entirely in Coconino County.
(d) Milepost 0.0 to 63.79.
(e) No agency stations on segment.

Category (2)

All lines or portions of lines potentially subject to abandonment which the carrier has under study and believes may be the subject of a future abandonment application because of either anticipated operating losses or excessive rehabilitation costs, as compared to potential revenues.

Map Code (Index No. 15)—Texas

(a) Maryneal to San Angelo, a 53.4 mile segment of the Sayard District.
(b) Located entirely in the State of Texas.
(c) Located in Nolan, Coke, and Tom Green County.
(d) Milepost 658.6 to 712.0.
(e) Agency stations at Maryneal (Milepost 657.3), Sayard (Milepost 714.5) and San Angelo (Milepost 717.4).

CONSOLIDATED RAIL CORP.

Amended System Diagram Map

Notice is hereby given that, pursuant to the requirements contained in Title 49 of the Code of Federal Regulations, Part 1121.23, that the Consolidated Rail Corp., has filed with the Commission its amended color-coded system diagram map in docket No. AB 167 (SDM). The maps reproduced here in black and white are resonable reproductions of that amended system diagram map and the Commission on August 28, 1978, received a certificate of publication as required by said regulation which is considered the effective date on which the amended system diagram map was filed.

Color-coded copies of the map have been served on the Governor of each State in which the railroad operates and the Public Service Commission or similar agency and the State designated agency. Copies of the map may also be requested from the railroad at a nominal charge. The maps also may be examined at the office of the Commission, Section of Dockets, by requesting docket No. AB 167 (SDM).

H. G. HOMME, Jr.,
Acting Secretary.

NOTICE

Consolidated Rail Corp. (Conrail) hereby gives public notice that it is filing with the Interstate Commerce Commission (ICC) an amendment to the system diagram map which it filed December 1, 1977, pursuant to ICC regulations (49 CFR §§ 1121.22 to 1121.23). Specifically, the Utica Branch between mile post 202.6 at Chenango Forks and mile post 231.0 at Norwich in Broome and Chenango Counties, N.Y. with freight stations at Greene, Brisben, and Oxford, has been reclassified from category 2 to category 5.

The Commission requires that a railroad company, when filing a system diagram map, place its rail lines in one of five categories. They are:

Category 1—Rail lines or portions thereof which Conrail anticipates will be the subject of abandonment or discontinuance applications within the next 3 years.

Category 2—Rail lines or portions thereof which Conrail has under study and believes may be the subject of future abandonment applications.

Category 3—Rail lines that are now the subject of pending abandonment or discontinuance applications.

Category 4—Rail line which are operated by Conrail under subsidy contracts with State agencies and/or shippers. (Conrail does not own these rail lines. They were excluded from the Conrail system when the bankrupt railroads of the Northeast/Midwest were re-structured.).

Category 5—All Conrail lines not placed in categories 1 through 4.

ICC regulations require that the system diagram map be accompanied by line descriptions, including, in the case of categories 1, 2, and 3, the names of the States and counties in which each line is located.

Below you will find a revised map covering the Conrail lines in this area and showing the categories in which these lines are now placed.

[7035-01]

[Decisions Volume No. 30]

DECISION-NOTICE

SEPTEMBER 7, 1978.

The following applications are governed by Special Rule 247 of the Commission's Rules of Practice (49 CFR § 100.247). These rules provide, among other things, that a protest to the granting of an application must be filed with the Commission on or before October 19, 1978. Failure to file a protest, within 30 days, will be considered as a waiver of opposition to the application. A protest under these rules should comply with Rule 247(e)(3) of the Rules of Practice which requires that it set forth specifically the grounds upon which it is made, contain a detailed statement of protestant's interest in the proceeding (as specifically noted below), and shall specify with particularity the facts, matters, and things relied upon, but shall not include issues or allegations phrased generally. A protestant should include a copy of the specific portions of its authority which protestant believes to be in conflict with that sought in the application, and describe in detail the method—whether by joinder, interline, or other means—by which protestant would use such authority to provide all or part of the service proposed. Protests not in reasonable compliance with the requirements of the rules may be rejected. The original and one copy of the protest shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named. If the protest includes a request for oral hearing, such request shall meet the requirements of section 247(e)(4) of the special rules and shall include the certification required in that section.

Section 247(f) provides, in part, that an applicant which does not intend timely to prosecute its applicaton shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. Broadening amendments will not be accepted after the date of this publication.

Any authority granted may reflect administratively acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

We find: With the exceptions of those applications involving duly noted problems (e.g., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the national transportation policy. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of the Interstate Commerce Act and the Commission's regulations. This decision is not a major Federal action significantly affecting the quality of the human environment.

It is ordered: In the absence of legally sufficient protests, filed within 30 days of publication of this decision-notice (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of this decision-notice. To the extent that the authority sought below may duplicate an applicant's existing authority, such duplication shall not be construed as conferring more than a single operating right.

By the Commission, Review Board No. 3, Membes Parker, Fortier, and Hill.

H. G. HOMME, Jr.,
Acting Secretary

MC 14252 (Sub-33F), filed July 10, 1978. Applicant: COMMERCIAL LOVELACE MOTOR FREIGHT, INC., 3400 Refugee Road, Columbus, OH 43227. Representative: William C. Buckham (same address as applicant). To operate as a *common carrier, by motor vehicle, transporting: General commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment): (1) Between Terre Haute, IN and Danville, IL; from Terre Haute over U.S. Hwy 41 to Lyford, then over IN Hwy 163 to Clinton, then over IN Hwy 63 to junction U.S. Hwy 136, then over U.S. Hwy 136 to Danville, and return over the same route, serving all intermediate points, and the off route points of Cayuga, Covington, and Kingman, IN; (2) between Terre Haute, IN and Dana, IN; from Terre Haute over U.S. Hwy 41 to junction IN Hwy 63, then over IN Hwy 63 to junction IN Hwy 163, then over IN Hwy 163 to junction IN Hwy 71, then over IN Hwy 71 to Dana, IN, and return over the same route, serving all intermediate points, and the off route point of St. Bernice, IN; and (3) between Terre Haute, IN and Clinton, IN; from Terre Haute over U.S. Hwy 40 to West Terre Haute, then over U.S. Hwy 150 to junction unnumbered Hwy approximately 8 miles north of junction U.S. Hwys 40 and 150, then over unnumbered Hwy to Clinton, and return over the same route, serving all intermediate points. (Hearing site: Indianapolis, IN, or Springfield, IL.)

MC 23618 (Sub-34F), filed August 15, 1978. Applicant: McALLISTER TRUCKING CO., a corporation, d.b.a. MATCO, P.O. Box 2377, Abilene, TX 79604. Representative: Bernard H. English, 6270 Firth Road, Fort Worth, TX 76116. To operate as a *common carrier,* by motor vehicle, over irregular routes, transporting *prefabricated metal buildings,* knockeddown, or in sections from Houston, TX, to those points in the United States in and east of ND, SD, NE, KS, OK, and TX. (Hearing site: Houston or Dallas, TX.)

MC 29328 (Sub-6F), filed August 14, 1978. Applicant: SCHIEK MOTOR EXPRESS, INC., a Delaware corporation, 90 Casseday Avenue, Joliet, IL 60432. Representative: Eugene L. Colin, One North LaSalle Street, Chicago, IL 60602. To operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: (1) *Plastic pipe and fittings,* and *materials* used in the installation of plastic pipe, from the facilities of Johns-Manville Sales Corp., at or near Wilton, IA, to points IL, IN, and WI; (2) *building materials and cement pipe,* from the facilities of Johns-Manville Sales Corp., at or near Waukegan, IL, to points in IN and MO; and (3) *insulation board,* from the facilities of Johns-Manville Perlite Corp., at or near Rockdale, IL, to points in IN, IA, MO, and WI. (Hearing site: Chicago, IL.)

MC 48958 (Sub-158F), filed August 10, 1978. Applicant: ILLINOIS-CALIFORNIA EXPRESS, INC., A Nebraska Corporation, 510 East 51st Avenue, P.O. Box 16404, Denver, CO 80216. Representative: Lee E. Lucero (same address as applicant). To operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Brass, bronze, or copper rods,* drawn or extruded, *billets, bars, rough cast, cakes, cathodes, ingots, pigs, and slabs,* from the facilities of Inspiration Consolidated Copper Co., at or near Globe, Inspiration, and Miami, AZ, to Hoisington, KS. (Hearing site: Phoenix, AZ.)

MC 61231 (Sub-126F), filed July 26, 1978. Applicant: EASTER ENTERPRISES, INC. d.b.a. ACE LINES, INC., P.O. Box 1351, Des Moines, IA 50305. Representative: William L. Fairbank, 1980 Financial Center, Des Moines, IA 50309. To operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Iron and steel tanks, storage bins,* and *materials* used in the construction of iron and steel tanks and storage bins, from the facilities of (1) Trico Industries, Inc., Columbian Steel Tank Division, at or near Kansas City, MO, and (2) Butler Manufacturing Co., at or near Kansas City MO, to points in AZ, CO, ID, IL, IN, IA, MI, MN, MT, NE, ND, NM, OK, SD, TX, WA, WI, and WY. (Hearing site: Kansas City, MO.)

MC 89084 (Sub-6F), filed July 14, 1978. Applicant: INTERSTATE 32670. Representative: Arnold L. Burke, 180 North LaSalle Street, Chi-

facture, distribution, and sale of glass containers, in the reverse direction.

United States (except AK and HI). (Hearing site: Washington, DC.)

porting: (1) *Iron and steel articles,* from the facilities of Northwestern

the commodities in (1) above, in the reverse direction. (Hearing site: Port-

MC 89084 (Sub-6F), filed July 14, 1978. Applicant: INTERSTATE HEAVY HAULING, INC., 12986 Northeast Whitaker Way, Portland, OR 97220. Representative: Lawrence V. Smart, Jr., 419 Northwest 23d Avenue, Portland, OR 97210. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting contractors' *equipment and machinery* which by reason of size or weight requires the use of special equipment, and contractors' *equipment and machinery parts*, between points in OR, WA, and CA. (Hearing site: Portland, OR.)

MC 93649 (Sub-22F), filed August 14, 1978. Applicant: GAINES MOTOR LINES, INC., P.O. Box 1549, Hickory, NC 28601. Representative: Edward G. Villalon, 1032 Pennsylvania Building, Pennsylvania Avenue and 13th Street NW., Washington, DC 20004. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Textiles and textile products*, from points in GA, to points in CT, DE, MD, MA, NJ, NY, PA, and RI. (Hearing site: New York, NY.)

MC 104140 (Sub-205F), filed August 14, 1978. Applicant: OSBORNE TRUCK LINE, INC., 516 North 31st Street, Birmingham, AL 35202. Representative: William P. Jackson, Jr., P.O. Box 1240, Arlington, VA 22210. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Alluminum and aluminum products;* and (2) *materials and equipment* used in the manufacture and distribution of the commodities in (1) above (except commodities in bulk), between the facilities of Reynolds Metals Co., at or near Listerhill and Sheffield, AL, on the one hand, and, on the other, points in AL, AR, CT, DE, IA, KY, LA, ME, MD, MA, MI, MN, MO, NH, NJ, NY, NC, OH, OK, PA, RI, SC, TX, VT, VA WV, WI, and DC. (Hearing site: Birmingham, AL.)

MC 105813 (Sub-244F), filed July 24, 1978. Applicant: BELFORD TRUCKING CO., INC., 1759 Southwest 12th Street, P.O. Box 2009, Ocala, FL 32670. Representative: Arnold L. Burke, 180 North LaSalle Street, Chicago, IL 60601. to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Meats, meat products and meat byproducts*, and *articles* distributed by meat packing houses, as described in sections A and C of Appendix I to the report in Descriptions In Motor Carreir Certificates, 61 MCC 209 and 766 (except hides and commodities in bulk), from Wilmington, NC, to points in FL. (Hearing site: Chicago, IL.)

MC 105813 (Sub-245F), filed July 28, 1978. Applicant: BELFORD TRUCKING CO., INC., 1759 Southwest 12th Street, P.O. Box 2009, Ocala, FL 32670. Representative: Arnold L. Burke, 180 North LaSalle Street, Chicago, IL 60601. to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Meats, meat products and meat byproducts*, and *articles* distributed by meat packinghouses, as described in sections A and C of Appendix I to the report in Descriptions In Motor Carreir Certificates, 61 MCC 209 and 766 (except hides and commodities in bulk), from Nebraska City, NE, to points in AL, FL, GA, MS, NC, SC, and TN. (Hearing site: Chicago, IL.)

MC 106398 (Sub-823F), filed August 16, 1978. Applicant: NATIONAL TRAILER CONVOY, INC, 525 South Main, Tulsa, OK 74103. Representative: Irvin Tull (same address as applicant), to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Cast iron pipe and fittings;* and (2) *accessories for cast iron pipe*, from the facilities of McWane Cast Iron Pipe Co., at or near Birmingham, AL, to those points in the United States in and east of ND, SD, NE, KS, OK, and TX. (Hearing site: Birmingham, AL.)

NOTE.—In view of the findings in MC 106398 (Sub-741) of which official notice is taken, the certificate to be issued in this proceeding will be limited to a period expiring 3 years from its effective date unless, prior to its expiration (but not less than 6 months prior to its expiration) applicant files a petition for the extension of said certificate and demonstrates that it has been conducting operations in full compliance with the terms and conditions of its certificate and with the requirements of the Interstate Commerce Act and applicable Commission regulations.

MC 106603 (Sub-180F), filed July 31, 1978. Applicant: DIRECT TRANSIT LINES, INC., 200 Colrain Street SW., P.O. Box 8099, Grand Rapids, MI 49508. Representative: Martin J. Leavitt, 22375 Haggerty Road, P.O. Box 400, Northville, MI 48167. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Plywood, hardboard, and composition board*, from Camden, NJ, to points in IL, IN, IA, KY, MI, MO, OH, PA, TN, WV, and WI. (Hearing site: Chicago, IL, or Washington, DC.)

MC 106674 (Sub-332F), filed July 13, 1978. Applicant: SCHILLI MOTOR LINES, INC., P.O. Box 123, Remington, IN 47977. Representative: Norman R. Garvin, 1301 Merchants Plaza, Indianapolis, IN 46204. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Glass containers* and *closures for glass containers*, from the facilities of Glass Containers Corp., at or near Gas City and Indianapolis, IN, to points in AL, AR, GA, IL, KY, LA, MI, MS, MO, OH, and TN; and (2) *materials, equipment, and supplies used in the manufacture, distribution, and sale of glass containers*, in the reverse direction. (Hearing site: Indianapolis, IN, or Chicago, IL.)

MC 107012 (Sub-274F), filed July 12, 1978. Applicant: NORTH AMERICAN VAN LINES, INC., 5001 U.S. Highway 30 West, P.O. Box 988, Fort Wayne, IN 46801. Representative: David D. Bishop (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *New furniture*, (1) from points in SC, to points in AL, CT, DE, FL, GA, IL, IN, IA, KY, LA, ME, MD, MA, MI, MN, NH, NJ, NY, NC (except Claremont, NC), OH, PA, RI, TN, VT, VA, WV, and DC, (2) from points in NC, to points in AL, CT, DE, FL, GA, IA, IL, IN, KY, LA, MA, MD, ME, MI, MN, MS, ND, NH, NJ, NY, OH, PA, RI, SC, SD, TN, VA, VT, WV, and DC, (3) from points in Hamblen County, TN, to points in AL, FL, GA, IA, KY, LA, MN, NC (except Claremont, NC), ND, SC, and VA, (4) from points in VA, to points in AL, CT, DE, FL, GA, KY, LA, MA, MD, ME, MS, NC (except Claremont, NC), NH, NJ, NY, PA, RI, SC, TN, VT, and DC, and (5) from Galax, Roanoke, Damascus, Stanleytown, Bassett, Pulaski, and Martinsville, VA, to points in AR, CO, IA, IL, IN, KS, MI, MN, ND, NM, OH, OK, SD, and TX, restricted in (1) through (5) to the transportation of traffic originating at or destined to the facilities of the J. C. Penney Co., and against the transportation of new furniture from High Point and Hudson, NC, and points in Lincoln and Catawba Counties, NC, to Wilmington, DE, Baltimore, MD, Freeport, NY, points in the New York, NY, commercial zone as defined by the Commission in 1 MCC 665, and those in PA, NJ, SC, VA, WV, and DC. (Hearing site: Chicago, IL, New York, NY.)

MC 107403 (Sub-1105F), filed July 31, 1978. Applicant: MATLACK, INC., 10 West Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Liquid sugar, corn syrup, and high fructose corn syrup with blends of liquid sugar*, from Supreme, LA, to points in the United States (except AK and HI). (Hearing site: Washington, DC.)

MC 107403 (Sub-1106F), filed July 28, 1978. Applicant: MATLACK, INC., 10 West Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Liquid chemicals*, in bulk, in tank vehicles, from Peachtree City, GA, to points in the

United States (except AK and HI). (Hearing site: Washington, DC.)

MC 107743 (Sub-47F), filed July 28, 1978. Applicant: SYSTEM TRANSPORT, INC., P.O. Box 3456 T.A., Spokane, WA 99220. Representative: J. Michael Alexander, 136 Wynnewood Professional Building, Dallas, TX 75224. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Iron and steel articles*, from the facilities of Harris Tube, at or near Los Angeles, CA, to points in OR, WA, and ID. (Hearing site: Los Angeles, CA, or Seattle, WA.)

MC 109692 (Sub-63F), filed July 12, 1978. Applicant: GRAIN BELT TRANSPORTATION CO., a corporation, Route 13, Kansas City, MO 64161. Representative: Warren H. Sapp, P.O. Box 16047, Kansas City, MO 64112. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Tractors*, and *farm, industrial, construction, and excavating machinery*, and (2) *parts, attachments, and accessories* for the commodities in (1) above, from the facilities of J. I. Case Co., Inc., at or near Burlington, IA, to points in AZ, AR, LA, MS, NM, OK, and TX. (Hearing site: Milwaukee, WI, or Chicago, IL.)

MC 109692 (Sub-65F), filed July 13, 1978. Applicant: GRAIN BELT TRANSPORTATION CO., a corporation, Route 13, Kansas City, MO 64161. Representative: Warren H. Sapp, P.O. Box 16047, Kansas City, MO 64112. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Lumber, lumber products*, and *lumber mill products*, the facilities of Weyerhaeuser Co., at or near West Memphis, AR, to points in CO, IL, IN, IA, KS, MI, MN, MO, NE, NM, ND, OK, SD, TX, and WI. (Hearing site: Chicago, IL, or Kansas City, MO.)

MC 111231 (Sub-244F), filed July 24, 1978. Applicant: JONES TRUCK LINES, INC., 610 East Emma Avenue, Springdale, AR 72764. Representative: Don A. Smith, P.O. Box 43, 510 North Greenwood, Fort Smith, AR 72902. To operate as a *common carrier*, by motor vehicle, over irreguar routes, transporting: *Cheese, cheese products*, and *synthetic cheese*, from the facilities of L. D. Schreiber Cheese Co., Inc., at or near Carthage and Monett, MO, to La Grange, GA. (Hearing site: Chicago, IL, or Washington, DC.)

MC 111231 (Sub-245F), filed July 26, 1978. Applicant: JONES TRUCK LINES, INC., 610 East Emma Avenue, Springdale, AR 72764. Representative: John C. Everett, P.O. Box A, 140 East Buchanan, Prairie Grove, AR 72753.To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Iron and steel articles*, from the facilities of Northwestern Steel & Wire Co. at or near Sterling and Rock Falls, IL, to points in AR, LA, MS, TN, MO, OK, and TX; and (2) *equipment, materials, and supplies* used in the manufacture and distribution of commodities named in (1) above, in the reverse direction. (Hearing site: Sterling or Rock Falls, IL.)

MC 112617 (Sub-402F), filed July 24, 1978. Applicant: LIQUID TRANSPORTERS, INC., 1292 Fern Valley Road, P.O. Box 21395, Louisville, KY 40221. Representative: Leonard A. Jaskiewicz, 1730 M Street NW., Suite 501, Washington, DC 20036. To operate as a *common carrier*, by motor vehicle, over irreguar routes, transporting: *Petroleum pitch*, in bulk, in tank vehicles, from Catlettsburg, KY, to points in AL, AR, CT, DE, FL, GA, IA, IL, IN, LA, MD, MA, MI, MN, MS, MO, NH, NJ, NY, NC, OH, PA, RI, SC, TN, VT, VA, WI, WV, and DC. (Hearing site: Louisville, KY, or Washington, DC.)

MC 113434 (Sub-103F), filed May 8, 1978, and previously noticed in the FEDERAL REGISTER issue of June 15, 1978. Applicant: GRA-BELL TRUCK LINE, INC., 679 Lincoln Avenue, Holland, MI 49423. Representative: Wilhelmina Boersma, 1600 First Federal Building, Detroit, MI 48226. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Animal feed, feed ingredients, additives, and materials and supplies* used in the manufacture and distribution of animal feed (except commodities in bulk), between the facilities of Kal Kan Foods, Inc., at or near Mattoon, IL, on the one hand, and, on the other, points in IN, MI, OH, PA, and WV, restricted to the transportation of traffic originating at or destined to the facilities of Kal Kan Foods, Inc., at or near Matton, IL. This republication corrects the destination state "WI" to read "WV". (Hearing site: Chicago, IL, or Washington, DC.)

MC 113855 (Sub-439F), filed July 10, 1978. Applicant: INTERNATIONAL TRANSPORT, INC., a North Dakota corporation, 2450 Marion Road SE., Rochester, MN 55901. Representative: Richard P. Anderson, 502 First National Bank Building, Fargo, ND 58102. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1)(a) *Logging, forestry, and construction equipment*, (b) *canopies, cabs, contractors' equipment, and safety guards*, (c) *attachments* for the commodities described in (a) and (b) above, and (d) *parts* for the commodities described in (a), (b), and (c) above, from Eugene, OR, to points in the United States (including AK but excluding HI); and (2) *materials, equipment, and supplies* used in the manufacture and distribution of the commodities in (1) above, in the reverse direction. (Hearing site: Portland, OR, or Seattle, WA.)

MC 114552 (Sub-169F), filed July 13, 1978. Applicant: SENN TRUCKING CO., a corporation, P.O. Drawer 220, Newberry, SC 29108. Representative: William P. Jackson, Jr., 3426 North Washington Boulevard, P.O. Box 1240, Arlington, VA 22210. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Iron and steel articles*, from the facilities of National Steel Corp., at or near (a) Steubenville, OH, and (b) Weirton, WV, to points in AL, AR, FL, GA, KY, LA, MS, NC, OK, SC, TN, TX, and VA. (Hearing site: Pittsburgh, PA, or Washington, DC.)

MC 114632 (Sub-175F), filed July 17, 1978. Applicant: APPLE LINES INC., P.O. Box 287, Madison, SD 57042. Representative: Michael L. Carter (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Frozen foodstuffs* (except commodities in bulk), (1) between Chicago, IL, and New Hampton, IA, and (2) between Chicago, IL, and New Hampton, IA, on the one hand, and, on the other, points in CT, MA, NJ, and NY, restricted to the transportation of traffic originating at and destined to the indicated points. (Hearing site: Chicago, IL, or Minneapolis, MN.)

NOTE.—Dual operations may be at issue in this proceeding.

MC 114632 (Sub-176F), filed July 17, 1978. Applicant: APPLE LINES, INC., P.O. Box 287, Madison, SD 57042. Representative: Michael L. Carter, (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Foodstuffs* (except commodities in bulk), from Battle Creek, MI, and Lancaster and Sharonville, OH, to Clearfield, UT. (Hearing site: St. Louis or Kansas City, MO.)

NOTE.—Dual operations may be at issue in this proceeding.

MC 114897 (Sub-127F), filed July 17, 1978. Applicant: WHITFIELD TANK LINES, INC., a Delaware corporation, 485 Coates Drive, P.O. Box 12278, El Paso, TX 79912. Representative: J. E. Gallegos, 215 Lincoln Avenue, P.O. Box 2228, Santa Fe, NM 87501. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Sulphuric acid*, in bulk, in tank vehicles, (1) from El Paso, TX, and points in NM and AZ, to points in TX, and (2) between points in NM. (Hearing site: El Paso, TX, or Santa Fe, NM.)

MC 114969 (Sub-83F), filed August 16, 1978. Applicant: PROPANE TRANSPORT, INC., P.O. Box 232,

Milford, OH 45150. Representative: James R. Stiverson, 1396 West Fifth Avenue, P.O. Box 1409, Columbus, OH 43216. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Plastic articles*, from the facilities of Rubbermaid, Inc., at or near Wooster, OH, to points in the United States (except AK and HI). (Hearing site: Portland, OR, or Washington, DC.)

Battery boxes, from Indianapolis, IN, and Philadelphia, MS, to points in AL, AR, GA, IL, IN, KY, LA, MS, MO, NC, OH, SC, TN, TX, VA, and WV. (Hearing site: Atlanta, GA.)

MC 115162 (Sub-297F), filed July 17, 1978. Applicant: POOLE TRUCK LINE, INC., P.O. Drawer 500, Evergreen, AL 36401. Representative: Robert E. Tate (same address as applicant). To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Lumber and wood products*, from the facilities of Welch Forest Products, at or near East Camden, AR, to points in MS, NC, SC, TN, and VA. (Hearing site: Atlanta, GA.)

[Decisions Vol. No. 31]

DECISION-NOTICE

SEPTEMBER 11, 1978.

The following applications are governed by Special Rule 247 of the Commission's Rules of Practice (49 CFR 1100.247). These rules provide, among other things, that a protest to the granting of an application must be filed with the Commission on or before October 19, 1978. Failure to file a protest, within 30 days, will be considered as a waiver of opposition to the application. A protest under these rules should comply with Rule 247(e)(3) of the Rules of Practice which requires that it set forth specifically the grounds upon which it is made, contain a detailed statement of protestant's interest in the proceeding, (as specifically noted below), and shall specify with particularity the facts, matters, and things relied upon, but shall not include issues or allegations phrased generally. A protestant should include a copy of the specific portions of its authority which protestant believes to be in conflict with that sought in the application, and describe in detail the method—whether by joinder, interline, or other means—by which protestant would use such authority to provide all or part of the service proposed. Protests not in reasonable compliance with the requirements of the rules may be rejected. The original and one copy of the protest shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named. If the protest includes a request for oral hearing, such request shall meet the requirements of section 247(e)(4) of the special rules and shall include the certification required in that section.

Section 247(f) provides, in part, that an applicant which does not intend timely to prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. Broadening amendments will not be accepted after the date of this publication.

Any authority granted may reflect administratively acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

We find: With the exceptions of those applications involving duly noted problems (e.g., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the national transportation policy. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of the Interstate Commerce Act and the Commission's regulations. This decision is not a major Federal action significantly affecting the quality of the human environment.

It is ordered: In the absence of legally sufficient protests, filed within 30 days of publication of this decision-notice (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of this decision-notice. To the extent that the authority sought below may duplicate an applicant's existing authority, such duplication shall not be construed as conferring more than a single operating right.

By the Commission, Review Board No. 1, Members Carleton, Joyce, and Jones (Review Board Member Carleton not participating).

H. G. HOMME, Jr.,
Acting Secretary.

MC 4405 (Sub-580F), filed August 7, 1978. Applicant: DEALERS TRANSIT, INC., 522 South Boston, Tulsa, OK 74103. Representative: Alan Foss, 502 First National Bank Building, Fargo, ND 58102. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Commodities* the transportation of which, because of size or weight, requires the use of special equipment or handling, from the facilities of Rockcastle Steel Corp. in Rockcastle County, KY, to points in the United States (except AK and HI). (Hearing site: Louisville, KY.)

MC 4687 (Sub-20F), filed July 25, 1978. Applicant: BURGESS & COOK, INC., P.O. Bos 458 Fernandina Beach, FL 32304. Representative: Sol H. Proctor, 1101 Blackstone Building, Jacksonville, FL 32202. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Insulation and insulation materials*, (except commodities in bulk), from Leeds, AL, to points in FL and GA. (Hearing site: Jacksonville, FL, or Birmingham, AL.)

MC 9325 (Sub-76F), filed July 31, 1978. Applicant: K LINES, INC., 17765 Southwest Boones Ferry Road, Lake Oswego, OR 97034. Representative: John G. McLaughlin, Suite 1440, 200 Market Building, Portland, OR 97201. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Dry fertilizer and fertilizer ingredients*, in bulk, in tank or hoppertype vehicles, from the ports of entry on the international boundary line between the United States and Canada in ID and those in WA on and east of U.S. Hwy 97 to points in OR, WA, and ID. (Hearing site: Spokane, WA.)

NOTE.—Applicant states that traffic is originating at points in the Province of BC, Canada. Condition: Prior receipt from applicant of an affidavit setting forth its appropriate complementary Canadian authority or explaining why no such Canadian authority is necessary. The restriction and conditions contained in the grant of authority in this proceeding are phrased in accordance with the policy statement entitled Notice to Interested Parties of New Requirements Concerning Applications for Operating Authority to Handle Traffic to and from Points in Canada published in the FEDERAL REGISTER on December 5, 1974, and supplemented on November 18, 1975. The Commission is presently considering whether the policy statement should be modified, and is in communication with appropriate Canadian officials regarding this issue. If the policy statement is changed, appropriate notice will appear in the FEDERAL REGISTER and the Commission will consider all restrictions or conditions which were imposed pursuant to the prior policy statement, regardless of when the condition or restriction was imposed, as being null and void and having no force or effect.

MC 11207 (Sub-439F), filed July 25, 1978. Applicant: DEATON, INC., 317 Avenue W, P.O. Box 938, Birmingham, AL 35201. Representative: Kim D. Mann, Suite 1010, 7101 Wisconsin Avenue, Washington, DC 20014. To operate as a *common carrier*, by motor vehicle, irregular routes, transporting: *Iron and steel articles* (except commodities in bulk and those which because of size or weight require the use of special equipment), from the facilities of (a) Florida Wire & Cable Co., at Jacksonville, FL, and (b) Wire Mill, Inc., at Sanderson, FL, to points in AL, AR, GA, IL, IN, KY, LA, MO, MS, NC, OH, OK, SC, TN, TX, VA, and WV. (Hearing site: Jacksonville, FL, or Birmingham, AL.)

MC 30837 (Sub-485F), filed July 10, 1978. Applicant: KENOSHA AUTO TRANSPORT CORP. 4314 39th Avenue, Kenosha, WI 53142. Representative: Paul F. Sullivan, 711 Washington, DC 20005. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Automobiles, trucks, and buses*, as defined in Descriptions in Motor Carrier Certificates, 61 MCC 209 and 766, in secondary movements, in truckaway service, from Earnest, PA, and points within 20 miles thereof, to points in CT, DE, MD, NJ, NY, PA, and DC, restricted to the transportation of traffic having a prior movement by rail or truck from the facilities of Jeep Corp., a subsidiary of American Motors Corp., at Toledo, OH, and South Bend, IN. (Hearing site: Washington, DC, or Detroit, MI.)

MC 35890 (Sub-50F), filed August 22, 1978. Applicant: BLODGETT FURNITURE SERVICE, INC., 5650 Foremost Drive SE., Grand Rapids, MI 49508. Representative: Ronald C. Nesmith, P.O. Box 4403, Chicago, IL 60680. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Expanded plastic and expanded plastic articles* from the facilities of E. MC 145238F, filed August 21 1978. Applicant: CHAPMAN TRUCKING, INC., 2346 South Lynhurst, Indianapolis, IN 46241. Representative: Donald W. Smith, P.O. Box 40659, Indianapolis, IN 46240. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Coal*, between points in IL, IN, KY, OH, and WV. (Hearing site: Indianapolis, IN.)

MC 145250 (Sub-1F), filed August 21, 1978. Applicant: ROBERT R. MACKEN AND LOIS M. MACKEN, a partnership, d.b.a. MACKEN TRANSFER, P.O. Box 1832, Ames, IA 50010. Representative: William L. Fairbank, 1980 Financial Center, Des Moines, IA 50309. To operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: (1) *Electric instruments* for water analysis equipment, and (2) *equipment, materials, and parts* used in the manufacture of the commodities in (1) above, between the facilities of Hach Chemical Co. at Ames, IA, and Berthoud and Loveland, CO, under a continuing contract with Hack Chemical Co., of Loveland, CO. (Hearing site: Des Moines, IA, or Omaha, NE.)

MC 145258F, filed August 21, 1978. Applicant: WALLACE TRANSFER LTD., 405 Industrial Avenue, Vancouver, BC, Canada V6A 2P9. Representative: George LaBissoniere, 1100 Norton Building, Seattle, WA 98104. To operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: *General commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, and those requiring special equipment), in containers, between the ports of entry on the international boundary line between the United States and Canada at or near Blaine, Lynden, and Sumas, WA, on the one hand, and, on the other, those points in WA in and west of Whatcom, Skagit, Snohomish, King, Pierce, Lewis, and Skamania Counties, restricted to the transportation of traffic moving in foreign commerce and originating at or destined to points in BC, Canada, under continuing contracts with (1) Empire Stevedoring Co., Ltd., of Vancouver, Canada, and (2) Furness Interocean Canada, Ltd., of Vancouver, Canada. Condition: Prior receipt from applicant of an affidavit setting forth its complementary Canadian authority or explaining why no such Canadian authority is necessary.

NOTE. (1) The restriction and conditions contained in the grant of authority in this proceeding are phrased in accordance with the policy statement entitled Notice to Interested Parties of New Requirements Concerning Applications for Operating Authority to Handle Traffic to and from points in Canada published in the FEDERAL REGISTER on December 5, 1974, and supplemented on November 18, 1975. The Commission is presently considering whether the policy statement should be modified, and is in communication with appropriate Canadian officials regarding this issue. If the policy statement is changed, appropriate notice will appear in the FEDERAL REGISTER and the Commission will consider all restrictions or conditions which were imposed pursuant to the prior policy statement, regardless of when the condition or restriction was imposed, as being null and void and having no force or effect. (2) In view of the *Geraci* and *Toto* policies (*see, e.g.*, 43 FR 33945) (8-2-78), applicant must satisfy the Commission that its operations will not result in objectionable private and for-hire operations. (Hearing site: Seattle, WA.)

BROKER AUTHORITY

MC 130509F, filed June 20, 1978, previously published in the FEDERAL REGISTER issue of August 17, 1978. Applicant: ROBERT LAMBERT, d.b.a., LAMBERT'S TOURS, 404 East Main Street, Suite 2-A, Ventura, CA 93001. Representative: Michael S. Rubin, 256 Montgomery Street, 5th floor, San Francisco, CA 94104. To engage in operations, in interstate or foreign commerce, as a *broker*, at Ventura, CA, in arranging for the transportation by motor vehicle, of: *Passengers and their baggage*, in special and charter operations, between Ventura, CA, on the one hand, and, on the other, points in the United States (including AK and HI). (Hearing site: Ventura or Los Angeles, CA.)

NOTE.—The purpose of the republication is to show both round trip and one-way operations.

PASSENGER AUTHORITY

MC 118044 (Sub-3F), filed June 27, 1978. Applicant: KEESHIN CHARTER SERVICE, INC., 705 South Jefferson Street, Chicago, IL 60607. Representative: Charles A. Webb, 1250 Connecticut Avenue NW., Suite 600, Washington, DC 20036. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Passengers and their baggage* in the same vehicle as passengers, in special and charter operations, beginning and ending at points in IL, MI, IN, OH, MN, KY, TN, FL, GA, CA, AL, NV, CO, KS, IA, MO, TX, WI, and DC, and extending to points in the United States, including AK (except HI). (Hearing site: Chicago, IL.)

MC 144460 (Sub-1F), filed July 18, 1978. Applicant: SHOMER SHABOS BUS CORP., 18 Phyllis Terrace, Monsey, NY 10952. Representative: Sidney J. Leshin, 575 Madison Avenue, New York, NY 10022. To operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: *Passengers and their baggage*, in the same vehicle with passengers, in special and charter operations, beginning and ending at Monsey, NY, and extending to points in Kings and New York Counties, NY, under continuing contracts with (1) Cong. Menachem Tzadik, of Brooklyn, NY, (2) Cong. Tifereth Israel, of Monsey, NY, (3) Cong. Beth Yitzchock, of Monsey, NY, (4) Cong. Bais Yitzchok Kasirer, of Monsey, NY, and (5) Cong. Khal Torat Chaim, of Monsey, NY. (Hearing site: New York, NY.)

MC 145008 (Sub-2F), filed August 17, 1978. Applicant: WESTERN SAFARIS, INC., d.b.a. HEART OF AMERICA TOURS, 3379 Wedgewood Drive, El Paso, TX 79925. Representative: D. Paul Stafford, Suite 1125 Exchange Park, P.O. Box 45538, Dallas, TX 75245. To operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Passengers and their baggage*, limited to the transportation of not more than 20 passengers (excluding the driver) in one vehicle at one time, in one-way and round trip special operations, in camping and sightseeing tours, from El Paso, TX, Denver, CO, and Los Angeles and San Francisco, CA, to points in AZ, CA, CO, NM, NV, TX, and UT, and return. (Hearing site: Los Angeles or San Francisco, CA.)

[AB 10 (SDM)]

NORFOLK & WESTERN RAILWAY CO.

Amended System Diagram Map

Notice is hereby given that, pursuant to the requirements contained in Title 49 of the Code of Federal Regulations, Part 1121.23, that the Norfolk & Western Railway Co., has filed with the Commission its amended color-coded system diagram map in docket No. AB 10 (SDM). The maps reproduced here in black and white are reasonable reproductions of that amended system diagram map and the Commission on August 28, 1978, received a certificate of publication as required by said regulation which is considered the effective date on which the amended system diagram map was filed.

Color-coded copies of the map have been served on the Governor of each State in which the railroad operates and the Public Service Commission or similar agency and the State-designated agency. Copies of the map also may be requested from the railroad at a nominal charge. The maps also may be examined at the office of the Commission, Section of Dockets, by requesting docket No. AB 10 (SDM).

H. G. HOMME, Jr.,
Acting Secretary.

SYSTEM DIAGRAM MAP
NORFOLK AND WESTERN RAILWAY COMPANY

including the following lines:

Akron, Canton and Youngstown Railroad Company
Chesapeake Western Railway Company
Lake Erie and Fort Wayne Railroad Company
Lorain and West Virginia Railway Company
New Jersey, Indiana and Illinois Railroad Company
Norfolk, Franklin and Danville Railway Company
Pittsburgh and West Virginia Railway Company
Wabash Railroad Company
Wheeling and Lake Erie Railway Company

LEGEND

(1) Lines anticipated will be subject of abandonment application within 3 years.

(2) Lines potentially subject to abandonment.

(3) Abandonment applications pending before Commission.

(4) Lines which are being operated under the Rail Service continuation provisions of Section 1a(6) (a) of the Act or of Section 304(c) (2) of the Regional Rail Reorganization Act of 1973.

(5) All other lines or portions of lines which the carrier owns, and operates, directly or indirectly.

(6) Trackage Rights.

ST. LOUIS-SAN FRANCISCO RAILWAY CO.

Amended System Diagram Map

Notice is hereby given that, pursuant to the requirements contained in Title 49 of the Code of Federal Regulations, Part 1121.23, that the St. Louis-San Francisco Railway Co., has filed with the Commission its amended color-coded system diagram map in Docket No. AB 9 (SDM). The maps reproduced here in black and white are reasonable reproductions of that amended system diagram map and the Commission on August 21, 1978, received a certificate of publication as required by said regulation which is considered the effective date on which the amended system diagram map was filed.

Color-coded copies of the map have been served on the Governor of each State in which the railroad operates and the Public Service Commission or similar agency and the State-designated agency. Copies of the map may also be requested from the railroad at a nominal charge. The maps also may be examined at the office of the Commission, Section of Dockets, by requesting Docket No. AB 9 (SDM).

H. G. Homme, Jr.,
Acting Secretary.

AB-9—First Amended Line Descriptions for the St. Louis-San Francisco Railway Co.

Lines for which abandonment applications are pending before the Interstate Commerce Commission:

Alabama

(a) Cochrane to York, Ala. (AB-9 (Sub-No. 12)).
(b) Located wholly within the State of Alabama.
(c) Located within the Alabama counties of Pickens and Sumpter.
(d) Railroad mileposts RA-686.46 to RA-728.
(e) Agency stations at Aliceville, Ala. (milepost R-680), and York, Ala. (milepost RA-732).

Missouri

(a) East Lynne to Bolivar, Mo. (Highline) (AB-9 (Sub-No. 9)).
(b) Located wholly within the State of Missouri.
(c) Located within the Missouri counties of Cass, Johnson, Henry, St. Clair, Hickory, and Polk.
(d) Railroad mileposts D-52.0 to D-153.0.
(e) Agency stations at Clinton, Mo. (milepost D-087) and Weaubleau, Mo. (milepost D-132).

Lines which this carrier anticipates will be the subject of an abandonment application to be filed within 3 years:

Missouri

(a) Willow Springs to Winona, Mo.
(b) Located wholly within the State of Missouri.
(c) Located in the Missouri counties of Howell and Shannon.
(d) Railroad mileposts S-294.3 to S-322.6.
(e) Agency station at Willow Springs, Mo. (milepost S-294).
(a) Kissick to Ozark, Mo.
(b) Located wholly within the State of Missouri.
(c) Located in the Missouri county of Christian.
(d) Railroad mileposts A-250.1 to A-257.6.
(e) Agency station at Springfield, Mo. (milepost MP-239), serves trackage.
(a) Kennett to Holcomb, Mo.
(b) Located wholly within the State of Missouri.
(c) Located in the Missouri county of Dunklin.
(d) Railroad mileposts TB-231.5 to TB-242.5.
(e) Agency station at Hayti, Mo. (milepost T-213), serves trackage.

Oklahoma

(a) Poteau to Hugo, Okla.
(b) Located wholly within the State of Oklahoma.
(c) Located in the Oklahoma counties of Le Flore.
(d) Railroad milepost M.P. 445.0 to MP 558.5.
(e) Agency station at Antlers, Okla. (milepost M.P. 542).

Lines owned and controlled by St. Louis-San Francisco Railway Co. and for which an abandonment application is pending before the Interstate Commerce Commission:

Texas

(Quanah, Acme, & Pacific Railway Co.)

(a) Acme to Floydada, Tex. (AB-109 (Sub-No. 1F)).
(b) Located wholly within the State of Texas.
(c) Located in the Texas counties of Hardeman, Cottle, Motley, and Floyd.
(d) Railroad mileposts M.P.G. 728 to 833.2.
(e) Agency stations at Paducah and Floydada, Tex.

AGRICULTURAL COOPERATIVE

Intent To Perform Interstate Transportation for Certain Nonmembers

SEPTEMBER 14, 1978.

The following Notices were filed in accordance with section 208(b)(5) of the Interstate Commerce Act provided for under 49 CFR 1047.23. These rules provide that agricultural cooperatives intending to perform nonmember, nonexempt, interstate transportation must file the Notice, Form BOp 102, with the Commission within 30 days of its annual meetings each year. Any subsequent change concerning officers, directors, and location of transportation records shall require the filing of a supplemental Notice within 30 days of such change. The name and address of the agricultural cooperative, the location of the records, and the name and address of the person to whom inquiries and correspondence should be addressed, are published here for interested persons. Submission of information that could have bearing upon the propriety of a filing should be directed to the Commission's Bureau of Investigations and Enforcement, Washington, D.C. 20423. The Notices are in a central file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C.

(1) Complete legal name of cooperative association or federation of cooperative associations—Big Sky Farmers & Ranchers Marketing Cooperative of Montana.

Principal mailing address—7777 Industry Avenue, Pico Rivera, Calif. 90660.

Where are records of your motor transportation maintained—7777 Industry Avenue, Pico Rivera, Calif. 90660.

Person to whom inquiries and correspondence should be addressed—Harold Goolsbee, Jr., General Manager, 7777 Industry Avenue, Pico Rivera, Calif. 90660.

(2) Complete legal name of cooperative association or federation of cooperative associations—Cape Henlopen Farm Lines Co-Operative.

Principal mailing address—Route 14, West, Milford, Del. 19963.

Where are records of your motor transportation maintained—P.O. Box 304, Milford, Del. 19963.

Person to whom inquiries and correspondence should be addressed—John M. Brown, P.O. Box 304, Milford, Del. 19963.

(3) Complete legal name of cooperative association or federation of cooperative associations—Federated Co-op Transport.

Principal mailing address—P.O. Box 353, Hooperston, Ill. 60942.

Where are records of your motor transportation maintained—P.O. Box 353, Hooperston, Ill. 60942.

Person to whom inquiries and correspondence should be addressed—C. M. Haworth, P.O. Box 353, Hooperston, Ill. 60942.

(4) Complete legal name of cooperative association or federation of cooperative associations—Land O' Lakes, Inc.

[Notice No. 714]

ASSIGNMENT OF HEARINGS

SEPTEMBER 14, 1978.

Cases assigned for hearing, postponement, cancellation or oral argument appear below and will be published only once. This list contains prospective assignments only and does not include cases previously assigned hearing dates. The hearings will be on the issues as presently reflected in the Official Docket of the Commission. An attempt will be made to publish notices of cancellation of hearings as promptly as possible, but interested parties should take appropriate steps to insure that they are notified of cancellation or postponements of hearings in which they are interested.

MC 113678 (Sub-741F), Curtis, Inc., is assigned for hearing October 2, 1978, at New York, NY, and will be held at Room D-2206, Federal Building, 26 Federal Plaza.

MC 140511 (Sub-5), Autolog Corp., is assigned for hearing October 5, 1978, at New York City, NY, and will be held at Room D-2206, Federal Building, 26 Federal Plaza.

MC 115331 (Sub-449F), Truck Transport Inc., is assigned for hearing October 12, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 134755 (Sub-137F), Charter Express, Inc., is assigned for hearing October 11, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 140829 (Sub-87F), Cargo Contract Carrier Corp., is assigned for hearing October 11, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 142299 (Sub-2), Truck Rail Truck Service Co., Inc., now being assigned for hearing on November 13, 1978 (5 days), at Chicago, IL, in a hearing room to be later designated.

MC 52657 (Sub-742), Arco Auto Carriers, Inc., now being assigned for hearing on November 20, 1978 (1 day), at Chicago, IL, in a hearing room to be later designated.

MC 134922 (Sub-259F), B. J. Mcadams, Inc., now being assigned for hearing on November 21, 1978 (1 day), at Chicago, IL, in a hearing room to be later designated.

MC 104221 (Sub-25F), Econo Lines, Inc., transferred to Modified Procedure.

MC 119226 (Sub-103F), Liquid Transport Corp., is assigned for hearing October 17, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 113855 (Sub-417F), Internation Transport, Inc is assigned for hearing October 17, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 139495 (Sub-332F), National Carriers, Inc., is assigned for hearing October 16, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 139495 (Sub-334F), National Carriers, Inc., is assigned for hearing October 16, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 128270 (Sub-28F), Rediehs Interstate, Inc., is assigned for hearing October 11, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 138890 (Sub-7F), Moodie, Inc., is assigned for hearing October 10, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 138890 (Sub-8F), Moodie, Inc., is assigned for hearing October 10, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 139482 (Sub-37F), New Ulm Freight Lines, Inc., is assigned for hearing October 10, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 113678 (Sub-723F), Curtis, Inc., is assigned for hearing October 19, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 112304 (Sub-133F), Ace Doran Hauling & Rigging Co., is assigned for hearing October 19, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 19157 (Sub-48), McCormack's Highway Transportation, Inc., is assigned for hearing October 18, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 124947 (Sub-106F), Machinery Transports, Inc., is assigned for hearing October 18, 1978, at Chicago, IL, and will be held at Room 1319, E. M. Dirksen Building, 219 South Dearborn Street.

MC 126473 (Sub-32F), Harold Dickey Transport, Inc. is assigned for hearing October

13, 1978 at Chicago, IL and will be held at Room 1319 E. M. Dirksen Building, 219 South Dearborn Street.

[Ex Parte No. MC-64]

GENERAL TEMPORARY ORDER TO TRANSPORT MEAT BY MOTOR VEHICLE

Decided: August 30, 1978. In the matter of General Order No. 14, Section 210a(a).

Unique characteristics of the meatpacking industry call for modification of our normal practice in handling requests for emergency temporary authority. There is an immediate and urgent need for additional motor carrier service to temporarily supplement the transportation system of the Nation.

To meet this need, the Commission will provide a more flexible way for applicants to obtain temporary authority to render the required motor carrier service.

It is ordered:

Pursuant to section 210a(a) of the Interstate Commerce Act (49 U.S.C. 310a(a)), applications for temporary authority to transport meat by motor vehicle shall, for a period of 90 days, be governed by the following procedures to expedite the filing and processing of those applications:

(1) A meatpacker, upon failing to find a carrier authorized to perform the needed peak service, may file a verified statement to that effect in support of an applicant for ETA to provide the service. The district supervisor receiving the application will accept the statement as evidence of the matters recited, and will make a recommendation without following the usual procedure of notifying other district offices. Other carriers will not be contacted.

(2) If, in its verified statement supporting an ETA application, the packer reports a failure to obtain a commitment after contacting carriers authorized to serve the need, the district supervisor receiving the application will seek specific reasons for the carriers' negative response to the packer. The district supervisor will then make a recommendation based on all known data.

(3) In an ETA application, where the supporting packer cannot pinpoint the time or destination of the shipment(s), but can, on the basis of prior experience, show a likely time period up to 30 days and a likely destination area in designated States, the field staff and Commission, respectively, will consider that showing in making a recommendation and rendering a decision.

This expedited procedure is available upon condition that the applicant carrier complies with all applicable requirements concerning tariff publications, evidence of security for the protection of the public, and designation of agents for service of process, and that such tariff publications quote rates, fares, and charges no lower than those of existing rail, water, or motor carriers in the territory in which the operations are to be authorized.

Service performed under temporary authority granted pursuant to this procedure shall in no way constitute evidence or a showing warranting future issuance of a certificate of public convenience and necessity or permit, as provided in section 207(a) of the Act (49 U.S.C. 307(a)) and section 209(b) of the Act (49 U.S.C. 309(b)).

This decision shall become effective October 1, 1978.

Notice of this decision shall be given to motor carriers, other parties of interest, and to the general public by depositing a copy thereof in the Office of the Secretary of the Commission, Washington, D.C., and by filing a copy thereof with the Director, Office of the Federal Register.

By the Commission, Chairman O'Neal, Vice Chairman Christian, Commissioners Murphy, Brown, Stafford, Gresham, and Clapp.

H. G. HOMME, Jr.,
Acting Secretary.

[FR Doc. 78-26329 Filed 9-18-78; 8:45 am]

[7035-01]

[MC 111320 (Sub-68G)]

KEEN TRANSPORT, INC.

Extension—Gateway Elimination (Hudson, OH)

Decided: September 6, 1978. Upon consideration of the record in this proceeding and of:

(1) Petition of applicant, filed June 26, 1978, for reconsideration;

(2) Reply by Home Transportation Co., Inc., protestant, filed July 10, 1978;

(3) Petition of Home Transportation Co., Inc., protestant, filed July 10, 1978, for reconsideration;

(4) Late-tendered reply by applicant, to the petition in (3) above submitted for filing August 1, 1978.

In a decision served June 9, 1978 we accepted an amendment of the authority sought by applicant and granted authority encompassing the scope of the amendment. Protestant Home points out that the effect of these actions was to grant authority in part I(33) (formerly part I(w')) broader than originally sought by applicant as set forth in the FEDERAL REGISTER notice. Because it is possible that other persons, who have relied upon the notice of the application as published, may have an interest in and could be prejudiced by the lack of proper notice of the authority described in our previous decision, a notice of the authority actually granted in that part will be published in the

FEDERAL REGISTER. Issuance of a certificate in this proceeding will be withheld for a period of 30 days from the date of that publication during which period any proper party in interest may file a petition to reopen or for any other appropriate relief setting forth in detail the precise manner in which it has been prejudiced.

It is ordered: The late-tendered pleading in (4) above is accepted for filing inasmuch as it is only 1-day late and its admission will not prejudice any party to the proceeding.

Except as noted above, the petitions are denied because the findings of Appellate Division 2 are in accordance with the evidence and the applicable law.

If applicant does not comply with the appropriate requirements set forth in the Code of Federal regulations (49 CFR 1043, 1044, and 1307) within 90 days after the date of service of this decision, the grant of authority will be void, and the application will stand denied.

By the Commission, Division 2, acting as an appellate division, Commissioners Stafford, Murphy, and Clapp. Commission Murphy not participating.

H. G. HOMME, Jr.,
Acting Secretary.

APPENDIX

SERVICE AUTHORIZED IN PART I(33)

To transport self-propelled roadbuilding equipment and parts thereof, in driveway and truckaway service, from points in Illinois to points in Kentucky, Louisiana, Michigan, North Carolina, South Carolina, and Tennessee.

CONDITION

The above service authorization is subject to prior publication in the FEDERAL REGISTER of a notice of the authority actually granted in this portion of the application.

[FR Doc. 78-26333 Filed 9-18-78; 8:45 am]

[7035-01]

[Notice No. 25]

SPECIAL PROPERTY BROKERS

SEPTEMBER 13, 1978.

The following applicants seek to participate in the property broker special licensing procedure under 49 CFR 1045A authorizing operations as a broker at any location, in arranging for the transportation by motor vehicle, in interstate or foreign commerce, of property (except household goods), between all points in the United States including AK and HI. Any interested person shall file an original and one (1) copy of a verified statement in opposition limited in scope to matters regarding applicant's fitness within 30 days after this notice. Statements must be mailed to: Broker Entry Staff, Room 2379, Interstate Commerce Commission, Washington, D.C. 20423. Opposing parties shall serve one (1) copy of the statement in opposition concurrently upon applicant's representative, or applicant if no representative is named.

If an applicant is not otherwise informed by the Commission, it may commence operation 45 days after this notice.

B-78-96, filed August 25, 1978. Applicant: DISTRIBUTION CENTERS, INC., 1310 Dublin Road, Columbus, OH 43215. Representative: Stanley E. McCormick, Suite 1301, 1600 Wilson Boulevard, Arlington, VA 22209.

B-78-97, filed August 25, 1978. Applicant: FOUR WINDS FORWARDING, INC., 7035 Convoy Court, San Diego, CA 92111. Representative: Robert J. Gallagher, 1000 Connecticut Avenue NW., Suite 1200, Washington, D.C. 20036.

B-78-100, filed August 24, 1978. Applicant: FOUR WINDS VAN LINES, INC., 7035 Convoy Court, San Diego, CA 92111. Representative: Robert J. Gallagher, 1000 Connecticut Avenue NW., Suite 1200, Washington, D.C. 20036.

B-78-101, filed August 28, 1978. Applicant: PAD CONSULTANTS, 4582 Timothy Lane, Canal Winchester, OH 43110. Representative: Kathleen L. Maher, 100 East Broad Street, Columbus, OH 43215.

By the Commission.

H. G. HOMME, Jr.,
Acting Secretary.

[Ex Parte No. MC-116]

CONSIDERATION OF RATES IN OPERATING RIGHTS APPLICATION PROCEEDINGS (GENERAL POLICY STATEMENT)

Proposed Change of Policy

AGENCY: Interstate Commerce Commission.

ACTION: Notice of proposed issuance of policy statement.

SUMMARY: The Commission proposes to issue a general policy statement governing the consideration of rates in operating rights application proceedings. The Commission believes that parties should have the option of placing rate levels in issue in operating rights cases. The ability of an applicant to offer the shipping public lower rates based on operating efficiencies is a factor that should be considered in determining whether there is need for additional service. The consideration of rates in operating rights application proceedings represents a change in policy. Accordingly, interested persons will be permitted to file comments before a final policy statement is adopted and issued.

COMMENTS: All interested persons are invited to comment. Comments should be filed with the Office of Proceedings, Room 5342, Interstate Commerce Commission, Washington, D.C. 20423.

DATES: Comments must be received within 30 days of the date of publication of this notice in the FEDERAL REGISTER.

FOR FURTHER INFORMATION CONTACT:

Janice M. Rosenak, or Harvey Gobetz, 202-275-7693.

SUPPLEMENTARY INFORMATION:

BACKGROUND

The Entry Control Task Force, in its report submitted July 6, 1977, entitled "Improving Motor-Carrier Entry Regulation," recommended to the Chairman of the Commission that rates, at the option of applicant, be made a consideration in operating rights application proceedings. The report stated:

> One of the most common criticisms of the Commission's decision-making process in the operating rights area is its refusal to take into account the rates proposed to be charged by the applicant. Shippers and carriers alike offer the opinion that many, and perhaps a majority, of applications for authority to serve existing sources of traffic are based on the support of shippers who anticipate a rate advantage * * *.

The Commission served a Notice of Proposed Rulemaking on February 24, 1978 (43 FR 7675). Numerous comments were received. Upon consideration of the comments, the Commission has decided not to promulgate specific regulations. Rather, the Commission has decided to issue a general policy statement setting forth guidelines for the consideration of rates in operating rights application proceedings.

By recognizing rates as a factor in motor carrier operating rights application proceedings, we seek to have this underlying issue dealt with explicitly. Furthermore, by allowing carriers who can operate more efficiently to enter the market through introduction of rate considerations, we believe that increased efficiency by all carriers will be encouraged with resultant benefits to the national economy.

Past Commission policy has been that rates are generally not a matter for consideration in common carrier application proceedings unless existing rates are so high as to constitute a virtual embargo. *Porter Transp. Co. Common Carrier Application*, 74 MCC 675 (1958), *H. L. & F. McBride Extension—Ohio*, 62 MCC 779 (1954); or where the rate benefit is attributable to differences between two modes of transportation, *Schaffer Transportation Co.* v. *United States*, 355 U.S. 83,

78 S. Ct. 173, 2 L. Ed. 2d 117 (1957); *I. C. C.* v. *J-T Transport Co.*, 368 U.S. 81, 82 S. Ct. 204, 7 L. Ed. 2d 147 (1961). In the Commission. *Schaffer, supra; J-T Transport Co. supra.*

There is an analogy between consid-

dustry. On the contrary, the consideration of rates in operating rights application proceedings will encourage

carriers; (2) attempts, if any, by those supporting the application to negotiate reduced rates with existing carri-

case-by-case basis, from the requirement that applicants fulfill their rate commitment. Rate relief may be ex-

statement should include more than a mere threat to impose conditions. I favor the required imposition of a meaningful holddown

78 S. Ct. 173, 2 L. Ed. 2d 117 (1957); *I. C. C.* v. *J-T Transport Co.*, 368 U.S. 81, 82 S. Ct. 204, 7 L. Ed. 2d 147 (1961). In all other respects, the prevailing view has been that, if shippers are dissatisfied with existing rates, the proper place to test the legality of those rates is in a complaint proceeding, and not in an application proceeding. See *American Trucking Ass'n.* v. *United States*, 326 U.S. 77, 86-87, 65 S. Ct. 1499, 89 L. Ed. 2065 (1945); *Auclair Transportation, Inc.* v. *United States*, 221 F. Supp. 328, 333-334 (D. Mass. 1963), *aff'd per curiam*, 376 U.S. 514, 84 S. Ct. 966, 11 L. Ed. 2d 968 (1964).

Section 207(a) of the Interstate Commerce Act, 49 U.S.C. 307(a), provides in pertinent part that a proposed common carrier service shall be authorized to the extent it "is or will be required by the present or future public convenience and necessity." Nowhere does the act define the term "Public convenience and necessity." It is therefore clear that Congress intended the Commission to have broad discretion in determining where "public convenience and necessity" lies. That discretion, however, must be exercised in conformity with the provisions of the National Transportation Policy, 49 U.S.C. preceding section 1.

The National Transportation Policy requires the Commission to "recognize and preserve" the different modes of transportation; and "to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers." The courts have generally stated that competition between different modes of transportation, *I.C.C.* v. *Parker*, 326 U.S. 60, 65 S. Ct. 1490, 89 L. Ed. 2051 (1945), as well as competition within the same mode of transportation, *Bowman Transportation, Inc.* v. *Arkansas-Best Freight, Inc.*, 419 U.S. 381, 95 S. Ct. 438, 42 L. Ed. 2d 447 (1974), is a relevant factor to be considered by the Commission in determining whether the grant of an application would further the National Transportation Policy. *Trans-American Van Service, Inc.* v. *United States*, 421 F. Supp. 308, 321-322 (1976).

Cases where a carrier sought to provide service to an area already served by basically the same type of transportation, only at a lower rate, have been distinguished from cases where an applicant carrier seeks to compete for traffic now handled exclusively by a different mode of transportation. See *Carl Subler Trucking, Inc., Extension—Southern States*, 77 MCC 707 (1958). In the latter situation it has been held that the rate benefit attributable to differences between the two modes of transportation is an "inherent advantage" of the competing type of carrier and must be considered by the Commission. *Schaffer, supra; J-T Transport Co. supra.*

There is an analogy between consideration of the inherent advantages of different modes of transportation and consideration of the level of rates assessed by carriers of the same mode. Competition within a mode is just as important as competition between modes. If lower rates to be offered by an applicant are based on efficient operations, this is a relevant factor for the Commission to consider in reaching ultimate findings concerning competition and the sound economic condition of the industry. *Trans-American, supra*, 421 F. Supp. at 327-328.

We believe that the inability or unwillingness of existing carriers to offer rates competitive with the proposed service, either for lack of interest in the traffic, or because of the inefficiency or unsuitability of their operations, may well indicate a public need for additional service. Accordingly, applicants in their presentations may show that rates are an issue between supporting shippers and existing carriers. Upon doing so they can expect the Commission to treat this as one factor in determining public convenience and necessity.

The Commission believes that, in some cases, rates are already an underlying issue in operating rights proceedings. In such cases, the parties have generally addressed the nature of the proposed service rather than the level of the proposed rates. See *Robinson Common Carrier Application*, 126 MCC 180 (1976); *Maxwell Co., Ext.—Chicago to Cincinnati*, 112 MCC 235 (1970); *Dieckbrader Express, Inc., Extension—Massillon, Ohio*, 103 MCC 540 (1967); and *Vancouver Airline Limousines Ext.—Charter Operations*, 71 MCC 101 (1957). Although the Commission has often recognized the efficiencies and economies that would flow from a proposed service innovation, it has generally not considered the direct benefits which would accrue to the shipper from having a lower rate available. For example, shippers who support a "no frills" or less inclusive service than that offered by existing carriers, are often actually seeking a less costly service at lower rates. We believe that the time has come to deal directly with rates when rate issues are raised in operating rights proceedings.

The National Transportation Policy requires that the Commission promote "safe, adequate, economical, and efficient service" while avoiding unfair or destructive competitive practices. That goal can be furthered by considering rate issues in operating rights cases. We do not believe that the consideration of rate matters will result in the development of destructive competitive practices in the motor carrier industry. On the contrary, the consideration of rates in operating rights application proceedings will encourage economic and efficient service.

PROPOSED POLICY STATEMENT

1. *General.* The Commission's policy is to permit any party in an application proceeding for permanent motor carrier authority for the transportation of either passengers or property to raise the issue of rates. The introduction of rate considerations in an operating rights case is optional, not mandatory. By making rates an optional factor in our determination of public convenience and necessity in common carrier application proceedings, we seek to insure that the parties have the opportunity to make all relevant factors a part of the record on which our conclusions are based. In this statement, "rates" includes all rates, fares, and charges.

2. *Notice of reliance on rate considerations.* Applicants electing the option of placing rates in issue must attach to the application form a brief statement that they intend to offer rates lower than those presently available from existing motor carriers, together with a tentative schedule of the proposed rates and charges for the complete service involved. Public notice of an applicant's reliance, in part, on rate issues will be given by publication in the FEDERAL REGISTER. Protestants wishing to raise rate issues in challenging an application must so indicate in their protests, along with the basis of their challenge. If the issue is raised by a protestant, applicant has no obligation to introduce evidence on the subject.

3. *Burden of proof.* If an applicant elects to place rates in issue, it has the burden of proof as to all aspects of public convenience and necessity, including its ability to perform the proposed service at rates lower than those of other carriers. However, an applicant in an operating rights case need not assume the burden of establishing that such rates will be just and reasonable and otherwise lawful. Rather, an applicant's evidence should relate to its ability to offer the proposed service at a lesser rate than existing carriers based on efficiency of operations, increased productivity, or other relevant considerations. This policy does not prejudge the lawfulness or change any evidential burden regarding initial rates and will not impair the right of any person to protest a rate after it is filed with the Commission.

4. *Rate evidence.* Evidence to be submitted by an applicant in support of its proposed rates should include, but need not be limited to, the following: (1) a comparison of applicant's proposed rates, fares, and charges with those maintained by existing motor carriers; (2) attempts, if any, by those supporting the application to negotiate reduced rates with existing carriers; (3) a showing that the low rates will not impair applicant's financial fitness; and (4) a narrative description of Applicant's operational efficiencies or advantages which enable it to provide lower rates. The weight to be accorded the rate factor will vary on a case-by-case basis, according to the strength of applicant's evidence as determined by the Commission.

5. *Fulfilling the rate commitment.* Applicants that depend upon rates to support a proposed service should fulfill their rate commitment. If necessary, the Commission may impose an express requirement that they do so. For example, the Commission may grant a limited term certificate for an appropriate period, such as 1 to 3 years. The Commission may also require periodic compliance reports, allowing the applicant to petition for permanent authority only at the end of the term. At such time, applicant would have to prove that it has provided satisfatory service at the proposed rate level. In other cases, when appropriate, the Commission may impose a rate holddown condition in the certificate. In some cases, other conditions may be appropriate. Applicants relying on rate evidence should be aware that the Commission may impose such restrictions upon a grant of authority and may also impose sanctions, such as revocation of the authority, upon violation of a restriction. Furthermore, whenever there is a restriction upon the authority, the issuance of the certificate may be postponed until the date the proposed rate actually becomes effective.

6. *Relief from rate commitments.* The Commission will allow relief, on a case-by-case basis, from the requirement that applicants fulfill their rate commitment. Rate relief may be expressly provided in the initial grant of authority, or may be permitted upon later petition by the carrier. The Commission may permit increases in the proposed rate, for example, to the extent of general rate increases or probable but unpredictable cost increases, such as substantial increases in the cost of fuel.

The Commission requests comments by any interested party on this announced policy and procedural safeguards.

Dated: August 30, 1978.

By the Commission, Chairman O'Neal, Vice Chairman Christian, Commissioners Murphy, Brown, Stafford, Gresham, and Clapp. Commissioner Stafford concurring in part and dissenting in part. Commissioner Murphy dissenting.

H.G. HOMME, Jr.,
Acting Secretary.

Commissioner Stafford, concurring in part, dissenting in part:

This policy statement recognizes a fact of life that the Commission heretofore has not really acknowledged. The truth is that a significant number of applications are based on the promise of lower rates.

If a shipper wishes to base its choice of a carrier solely or primarily on the prospect of lower rates and if the carrier is capable of operating at a lower rate than its competitors, then I agree that the rates issue deserves consideration.

I am concerned, however, that this new policy will be subject to abuse by carriers who promise lower rates but who will not abide by that promise for very long after they receive a certificate. The majority takes the position that applicants "should fill their rate commitment. If necessary, the Commission may impose an express requirement that they do so." I believe the policy statement should include more than a mere threat to impose conditions. I favor the required imposition of a meaningful holddown or other appropriate restriction against rate increases in any grant of authority that relies on a promise of lower rates. I suggest that an appropriate term should be at least 1 and possibly 3 years.

Consistent with the above, item 6 on sheet 7 should indicate that relief from rate commitments will be granted sparingly. The Commission should state that it will not look with favor upon such requests. It should also be made clear that repeated requests for relief may adversely affect a carrier's subsequent applications where it proposes a lower rate. If a carrier receives several grants of authority based on lower rates, and then seeks relief from our holddown conditions, it is an indication that rates should not have been the basis for a grant. In future application proceedings of that carrier, this issue may be raised and it should receive appropriate weight.

One final point worth noting about the notice is that the real beneficiaries of this policy statement will not be the small shippers who need rate relief the most. No matter what incentives the Commission may offer, the large shipper will always receive a better rate than the small shipper. I am concerned that this policy statement may widen the rate differences that already exist.

Commissioner Murphy, dissenting:

I believe that the Commission is embarking on a perilous journey which will encumber rather than ease the mounting caseload now troubling the Commission. Moreover, the majority's reliance upon lower rates as a basis for a claim of efficiency of operations is misplaced.

In the final analysis, rate matters should be excluded from applications for operating authority except in those limited circumstances where an embargo is present.

Accordingly, I respectfully dissent from the majority decision and rely upon my separate expression in this matter, served February 27, 1978. In any event, after the comments are received, I believe it is imperative that the Commission hold oral argument in this matter.

CIVIL AERONAUTICS BOARD.

[M-162 Amdt. 4; Sept. 13, 1978]

NOTICE OF DELETION OF ITEMS FROM THE SEPTEMBER 13, 1978, AGENDA

TIME AND DATE: 10 a.m., September 13, 1978.

PLACE: Room 1027, 1825 Connecticut Avenue NW., Washington, D.C. 20428.

SUBJECT: 4. Docket 30332, IATA agreements proposing increases in North Atlantic cargo rates to compensate for cost increases (Memo No. 8176, BPDA, BIA).

10b. Dockets 33019, 33108, 33116, 33117, 33118, 33122, 33123, 33129, 33132, 31542, 33135, 33138, 33140, 33146, 33147, 33148, 33149, 33152, 33153, 33154, 33156, 33157, and 33178; Chicago-Midway Expanded Service Proceeding; (Memo No. 7909-F, OGC).

STATUS: Open.

PERSON TO CONTACT:

Phyllis T. Kaylor, The Secretary, 202-673-5068.

SUPPLEMENTARY INFORMATION: The staff needs additional time to review Item 4. Item 10b was deleted from the September 13, 1978 agenda in order to allow Member O'Melia additional time to review. Accordingly, the following Members have voted that agency business requires the deletion of Item 4 and 10b from the September 13, 1978 agenda and that no earlier announcement of these changes was possible:

Chairman Alfred E. Kahn
Member Richard J. O'Melia
Member Elizabeth E. Bailey

All amendments to previously announced agendas are publicly posted at the Board's offices, sent to the FEDERAL REGISTER for publication, and mailed to parties to docketed cases affected by the change. We regret any inconvenience that may be caused by these changes or the delayed receipt of our notices.

2

[M-164; Sept. 13, 1978]

CIVIL AERONAUTICS BOARD.

TIME AND DATE: 10 a.m.—September 20, 1978.

PLACE: Room 1027, 1825 Connecticut Avenue NW., Washington, D.C. 20428.

SUBJECT:

1. Ratification of items adopted by notation.

2. Docket 24048, Application of Braniff Airways, Inc., and Braniff International Corp. for approval of interaffiliate transfer of A-B Aircraft, Inc. (Memo 7835-A, BPDA, OGC, BAS).

3. Docket 31633, to amend Allegheny's certificate by removing its one-step restriction between Cleveland and Rochester (Memo 7759-B, BPDA, OGC).

4. Docket 32994, Allegheny's Exemption, Charleston, W. Va.-Pittsburgh, Pa. (Memo 8180, BPDA).

5. Docket 32873, American's Application and motion for Hearing on Reno-Chicago authority (Memo 8179, BPDA).

6. Letter to Congressman Jerome A. Ambro in reply to his inquiry on J.R. 13181, a bill to reinstate Board jurisdiction over the reasonableness of air cargo carriers' liability rules and practices (Memo 8182, BPDA).

7. Docket 30332, IATA agreements proposing varying increases in North Atlantic cargo rates through September 30, 1979 to compensate for cost increases. Pan American and TWA support the agreements in their entirety while Seaboard supports the increases with some exceptions. Both the Air Freight Forwarders Association and the Ad Hoc Committee for the Development of Air Freight oppose some of the structural aspects of the agreements (Memo 8176, BPDA, BIA).

8. Dockets 28337, 28999, and 32746, applications of Braniff, Allegheny, and American to serve various U.S.-Canada routes (Memo 8178, BIA, OGC, BALJ).

9. Docket 33019, 33108, 33116, 33117, 33118, 33122, 33123, 33129, 33132, 31542, 33135, 33138, 33140, 33146, 33147, 33148, 33149, 33152, 33153, 33154, 33156, 33157, and 33178, *Chicago-Midway Expanded Service Proceeding* (Memo 7909-F, OGC).

10. Docket 28903, *Enforcement Proceeding against Alaska Airlines, Inc., Gerald L. Johnson and C. James England.* BOE's motion to dismiss this proceeding against the only remaining respondent, C. James England, on the grounds that recent liberalization of the Board's charter regulations has greatly reduced the incentive for the type of single entity charter violations that are the subject of this proceeding (Memo No. 6256-A, OGC).

4

CONSUMER PRODUCT SAFETY COMMISSION.

In Sunshine Act Meeting document S-1799-78 published at page 40099 in the issue for Friday, September 8, 1978, and announcing a meeting for September 13, 1978, in the middle column, item 3 under the agenda should read as follows:

"3. *Final rule to exempt certain ink cartridges from labeling requirements.* In response to a petition from the Parker Pen Co. (HP77-4), the Commission, in November 1977 proposed to exempt certain rigid or semirigid ink cartridges from labeling requirements of the Federal Hazardous Substances Act. At this meeting, the Commission will discuss this exemption. (Closed—exemption 9, possible frustration of agency action.)

[6730-01]

5

FEDERAL MARITIME COMMISSION.

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUNCEMENT: September 14, 1978; 43 FR 41160.

PREVIOUSLY ANNOUNCED TIME AND DATE OF THE MEETING: 10 a.m., September 20, 1978.

CHANGES IN THE MEETING: Addition of the following items to the Open Session.

2. Concordia International Forwarding Corp.—Application for independent ocean freight forwarder license.

3. Conditions unfavorable to shipping in the United States/Ecuador trade—Section 19 Merchant Marine Act, 1920.

ADDITIONAL CHANGES IN THE MEETING: Time and Date of Meeting changed from September 20, 1978—10 a.m. to September 21, 1978—2 p.m.

[S-1896-78 Filed 9-15-78; 1:38 pm]

6

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM.

TIME AND DATE: 10 a.m., Friday, September 22, 1978.

PLACE: 20th Street and Constitution Avenue NW., Washington, D.C. 20331.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Proposed purchases, under competitve bidding, of computer equipment within the Federal Reserve System.

2. Proposed acquisition of real property by a Federal Reserve Bank.

3. Proposed rescission of a Board policy prohibiting payment of extra compensation to Reserve Bank employees.

4. Proposed salary structure adjustments at several Federal Reserve Banks.

5. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.

6. Any agenda items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION:

10

RENEGOTIATION BOARD.

DATE AND TIME: Thursday, September 28, 1978; 10 a.m.

PLACE: Conference room, 4th floor, 2000 M Street NW., Washington, D.C. 20446.

STATUS: Matters 1 through 3 are open to public observation. Matters 4 and 5 are not applicable for status.

MATTERS TO BE CONSIDERED:

1. Approval of minutes of meeting held September 19, 1978, and other Board meeting, if any.

2. Recommended determination of excessive profits and clearance: ABC Management Services, Inc., fiscal years ended June 30, 1974 and 1975.

3. Recommended determination of excessive profits: DeLong Corp., fiscal year ended December 31, 1969.

4. Approval of agenda for meeting to be held October 10, 1978.

5. Approval of agenda for other meetings, if any.

CONTACT PERSON FOR MORE INFORMATION:

Kelvin H. Dickinson, Assistant General Counsel-Secretary, 2000 M Street NW., Washington, D.C. 20447, 202-254-8277.

Dated: September 15, 1978.

11

UNITED STATES RAILWAY ASSOCIATION.

TIME AND DATE: September 21. 1978, 9 a.m.

PLACE: Caucus Room, Loew's l'Enfant Plaza Hotel, 480 l'Enfant Plaza East SW., Washington, D.C.

STATUS: Parts of this meeting will be open to the public. The rest of the meeting will be closed to the public.

MATTERS TO BE CONSIDERED BY THE BOARD OF DIRECTORS OR ITS EXECUTIVE COMMITTEE

Portions open to the public (9 a.m.):

1. Briefing on administrative matters.
2. Briefing on Regional Rail Reorganization Act of 1973 and Railroad Revitalization and Regulatory Reform Act of 1976.
3. Discussion of role of association.

Portions closed to the public (10 a.m.):

4. Review of Conrail proprietary and financial information for monitoring and investment purposes.
5. Consideration of internal personnel matters.
6. Litigation report.

Annual Publication

federal

V 4 3 / 1 8 2

[4510-23]

DEPARTMENT OF LABOR

Office of the Secretary

PRIVACY ACT ISSUANCES

Notices of Incorporation by Reference

Agency: Office of the Secretary

Action: Incorporation by Reference of Privacy Act Issuances

Summary: Federal agencies are required by the Privacy Act of 1974 to give annual notice of certain records they maintain. The notices published last year were compiled by the Office of the Federal Register into "Privacy Act Issuances—1977 Compilation." The purpose of this document is to incorporate by reference the notices that appear in "Privacy Act Issuances—1977 Compilation" and to publish in full the systems that this agency has amended since publication of the 1977 Compilation; and to add systems of records previously published by the Department of the Interior which have been transferred to the Department of Labor under the Mine Safety and Health Amendments Act, 1977, Public Law 95-164.

For further information contact: Sofia P. Petters, 523-8065.

Pursuant to 5 U.S.C. 552 (a)(e)(4), section 3 of the Privacy Act of 1974, the Department of Labor hereby publishes notice of its systems of records currently maintained pursuant to the Privacy Act of 1974. The systems were previously published at 42 FR 49654 (September 27, 1977); 43 FR 25206 (June 9, 1978); and 43 FR 29042 (July 5, 1978); and in Volume II of the 1977 Privacy Act Issuances Compilation. This notice reflects an incorporation by reference of systems of records published in the 1977 Privacy Act Issuances Compilation, two systems which were not published in full in the Compilation, amendments to existing systems and two new systems published since the 1977 Compilation. This notice also includes notice of systems of records transferred from the Department of the Interior to the Department of Labor under mine safety and health program.

Since publication of the 1977 annual notice of systems of records at 43 FR 49654 (September 27, 1977), the Department of Labor has published at 43 FR 25206 (June 9, 1978) two new systems of records; DOL/ESA-23, Office of Workers' Compensation Programs Investigation Files, and DOL/ESA-24, Office of Workers' Compensation Programs, Longshoremen's and Harbor Workers' Compensation Act Special Fund System. DOL/ESA-23 contains investigatory records compiled by the Division of Investigation, a new devision within the Office of Workers' Compensation Programs. DOL/ESA-24 is a system, which was segregated from the DOL/ESA-15 and established as a new system because of a change in location. DOL/ESA-15 has been amended to reflect this change.

DOL/OSHA-1, Discrimination Complaint File, was amended at 43 FR 29042 (July 5, 1978) to exempt this system of records under paragraph (k)(2) of the Privacy Act as investigatory material compiled for civil law enforcement purposes.

The Department of Labor is also republishing two systems of records: DOL/ETA-4, Bureau of Apprenticeship and Training National Industry and DOL/ETA-5, ESARS 2, which were indexed in the 1977 Compilation, but were not published in full in the body of the text.

The Department of Labor also publishes notice of 15 systems of records which have been transferred from the Department of the Interior to the Department of Labor under the authority of the Federal Coal Mine Health and Safety Act as amended by the Federal Mine Safety and Health Amendments Act of 1977, Public Law 95-164. The systems of records published by the Department of the Interior on April 11, 1977 and included in Volume VI of the 1977 Privacy Act Compilation are published in full with charges necessitated by the transfer of the mine safety and health program from the Department of the Interior to the Department of Labor.

The Department of the Interior published 16 systems of records for the mine safety program. One system of records, Interior/EMS-11, National Mine Health and Safety Academy Records, is not being published by the Department of Labor as that function remains with the Department of the Interior.

The changes in the notice of systems of records and the new systems of records are as follows:

DOL/ESA-15: Office of Workers' Compensation Programs, Longshoremen and Harbor Workers' Compensation Case File—amended.

DOL/ESA-23: Office of Workers' Compensation Act Investigation Files—new system.

DOL/ESA-24: Office of Workers' Compensation Act Special Fund System—new system, segregated from ESA-15.

DOL/OSHA-1: Discrimination Complaint File—amended.

DOL/ETA-4: Bureau of Apprenticeship and Training, National Industry—republished.

DOL/ETA-5: ESARS 2—republished.

DOL/MSHA-1: Coal and Metal and Nonmetal Mine Accident and Injury—new system.

DOL/MSHA-2: Identification cards—new system.

DOL/MSHA-3: Metal and Nonmetal Mine Safety and Health Management Information—new system.

DOL/MSHA-4: Employee Conduct Investigations—new system.

DOL/MSHA-5: Payroll Records—new system.

DOL/MSHA-6: Travel—new system.

DOL/MSHA-7: Travel Advance File—new system.

DOL/MSHA-8: Accident and Injury Records—new system.

DOL/MSHA-9: Clearance Records—new system.

DOL/MSHA-10: Coal Mine Health and Safety Special Investigations—new system.

DOL/MSHA-12: Property Control—new system.

DOL/MSHA-13: Coal Mine Respirable Dust Program—new system.

DOL/MSHA-14: Coal Mine Noise Level Program—new system.

DOL/MSHA-15: Health and Safety Training Records Including Qualification and Certification Data—new system.

DOL/MSHA-16: Employee Locator System—new system.

This notice fulfills the annual notice requirements of the Privacy Act for 1978.

Dated: August 29, 1978.

Ray Marshall,
Secretary of Labor.

APPROVAL OF DIRECTOR

The notices of systems of records of this agency which appear in "Privacy Act Issuances—1977 Compilation" are incorporated by reference. The Director of the Office of the Federal Register granted approval to incorporate by reference these Privacy Act issuances on July 13, 1978. Published below is the full text of systems of records that this agency has amended since publication of the 1977 Compilation.

DOL/ESA-15

System name: Office of Workers' Compensation Programs, Longshoremen's and Harbor Workers' Compensation Act Case Files.

System location: Most files are located in District Offices but cases involving special issues may be in the National Office.

Categories of individuals covered by the system: The system maintains records of injury, occupational disease and death of employees working in private industry who are covered by the provisions of the Longshoremen's and Harbor Workers' Compensation Act and related acts.

Categories of records in the system: Records include: reports of injury by employees and employers, authorization for medical care; medical reports; medical and transportation bills; formal orders for or against payment of compensation; vocational evaluations, rehabilitation plans and awards and vocational progress reports; vital statistics such as birth, marriage, death certificates; enrollment and attendance records at educational institutions.

Authority for maintenance of the system: 33 U.S.C. 901 et. seq. (20 CFR 701 et. seq.) 36 U.S.C. 501 et. seq., 42 U.S.C. 1951 et. seq., 43 U.S.C. 1331 et. seq., 5 U.S.C. 8171 et. seq.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: Disclosure to the employer at the time of the injury or the onset of the occupational illness and to any party providing the employer with workers' compensation insurance coverage; doctors and medical service providers for the purpose of obtaining medical evaluations, physical rehabilitation or other services; public or private agencies to whom the injured worker has been referred for vocational rehabilitation services; contractors providing automated data processing services for the Department of Labor; and labor unions and other voluntary associations of which the claimant is a member acting on behalf of the individual member.

Storage: This information is maintained as written records and documents in letter size manual files stored in 4 and 5 drawer file cabinets, located in the several District Offices.

Notification procedure: Contact System Manager.

Record access procedures: Any individual seeking information about a case in which he/she is a party of interest may write or telephone the OWCP District Office and arrangement will be made

SEP 19 1978

to provide review of the file, consonant with restrictions defined as a Routine Use.

Contesting record procedures: Contact Systems Manager.

Record source categories: The system obtains information from injured employees, their qualified dependents, employers, insurance carriers, physicians, medical facilities, educational institutions, attorneys, State and Federal vocational rehabilitation agencies and Members of Congress.

DOL/ESA-23

System name: Office of Workers' Compensation Programs Investigation Files

System location: U.S. Department of Labor, Employment Standards Administration, Office of Workers' Compensation Programs (OWCP), Division of Investigation, Washington, D.C. 20210, and ESA Regional Offices.

Categories of individuals covered by the system: Individuals filing claims for workers' compensation benefits under (1) the Federal Employees' Compensation Act, as amended and extended (5 U.S.C. 8101 et. seq.) (except 8149 as it pertains to the Employees' Compensation Appeals Board) (2) the Longshoremen's and Harbor Workers' Compensation Act as amended and extended (33 U.S.C. 901 et. seq.) (except 33 U.S.C. 921(b) as it applies to the Benefits Review Board) and (3) Title IV, Section 415 and Part C, of the Federal Coal Mine Health and Safety Act of 1969, as amended by the Black Lung Benefits Act of 1972, 30 U.S.C. 901 et. seq.; individuals providing medical and other services to OWCP; employees of insurance companies and of medical and other services providers to OWCP; and other persons suspected of violations of law under the above Acts and related civil and criminal provisions as well as respondents, witnesses and other individuals involved in investigations and enforcement actions instituted by the Department of Labor.

Categories of records in the system: The system contains information gathered by OWCP in connection with investigations by it into possible violations of Federal law, whether civil or criminal including (1) the Federal Employees' Compensation Act and related Acts, (2) the Longshoremen's and Harbor Workers' Compensation Act and related Acts, and (3) Title IV, Section 415 and Part C, of the Federal Coal Mine Health and Safety Act of 1969, as amended by the Black Lung Benefits Act of 1972, 30 U.S.C. 901 et. seq. Such information may be derived from materials filed with the Department of Labor, other Federal, State and local departments and agencies, court records, medical records, insurance records, records of employers, articles from publications published financial data, corporate information, bank information, telephone data, statements of witnesses, information received from Federal, State, local and foreign regulatory and law enforcement organizations, and from other sources. This record also contains the work product of the Department of Labor, and other government personnel and consultants involved in the investigations.

Authority for maintenance of the system: 5 U.S.C. 8101 et seq. 20 CFR 1.1 et seq.; 33 U.S.C. 901 et seq., 20 CFR 701 et seq.; 36 U.S.C. 501 et seq., 42 U.S.C. 1951 et seq.; 43 U.S.C. 1331 et seq.; 5 U.S.C. 8171 et seq.; 30 U.S.C. 901 et seq.; 20 CFR 715 et seq.; 20 CFR 720.1 et seq.; 20 CFR 725.1 et seq.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: Records are made available to other Federal agencies and State and local agencies conducting similar or related investigations and to the Justice Department in that agency's determination regarding potential litigation and during the course of actual litigation. Records may be disclosed to contractors providing automated data processing services for the Department of Labor. Records may also be disclosed in any proceeding where the Federal Employees' Compensation Act and related Acts, Longshoremen's and Harbor Workers' Compensation Act and related Acts, Title IV Section 415 and Part C, of the Federal Coal Mine Health and Safety Act of 1969, as amended by the Black Lung Benefits Act of 1972 is in issue or in which the Secretary of Labor, any past or present Federal employee or consultant directly or indirectly involved in investigations or other enforcement activities under the above Acts, is a party or otherwise involved in an official capacity.

Retrievability: Records are indexed by name.

Safeguards: Access to and use of these records are limited to those persons whose official duties require such access.

Retention and disposal: To be determined.

System manager(s) and address: Associate Director, Division of Investigation, Office of Workers' Compensation Programs, 200 Constitution Avenue NW., Washington, D.C. 20210.

Notification procedure: Contact Systems Manager.

Record access procedures: Contact Systems Manager.

Contesting record procedures: Contact Systems Manager.

Record source categories: Record from OWCP claim and payment files (DOL/ESA-6, 7, 8, 11, 13, 15, and 24) and from employees, insurers, service providers and parties interviewed during the course of an investigation.

Systems exempted from certain provisions of the act: (a) Criminal law enforcement. In accordance with paragraph 3(j)(2) of the Privacy Act, information maintained in investigation files in the Division of Investigation of the Office of Workers' Compensation Programs of the Employment Standards Administration is exempt from all provisions contained in 5 U.S.C. 552a except those requirements set forth in paragraphs (b), (c) (1) and (2), (e)(4) (A) through (F), (e) (6), (7), (9), (10), and (11) and paragraph (i) of the Act. The disclosure of information contained in the criminal investigative files, including the names of persons or agencies to whom the information has been transmitted, would substantially compromise the effectiveness of the Division's investigations. Knowledge of such investigations could enable subjects to take such action as is necessary to prevent detection of criminal activities, conceal evidence, or to escape prosecution. Disclosure of this information could lead to the intimidation of, or harm to, informants, witnesses, and their respective families, and could jeopardize the safety and well-being of investigative personnel and their families. The imposition of certain restrictions on the manner in which investigative information is collected, verified, and retained would impede significantly the effectiveness of the division's investigatory activities, and in addition, may often preclude the apprehension and successful prosecution of persons engaged in fraud of the Federal workers' compensation programs. (b) Other law enforcement. In accordance with paragraph 3(k)(2) of the Privacy Act, investigatory material compiled for law enforcement purposes other than material declared exempt under paragraph 3(j)(2) of the Act, which is maintained in investigation files of the Division of Investigation of the Office of Workers' Compensation Programs of the Employment Standards Administration is exempt from paragraphs (c)(3), (d), (e)(4), (G), (H), and (I), and paragraph (f) of 5 U.S.C. 552a. The disclosure of information contained in civil investigative files, including the names of persons and agencies to whom the information has been transmitted, would substantially compromise the effectiveness of the Division's investigations. Knowledge of such investigations would enable subjects to take such action as is necessary to prevent detection of illegal activities, conceal evidence, or otherwise escape civil enforcement action. Disclosure of this information could lead to the intimidation of, or harm to informants, witnesses, and their respective families, and, in addition, could jeopardize the safety and well-being of investigative personnel and their families. The imposition of certain restrictions on the manner in which investigative information is collected, verified, and retained would also impede significantly the effectiveness of the Division's investigatory activities.

DOL/ESA-24

System name: Office of Workers' Compensation Programs, Longshoremen's and Harbor Workers' Compensation Act Special Fund System

System location: Division of Longshore and Harbor Workers' Compensation, Room C4315, 200 Constitution Avenue NW., Washington, D.C. 20210.

Categories of individuals covered by the system: Persons receiving compensation and related benefits under the Longshoremen's and Harbor Workers' Compensation Act.

Categories of records in the system: Bills, vouchers, and records of payment for compensation and related benefits under the Longshoremen's and Harbor Workers' Compensation Act.

Authority for maintenance of the system: 33 U.S.C. 901 et seq. (20 CFR 701 et seq.), 36 U.S.C. 501 et seq., 42 U.S.C. 1951 et seq., 43 U.S.C. 1331 et seq.; 5 U.S.C. 8171 et seq.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: Disclosure of payment information to insurance carriers or self-insurers under the Longshoremen's and Harbor Workers' Compensation Act in instances of verification of payment.

Storage: The information is maintained as written records and documents in letter size manual files stored in four and five drawer cabinets.

Retrievability: By name of payee.

Safeguards: Files are locked at night and maintained during working hours under the constant supervision of OWCP personnel.

Retention and disposal: To be determined.

System manager(s) and address: Associate Director, OWCP, Division of Longshore and Harbor Workers Compensation, U.S. Department of Labor, 200 Constitution Avenue NW., Room C4315, Washington, D.C. 20210.

Notification procedure: Contact System Manager.

Record access procedures: Contact System Manager.

Contesting record procedures: Contact System Manager.

Record source categories: Insurers and self-insurers under the Longshoremen's and Habor Workers' Compensation Act and parties providing covered benefits and service to approved claimants under the Act.

DOL/OSHA-1

System name: Discrimination Complaint File.

System location: For Standard Federal Region I through V, at the following address; Operations Review Office, U.S. Department of Labor, Occupational Safety and Health Administration, Federal Building, Room 1110A, Charles Center, 31 Hopkins Plaza, Baltimore, Md. 21201, for Standard Region VI through X, at the following address: Operations Review Office, U.S. Department of Labor, Occupational Safety and Health Administration, Room 3100, Federal Office Building, 909 First Avenue, Seattle, Wash. 93174.

Categories of individuals covered by the system: Individuals who have filed complaints pursuant to section 11(c) of the Occupational Safety and Health Act.

Categories of records in the system: Case files compiled in connection with investigations of discrimination complaints.

Authority for maintenance of the system: Section 11(c) of the Occupational Safety and Health Act (Pub. L. 91-596).

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: None.

Storage: Manual files.

Retrievability: By complainant's name or case identification number.

Safeguards: Locked file cabinets.

Retention and disposal: Retained for 3 years after completion of investigation then forwarded to GSA Records Center.

System manager(s) and address: Operations Review Officer at address where system is located.

Notification procedure: To Systems Managers at above address.

Record access procedures: As above.

Contesting record procedures: As above.

Record source categories: Complaints filed by individuals alleging discrimination and information compiled in connection with investigations of alleged acts of discrimination.

Systems exempted from certain provisions of the act: In accordance with paragraph (k)(2) of the Privacy Act, investigatory material compiled for law enforcement purposes which is maintained in the Discrimination Complaint File is exempt from paragraphs (c)(3), (d), (e)(1), (e)(4) (G), (H), and (I), and (f) of 5 U.S.C. 552a.

Disclosure of information contained in this file could threaten investigators, witnesses, informants and their families with adverse consequences and could hinder effective enforcement of the Occupational Safety and Health Act. In order to conduct effective investigations it is necessary to guarantee the confidentiality of information being collected. Release of such information would constitute a breach of the guarantee of confidentiality, could lead to the intimidation, harassment of dismissal from employment of those involved, and would discourage those contacted in future investigations from cooperating with investigators.

Two systems of records were not published in full in the 1977 Compilations. These systems were included in the DOL index. The full text of the systems is published below.

DOL/ETA—4

System name: Bureau of Apprenticeship and Training. National Industry.

System location: Bureau of Apprenticeship and Training. Room 5414. Patrick Henry Building, 601 D Street NW., Washington, D.C. 20213.

Categories of individuals covered by the system: Apprentices.

Categories of records in the system: Program Sponsor.

Authority for maintenance of the system: Public Law 308 (Fitzgerald Act)

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: None

Storage: Manual Files—programs and apprentice registration cards for apprentices.

Retrievability: Program sponsor name, apprentice's name and apprenticeable occupation.

Safeguards: Standard file cabinets with locks.

Retention and disposal: Retain three years and commit to Archives.

System manager(s) and address: Director, Office of National Industry Promotion, Room 5414, Patrick Henry Building, 601 D Street NW., Washington, D.C.

Notification procedure: As above.

Record access procedures: As above.

Contesting record procedures: As above.

Record source categories: Program Sponsor.

DOL/ETA—5

System name: ESARS 2 Sample File.

System location: Room 2821, GAO Building, 441 G Street NW., Washington, D.C.; Room 4410 Patrick Henry Building, 601 D Street NW., Washington, D.C.

Categories of individuals covered by the system: Employment Service Applicants.

Categories of records in the system: Characteristics of individual such as age, sex, race and ES Services provided to him.

Authority for maintenance of the system: 29 U.S.C. 49, et seq.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: None.

Storage: Magnetic Tape.

Retrievability: By region, State, SSN.

Safeguards: Routine computer precautions limiting access to authorized expenditure codes.

Retention and disposal: 5 years. Destroyed by scratching tape.

System manager(s) and address: Chief, Division of ADP Systems, Patrick Henry Bldg., Room 4410, 601 D Street, NW., Washington, D.C. 20213.

Notification procedure: As above.

Record access procedures: As above.

Contesting record procedures: As above.

Record source categories: All records came from the State Employment Service Offices in the 50 States, P.R. and D.C.

The Federal Coal Mine Health and Safety Act, 30 U.S.C. 801 et seq., was amended by the Federal Mine Safety and Health Amendments Act of 1977, Public Law 95-164. Under these amendments certain functions formerly under the responsibility of the Department of the Interior were transferred to the Department of Labor. These functions are now being carried out by the Mine Safety and Health Administration, MSHA, of the Department of Labor. The Department of Labor now publishes those systems of records which were transferred to the Department of Labor from the Department of the Interior, with such amendments as are necessary to reflect their transfer. All systems of records published as Interior/EMS by the Department of the Interior on April 11, 1977, and in Volume VI of the 1977 Privacy Act compilation are hereby published by the Department of the Interior except for Interior/EMS-11, National Mine Health and Safety Academy Records, which will continue to be published by the Department of the Interior.

DOL/MSHA—1

System name: Coal and Metal and Nonmetal Mine Accident and Injury.

System location: Health and Safety Analysis Center, Technical Support Center, 730 Simms Street, Lakewood, Colo. 80215.

Categories of individuals covered by the system: Individual workers in the coal and metal and nonmetal mining industries.

Categories of records in the system: These records contain accident, injury, fatality, and occupational illness data which includes the individual miner's name, social security number, date and time of accident or injury, place of accident or injury, man-hours worked, name of mine, and mine identification number and type and cause of accident, injury or illness.

Authority for maintenance of the system: Section 103 of Public Law 91-173 as amended by Public Law 95-164.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to determine probable cause of accidents, injuries, and illnesses and (b) to provide a statistical analytic data base for allocation of MSHA and other resources to reduce occupational injuries and illnesses. Disclosures outside the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticipated litigation; (2) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local, or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (3) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (4) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license, contract, grant, or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Manual—in file folders; computer—disk pack.

Retrievability: indexed by mine identification number, name of mine, individual's name, and social security number. Retrieved by manual search, frequently used information maintained on computer printouts.

Safeguards: Computer—in accordance with the National Bureau of Standards publication "Computer Security Guidelines for Implementing the Privacy Act of 1974". Manual—file cabinets. During working hours records are accessible only to authorized personnel.

Retention and disposal: Source document are retained for up to 3 years and then transferred to Federal Records Center. Tapes are retained indefinitely for historical purposes. Microfilm records are held for 5 years and then disposed of.

System manager(s) and address: Chief, Health and Safety Analysis Center, 730 Simms Street, Lakewood, Colo. 80215.

Notification procedure: Inquiries regarding the existence of records should be addressed to the system manager. A written, signed request stating that the requester seeks information concerning records pertaining to him is required.

Record access procedures: To see your records write the systems manager or the offices cited under "Records Location." Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the systems manager.

Record source categories: Information in these records is obtained from accident, injury, illness and fatality reports submitted by mine operators.

DOL/MSHA—2

System name: Identification Cards

System location: Mine Safety and Health Adminstration, Branch of Records Management, 4015 Wilson Blvd., Arlington, Va. 22203.

Categories of individuals covered by the system: Individuals who require identification for the purpose of carrying out their activities work. Individuals who have been appointed by the Secretary as Duly Authorized Representatives (DAR) to administer the provisions of Public Law 91-173 as amended by Public Law 95-164.

Categories of records in the system: Contain individual's name; some DAR records contain a statement of an individual's qualifications (e.g., education, work experience, training, etc.) as a justification for being appointed as a DAR.

Authority for maintenance of the system: Employee identification cards—5 U.S.C. 3101. DAR identification cards—Section 505 of Public Law 91-173 as amended by Public Law 95-164.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: (1) issuance of identification cards; (2) transfer to the U.S. Department of Justice in the event of litigation involving the records or the subject matter of these records; (3) transfer, in the event there is an indicated violation or potential violation of a statute, regulation, rule, order, or license, whether civil, criminal or regulatory in nature, to the appropriate agencies, whether Federal, State, local, or foreign, charged with the responsibility of investigaion or prosecuting such violation or charged with enforcing or implementing the statute, regulation, rule, order, or license violated or potentially violated; (4) disclosure to a Federal, State or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, such as current licenses. If necessary to obtain information relevant to an agency decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit; (5) disclosure to a Federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Continuous listing maintained in manual form on 8 x 10.5 inch paper filed in manila folders, and stored in file cabinets.

Retrievability: Indexed by name and number issued.

Safeguards: Records are kept in a locked file cabinet and only those employees who work with the records have access to them.

Retention and disposal: Records are maintained until a notice of change or employment is terminated and destroyed when no longer needed.

System manager(s) and address: Records Management Officer, Division of Management Services, MSHA, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: Inquiries regarding records in this system should be addressed to the system manager. Such requests must be submitted in writing and signed by the requester.

Record access procedures: A request for access may be addressed to the system manager. The request must be in writing and be signed by the requester.

Contesting record procedures: A petition for amendment shall be addressed to the system manager.

Record source categories: Information is obtained from individuals and personnel records as needed.

DOL/MSHA—3

System name: Metal and Nonmetal Mine Safety and Health Management Information

System location: (1) Office of the Administrator for Metal and Nonmetal Mine Safety and Health, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va. 22203. (2) Substantially all district and subdistrict offices (See Appendix for addresses.)

Categories of individuals covered by the system: Individual metal and nonmetal miners who are covered by the Federal Mine Safety and Health Amendments Act of 1977, Public Law 91-173 as amended by Public Law 95-164; MSHA personnel.

Categories of records in the system: Contains records on metal and nonmetal mine safety and health activities which include annual manpower and activity plans, mine and mill locations, metal and nonmetal mine inspection personnel time and activity, inspections, citations, and orders against operators, personal exposure data on personnel exposure of miners and MSHA Personnel to radiation, dust, noise and other contaminants, and comprehensive health surveys on individual operations.

Authority for maintenance of the system: Public Law 91-173 as amended by Public Law 95-164; 29 U.S.C. 668.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to determine the workload work scheduling and performance of mine inspection personnel; (b) to maintain records on violations of health and safety standards and regulations; (c) to determine contaminant exposure level; (d) employment data relative to metal and nonmetal mine workers, e.g., number of workers, etc. Disclosures outside the Department of Labor may be made (1) to the National Institute of Occupational Safety and Health and the Environmental Protection Agency information resulting from special health studies; (2) to provide State agencies applicable inspection reports, surveys on personnel exposure and special health studies; (3) to furnish unions and company officials inspection reports containing exposure data pertaining to members and employees, respectively; (4) to the U.S. Department of Justice when related to litigation or anticipated litigation; (5) of information indicating a violation or potential violation of a statute, regulation, rule, order or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rules, regulation, order or license; (6) from the

record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and

Systems exempted from certain provisions of the act: Under the specific exemption authority provided by 5 U.S.C. 552a(k)(2), exempting this system from the following provisions of the Privacy Act: 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (H), and (I) and (f) and

the Bureau of Mines, ADP. All other official payroll data are disposed of in accordance with General Records Schedule No. 2, FPMR 101-11.4.

Notification procedure: To determine whether records are maintained on you in this system, write to the system manager or to the office cited under System Location.

V 43 / 182 SEP 19 78

record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Computer—information from source documents to punch cards to disk storage for processing, final storage on magnetic tape. Manual—8 x 10.5 inch report forms in standard file cabinets.

Retrievability: Computerized and manual records are indexed by mine identification number for operators, by authorized representative number for individuals.

Safeguards: Computer—In accordance with the National Bureau of Standards publication, "Computer Security Guidelines for Implementing the Privacy Act of 1974." Manual—locked file cabinets. During working hours records are accessible only to authorized personnel.

Retention and disposal: Computer—tapes are retained indefinitely. Punch cards and source documents are destroyed after 90 days. Manual—retained indefinitely.

System manager(s) and address: Thomas J. Shepich, Metal and Nonmetal Mine Safety and Health, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: To determine whether the records are maintained on you in this system, write to the system manager, or to the offices cited under Records Location.

Record access procedures: To see your records write the system manager or the office cited under Records Locatlon. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: MSHA inspection personnel and individual mine operators submit reports and information in accordance with prescribed procedures.

DOL/MSHA—4

System name: Employee Conduct Investigations

System location: Mine Safety and Health Administration, Office of Internal Affairs, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va. 22203.

Categories of individuals covered by the system: Any MSHA employee against whom any allegation of misconduct, illegal acts, conflict of interest, etc. has been made.

Categories of records in the system: Contains the name, organization, allegation and other pertinent information relating to the individual involved. It also contains the investigative report associated with the case including interviews and other confidential data gathered by investigators.

Authority for maintenance of the system: 5U.S.C. 301, 7301, Executive Order 11222.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary use of the records is to determine facts and circumstances relative to allegations. Disclosures outside the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticipated litigations; (2) of information indicating a violation or potential violation of a statute, regulation, rule, order or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order or license; (3) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; and (4) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license, contract, grant, or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Manual—in manila file folders

Retrievability: Filed by name in alphabetical order. Retrieved by manual search.

Safeguards: Stored in GSA approved 3-way combination safe.

Retention and disposal: Reports of completed investigations are disposed of after 30 years. Matters not subjected to full field investigations are disposed of after 15 years. Destruction is by shredding or burning under supervision.

System manager(s) and address: Chief, Office of Internal Affairs, MSHA, 4015 Wilson Blvd., Arlington, Va. 22203.

Systems exempted from certain provisions of the act: Under the specific exemption authority provided by 5 U.S.C. 552a(k)(2), exempting this system from the following provisions of the Privacy Act; 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (H), and (I) and (f) and the portions of 29 CFR 70a which implement these provisions.

DOL/MSHA—5

System name: Payroll Records

System location: Mine Safety and Health Administration, Branch of Finance, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Categories of individuals covered by the system: Current MSHA employees and those formerly employed by MSHA within the last 3 years.

Categories of records in the system: A variety of documents which set forth or effect an employees annual wage rate, leave, biweekly earnings, payroll deductions, and disposition of earnings. Hard copy records consist of folders of action type documents for each employee: These records are source documents for data records on computer tape for payroll purposes.

Authority for maintenance of the system: 5 U.S.C. 5101, et seq., Budget and Accounting Procedures Act of 1950, as amended, 31 U.S.C. 66a.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to provide information and accounting records regarding employees pay and leave for the automated payroll data file; (b) to inform each MSHA office of the composition of the labor cost changes by reporting total payroll changes for each individual made to various cost accounts within the finance system. This reporting is made every 2 weeks on a regular payroll cycle. Disclosures outside the Department of Labor may be made (1) to provide States with pay data relative to plans for unemployment compensation; (2) to the Department of the Treasury for preparation of (a) payroll checks and (b) payroll deduction and other checks to Federal, State, and local government agencies, non-governmental organizations and individuals; (3) to the Internal Revenue Service, the Social Security Administration and to State, commonwealth, territorial and local governments for tax purposes; (4) to the Civil Service Commission in connection with the Civil Service Retirement System; (5) Federal Employees Government Life Insurance, and Health Benefits Program; (6) to carriers of health insurance benefits; (7) to labor unions for dues; (8) to charitable institutions for charity contributions; (9) to courts and court representatives requesting earnings and deductions information for alimony and child support under Public Law 93-579; (10) to another Federal agency to which employee had transferred; (11) to provide SSN for use in identifying MSHA employee travel advance accounts which are maintained in travel advance file; (12) to the U.S. Department of Justice when related to litigation or anticipated litigation; (13) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local, or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (14) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (15) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license, contract, grant, or other benefit; (16) to Federal, State, or local agencies where necessary to obtain information relevant to the hiring or retention of an employee, or the issuance of security clearance, contract, license, grant or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Records are maintained manually in file folders, and automated on computer magnetic tape, microfiche, microfilm, and punched cards.

Retrievability: File folders are maintained by name and all others by social security number.

Safeguards: Files are kept in locked metal filing cabinets which are posted with the appropriate Privacy Act warning. During working hours only authorized personnel have access to the files. Computer: Safeguards as described in the National Bureau of Standards booklet, "Computer Security Guidelines for Implementing the Privacy Act of 1974," and procedures developed by MSHA under GSA Circular E-34.

Retention and disposal: Punched cards are destroyed after 1 year. Magnetic tapes are erased and reused in accordance with schedule of retention agreed to by the Chief, Division of Budget and Finance, and the Chief, Division of Automatic Data Processing, MSHA, and

the Bureau of Mines, ADP. All other official payroll data are disposed of in accordance with General Records Schedule No. 2, FPMR 101-11.4.

System manager(s) and address: Chief, Branch of Finance, MSHA. P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Notification procedure: Inquiries regarding records in this system should be addressed to the system manager. Such request must be submitted in writing and signed by the requester.

Record access procedures: To see your records write the systems manager or the office cited under System Location. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: Information in this system of records comes from individual to whom it applies or is derived from information he supplied. Payroll leave regulations are all established by public law and the effect upon the individual is in accordance with such public laws and regulations. Generally, most payroll source data are echo records of official personnel actions.

DOL/MSHA—6

System name: Travel

System location: (1) Mine Safety and Health Administration, Branch of Finance, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215. Input documents supplied by all facilities of the Mine Safety and Health Administration.

Categories of individuals covered by the system: All persons traveling for or in behalf of MSHA on official business.

Categories of records in the system: Voucher file consists of copies of paid travel vouchers, SF-1012, which serve to reimburse travelers for expenses incurred in connection with official travel and travel anthorizations, MSHA Form 1000-3, which authorizes employee to incur expenses. Travelers home address and SSN are likely to be found on these two forms.

Authority for maintenance of the system: 5 U.S.C. 5701, et seq., GSA regulations, FPMR 101-7 dated May 1973, as amended.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) as backup entry data for obligation and disbursements in the automated finance system of MSHA; (b) as an audit file for researching historical data; (c) for travel cost information which is reported to each MSHA office as part of the detailed composition of monthly expense reports for cost accounts within the finance system. Only data pertinent to individual MSHA offices are available to that office. Disclosures outside the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticipated litigation; (2) of information indicating a violation or potential violation of a statue, regulation, rule, order or license, to appropriate Federal, State, local, or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statue, rule, regulation, order or license; (3) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (4) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, contract, license, grant, or other benefits; (5) to Federal, State, or local agencies where necessary to obtain information relevant to the hiring or retention of an employee, or the issuance of a security clearance, contract, license, grant, or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Records are maintained in file folders in steel filing cabinets in Branch of Finance.

Retrievability: Vouchers are filed by bureau voucher number and alphabetically by traveler name. Travel authorizations are filed by transaction number. Retrieved by manual search.

Safeguards: Files are kept in locked metal filing cabinets which are posted with the appropriate Privacy Act warning. During working hours only authorized personnel have access to the files. Computer: Safeguards as described in the National Bureau of Standards booklet, "Computer Security Guidelines for Implementing the Privacy Act of 1974," and procedures developed by MSHA under GSA circular E-34.

Retention and disposal: Disposition is in accordance with General Records Schedule No. 6, FPMR 101-11.4.

System manager(s) and address: Chief, Branch of Finance, MSHA, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Notification procedure: To determine whether records are maintained on you in this system, write to the system manager or to the office cited under System Location.

Record access procedures: To see your records write the system manager or the office cited under System Location. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: Travel vouchers are submitted by the traveler after incurring expenses of official travel pursuant to a signed travel authorization. Each voucher is a request for payment based on the tavelers record of official expenses. Input documents are supplied by all facilities of MSHA.

DOL/MSHA—7

System name: Travel Advance File

System location: Mine Safety and Health Administration, Branch of Finance, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Categories of individuals covered by the system: All MSHA employees who have outstanding travel advances or who have closed travel advances.

Categories of records in the system: File consists of automatic data tape files of travel advance transactions retrieved on the basis of social security numbers, and forms filed in alphabetical order by surname, whereon employees request and receive advances of funds for the purpose of paying travel expenses incurred in the performance of official Government business. These forms also include a record of repayment against an advance, whether by set-off on travel vouchers or repaid by check, money order, etc.

Authority for maintenance of the system: 5 U.S.C. 5701 et seq., GSA regulations FPMR 101-7.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to provide an accounting record of obligation due to the U.S. Government from employees who have cash advances to defray expenses incurred in official travel. Payments to the traveler and repayments to the Government are reflected in this record; (b) to serve as a source file of hard copy documents for entries for travel advances in the Automated Finance System; and (c) computer listings are produced monthly of outstanding travel advances for supporting accounts receivable. Listings are also produced with a computer analysis to assist in the control and proper utilization of travel advances. Listings are produced in alphabetical order by name of traveler. Computer generated verification notices are mailed to individual travelers on a quarterly basis. Disclosures outside the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticipated litigation; (2) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local, or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (3) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (4) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, contract, license, grant, or other benefit; (5) to Federal, State, or local agencies where necessary to obtain information relevant to the hiring or retention of an employee, or the issuance of security clearance, contract, license, grant or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Records are maintained in file boxes in the Branch of Finance and on magnetic tape in the Division of A.D.P.

Retrievability: Files are indexed alphabetically by employee name and retrieved by manual search.

Safeguards: Files are kept in locked metal filing cabinets which are posted with the appropriate Privacy Act warning. During working hours only authorized personnel have access to the files. Computer: Safeguards as described in the National Bureau of Standards booklet, "Computer Security Guidelines for Implementing the Privacy Act of 1974," and procedures developed by MSHA under GSA circular E-34.

Retention and disposal: Disposition is in accordance with General Records Schedule 9 FPMR 101-11.4

System manager(s) and address: Chief, Branch of Finance, MSHA, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Notification procedure: To determine whether records are maintained on you in this system, write to the system manager or to the office cited under System Location.

Record access procedures: To see your records write the system manager or the office cited under System Location. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: Information for this system originates with the traveler who specifies the need of a travel advance on MSHA Form 1000-8, the request is concurred in by signature of a responsible supervisory official. Repayment entries on the file are as a result of actions taken by the individual to liquidate his travel advance.

DOL/MSHA—8

System name: Accident and Injury Records

System location: Office of Mine Safety and Health Administration Employee Safety Manager, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va. 22203.

Categories of individuals covered by the system: Any MSHA employee who has had an on-the-job accident or injury.

Categories of records in the system: Records contain investigative information pertaining to any accident or injury an employee of MSHA is involved in.

Authority for maintenance of the system: 5 U.S.C. 7902, Sections 6 and 19 of the Occupational Safety and Health Act of 1970, 29 U.S.C. 668, Executive Order 11807.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to identify deficiencies in the Employee Safety Programs that must be corrected in order to maintain a safe and healthy work environment; (b) adjudication of tort, employee, and similar claims against the Government. Disclosures outside the Department of Labor may be made (1) to General Services Administration when a GSA motor vehicle is involved in an accident; (2) to the U.S. Department of Justice when related to litigation or anticipated litigation; (3) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local, or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, and/or license; (4) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (5) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license contract, grant, or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Maintained in manila folders.

Retrievability: Indexed by assigned accident number.

Safeguards: Folders kept in locked filing cabinets.

Retention and disposal: Reports are kept for 5 years and then destroyed.

System manager(s) and address: MSHA Employee Safety Manager, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: Inquiries regarding records in this system should be addressed to the systems manager. Such requests must be submitted in writing and be signed by the requester.

Record access procedures: To see your records write the systems manager or the office cited under System Location. Describe as specifically as possible the records sought.

Contesting record procedures: A petition for amendment should be addressed to the systems manager.

Record source categories: Reports are completed by the individual employees and their supervisors.

DOL/MSHA—9

System name: Clearance Records

System location: MSHA, Branch of Records Management, 4015 Wilson Blvd., Arlington, Va. 22203.

Categories of individuals covered by the system: Employees and prospective employees of MSHA on whom a security investigation has been conducted by the CSC or FBI.

Categories of records in the system: Records pertain to loyalty checks, character evaluations, and other information resulting from investigation by the CSC or NACI's.

Authority for maintenance of the system: Executive Order 10450.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: (1) Information used to determine qualifications of individuals for employment in sensitive positions with MSHA. (2) Transfer to the Department of Justice in the event of litigation involving the records or the subject matter of the records. (3) Transfer, in the event there is indicated a violation or potential violation of a statute, rule, regulation, order, or license, whether civil, criminal or regulatory in nature, to the appropriate agencies, whether Federal, State, local, or foreign, charged with the responsibility of investigation or prosecuting such violation or charged with enforcing or implementing the statute, regulation, rule, order, or license violated or potentially violated. (4) Disclosure to a Federal, State, or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to an agency decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant, or other benefit. (5) Disclosure to a Federal agency, in response to its request in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Maintained in manila file folders.

Retrievability: Filed alphabetically by last name.

Safeguards: Files are kept in an approved three-way combination safe and only employees who have security clearance and are responsible for the system have access.

Retention and disposal: Records are kept as long as the individual is employed and then the records are destroyed.

System manager(s) and address: MSHA, Chief, Branch of Records Management, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: Inquiries regarding records in this system should be addressed to the system manager. Such requests must be submitted in writing and be signed by the requester.

Record access procedures: A request for access may be addressed to the system manager. The request must be in writing and be signed by the requester.

Contesting record procedures: A petition for amendment should be addressed to the system manager.

Record source categories: Loyalty checks, inquiries, field investigations reports, and other Government agencies.

DOL/MSHA—10

System name: Coal Mine Health and Safety Special Investigations

System location: Office of the Administrator—Coal Mine Safety and Health, Mine Safety and Health Administration, U.S. Department of Labor, 4015 Wilson Boulevard, Arlington, Va. 22203 and some of the Coal Mine Safety and Health offices (see Appendix for address).

Categories of individuals covered by the system: Any individual alleged to have committed or have information concerning willfull or knowing violations of the Federal Mine Safety and Health Act of 1977 and the Coal Mine Health and Safety Act of 1969 and related section of the U.S. Code.

Categories of records in the system: Contains name, address, telephone number, social security number, occupation, place of employment, and other identifying data along with the type of allegation. This material includes interviews and other confidential data gathered by the investigator.

Authority for maintenance of the system: Investigations conducted pursuant to Sections 103, 105(c) and 110 of Public law 91-173 or amended by Public Law 95-164.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) to determine validity of allegations and (b) for use in determining amount of civil penalty assessments against individuals and operators. Disclosures outside of the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticipated litigation; (2) of information indicating a

violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (3) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual; (4) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license, contract, grant, or other benefit; and (5) to Federal, State, or local agncies where necessary to obtain information relevant to the hiring or retention of an employee, or the issuance of a security clearance, contract, license, grant, or other benefit.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Manual: In manila file folders.

Retrievability: Filed by docket and status of case, indexed by name of mine, docket number, and date of receipt. Retrieved by manual search.

Safeguards: Maintained in locked file cabinets. Accessed only by authorized personnel.

Retention and disposal: Retained for 5 years then transferred to Federal Records Center. Destroy after 10 years.

System manager(s) and address: Administrator, Coal Mine Safety and Health, Room 814, Ballston Tower 03, 4015 Wilson Blvd., Arlington, Va. 22203.

Systems exempted from certain provisions of the act: Under the specific exemption authority provided by 5 U.S.C. 552a(k)(2) exempting this system from the following provisions of the Privacy Act: 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (H), and (I), and (f) and the portions of 29 CFR, 70a which implement these provisions.

DOL/MSHA—12

System name: Property Control

System location: (1) Mine Safety and Health Administration, Chief, Division of Management Services, 4015 Wilson Blvd., Arlington, Va. 22203, (2) Substantially all field offices in lists of field offices in Appendix.

Catcgories of individuals covered by the system: Any person who has responsibility for MSHA property; who have reserved parking spaces assigned, or who have submitted invention reports and all records directly related to property control functions.

Categories of records in the system: Contains information indicating what property, including equipment, application for motor vehicle operator's license, keys, motor pool vehicles, requests for assignment of carpool or reserved parking spaces, and transportation request books, for which the employee has custody and/or responsibility. A list is maintained of inventions by case numbers. In addition, all other records directly related to property control functions.

Authority for maintenance of the system: Federal Property and Administrative Services Act of 1949, as amended, 40 U.S.C. 483(b)(1).

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary use of the records is the identification and control of MSHA property. Disclosure outside the Department of Labor may be made (1) to the U.S. Department of Justice when related to litigation or anticiapted litigation; (2) of information indicating a violation or potential violation of a statute, regulation, rule, or license, to appropriate Federal, State, local or foreign agencies responsible for investigation or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (3) disclosure from the record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Records are kept in manual form in file folders or cards indexes, microfiim cassettes, and computer disks.

Retrievability: Indexed by alphabetical order or control number. Entire file retrieved by manual search; frequently used information maintained on computer printouts.

Safeguards: Computer: In accordance with the National Bureau of Standards publication "Computer Security Guidelines for Implementing the Privacy Act of 1974." Manual: File cabinets. During working hours records are accessible only to authorized personnel.

Retention and disposal: In accordance with the General Records Schedule.

System manager(s) and address: Chief, Division of Management Services, MSHA, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: To determine whether the records are maintained on you in this system, write to the systems manager or to the offices cited under Records Location.

Record access procedures: To see your records write the systems manager or the offices cited under Records Location. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the systems manager.

Record source categories: MSHA employees and any property control records maintained by MSHA.

DOL/MSHA—13

System name: Coal Mine Respirable Dust Program

System location: Coal Mine Safety and Health Activity, MSHA, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va., 22203, and substantially all coal mine safety and health offices listed in Appendix.

Categories of individuals covered by the system: Individual coal miners for whom personal dust samples have been submitted for analysis.

Categories of records in the system: Contains data concerning mine identification, mine section, name of individual sampled, social security number, date of sample, and concentration of respirable dust contained in the personal sampler.

Authority for maintenance of the system: Title II of Public Law 9-173, Federal Coal Mine Health and Safety Act of 1969, as amended by Public Law 95-164 206.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary use of the record is to determine respirable dust levels in every active working mine to insure compliance with dust level standards. Disclosures outside the Department of Labor may be made (1) of respirable dust data to the U.S. Department of HEW in accordance with provisions of Public Law 91-173 as amended by Public Law 95-164; (2) of special studies relative to occupational types, mining methods, ventilation, etc., (3) to furnish mine operators with information relevant to the respirable dust program as it applies to their operations as required by the law; (4) to the U.S. Department of Justice when related to litigation or anticipated litigation; (5) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (6) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Computer on diskettes and mag tape.

Retrievability: Indexed by mine identification number and social security number frequently used information is maintained on computer printouts.

Safeguards: Records are stored in locked steel cabinets in locked rooms with access being granted only to duly authorized personnel.

Retention and disposal: Analysis forms are mailed to Denver and microfilmed. The forms and the microfilm record are maintained indefinitely. Computer tapes are purged periodically and computer output is utilized in the districts indefinitely.

System manager(s) and address: Chief, Division of Health, Coal Mine Safety and Health, MSHA, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: To determine whether the records are maintained on you in this system, write to the system manager.

Record access procedures: To see your records write the system manager. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: Mine operators submit the information used in this system.

DOL/MSHA—14

System name: Coal Mine Noise Level Program

System location: (1) Coal Mine Safety and Health Activity, MSHA, U.S. Department of Labor, 4015 Wilson Blvd., Arlington, Va. 22203.

(2) Substantially all Coal Mine Safety and Health Offices listed in Appendix.

Categories of individuals covered by the system: Individual coal

grams; (e) to verify that individuals have completed required training; (f) statistical reporting of training data in various formats for a variety of uses, e.g., reporting to Congress, publications, etc. Disclo-

cerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit. (6) Disclosure to a Federal agency, in response to its request, in connection with the hiring or retention of

Record access procedures: Individuals may write the system manager at the address indicated above for information concerning the procedures involved in gaining access to records in this system.

Contesting record procedures: A petition for amendment shall be in

(2) Substantially all Coal Mine Safety and Health Offices listed in Appendix.

Categories of individuals covered by the system: Individual coal miners for whom noise level samples have been submitted for analysis.

Categories of records in the system: Contains data concerning mine identification, mine section, name of individual sampled, social security number, date of sample, and noise level data.

Authority for maintenance of the system: Title II of Public Law 91-173, Federal Coal Mine Health and Safety Act of 1969 as amended by Public Law 95-164.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are: (a) determine noise levels in every active working mine to insure compliance with noise level standards; (b) special studies relative-to occupational types mining methods, ventilation, etc. Disclosures outside the Department of Labor may be made (1) to furnish mine operators with information relevant to the noise program as it applies to their operations as required by the law; (2) to the U.S. Department of Justice when related to litigation or anticipated litigation; (3) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (4) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Currently noise level data is entered onto a form which is sent to District Offices for manual processing and filing in manila folders. All district offices utilize diskettes and minicomputers to process the data.

Retrievability: Data is indexed by mine identification number, name of mine, name of operator, name of individual, and individual social security number.

Safeguards: Maintained in locked file cabinet. Accessed only by authorized personnel.

Retention and disposal: Forms and diskettes are retained indefinitely in District offices.

System manager(s) and address: Chief, Division of Health, Coal Mine Safety and Health, MSHA, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: To determine whether the records are maintained on you in this system, write to the system manager.

Record access procedures: To see your records write the system manager. Describe as specifically as possible the records sought.

Contesting record procedures: To request correction or the removal of material from your files, write the systems manager.

Record source categories: Mine operators submit the information used in this system.

DOL/MSHA—15

System name: Health and Safety Training Records including Qualification and Certification Data

System location: Qualification and Certification Unit, Education and Training, Mine Safety and Health Administration, 730 Simms Street, Lakewood, Colo. 80215.

Categories of individuals covered by the system: Contains training data on miners, mining industry personnel, and Federal employees who have taken MSHA approved training courses. Also individuals certified and qualified as required by regulations.

Categories of records in the system: Contains name, social security number, mine ID number, training course, certification and/or qualification, instructor's name, and other relevant data.

Authority for maintenance of the system: Section 317(i) and 502 of Public Law 91-173 as amended by Public Law 95-164.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The primary uses of the records are (a) maintain records of training of individual miners, mining industry personnel, and State and Federal employees who have taken MSHA approved training courses; (b) issue certificates or certification cards to individuals who become qualified or certified under the law, as appropriate; (c) issue certification cards to instructors authorizing them to teach MSHA approved training courses; (d) provide information to monitor and/or expand safety training programs; (e) to verify that individuals have completed required training; (f) statistical reporting of training data in various formats for a variety of uses, e.g., reporting to Congress, publications, etc. Disclosures outside of the Department of Labor many be made (1) to coal companies requesting information to verify training required by law; (2) to Unions requesting information on training status of its members; (3) to coal operators associations requiring training for policy and programming utilization; (4) to the U.S. Department of Justice when related to litigation or anticipated litigation; (5) of information indicating a violation or potential violation of a statute, regulation, rule, order, or license, to appropriate Federal, State, local,or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order, or license; (6) from the record of an individual in response to an inquiry from a congressional office made at the request of that individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Input forms to key tape to magnetic taps in the computer system. Microfilm records are stored in the Qualification and Certification Unit.

Retrievability: Computerized records are indexed by mine identification and individual social security numbers. Microfilm records are retrieved on basis of mine identification numbers, date, and course.

Safeguards: Computer safeguards as described in the National Bureau of Standards booklet "Computer Security Guidelines for Implementing the Privacy Act of 1974" and procedures developed by MSHA under GSA Circular E-34. Files are posted with the appropriate Privacy Act warning. During working hours only authorized personnel have access to take files.

Retention and disposal: Computer records are maintained on yearly historical file. Reporting outputs are discarded after they have served their purpose. Microfilm records are being maintained indefinitely for historical file purposes.

System manager(s) and address: Education Specialist, Qualification and Certification Unit, Education and Training, P.O. Box 25367, 730 Simms Street, Lakewood, Colo. 80215.

Notification procedure: Inquiries regarding records in this system should be addressed to the system manager. Such requests must be submitted in writing and be signed by the requester.

Record access procedures: To see your records write the system manager. Describe as specifically as possible the records sought.

Contesting record procedures: To request corrections or the removal of material from your files, write the system manager.

Record source categories: An individual on whom the record is maintained, instructors of the training courses, mine inspection personnel, mine operators, State personnel and miner's representatives or organizations who provide training courses required by MSHA.

DOL/MSHA—16

System name: Employee Locator System

System location: Mine Safety and Health Administration, Branch of Records Management, 4015 Wilson Blvd., Arlington, Va. 22203.

Categories of individuals covered by the system: Current employees of MSHA.

Categories of records in the system: Records contain name, title, office address, organization symbol, business telephone number, reason for preparation (i.e. new listing, change of address or location, separation).

Authority for maintenance of the system: 5 U.S.C. 301, 44 U.S.C. 3101.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: (1) Used to assist callers in locating MSHA employees and for the use of other employees of MSHA who have a need for the records in the performance of their duties. (2) Used to compile agency telephone directory. (3) Transfer to the Department of Justice in the event of litigation involving the records or the subject matter of these records. (4) Transfer in the event there is an indicated violation or potential violation of a statute, regulation, rule, order, or license, whether civil, criminal or regulatory in nature, to the appropriate agencies, whether Federal, State, local, or foreign, charged with the responsibility of investigation or prosecuting such violation or charged with enforcing or implementing the statute, regulation, rule, order, or license violated or potentially violated. (5) Disclosure to a Federal, State, or local agency maintaining civil, criminal, or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to an agency decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit. (6) Disclosure to a Federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation to an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage: Records are maintained on DI-28 forms on a 3 inch by 5 inch file box.

Retrievability: Records are filed alphabetically by name.

Safeguards: File is kept in a locked cabinet and only those employees who work with the records have access to them.

Retention and disposal: Records are maintained until a notice of change or employment is terminated. Records are destroyed when no longer needed.

System manager(s) and address: Chief, Branch of Records Management, Mine Safety and Health Administration, 4015 Wilson Blvd., Arlington, Va. 22203.

Notification procedure: Inquiries regarding records in this system should be addressed to the system manager. Such requests must be submitted in writing and signed by the requester.

Record access procedures: Individuals may write the system manager at the address indicated above for information concerning the procedures involved in gaining access to records in this system.

Contesting record procedures: A petition for amendment shall be in writing and addressed to the system manager.

Record source categories: Information is from individual employees.

LOCATION OF NOTICES IN 1977 COMPILATION

Notices of this agency's systems of records appear in Volume II of the 1977 Compilation at 42 FR 49654. The price of this volume is sixty dollars and fifty cents.

AVAILABILITY OF 1977 COMPILATION

"Privacy Act Issuances—1977 Compilation" is available from Regional Depository Libraries at 50 locations around the country and can be examined at these libraries free of charge. The 1977 Compilation is also available at the General Services Administration Federal Information Centers, which are located at 38 central points around the country and may be examined at the central headquarters and all field offices of this agency. It is also available for purchase from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. upon request, the Office of the Federal Register will furnish a photocopy of the full text of a particular records system published in the 1977 Compilation for a nominal fee.

COMMUNITY SERVICES ADMINISTRATION

PRIVACY ACT ISSUANCES

Notice of Incorporation by Reference

Agency: Community Services Administration.

Action: Incorporation by reference of Privacy Act issuances.

Summary: Federal agencies are required by the Privacy Act of 1974 to give annual notice of certain records they maintain. The notices published last year were compiled by the Office of the Federal Register into "Privacy Act Issuances—1977 Compilation." The purpose of this document is to incorporate by reference the notices that appear in "Privacy Act Issuances—1977 Compilation" and to publish in full the systems that this agency has amended since publication of the 1977 Compilation.

Dates: This document fulfills the annual notice requirements of the Privacy Act for 1978.

For further information contact: Alan O. Mann, Privacy Act Officer, Community Services Administration, 1200 19th Street, NW., Room 413, Washington, D.C. 20506. Telephone (202) 254-5300.

APPROVAL OF THE DIRECTOR

The notices of systems of records of this agency which appear in "Privacy Act Issuances—1977 Compilation" are incorporated by reference. The Director of the Office of the Federal Register granted approval to incorporate by reference these Privacy Act issuances on August 14, 1978.

Published below is the full text of the "Geographical Guidance for Accessing Systems of Records" to reflect changes in the Regional Office addresses and telephone numbers. Other than these changes none of this agency's systems of records have been amended since the 1977 Compilation.

Geographical Guidance for Accessing Systems of Records

Many CSA systems of records are maintained wholly or partially in the CSA Regional Offices. To facilitate access to such records, a listing of the CSA Regional Offices, the States served thereby, their addresses and telephone numbers are provided:

Region I

Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont. John F. Kennedy Federal Building, Room E400, Boston, Massachusetts 02203 (617) 223-4080.

Region II

New Jersey, New York, Puerto Rico, Virgin Islands. 26 Federal Plaza, 32nd Floor, New York, New York 10007 (212) 264-1900.

Region III

Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia. Gateway Building, 3535 Market Street, Room 2260, Philadelphia, Pennslyvania 19104 (215) 596-1000.

Region IV

Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee. 101 Marietta Street, NW., Atlanta, Georgia 30323 (404) 221-2717.

Region V

Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin. 300 South Wacker Drive, 24th Floor, Chicago, Illinois 60606 (312) 353-5987.

Region VI

Arkansas, Louisiana, New Mexico, Oklahoma, Texas. 1200 Main Street, Room M130, Dallas, Texas 75202 (214) 767-6125.

Region VII

Iowa, Kansas, Missouri, Nebraska. 911 Walnut Street, Room 1720, Kansas City, Missouri 64106 (816) 374-3361.

Region VIII

Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming. Federal Building, 1961 Stout Street, Room 1234, Denver, Colorado 80294 (303) 837-4767.

Region IX

Arizona, California, Guam, Hawaii, Nevada, Pacific Trust Territories. 450 Golden Gate Avenue, Box 36008, San Francisco, California 94102 (415) 556-4000.

Region X

Alaska, Idaho, Oregon, Washington. Arcade Plaza Building, Mail Stop 105A, 1321 Second Avenue, Seattle, Washington 98101 (206) 442-4910.

AVAILABILITY OF 1977 COMPILATION

"Privacy Act Issuances—1977 Compilation" is available from Regional Depository Libraries at 50 locations around the country and can be examined at these libraries free of charge. The 1977 compilation is also available at the General Services Administration Federal Information Centers, which are located at 38 central points around the country and may be examined at the central headquarters and all field offices of GSA. It is also available for purchase from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Upon request, the Office of the Federal Register will furnish a photocopy of the full test of a particular records system published in the 1977 compilation, for a nominal fee.

Location of Notices in 1977 Compilation

Notices of this agency's systems of records appear in Volume V of the 1977 Compilation at pages 53430-53434 (42 FR 53430). The price of this volume is eight dollars.

John Gabusi,
Assistant Director for Management.

[Docket No. 78N-0090]

FILLED MILK PRODUCTS COMMON OR USUAL NAME

Withdrawal of Proposal and Termination of Rulemaking Proceedings

AGENCY: Food and Drug Administration.

ACTION: Withdrawal of proposal.

SUMMARY: The Food and Drug Administration is withdrawing the proposal to establish a common or usual name for filled milk products and is terminating the rulemaking proceeding. The proposal would have established by regulation a common or usual name for filled milk products. The Commissioner of Food and Drugs is proposing elsewhere in this issue of the FEDERAL REGISTER a standard of identity for milk and cream substitutes and cheese substitutes.

EFFECTIVE DATE: This action is effective September 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Eugene T. McGarrahan, Bureau of Foods (HFF-415), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1155.

SUPPLEMENTARY INFORMATION: Under the U.S. district court decision in *Milnot Co. v. Richardson*, 350 F. Supp. 221 (S.D. Ill., 1972), holding the Filled Milk Act unconstitutional, the Commissioner concluded that appropriate labeling for filled milk products should be promptly considered and a regulation promulgated to govern the common or usual name of these products. Accordingly, a proposal to amend part 102 (21 CFR 102) by adding new § 102.18 to establish a common or usual name for filled milk products was published in the FEDERAL REGISTER of August 2, 1973 (38 FR 20748). Interested persons were invited to comment particularly on the suitability and meaning of the word "filled" in the name of the food.

A total of 250 comments were received in response to the proposal. Of this total, 233 comments either opposed adoption of the proposal as published or questioned the advisability of promulgating regulations governing the common or usual name of these products, and 17 comments favored the proposal as published or on condition that it provide for proof of nutritional equivalency. Stating that the meaning of the word "filled" is not comprehensible and could mislead consumers, 192 comments opposed the use of the term in the name of the food. They also opposed the use of the words "milk" and "cream" in the name of the food because of possible consumer confusion with the traditional product. Six comments favored the terminology as set out in the proposal. Twenty-one comments considered filled milk products to be imitation milk products which should be so labeled. Fourteen comments suggested using names with prefixes such as "mello" or suffixes such as "ine," as in various State regulations for non-milkfat-based products. Also suggested were names such as "modified," "blend," "blended," "substitute," "vegetable fat drink," and "nondairy product."

Since publication of the filled milk products proposal, the Commissioner has observed that many new substitute dairy foods, including cheese substitutes, have been marketed. These foods are made to resemble standardized dairy foods by complete or partial replacement of milkfat and/or milk protein with vegetable fats and proteins. Because the filled milk products proposal provides for the replacement of only milkfat with any fat or oil other than milkfat and does not mention milk protein, it lacks the provisions necessary for regulation of all of the new substitute dairy foods.

Therefore, in view of the adverse comments received on the proposal, and because it does not contain provisions consistent with those necessary for regulation of various other substitute dairy foods, the need for which is demonstrated by recent industry petitions to establish a standard of identity and/or a common or usual name regulation for cheese substitutes, the Commissioner concludes the proposal to establish a common or usual name for filled milk products is no longer necessary and rulemaking proceedings on the matter are terminated.

The Commissioner is proposing elsewhere in this issue of the FEDERAL REGISTER a standard of identity for milk and cream substitutes and cheese substitutes providing for both fat and protein replacement.

This action is taken under the Federal Food, Drug, and Cosmetic Act (secs. 401, 701, 52 Stat. 1046, 1055-1056, as amended, 70 Stat. 919, 72 Stat. 948 (21 U.S.C. 341, 371) and under authority delegated to the Commissioner (21 CFR 5.1)).

Dated: September 8, 1978.

JOSEPH P. HILE,
Associate Commissioner for Regulatory Affairs.

SUBSTITUTES FOR MILK, CREAM, AND CHEESE

Standards of Identity

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: This proposal would establish standards of identity for milk and cream substitutes and cheese substitutes. The proposed standards of identity would (1) establish descriptive names for milk and cream substitutes, and cheese and cheese product substitutes, (2) permit the use of any safe and suitable optional ingredients in their formulation, (3) establish compositional requirements including requirements for nutritional equivalence to the foods which they simulate, and (4) establish appropriate labeling requirements. These standards of identity are being proposed because of the introduction of many new dairy food substitutes and in response to petitions from the cheese industry. Any regulation issued on the basis of this proposal will reflect the Commissioner's consideration of relevant information presented at the food labeling hearings announced in the FEDERAL REGISTER of June 9, 1978.

DATES: Comments by November 27, 1978. Proposed compliance for products initially introduced into interstate commerce: One year after the date of issuance of a regulation.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Eugene T. McGarrahan, Bureau of Foods (HFF-415), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1155.

SUPPLEMENTARY INFORMATION: The Commissioner of Food and Drugs, on his own initiative, proposes to establish definitions and standards of identity for milk and cream substitutes (foods made in semblance of standardized milk and cream foods). He also proposes to establish, on his own initiative and in consideration of petitions from the National Cheese Institute, 110 North Franklin Street, Chicago, Ill. 60606; Anderson Clayton Foods Co., One Main Place, Dallas, Tex. 75250; and Fisher Cheese Co., Wapakoneta, Ohio 45895, definitions and standards of identity for cheese and cheese product substitutes (foods made in semblance of cheese, cheese products, pasteurized process cheese, and pasteurized process cheese products).

SEP 19 78

The Commissioner has observed that many new dairy food substitutes, made in semblance of standardized dairy foods, have been introduced in markets recently. This increase in dairy food substitutes is due in part to a relaxation of restrictions on such foods since (1) the Filled Milk Act of 1923 (42 Stat. 1486), 21 U.S.C. 61-64, was declared unconstitutional by the U.S. District Court for the Southern District of Illinois in *Milnot Co. v. Richardson*, 350 F. Supp. 221 (S.D. Ill., 1972) and (2) the Filled Cheese Act of June 6, 1896 (29 Stat. 253) (26 U.S.C. 4831-4836) was repealed on October 6, 1974, by the 93d Congress (88 Stat. 1466).

The repeal of the Filled Cheese Act and the Filled Milk Act was recommended by the White House Conference on Food, Nutrition, and Health in December 1969. Consumers had expressed the desire for modified milk and cheese foods made with vegetable fats, but the development of such foods was inhibited by the restrictive nature of these acts.

The Filled Milk Act prohibited the shipment of any filled milk or cream in interstate commerce. The Filled Milk Act defined "filled milk" as "any milk, cream, or skimmed milk, whether or not condensed, evaporated, concentrated, powdered, dried or desiccated, to which has been added, or which has been blended or compounded with, any fat or oil other than milkfat, so that the resulting food is in imitation or semblance of milk, cream, or skimmed milk, whether or not condensed, evaporated, concentrated, powdered, dried, or desiccated." This definition, however, was not intended to include any distinctive proprietary food compound which would not be readily mistaken in taste for milk or cream, or where such food was intended for feeding infants and young children.

By taxing the filled cheese and its producers and distributors, the Filled Cheese Act, which was administered by the Internal Revenue Service, sought to control and identify filled cheeses made in semblance of natural cheese. The Filled Cheese Act defined filled cheese as "all substances made from milk or skimmed milk, with the admixture of butter, animal oil or fats, vegetable, or any other oils or compounds foreign to such milk and made in imitation and semblance of cheese."

As a result of the repeal of the filled Cheese Act and the declaration of the Filled Milk Act as unconstitutional, filled cheese foods and filled milk foods are now subject solely to provisions of the Federal Food, Drug, and Cosmetic Act and the Fair Packaging and Labeling Act and move freely in interstate commerce as nonstandardized foods. In view of the change in the regulatory status of these foods and the recent increase in sales of dairy food substitutes, the Commissioner believes that the establishment of standards of identity for these and other foods made in semblance of standardized milk, cream, cheese, and foods made of cheese, will promote honesty and fair dealing in the interest of consumers.

MILK AND CREAM SUBSTITUTES

The Commissioner of Food and Drugs published in the FEDERAL REGISTER of May 18, 1968 (33 FR 7456) a notice of proposed rulemaking to establish standards of identity and quality for imitation milks and creams. Based on comments received in response to that proposal, a revised proposal that was limited to imitation milks was published in the FEDERAL REGISTER of October 9, 1969 (34 FR 15657). All comments received in response to this second proposal were opposed to adoption of the proposal as published. In addition the Commissioner became aware that the production of imitation milks was declining. The Commissioner, therefore, concluded that standards should not be established at that time and a notice of withdrawal of the October 9, 1969, proposal was published in the FEDERAL REGISTER of June 3, 1970 (35 FR 8584).

A third proposal to regulate milk substitutes was published in the FEDERAL REGISTER of August 2, 1973 (38 FR 20748). The proposal sought to establish the common or usual name, "filled ——," for the foods defined by the Filled Milk Act, the blank being filled in with the name of the counterpart milk or cream food as designated in part 131 (21 CFR Part 131). Comments on this proposal suggested that the term "filled" in "filled milk" is meaningless to most consumers and that it might be misleading by implying that something is missing in the traditional dairy food and that the "filled" dairy food is more complete. In view of these and other relevant comments, that proposal is being withdrawn. A notice of withdrawal of that proposal appears elsewhere in this issue of the Federal Register.

The Commissioner has reviewed the comments submitted in response to the imitation milk and filled milk proposals and he is proposing to establish a definition and standard of identity which will govern the composition and labeling of milk and cream substitutes. The Commissioner has observed the market and notes that many new dairy food substitutes are being sold with potentially misleading labeling. Many of these substitutes bear fanciful names while others have adopted "imitation" dairy food labeling. Also, some milk and cream substitute foods contain partial or total milk protein replacements as well as milkfat replacements. The Commissioner believes that a standard of identity that would encompass both types of substitutes should be established for these foods. Accordingly, he is proposing to establish such a standard in new § 131.300 Milk and cream substitutes as set out below.

CHEESE SUBSTITUTES

The Commissioner of Food and Drugs has received three petitions from representatives of the cheese industry proposing the establishment of regulations to govern the nomenclature, composition, and labeling of cheese substitutes. He has also received two letters of comment suggesting common or usual names for these foods. A brief summary of these petitions and comments follows. The petitions and letters of comment are on file with the Hearing Clerk, Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

The National Cheese Institutes (NCI), 110 North Franklin Street, Chicago, Ill. 60606, submitted a petition dated June 10, 1975 (docket No. 75P-0121) proposing the establishment of a standard of identity for cheese analogs under the name "Golana" in part 133 (21 CFR Part 133). The NCI petition stated that the name "Golana" was selected because it was pleasant sounding, easily pronounced, and not related to another food. Golana is also "analog" spelled backward. The NCI rejected the word "cheese" as a root word on the ground that such terms might be confused with names of natural cheeses. Further, NCI suggested that the word "analog" was more applicable than words such as "alternate," "substitute," or "imitation," because analog connotes something having properties corresponding to something else, but different in origin. "Imitation," the petition noted, already has been defined in the Code of Federal Regulations and would connote nutritional inferiority, while "substitute" or "alternate" suggests the food is intended to serve in place of another. The NCI petition argued that these foods should stand on their own merits and not ride on the coattails of the foods which they simulate.

Briefly, the petition for the standard of identity for Golana defines a cheese

V 4 3 / 1 8 2

analog as the food made in semblance of cheese or a cheese product in which safe and suitable nonmilk ingredients supplement or replace any or all nutritive milk components. The proposed standard would also establish nutritional equivalency requirements for Golana and a system of nomenclature for Golana-type foods based on the degree of semblance to the cheese simulated, including its nutritional equivalency to that food. For example, a Golana simulating mozzarella cheese that conforms to the organoleptic and physical properties, as well as to the established fat and moisture requirements for mozzarella cheese, and contains the required levels of protein and nutrients proposed in the standard of identity for Golana would be named "Golana mozzarella cheese analog." A cheese analog that does not conform to the organoleptic and physical properties, and the fat and moisture requirements for a specific cheese variety, but is nutritionally equivalent to cheddar cheese, would be named simply "Golana cheese analog." However, a food that conforms to the organoleptic and physical properties of a cheese analog, but fails to conform to the organoleptic and physical properties and the compositional requirements of a specific cheese variety, and is not nutritionally equivalent to cheddar cheese would be named "Imitation Golana."

The Anderson Clayton Foods Co., One Main Place, Dallas, Tex. 75250, submitted a petition dated August 13, 1975 (docket No. 75P-0233) proposing the establishment of a common or usual name regulation for cheese substitutes in 21 CFR Part 102, under the name "Cheesana Cheese Substitutes." A second petition dated November 28, 1975 (docket No. 75P-0354) proposing the establishment of a common or usual name regulation for these foods under the name "Cheese and cheese product substitutes" was submitted by the Fisher Cheese Co., P.O. Box 409, Wapakoneta, Ohio 45895. Both firms manufacture cheese substitute-type foods. In both petitions, the proposed common or usual names would reference the type of standardized or recognized cheese variety simulated, e.g., "Cheesana Cheddar Cheese Substitute" or "Cheddar Cheese Substitute," followed by an informative statement defining the distinguishing characteristic of the food such as "contains vegetable oil." Both petitions recommended establishing nutritional equivalency requirements for cheese substitutes but neither would require that the cheese substitute conform to the established fat and moisture requirements of the cheese being simulated.

Two letters from industry representatives suggested common or usual names for cheese substitutes. One comment stated that the name should inform the consumer of the basic nature of the substitute. The comment further suggested the use of a phrase such as "Highly Polyunsaturated Filled —— Cheese" be adopted for filled cheeses which provide a minimum of 30 percent polyunsaturates of total fats, with a total polyunsaturated/saturated fat ratio of at least 1:1 and maximum cholesterol level of 15 milligrams/100 grams product. Filled cheeses which do not meet these standards would simply be designated as "Filled —— Cheese." In both cases, the blank would be filled in with the type of filled cheese, e.g., "cheddar." The second comment suggested that names such as "nondairy imitation cheese" or "nondairy cheese replacement" be used instead of a contrived or arcane name that would be confusing to consumers and that would require extensive advertising to establish the food's identity.

The Commissioner has considered both comments and has decided that the names suggested would not be generally applicable to all types of cheese substitutes. As indicated above, the use of the term "filled"to refer to substitutes containing replacements for milkfat may be confusing to consumers and may cause some consumers to think filled dairy products are superior to traditional dairy products. The suggested phrase "Highly Polyunsaturated Filled —— Cheese" could imply tht the food is a special dietary food. Nomenclature for special dietary foods is beyond the scope of this proposal. The names "nondairy imitation cheese" and "nondairy cheese replacement" would not accurately describe the nature of all cheese and cheese product substitutes since many substitutes use milk solids and milk derived ingredients, such as casein, whey or modified whey, milkfat, or lactose as components of the food.

Standards of Identity Versus Common or Usual Name Regulations

Both standards of identity and common or usual name regulations establish the name of the food, which identifies and describes the food's basic nature. In addition to establishing the name of the food, the common or usual name regulation may require that the name of the food include the percentage of any characterizing ingredient when the proportion of such ingredient has a material bearing on the price or when the label or appearance of the food may otherwise create an erroneous impression that such ingredient is present in an amount greater than is actually the case. The intended purpose is to provide consumers with relevant information about an important aspect of the food's composition in the labeling so that informed purchasing decisions can be made.

In addition to providing for informative labeling, standards of identity provide a further measure of consumer protection by defining the composition of the food, prescribing the mandatory ingredients as well as the optional ingredients, and establishing the amounts or relative proportions of these ingredients in the food. Most standards of identity require that the common or usual name of all optional ingredients be declared on the label unless exempted by the Federal Food, Drug, and Cosmetic Act or by other regulations. Standards of identity are established to promote honesty and fair dealing in the interest of consumers. They serve to eliminate confusion in those cases where it would be difficult for the consumer to determine, solely on the basis of informative labeling, the relative merits of a variety of products superficially resembling one another.

The standards of identity governing natural cheeses do not provide for variations from the established levels or ranges of minimum fat and solids content or the maximum allowable moisture content, although these standards may allow for variations in the manufacturing process as long as the resultant cheese exhibits the same physical and chemical properties. The composition of the ingredients, the types of organisms used, and the manufacturing process contribute to the uniqueness of a given cheese variety. The differences in total and relative amounts of fat, milk solids-not-fat, and moisture present in cheese ingredients are basic reasons that one cheese variety is distinct from another. Each natural cheese standard of identity thus insures the integrity of the natural cheese by setting limits on its fat, milk solids-not-fat, and moisture content.

Common or usual name regulations would not restrict the composition of cheese substitutes, except as is required for nutritional content. Manufacturers would be free to vary the fat content of these foods to suit consumer's preferences and pocketbooks. In a nationwide survey of consumers conducted by the U.S. Department of Agriculture, "Homemakers' Opinions on Dairy Products and Imitation Foods" (Marketing Research Report No. 995, May 1973), the majority of the homemakers polled thought that, generally, imitation foods were cheaper, contained fewer calories, were more convenient and easier to use, and had better keeping characteristics than genuine dairy foods. The majority also felt that genuine dairy foods had superior taste, food value, and purity or absence of additives compared to the imitation.

SE 19 78

Hence, cheese substitutes, if regulated by a common or usual name regulation as petitioned for by Fisher Cheese Co. or by Anderson Clayton Foods, might not be inconsistent with consumer expectations. This could be so even though such cheese substitutes would not have to meet fat content requirements or possess the same organoleptic and physical characteristics as the standardized cheese, provided that the cheese substitutes cost less and effectively served the purposes for which they were designed. Further, absence of specific compositional requirements would allow more flexibility in developing new cheese substitutes.

A common or usual name regulation could require that the amount and type of protein and fat in the substitute food be included in the labeling. These foods also would be required to bear nutritional labeling. With such labeling supplementing an appropriate product name, it is doubtful that these foods would be mistaken for genuine dairy foods. However, each of these requirements also may be accomplished by standards of identity.

A standard of identity such as that petitioned for by NCI could include a requirement that the moisture, solids, and fat values for the substitute food be equivalent to those of the food being simulated. This compositional requirement would assure the consumer of uniformity of composition and would prevent the debasement of foods as costs of ingredients increase.

The adoption of a standard of identity also would serve a regulatory function. Consumers' ability to distinguish one cheese variety from another or one food made with cheese from another by taste and sight varies because the determination is subjective. The only objective, practical way to determine whether a specific cheese variety or specific food made with cheese is properly labeled as to variety or type is to analyze the food for fat, solids, and moisture content. With such objective analyses and subjective organoleptic evaluations, a regulatory agency can make a determination concerning label claims.

A standard of identity for cheese substitutes would also be more consistent with the ongoing revisions of part 133 (21 CFR Part 133). In the FEDERAL REGISTER of October 4, 1977 (42 FR 53970) the Commissioner published a proposal that would revise the current pasteurized process cheese, cheese food, and cheese spread standards of identity and group them into two categories—process cheese and cheese products.

Under that proposed revision, all pasteurized process cheeses would remain in one standard of identity category and retain their current nomenclature except that use of the term "pasteurized" in the name would be optional. All pasteurized process cheese foods and pasteurized process cheese spreads, which are generally distinguished from pasteurized process cheese by their lower fat and solids and higher moisture contents, would be grouped into a second category—"pasteurized process cheese products." The terms "pasteurized" and "process" in the names of pasteurized process cheese products would be optional. The proposed revision would require label declaration of the percent of milkfat contained in process cheese and process cheese products. In that proposal the Commissioner reasoned that closely related foods differing primarily in percent of fat and moisture could best be identified by labeling the percentage of fat rather than by different names, such as "food" or "spread." The proposed revision would also require nutritional and complete ingredient labeling.

A similar labeling approach would be equally appropriate for cheese substitutes. A standard of identity for cheese substitutes, as well as one for milk and cream substitutes, could require label declaration of the percent and type of fat used and/or the type of protein ingredients used in the food if other than milk protein. In addition, the standards of identity could be sufficiently flexible to allow for some variability within the compositional requirements. Thus, the standards of identity for the substitutes could establish moisture, solid, and fat content requirements consistent with the standards of identity for the foods they simulate, yet allow for variations in those compositional requirements, within limits, established in the standards, and/or with required label declaration.

The provision permitting the composition of certain foods to vary within certain limits appears in several standards of identity although label declaration may not always be required. Although most cheese standards of identity include minimum levels of fat and solids, the standards of identity for part-skim cheese foods and Neufchatel cheese permit the fat content to vary within a specified range. Further, in view of trends indicating consumer preferences for low fat dairy foods, and the need for economical, yet nutritious foods, it seems only logical to permit the fat content of cheese substitutes to differ from that of the standardized foods they simulate, as long as consumers are not misled.

Establishing a standard of identity for cheese substitutes with adequate requirements for label declaration of ingredients in part 133 (21 CFR Part 133) is a logical extension of the proposed revision of the process cheese and cheese products standards of identity. This approach would keep all nomenclature specifically identifiable with cheese type foods together in one part of the Code of Federal Regulations. Moreover, in view of the fact that dairy foods generaly are regulated by standards of identity, it would seem reasonable to regulate vegetable fat substitutes for these foods in a like manner. The Commissioner maintains that this approach is least disruptive and most consistent with current regulations and policies. Similarly, a standard of identity for mild and cream substitutes could be established in part 131 (21 CFR Part 131) with the standards of identity for milk and cream. Standards of identity for these dairy foods are generally preferred by industy and have served the public well for many years. A consistent and systemized regulatory approach to one general type of food lends itself to better understanding and acceptance by industry and the public. Accordingly, the Commissioner concludes that standards of identity for milk, cream, and cheese substitutes will promote honesty and fair dealing in the interest of consumers.

Other Requirements

The three petitions for cheese substitutes indicate an intent to utilize the name of the standardized food being simulated as part of the name of the substitute food. The Commissioner has considered the use of the names of specific cheese varieties in the names of cheese substitutes. He believes such use appears reasonable and would promote honesty and fair dealing in the interest of consumers. This is particularly true if broad compositional requirements for nutritional equivalency are established for cheese substitutes as set out in this proposed rule. If broad compositional requirements (e.g., moisture and fat levels) as well as requirements are not applied, consumers could find that a certain food claiming to be a substitute for a specific cheese or cheese product does not resemble that food in physical attributes or composition.

The Commissioner maintains that, if the name of the substitute food includes the name of the traditional food it simulates, the substitute food should be reasonably similar to the traditional food. Thus, the substitute food should be nutritionally equivalent to the traditional food and should have similar levels of fat and moisture, as well as similar physical attributes such as color, body, and texture. The Commissioner is aware that regardless of the fat and moisture content, the flavor and texture of cheese substitutes would probably differ in some respects from natural cheeses because vegetable fats and proteins have their

own unique organoleptic properties. However, a requirement for similarity would insure that the characteristics of the cheese substitute resemble those of the traditional food used in the name of the cheese substitute.

NOMENCLATURE

A scheme for establishing the nomenclature for cheese substitutes is shown in the chart below. The scheme provides for: (1) Cheese substitutes that comply with the compositional requirements for fat and moisture content of the cheeses which they simulate, and (2) those that do not comply with the established fat and moisture contents of such cheeses. The name of the cheese substitute that conforms to the required fat and moisture levels for a standardized cheese product simulated would consist of the name of the cheese simulated followed by the term "substitute." In the case of a cheese substitute that does not conform to the established fat and moisture levels for the cheese simulated, the name of the food would consist of the name of the cheese simulated followed by the terms "product substitute." The term "product" is used to indicate a variation in the fat content and is consistent with the use of the term in the proposed pasteurized process cheese standards revision. In addition, a declaration of the type of fat contained and the percent by weight of the total fat in the cheese substitute would be required in the name of the substitute. Further, the Commissioner proposes that the name be accompanied by an additional statement, as applicable, which identifies other nonmilk ingredients used to replace milk protein in the manufacture of the cheese substitute.

The Commissioner notes that the declaration of the percent of milkfat in cheeses is not required by the standards of identity for most cheeses. However, he believes that the declaration of the percent of fat in cheeses is of interest to consumers for comparison purposes and is recommending that these foods be labeled with the percent of milkfat by weight contained in the food. He further notes that the declaration of the percent of milkfat will trigger nutritional labeling of the product in accordance with § 101.9(a) (21 CFR 101.9(a)) of this chapter. The proposed system of nomenclature in the chart below incorporates this recommendation for declaration of the percent of milkfat in natural cheeses, as well as certain provisions of the proposed revisions in the nomenclature of the pasteurized process cheese and pasteurized process cheese foods and spreads.

The proposed regulation would require that cheese substitutes that are nutritionally inferior to the cheese which they simulate be labeled with the term "imitation," in accordance with section 403 of the act and § 101.3(e) (21 CFR 101.3(e)) of the regulations. The proposed system of nomenclature would provide adequately for cheese substitutes already being marketed. Further, it would eliminate the need for manufacturers to alter formulations of existing foods in order to comply with the required fat and moisture levels in standarized cheese and cheese products.

Cheese Substitutes Nomenclature Based on Consideration of Composition

Standardized cheese	Cheese substitute
——cheese——pct fat.	——cheese substitute——pct vegetable fat and milkfat.
The first blank is filled in with the name of the standardized cheese variety and the second blank is filled in with the percent of milkfat in the cheese. Declaration of percent fat is recommended but not required unless stated in the standard of identity for the cheese.	The first blank is filled in with the name of the cheese being simulated, if it meets the fat and moisture requirements of the standardized food. The second blank is filled in with the percent of fat in the cheese substitute.
For example: Cheddar cheese 30 pct milkfat.	For example: Cheddar cheese substitute, 30 pct vegetable fat and milkfat.
Pasteurized process cheese——pct fat.	Pasteurized process cheese substitute——pct vegetable fat and milkfat. The blank is filled in with the percent of fat in the food.
For example: Pasteurized process cheese, 33 pct milkfat.[1]	For example: Pasteurized process cheese substitute, 33 pct vegetable fat and milkfat.[1]
——cheese product.	——cheese product substitute.
——pct milkfat.	——pct vegetable fat and milkfat.
The first blank is filled in with the name of the standardized food when the fat and moisture content requirements are optionally variable, or when the fat and moisture content varies from that of the standardized food. The word "product" in the name further indicates that a compositional variation exists.	The first blank is filled in with the name of the food simulated and the second blank is filled in with the percent of fat in the food.
For example: Pasteurized process cheese product, 10 pct milkfat.[2]	For example: Pasteurized process cheese product substitute, 10 pct vegetable fat and milkfat.[2]

[1] Use of the term "pasteurized" is optional.
[2] Use of the terms "pasteurized" and "process" is optional.

The Commissioner maintains that the requirements for the composition of cheese substitutes should remain flexible as long as the foods are formulated from safe and suitable ingredients. However, a cheese substitute should be nutritionally equivalent to the food simulated.

This proposal defines nutritional equivalence for cheese substitutes which are intended to substitute for cheeses and cheese products. The Commissioner believes that it would be impracticale to establish nutrient profiles for each food for which a cheese substitute may be developed. Consequently this proposal identifies the nutritional qualities in terms of vitamins, minerals, and protein content and quality, which must be met in cheese substitutes simulating cheeses that fall into one of four categories of cheese and cheese products. The proposed categories, the first three of which are based upon the average protein levels and the other on minimum protein levels present in the foods comprising the categories, are: (1) Cream cheese (Neufchatel cheese and cream cheese), 8–10 percent protein, 9 percent average; (2) cottage cheese (cottage cheese, lowfat cottage cheese, and dry curd cottage cheese), 12–17 percent protein, 14 percent average; (3) all other natural cheeses (e.g., bleu, cheddar, gruyere, mozzarella, swiss, etc.), 19–30 percent protein, 24 percent average; and (4) process cheese, 23 percent minimum protein, and cheese products (process cheese food, process cheese spread, and natural cheese products which do not comply with established fat and moisture contents), 16 percent protein and higher levels, 16 percent minimum. The protein values were calculated from data obtained from U.S. Department of Agriculture Handbook No. 8–1, "Composition of Foods. Dairy and Egg Products. Raw, Processed, Prepared," 1976. The minimum value used for cheese products is based on the protein content for process cheese spreads which have a lower protein content than process cheese foods. Since this category will also encompass cheese substitutes which simulate other natural cheeses but which may exceed the maximum moisture content of the standardized cheese and which would contain a

lower percent of total solids, this lower protein content, 16 percent, is being proposed as appropriate for this category of foods. The Commissioner specifically requests information on the appropriateness of this minimum protein requirement for cheese product substitutes, since data on cheese products are limited. Further, in order for substitutes to maintain nutritional equivalence to the cheese or cheese product simulated, the proposed regulation includes a requirement for the nutritional quality of the protein used in the formulation of the substitute foods. If the cheese or cheese product substitute is made with milk protein or protein of vegetable origin, the protein efficiency ratio (PER) must be at least 100 percent that of casein.

The proposed vitamin and mineral requirements for cheese and cheese product substitutes have been based primarily on average values for the various cheeses in each category and are expressed in terms of amounts of these nutrients per gram of protein to be contained in the food. For the most part, these vitamins and minerals are those which are present in measurable amounts, i.e., in amounts equal to or greater than 2 percent of the U.S. recommended daily allowance (U.S. RDA) for that nutrient in a 1-ounce serving of the cheese.

Vitamin A has been included in the nutrient profiles for all cheese and cheese product substitutes except cottage cheese type products. Vitamin A is not present in lowfat and dry curd cottage cheese in measurable amounts. A serving of cottage cheese, however, contains approximately 3½ percent of the U.S. RDA for vitamin A. In using the averaging concept for establishing nutrient levels (i.e., the average of the values for a nutrient for the foods comprising a particular category), the average value for vitamin A for cottage cheese type products is less than 2 percent of the U.S. RDA. Hence, no requirement for vitamin A has been included in the cottage cheese nutrient profile. Similar calculations were used to determine the proposed requirements for other nutrients, such as riboflavin, pantothenic acid, vitamins B_6 and B_{12}, folacin, calcium, phosphorus, and zinc.

A requirement for zinc has been included in all of the nutrient profiles for cheese substitutes except cream cheese. These are 0.03 mg zinc for cottage cheese, 0.10 mg for process cheese and natural cheeses, and 0.15 mg for cheese products, provided the cheese substitutes are made with milk protein. If the protein component in the cheese substitute is primarily of vegetable origin, the proposed zinc requirement is twice the proposed requirement for substitutes made with milk protein. The increased level of zinc is necessary because the presence of phytate and other mineral-binding components in foods made from protein of vegetable origin decreases the bioavailability of zinc.

The phosphorus content of process cheese and cheese products is normally higher than that of natural cheese because of the phosphate-containing emulsifiers which may be used in their manufacture. Consequently, a higher level of phosphorus has been proposed for nutritional equivalence for cheese substitutes simulating process cheese and process cheese products.

Although no U.S. RDA has been established for potassium, this nutrient has been included in the nutrient profiles for cottage cheese and for the milk foods. Potassium occurs at significant levels in these foods and is essential for human nutrition. The Commissioner maintains that milk and cottage cheese substitutes should provide levels of potassium consistent with those in milk and cottage cheese. The proposed levels for potassium have been based on data obtained from U.S. Department of Agriculture Handbook 8-1.

Nutrient profiles are proposed for six categories of milk foods. Four of these categories differ primarily by the fat content of the class of foods, i.e., whole milk, lowfat milk, skim milk, and cream. Separate categories were established for sweetened condensed milk and cultured buttermilk because certain nutrients present in the other four categories are not present in sweetened condensed milk or cultured buttermilk at the level of 2 percent of the U.S. RDA per serving or portion of those foods. Those nutrients which are not present in measurable amounts in these foods are vitamin C, niacin, vitamin B_6, and folacin in a 1-fluid-ounce portion of sweetened condensed milk and folacin and vitamin A in a one-cup portion of cultured buttermilk.

The Commissioner proposes that, where a standard of identity for a substitute for milk food contains provisions for the required or optional addition of vitamin A and/or vitamin D, such provisions will be consistent with the provisions for the addition of vitamin A and/or vitamin D in the standard of identity for the food simulated.

Vitamin A is the only nutrient in cream foods which is present at a level of 2 percent of the U.S. RDA. Hence the proposed nutrient profile for cream foods provides for a minimum level of vitamin A in International Units of vitamin A per gram of fat. The other nutrient profiles for milk foods express the requirement for vitamin A in grams of protein present in the food.

The proposed protein levels for milk food substitutes are based on average protein levels for milk foods obtained from U.S. Department of Agriculture Handbook 8-1. If the milk food substitute is made with milk protein and/or protein of vegetable origin, the protein efficiency ratio (PER) of the finished food must be equal to that of milk, i.e., 108 percent of that of casein (Chapman, D. G., Raul Castillo, and J. A. Campbell, "Evaluation of Protein in Foods," "Can. J. Biochem. Physiol.," 37, 679 (1959)). No attempt has been made to provide for protein fortified lowfat milk and skim milk substitute foods. However, manufacturers may increase protein levels in these substitute foods consistent with provisions in the standards of identity for lowfat milk in § 131.135 (21 CFR 131.135) and for skim milk in § 131.145 (21 CFR 131.145).

Having considered the comments received on cheese and cheese product substitutes and present marketing trends of new dairy product substitutes, the Commissioner believes that the establishment of standards of identity for milk and cream substitutes in new § 131.300 and cheese substitutes in new § 133.300 will promote honesty and fair dealing in the interest of consumers.

In a notice published in the FEDERAL REGISTER of June 9, 1978 (43 FR 25296), the Food and Drug Administration, the U.S. Department of Agriculture, and the Federal Trade Commission announced a series of five public hearings to discuss several issues related to food labeling, including ingredient labeling, nutrition labeling, and imitation foods. The last of these hearings is scheduled for October 25-26, 1978. Because the Commissioner intends to take into consideration all relevant information presented at the hearings in developing a regulation based upon this proposal, the Commissioner has scheduled the comment period on this proposal to extent beyond the last of the hearings; comments may be submitted on or before November 27, 1978.

The Commissioner proposes that all products initially introduced into interstate commerce on or after 1 year following the issuance of a regulation based upon this proposal shall comply with the regulation, except for any provisions that may be stayed by the filing of proper objections.

The Commissioner has considered the environmental effects of the issuance or amendment of food standards and has concluded in § 25.1(d)(4) (21 CFR 25.1(d)(4)) that food standards are not major agency actions significantly affecting the quality of the human environment. Therefore, an environmental impact statement is not required for this proposal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 401,

701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))) and under authority delegated

shall accompany the name of the food wherever it appears on the principal display panel or panels of the label in letters not less than one-half the

(iii) Nutrient profile for substitutes simulating other natural cheeses such as cheddar, swiss, mozzarella, blue, and edam:

701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))) and under authority delegated to him (21 CFR 5.1), the Commissioner proposes to amend Parts 131 and 133 as follows:

1. Part 131 is amended by adding new § 131.300 as follows:

§ 131.300 Milk and cream substitutes.

(a) *Description.* A milk or cream substitute is a food made in semblance of a standardized food as otherwise defined in this part in which safe and suitable nonmilk ingredients replace all or part of the nutritive milk components of the milk or cream foods simulated, whether or not the food is fluid, concentrated, dried, or in frozen form. The milk or cream substitute shall be pasteurized, ultrapasteurized, or sealed in a container and so processed by heat, either before or after sealing, as to prevent spoilage. The milk or cream substitute shall possess similar physical and organoleptic properties to the food simulated and the fat and solids-not-fat content of the milk or cream substitute shall meet the milk-fat and milk solids-not-fat requirements contained in the standard of identity of the counterpart milk or cream food. In addition, the milk or cream substitute shall meet the requirements in paragraph (b) of this section.

(b) *Nutritional equivalency.* A milk or cream substitute that is nutritionally inferior to the milk or cream food it simulates shall be labeled as an "imitation" milk or cream substitute, as required by § 101.3(e) of this chapter. For purposes of § 101.3(e)(2) of this chapter, a milk or cream substitute shall be considered nutritionally equivalent to the food being simulated if it meets all of the following applicable requirements:

(1) *Nutrient profiles for substitutes simulating milk and cream foods.* (i) Nutrient profile for substitutes simulating whole milk foods:

[Percent by weight]

Foods:	Minimum protein content
Milk	3.3
Evaporated milk	6.8
Dry whole milk	26.0
Plain whole milk yogurt	3.5
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	36.0
Magnesium, milligrams	3.5
Phosphorus, milligrams	29.0
Potassium, milligrams	46.0
Zinc, milligrams	.13
Vitamin C, milligrams	.26
Thiamine, milligrams	.01
Riboflavin, milligrams	.04
Pantothenic acid, milligrams	.10
Vitamin B_6, milligrams	.01
Folacin, micrograms	1.6
Vitamin B_{12}, micrograms	.09
Vitamin A, international units	36.0

(ii) Nutrient profile for substitutes simulating lowfat milk foods:

[Percent by weight]

Foods:	Minimum protein content
Lowfat milk, 0.5 to 2 percent fat	3.3
Plain lowfat yogurt, 0.5 to 2 percent fat	3.5
Lowfat dry milk, 5.0 to 19.9 percent fat	29.0
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	36.0
Magnesium, milligrams	3.7
Phosphorus, milligrams	29.0
Potassium, milligrams	47.0
Zinc, milligrams	.13
Vitamin C, milligrams	.26
Thiamine, milligrams	.01
Riboflavin, milligrams	.04
Pantothenic acid, milligrams	.10
Vitamin B_6, milligrams	.01
Folacin, micrograms	1.6
Vitamin B_{12}, micrograms	.11
Vitamin A, international units	[1]16.9

[1]The value, 18.9 international units, for vitamin A is applicable to substitutes for lowfat yogurt and other nonstandardized lowfat milk products except lowfat dry milk. A lowfat dry milk substitute shall contain added vitamins A and D such that, when prepared according to label directions, each quart contains 400 international units of vitamin D and not less than 2,000 international units of vitamin A.

(iii) Nutrient profile for substitutes simulating skim milk foods:

[Percent by weight]

Foods:	Minimum protein content
Skim milk	3.4
Evaporated skimmed milk	7.6
Nonfat dry milk	35.0
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	36.0
Magnesium, milligrams	3.3
Phosphorus, milligrams	28.0
Potassium, milligrams	48.0
Zinc, milligrams	.12
Vitamin C, milligrams	.20
Thiamine, milligrams	.01
Riboflavin, milligrams	.04
Pantothenic acid, milligrams	.10
Vitamin B_6, milligrams	.01
Folacin, micrograms	1.3
Vitamin B_{12}, micrograms	.09
Vitamin A, international units	[1]
Vitamin D, international units	[1]

[1]As required by the standard of identity for the food simulated. An evaporated skimmed milk substitute shall contain added vitamins A and D such that each fluid ounce of the food contains 25 international units of vitamin D and not less than 125 international units of vitamin A.

(iv) Nutrient profile for substitutes simulating cultured buttermilk:

	Percent by weight
Minimum protein content	3.3
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	35.0
Magnesium, milligrams	3.3
Phosphorus, milligrams	27.0
Potassium, milligrams	46.0
Zinc, milligrams	.13
Ascorbic acid, milligrams	.30
Thiamine, milligrams	.01
Riboflavin, milligrams	.05
Pantothenic acid, milligrams	.08
Vitamin B_6, milligrams	.01
Vitamin B_{12} micrograms	.07

(v) Nutrient profile for substitutes simulating sweetened condensed milk:

	Percent by weight
Minimum protein content	7.9
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	36.0
Magnesium, milligrams	3.2
Phosphorus, milligrams	32.0
Potassium, milligrams	47.0
Zinc, milligrams	.12
Thiamine, milligrams	.01
Riboflavin, milligrams	.05
Pantothenic acid, milligrams	.10
Vitamin B_{12} micrograms	.06
Vitamin A, international units	41.0

(vi) Nutrient profile for substitutes simulating cream:

	Amount per gram of fat
Nutrient: Vitamin A, international units	37.7

(2) The zinc requirement is doubled if the protein component of the milk substitute is obtained primarily from vegetable protein products.

(3) The protein efficiency ratio (PER) of the protein component of the milk substitute shall be at least 108 percent of that of casein.

(4) Substitutes for milk foods, in addition to the vitamin requirements established in paragraph (b)(1) of this section, are also required to contain an additional amount of vitamin A or vitamin D equivalent to that of the food simulated when the food simulated is required by an applicable standard of identity to contain these added vitamins in a prescribed amount. Further, if the standard of identity for the food simulated provides for the optional addition of vitamins A and/or D, then the food substitute simulating that food will contain vitamins A and/or D in an amount equivalent to that prescribed in the applicable standard of identity for the food simulated.

(5) Compliance with the requirements for other nutrients in this paragraph will be deemed to have been met if reasonable overages of vitamins and minerals, within limits of good manufacturing practice, are present to insure that the required levels are maintained throughout the life of the food under customary conditions of distribution and storage.

(c) *Methods of analysis.* The following referenced methods of analysis are from "Official Methods of Analysis of the Association of Official Analytical Chemists," 12th Ed., 1975.[1]

(1) *Fat content.* "Fat—Official Final Action," sections 16.052, 16.114, 16.129, 16.156, and 16.157, as appropriate.

(2) *Moisture content.* "Moisture—Official Final Action," section 16.149.

(3) *Solids-not-fat content.* Calculated by subtracting the fat content from

[1]Copies may be obtained from the Association of Official Analytical Chemists, P.O. Box 540, Benjamin Franklin Station, Washington, D.C. 20044.

the total solids content as determined by the method "Total Solids, Method I—Official Final Action," section 16.032.

(4) *Protein content.* "Nitrogen—Official Final Action," section 16.036.

(5) *Protein efficiency ratio.* "Biological Evaluation of Protein Quality—Official Final Action," sections 43.183 through 43.187.

(6) Analyses for other nutrients shall be carried out in accordance with Association of Official Analytical Chemists (AOAC) methods when available or by other recognized methods.

(d) *Nomenclature.* (1) The name of the food that substitutes for, or that is made in semblance of, a standardized milk or cream food and that complies with the definition for such food as set forth in paragraph (a) of the section shall be "—— substitute," the blank being filled in with the name of the food simulated, e.g., "lowfat milk substitute." The name of the food shall be accompanied by a descriptive phrase identifying the nonmilk ingredients used to replace the milk components.

(2) When required by the standard of identity for the food simulated, the name of the milk or cream substitute shall be accompanied by a declaration of the amount of fat, e.g., "—— percent fat," or "—— percent vegetable and milkfat," as appropriate, the blank being filled in with the whole number closest to the actual fat content of the food.

(3) If vitamins A and/or D are added to a milk food substitute at levels above those required by paragraph (b)(1) of this section, the name of the milk food substitute shall be accompanied by a phrase such as "vitamin A" or "vitamin A added," or "vitamin D" or "vitamin D added," or "vitamins A and D," or "vitamins A and D added," as appropriate. The word "vitamin" may be abbreviated "vit." Vitamin A and/or D requirements indicated in paragraph (b)(1) of this section by a footnote also cause the name of that food to be accompanied by one of the applicable phrases in this subparagraph.

(4) The name of the food shall appear on the principal display panel of the label in type of uniform size, style, and color. The declaration of the amount of fat, when applicable, and the descriptive phrase shall be in letters not less than one-half the height of the largest type appearing in the name of the food.

(5) The name of the food shall be accompanied by a declaration indicating the presence of any characterizing flavoring, in the manner specified in § 101.22 of this chapter.

(6) If the food has been ultra-pasteurized, the word "ultrapasteurized" shall accompany the name of the food wherever it appears on the principal display panel or panels of the label in letters not less than one-half the height of the largest type appearing in such name.

(e) *Label declaration.* Each of the ingredients used shall be declared on the label as required by the applicable sections of part 101 of this chapter.

2. Part 133 is amended by adding a new § 133.300 as follows:

§ 133.300 Cheese substitutes.

(a) *Description.* A cheese substitute is a food made in semblance of a standardized cheese variety, process cheese, cheese product, or other standardized foods made of cheese in which safe and suitable nonmilk ingredients replace all or part of the nutritive milk components normally found in the food being simulated. The cheese substitute shall possess similar physical and organoleptic properties and may meet the fat and moisture requirements set forth in the standard of identity for the food being simulated where such requirements exist. In addition, the cheese substitute shall meet the requirements set out in paragraph (b) of this section.

(b) *Nutritional equivalency.* A cheese substitute that is nutritionally inferior to the cheese or cheese product being simulated shall be labeled "imitation" as required by § 101.3 of this chapter. For purposes of this chapter, a cheese substitute is considered to be nutritionally equivalent to the food being simulated if it meets all of the following applicable requirements.

(1) *Nutrient profile for substitutes simulating cheese and cheese products.* (i) Nutrient profile for substitutes simulating cream cheese and neufchatel cheese:

	Percent by weight
Minimum protein content	9
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	9.0
Riboflavin, milligrams	0.02
Vitamin A, international units	146.0

(ii) Nutrient profile for substitutes simulating cottage cheese, lowfat cottage cheese, and dry curd cottage cheese:

	Percent by weight
Minimum protein content	14
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	4.0
Potassium, milligrams	6.0
Zinc, milligrams	.03
Riboflavin, milligrams	.01
Pantothenic Acid, milligrams	.02
Vitamin B_6, milligrams	.01
Folacin, micrograms	1.0
Vitamin B_{12}, micrograms	.05

(iii) Nutrient profile for substitutes simulating other natural cheeses such as cheddar, swiss, mozzarella, blue, and edam:

	Percent by weight
Minimum protein content	24
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	28.0
Phosphorus, milligrams	19.0
Zinc, milligrams	.10
Riboflavin, milligrams	.02
Vitamin B_{12}, micrograms	.05
Vitamin A, international units	39.0

(iv) Nutrient profile for substitutes simulating process cheese and cheese products:

[Percent by weight]

Foods:	Minimum protein content
Process cheese substitute	23
Cheese product substitute	16
Other nutrients:	**Amount per gram of protein**
Calcium, milligrams	30.0
Phosphorus, milligrams	30.0
Potassium, milligrams	14.0
Zinc, milligrams	.15
Riboflavin, milligrams	.02
Pantothenic acid, milligrams	.03
Vitamin B_6, milligrams	.01
Vitamin B_{12}, micrograms	.05
Vitamin A, international units	44.0

(2) The zinc requirement is doubled if the protein component of the cheese substitute is obtained primarily from vegetable protein products.

(3) The protein efficiency ratio (PER) of the protein component of the cheese or cheese product substitute shall be at least 100 percent of that of casein.

(4) Compliance with the requirements for other nutrients in this paragraph will be deemed to have been met if reasonable overages of vitamins and minerals, within limits of good manufacturing practice, are present to insure that the required levels are maintained throughout the life of the food under customary conditions of distribution and storage.

(c) *Method of analysis.* The following reference methods of analysis are from "Official Methods of Analysis of the Association of Official Analytical Chemists," 12th Ed., 1975.[1]

(1) *Fat content.* "Fat—Official Final Action," section 16.230.

(2) *Moisture content.* "Moisture—Official Final Action," sections 16.217, 16.218, or 16.219 through 16.222, as appropriate.

(3) *Protein content.* "Nitrogen—Official Final Action," section 16.226.

(4) *Protein efficiency ratio.* "Biological Evaluation of Protein Quality—Official final Action," sections 43.183 through 43.187.

(5) Analyses for other nutrients shall be carried out in accordance with Association of Official Analytical Chemists (AOAC) methods when

available or by other recognized methods.

(d) *Nomenclature.* (1) The name of

cipitating wood smoke, and any characterizing spice in the manner specified in § 101.22 of this chapter.

comment period on a proposed rule that would amend the standards of identity for skim milk cheese for manufacturing. This action is based on re-

Interested persons may, on or before November 27, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600

SUPPLEMENTARY INFORMATION: In the FEDERAL REGISTER of October 4, 1977 (42 FR 53970), the Commissioner

[4110-03]

[21 CFR Part 133]

V 4 3 / 1 8 2

available or by other recognized methods.

(d) *Nomenclature.* (1) The name of the food that substitutes for or that is made in semblance of a standardized cheese variety, process cheese, cheese product, or other standardized food made of cheese and that complies with the definition for such food set forth in paragraph (a) of this section shall be "—— substitute," the blank being filled in with the name of the food simulated as provided for in the standard of identity for that food, e.g., "cheddar cheese substitute," or "process swiss cheese substitute." The name of the food shall be accompanied by a descriptive phrase identifying the nonmilk ingredients, if used in the food, to replace the milk protein. The name of the food shall also be accompanied by a declaration of the amount and type(s) of fat in the cheese substitute, e.g., "—— percent vegetable fat and milkfat," the blank being filled in with the whole number closest to the actual fat content of the food.

(2) In cases where the fat and moisture content requirements of the standardized food being simulated are optionally variable, e.g., in process cheese products, or when the fat and moisture contents of the cheese substitute vary from that the standardized food simulated, and the food complies with the definition for such food as required in paragraph (a) of this section, the name of the food shall be "—— product substitute," the blank being filled in with the name of the food simulated, e.g., "process cheddar cheese product substitute." The name of the food shall be accompanied by a descriptive phrase identifying any nonmilk ingredients used in the food to replace the milk protein. The name of the food shall also be accompanied by a declaration of the amount and type(s) of fat in the cheese product substitute, e.g., "—— percent vegetable fat and milkfat," the blank being filled in with the whole number closest to the actual fat content of the food.

(3) The use of the term "pasteurized" in the name of process cheese substitutes and the terms "pasteurized" and "process" in the name of cheese product substitutes is optional.

(4) The name of the food shall appear on the principal display panel of the label in type of uniform size, style, and color. The declaration of fat content, when required, and the descriptive phrase shall be in letters not less than one-half the height of the largest type appearing in the name of the food.

(5) The name of the food shall be accompanied by a declaration indicating the presence of any characterizing flavoring, including smoke and substances prepared by condensing or precipitating wood smoke, and any characterizing spice in the manner specified in § 101.22 of this chapter.

(6) The word "cheese" or any varietal name of a cheese or food made of cheese shall not appear on the label except as permitted by this section. Words or phrases suggesting possible uses of the cheese substitute, such as "for pizza" or "for salads," or descriptive phrases such as "sliced" or "sharp," may appear on the label, but shall be separate from the name of the food.

(e) *Label declaration.* The common or usual name of each of the ingredients used shall be declared on the label as required by the applicable sections of Part 101 of this chapter.

Interested persons may, on or before November 27, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the hearing clerk docket numbers found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order. A copy of the regulatory analysis assessment supporting this determination is on file with the Hearing Clerk, Food and Drug Administration.

Dated: September 8, 1978.

DONALD KENNEDY,
Commissioner of Food and Drugs.

NOTE.—Incorporation by reference approved by the Director of the Office of the Federal Register on March 11, 1976, and is on file in the Federal Register Library.

SKIM MILK CHEESE FOR MANUFACTURING

Proposal To Amend Identity Standards; Reopening of Comment Period

AGENCY: Food and Drug Administration.

ACTION: Reopening of comment period.

SUMMARY: The Food and Drug Administration (FDA) is reopening the comment period on a proposed rule that would amend the standards of identity for skim milk cheese for manufacturing. This action is based on requests from industry. The reopened comment period will run concurrently with the comment periods for two proposed rules published elsewhere in this issue of the FEDERAL REGISTER: The proposed rule to establish standards of identity for milk, cream, and cheese substitutes and the proposed rule to revise the standards of identity for nine natural cheeses based on the international standards for these foods.

DATE: New deadline for comments November 27, 1978.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Eugene T. McGarrahan, Bureau of Foods (HFF-415), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1155.

SUPPLEMENTARY INFORMATION: In the FEDERAL REGISTER of October 4, 1977 (42 FR 53979), the Commissioner of Food and Drugs proposed to amend the identity standard for skim milk cheese for manufacturing. Comments were to be filed on the proposal by December 5, 1977.

Subsequently, the Commissioner received several requests from industry for extension of the comment period on the proposal. In view of two other related proposals the agency planned to issue, the Commissioner decided not to extend the comment period at that time but rather, to reopen the comment period on publication of the new proposals. These new proposals which would: (1) establish standards of identity for milk, cream, and cheese substitutes (docket No. 75P-0121), and (2) revise the standards of identity for nine natural cheeses based on a review of the recommended international standards for these foods (docket No. 77N-0331), are published elsewhere in this issue of the FEDERAL REGISTER.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 401, 701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))), and under authority delegated to the Commissioner (21 CFR 5.1), the comment period on the proposal for skim milk cheese for manufacturing is hereby reopened and shall run concurrently with the comment periods established for the proposals for milk, cream, and cheese substitutes and for the nine natural cheeses.

Interested persons may, on or before November 27, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the hearing clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: September 8, 1978.

JOSEPH P. HILE,
Associate Commissioner for Regulatory Affairs.

PASTEURIZED PROCESS CHEESE AND CHEESE PRODUCTS

Proposed Revision of Definition and Standards of Identity; Reopening of Comment Period

AGENCY: Food and Drug Administration.

ACTION: Reopening of comment period.

SUMMARY: The Food and Drug Administration (FDA) is reopening the comment period on a proposed rule that would revise the standards of identity for pasteurized process cheese and pasteurized process cheese products. This action is based on requests from industry. The reopened comment period will run concurrently with the comment periods for two proposed rules published elsewhere in this issue of the FEDERAL REGISTER: The proposed rule to establish standards of identity for milk, cream, and cheese substitutes and the proposed rule to revise the standards of identity for nine natural cheeses based on the international standards for these foods.

DATE: New deadline for comments November 27, 1978.

ADDRESS: Written comments to Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Eugene T. McGarrahan, Bureau of Foods (HFF-415), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1155.

SUPPLEMENTARY INFORMATION: In the FEDERAL REGISTER of October 4, 1977 (42 FR 53970), the Commissioner of Food and Drugs proposed revision of the standards of identity for pasteurized process cheese and other pasteurized process cheese products. Comments were to be filed on the proposal by January 3, 1978.

Subsequently, the Commissioner received several requests from industry for extension of the comment periods on the proposal. In view of two other related proposals the agency planned to issue, the Commissioner decided not to extend the comment period at that time but rather, to reopen the comment period on publication of the new proposals. These new proposals which would: (1) establish standards of identity for milk, cream, and cheese substitutes (docket No. 75P-0121), and (2) revise the standards of identity for nine natural cheeses based on a review of the recommended international standards for these foods (docket No. 77N-0331), are published elsewhere in this issue of the FEDERAL REGISTER.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 401, 701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))) and under authority delegated to the Commissioner (21 CFR 5.1), the comment period on the proposal for pasteurized process cheese and other pasteurized process cheese products is hereby reopened and shall run concurrently with the comment periods established for the proposals for milk, cream, and cheese substitutes and for the nine natural cheeses.

Interested persons may, on or before November 27, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the hearing clerk docket number found in brackets in the hearing of this document. CHEESES AND RELATED CHEESE PRODUCTS

Proposal Based on International Standards

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: This proposal would revise and update the standards of identity for nine cheese and appropriate cross-referenced standards. In addition, amendments to the nine cheese standards are proposed to bring them into closer conformance with international standards recommended by the Codex Alimentarius Commission. Any regulation issued on the basis of this proposal will reflect the Commissioner's consideration of relevant information presented at the food labeling hearings announced in the FEDERAL REGISTER on June 9, 1978.

DATES: Comments by November 27, 1978. Proposed compliance for products initially introduced into interstate commerce: One year after the date of issuance of a regulation.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Eugene T. McGarrahan, Bureau of Foods (HFF-415), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C Street SW., Washington, D.C. 20204, 202-245-1155.

SUPPLEMENTARY INFORMATION: The Food and Drug Administration (FDA) is proposing to revise the standards of identity for blue cheese, cheddar cheese, edam cheese, gouda cheese, gruyere cheese, limburger cheese, provolone cheese, samsoe cheese, swiss cheese, and the cross-referenced cheeses—cheddar cheese for manufacturing, low sodium cheddar cheese, and swiss cheese for manufacturing. The purpose of these revisions is to: (1) Provide for full ingredient declaration; (2) relax recipe requirements to permit use of safe and suitable ingredients that do not change the basic identity of the food or adversely affect the physical or chemical characteristics; and (3) amend compositional requirements to be consistent with the "recommended international standards" (hereinafter referred to as Codex standards), where it will promote honesty and fair dealing in the consumers' interest.

All FDA regulations concerning human food were reorganized under

SE 19 78

Subchapter B—Food for Human Consumption, published in the FEDERAL REGISTER of March 15, 1977 (42 FR 14302), the Commissioner of Food and Drugs (the Commissioner) proposed to revise the standards of identity for blue cheese, cheddar cheese, edam cheese, gouda cheese, gruyere cheese, limburger cheese, provolone cheese, samsoe cheese, swiss cheese, and the cross-referenced cheeses—cheddar cheese for manufacturing (21 CFR 133.113), low sodium cheddar cheese (21 CFR 133.116), and swiss cheese for manufacturing (21 CFR 133.185), and swiss and emmentaler cheese (21 CFR 133.195) and, by cross-reference, cheddar cheese for manu-

chemical properties of the cheese. The Commissioner, therefore, is proposing to allow the use of specific classes of

expression of fat content has little or no meaning to the average consumer. Moreover, the actual fat content of a cheese may vary from the minimum

AOAC method in § 133.5. All cheese standards included in this proposal that now refer to the cheddar cheese

deleting the provision for the addition of smoke flavor since the smoke-flavored cheese would be subject to the

V 43 / 182 SEP 19 78 V4

Subchapter B—Food for Human Consumption, published in the FEDERAL REGISTER of March 15, 1977 (42 FR 14302). For the convenience of the reader, the following table lists the former designation of the sections in recodified subchapter B that would be affected by this proposal.

New section:	Old section:
133.3	19.499
133.106	19.565
133.113	19.500
133.114	19.502
133.116	19.503
133.138	19.555
133.142	19.560
133.149	19.543
133.152	19.575
133.181	19.590
133.185	19.544
133.195	19.540
133.196	19.542

The Joint Food and Agriculture Organization/World Health Organization (FAO/WHO) Committee of Government Experts on the Code of Principles Concerning Milk and Milk Products, an auxiliary body of the Codex Alimentarius Committee, has submitted standards of identity for 34 natural cheeses to the United States for consideration of acceptance. The United States has 11 corresponding standards of identity, and the 9 included in this document cover the principal cheeses used in this country. The remaining two (cottage cheese and cream cheese) will not be considered in this document, because they are subject to further revision by Codex.

The Commissioner is taking the opportunity presented by the U.S. obligation to consider Codex standards for adoption to revise and update the standards of indentity for nine cheeses for which there are also Codex standards and to revise appropriate cross-referenced standards. The proposed revision is in keeping with recent vevisions of other standards of indentity to provide consumers with more complete ingredient information and to accommodate changes in the availability of ingredients as well as technological advances. The other 23 Codex standards will be considered for acceptance at a later date.

The Commissioner believes that the proposed changes will promote honesty and fair dealing in the interest of consumers and will facilitate international trade.

REVISION OF EXISTING STANDARDS OF IDENTITY

The Commissioner proposes that the standards of indentity for blue cheese (21 CFR 133.106), cheddar cheese (21 CFR 133.113), edam cheese (21 CFR 133.138), gouda cheese (21 CFR 133.142), gruyere cheese (21 CFR 133.149), limburger cheese (21 CFR 133.152), provolone cheese (21 CFR 133.181), samsoe cheese (21 CFR 133.185), and swiss and emmentaler cheese (21 CFR 133.195) and, by cross-reference, cheddar cheese for manufacturing (21 CFR 133.114), low sodium cheddar cheese (21 CFR 133.116), and swiss cheese for manufacturing (21 CFR 133.196) be revised. The revisions would (1) adopt the use of functional group designations for safe and suitable optional ingredients, where appropriate, and require that all ingredients be declared on the label by their common or usual name in accordance with part 101 (21 CFR part 101); (2) provide for the use of various forms of milk, nonfat milk, and cream; (3) require that a label declaration of fat content accompany the name of the food; and (4) delete the methods of analysis from the individual standards and establish a new § 133.5, titled "Methods of analysis."

The Commissioner is of the opinion that it is unduly restrictive to limit a manufacturer's choices of ingredients by specifically listing each optional ingredient that may be used. He believes that the use of functional group designation of optional ingredients benefits the consumer by allowing a manufacturer to select less expensive or more readily available ingredients that are equally appropriate for a functional purpose. Safety and suitability of ingredients chosen from a functional group are governed by the definition of "safe and suitable" in § 130.3(d) (21 CFR 130.3(d)) in conjunction with appropriate food additive regulations established under parts 170, 171 and 172 (21 CFR parts 170, 171 and 172). The Commissioner believes that the use of safe and suitable functional categories will minimize any future need to amend the standards to provide for additional specific ingredients. Therefore, wherever practicable, he is proposing the use of functional group terminology, established by § 170.3 (21 CFR 170.3), for safe and suitable optional ingredients.

The Commissioner is further proposing that various forms of milk, nonfat milk, and cream be provided for. The existing cheese standards specify that the basic ingredient for cheese manufacture is fluid cow's milk which may have the fat of solids-not-fat levels adjusted by removing milkfat or adding cream, nonfat milk, concentrated skim milk of nonfat dry milk. The Commissioner believes that, technologically, alternate forms of milk, nonfat milk, and cream, i.e., concentrated, dried, and reconstituted forms, can be used to produce the same cheese as produced from fluid cow's milk. Further, he is of the opinion that provision for alternate forms of these milk products would be consistent with the provision in the existing standards for alternate manufacturing procedures that do not adversely affect the physical and chemical properties of the cheese. The Commissioner, therefore, is proposing to allow the use of specific classes of optional dairy ingredients, i.e., "milk," "cream," and "nonfat milk." He is also proposing definitions for the class designations "milk," "cream," and "nonfat milk" in the definitions section, § 133.3.

The Commissioner is aware of consumers' desire to be informed of the ingredients used in the foods they consume. In accordance with the policy set forth in § 101.6 (21 CFR 101.6), the Commissioner proposes to amend the standards of identity for the nine cheeses and the cross-referenced cheeses to require label declaration of optional ingredients in accordance with part 101. All ingredients in these cheeses are optional ingredients, with the exception of salt (except in the cross-referenced cheese, low sodium cheddar (§ 133.116)). While cheese must contain forms of milk, nonfat milk or cream, the manufacturer has the option of choosing, within specific classes of milk products, those forms he prefers to use. Section 403(k) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 343(k)) specifically exempts cheese from any label declaration of optional artificial coloring. Salt, a mandatory ingredient in most of the cheeses, also is exempt from the ingredient statement requirement. However, the Commissioner urges manufacturers to declare the presence of these ingredients when used.

The standards of identity for blue cheese (§ 133.106), provolone cheese (§ 133.181), and swiss cheese (§ 133.195) provide for the use of the optional ingredient benzoyl peroxide to bleach milk products. These existing standards require that use of benzoyl peroxide be declared on the label by the statement "Milk bleached with benzoyl peroxide." Under this proposed revision, benzoyl peroxide is an optional ingredient and as such must be declared in the ingredient statement of the cheese. The Commissioner advises that its use maybe declared either as "benzoyl peroxide" or "—— bleached with benzoyl peroxide" with the appropriate name(s) of the milk products filling the blank.

The Commissioner is also proposing that the milkfat content of each cheese be declared, by weight, on the label. In conjunction with this, it is proposed that the minimum milkfat requirements in each of the subject cheese standards of identity be expressed on an "as is" basis, i.e., the percentage by weight of the finished food. Currently minimum milkfat requirements are expressed on a "dry basis" as a percentage of the solid matter in the cheese, i.e., excluding the moisture content. The Commissioner is of the opinion that such an

expression of fat content has little or no meaning to the average consumer. Moreover, the actual fat content of a cheese may vary from the minimum, upward. The Commissioner is of the opinion that the phrase "contains —— % fat," based on the weight of the finished food including moisture, with the whole number nearest the actual milkfat content of the cheese filling the blank and accompanying the name of the food, would more fully inform the consumer about the food.

Regarding other changes in the existing standards, the Commissioner is proposing to delete the definition of "safe and suitable" from the "Definitions" section (§ 133.3) and add definitions for "pasteurized" and "ultrapasteurized," in addition to the definitions for classes of dairy ingredients named above. "Safe and suitable" is already defined in § 130.3(d). Definition of the other terms he proposes to include in § 133.3 would eliminate the needless repetition of each term in each standard of identity. For the same reason, the Commissioner proposes that a new § 133.5, titled "methods of analysis" be established. This section will include the methods of analysis for milkfat, moisture, and phosphatase contents referred to in each of the standards. The other standards in part 133 will be revised to refer to §§ 133.3 and 133.5 at a later date.

The Commissioner is also proposing that all cheese standards of identity included in this proposal provide for a mixmum allowable phenol equivalent value. The existing standards of identity for blue cheese (§ 133.106), gruyere cheese (§ 133.149), limburger cheese (§ 133.152), samsoe cheese (§ 133.185), and swiss cheese (§ 133.195) do not include a specific maximum allowable phenol equivalent value. The standards for the other four cheeses do include a specific value. The phenol equivalent value indicates whether proper pasturization procedures were followed when a cheese purports to be made from pasteurized milk products. A phenol equivalent value above the maximum allowed for a specific cheese that claims to be made from pasteurized milk products might indicate that improper pasteurization times and/or temperatures were used. The phenol equivalent value is determined by the "Fesidual Phosphatase" test described in section 16.245 of the 12th edition of "Official Methods of Analysis of the Association of Official Analytical Chemists" (AOAC). This entire test procedure is now included in the standard of identity for cheddar cheese (§ 133.113). When the new § 133.5, Methods of analysis, is established, the procedure will be removed from the cheddar cheese standard and replaced with a reference to the AOAC method in § 133.5. All cheese standards included in this proposal that now refer to the cheddar cheese standard for the method of determining the phenol equivalent value will be amended to refer to the new § 133.5. All the cheese standards not covered by this proposal will be similarly amended in the future.

The AOAC procedure also includes a table of cheese varieties and types and corresponding phenol equivalent values. These values were established from data obtained after the hearings to establish standards of identity for cheeses and were first published in the 6th edition of "Official Methods of Analysis of the Association of Official Agricultural Chemists" in 1950. From 1950 to 1975 the values were considered experimental by the AOAC, and they were constantly reviewed and updated. In the 12th edition of the AOAC (1975) the term "experimental" was dropped from the values, indicating that these values are recognized as valid. Therefore, the Commissioner is proposing that the phenol equivalent values from the AOAC be accepted for those five cheeses for which the standards that do not now include maximum allowable phenol equivalent values and to retain the values in the standards that do contain them since these values already correspond to the AOAC values.

To ensure that cheeses made from unpasteurized milk products are cured for the length of time specified by each standard of identity, the Commissioner points out that, in accordance with § 101.100(f) (21 CFR 101.100(f)), uncured bulk cheese must be clearly marked with the date the curing process begins.

The Commissioner is further proposing that the provision for hydrogen peroxide/catalase treatment of milk be eliminated from the standards of identity for cheddar cheese (§ 133.113), swiss cheese (§ 133.195), and the cross-referenced cheeses—cheddar cheese for manufacturing (§ 133.114), low sodium cheddar cheese (§ 133.116), and swiss cheese for manufacturing (§ 133.196). He is not aware that this method is in common use and particularly asks for comment on this point.

The standard of identity for provolone cheese (§ 133.181) states that provolone cheese may be smoked, or it may have added to it a clear aqueous solution prepared by condensing or precipitating wood smoke in water. If the food is not smoked, the standard requires that the name of the food include the words "not smoked." If a clear aqueous solution of wood smoke is added, the words "with added smoke flavoring" must immediately follow the name.

The Commissioner is retaining the provision for optional smoking, but is deleting the provision for the addition of smoke flavor since the smoke-flavored cheese would be subject to the requirements of § 133.193 Spiced, flavored standardized cheeses (21 CFR 133.193). Further, he is proposing to delete the words "not smoked" when the food is not smoked and instead is proposing that, if the food is smoked, the work "smoked" shall accompany the name of the food.

Since the name "pasta filata" more correctly refers to a class of cheeses than to a specific variety, the Commissioner is proposing to delete the alternative name "pasta filata" from the standard of identity for provolone cheese (§ 133.181).

Certain standards of identity subject to this proposal do not provide for specific dimensions, weights, or shapes of the cheese, or for coatings that may be applied to the surface before curing. The standards for blue cheese, edam cheese, gouda cheese, and provolone cheese contain provisions for coatings, shapes, or both, while the standard for samsoe cheese provides for specific shape, weight, and dimensions. Traditionally, such cheeses have been produced in distinctive shapes or sizes, and/or have been covered with paraffin of one color or another. The Commissioner recognizes that some consumers may identify the type of cheese by its dimensions, weight, shape, or coating color, but he believes that the name and ingredient labeling requirements of the standards assure the consumer of being adequately informed of the variety of cheese. Therefore, the Commissioner is proposing to remove provisions for coatings and/or cheese shapes from the standards of identity for blue cheese, edam cheese, and gouda cheese; the provisions for specific shapes from the standard of identity for provolone cheese; and the provisions for shape, weight, and dimensions form the standard of identity for samsoe cheese. These changes will allow the use of new manufacturing and packaging techniques as they are developed.

The existing standards of identity for gruyere cheese and swiss cheese provide for the optional use of propionic acid-producing bacterial cultures. The Codex standards for emmentaler cheese (C-9) and gruyere cheese (C-10) require the addition of propionic acid-producing bacterial cultures.

The Commissioner is of the opinion that this type of culture is essential for proper eye-formation characteristic of these two cheese varieties. He, therefore, proposes that propionic acid-producing bacterial cultures, in addition to lactic acid-producing bacterial cultures, be required in the manufacture of gruyere cheese and swiss cheese.

In the cross-referenced standard for low sodium cheddar cheese, the Commissioner is proposing to delete para-

part 101 (21 CFR Part 101) and are applicable to all products entered into interstate commerce is the United

4.4 Rind.
4.4.1 Consistency: No actual rind, but a semihard surface.
4.4.2 Appearance: Greasy to dry.

suffix corresponding to the fat percentage, e.g., "Edelpilzkase 45%."

The use of food colors shall be indicated on the label.

The whey is run off and the process of "cheddaring" (which may take place in a separate container) continues, during which the curd is cut into blocks, which are turned

4.6 Holes.
4.6.1 Distribution: Few, all over the inte-

V 43 / 182 SE 1978 V4

In the cross-referenced standard for low sodium cheddar cheese, the Commissioner is proposing to delete paragraph (b), which prohibits the use of sodium sorbate. He considers this prohibition to be unnecessary since the low sodium cheddar cheese standard contains a maximum sodium limit.

CODEX ALIMENTARIUS RECOMMENDED INTERNATIONAL STANDARDS

The United States, as a member nation of FAO/WHO, is under treaty obligation to consider acceptance of all Codex standards. The rules of procedure of the Codex Alimentarius Commission permit acceptance of a recommended standard in one of three ways: Full acceptance; target acceptance; or acceptance with specified deviations. A participating country which concludes that it cannot accept the standard in full is requested to indicate the ways in which its requirements differ from the recommended international standard. Member nations of the Codex Alimentarius Commission are requested to notify the Technical Secretary, Committee on the Code of Principles Concerning Milk and Milk Products, Animal Production and Health Division, FAO, Rome, Italy, of their decision. When a sufficient number of governments accept these standards, the Secretariat of the Committee will notify the Codex Alimentarius Commission and request the publication of the accepted standards as worldwide standards by the Commission.

The United States is now considering acceptance of Codex standards of identity for nine natural cheeses. The nine Codex standards and corresponding U.S. standards are as follows:

	Codex	United States
Blue-veined	C-32	133.106
Cheddar	C-1	133.113
Edam	C-4	133.138
Gouda	C-5	133.142
Gruyere	C-10	133.149
Limburger	C-12	133.152
Provolone	C-15	133.181
Samsoe	C-7	133.185
Swiss or Emmentaler	C-9	133.195

Based on the treaty obligation and the policy set forth in § 130.6 (21 CFR 130.6), the Commissioner proposes to amend the compositional requirements of the standards of identity for these nine cheeses, wherever practicable, to effect consistency with the Codex standards.

The Codex standards include certain labeling requirements that are not considered a part of food standards of identity under section 401 of the Federal Food, Drug, and Cosmetic Act. Such requirements are authorized by other sections of the act, the Fair Packaging and Labeling Act, and regulations promulgated thereunder in part 101 (21 CFR Part 101) and are applicable to all products entered into interstate commerce is the United States.

The Codex standards also reference specific methods of sampling in FAO/WHO Standard B-1, "Sampling Methods for Milk and Milk Products," paragraphs 2 and 7 (CAC/M1-1973).[1] Such sampling methods are not specifically designated in the U.S. standards of identity for cheeses and cheese products. However, these FAO/WHO sampling methods have been published in the "Official Methods of Analysis of the Association of Official Analytical Chemists," 12th ed., 1975, the source of the referenced methods of analysis for cheese and cheese products contained in the U.S. standards of identity.

Although the individual Codex standards are similar to corresponding U.S. standards, including proposed revisions, significant variations do exist in several instances which merit discussion. The texts of the Codex Recommended International Standards under consideration follow:

Appendix V-3.

STANDARD No. C-32, STEP 7

Submitted to Governments for Acceptance

INTERNATIONAL STANDARD FOR CERTAIN BLUE-VEINED CHEESES

1. *Scope.* This standard applies to the following varieties of blue-veined cheese: Danablu, Edelpilzkase, Adelost, Blue Cheese.

2. *Depositing countries:* Denmark, Federal Republic of Germany, Sweden, United States of America.

3. *Raw Materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions:

3.2.1 Necessary additions: Cultures of harmless lactic acid producing bacteria (starter); rennet or other suitable coagulating enzymes; sodium chloride; and cultures of *penicillium roqueforti.*

3.2.2 Optional additions: Water; calcium chloride, maximum 200 mg/kg of the milk used; *beta*-carotene maximum 600 mg/kg of cheese; chlorophyll copper complex; riboflavin (lactoflavin); and harmless preparations of enzymes capable of aiding in the curing or flavor development (weight of solids of such substance added, not to exceed 0.1 percent of weight of milk used).

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type.

4.1.1 Consistency: Semi-hard to soft.

4.1.2 Short description: Blue-veined semi-hard cheese mainly ripened by internal mold growth.

4.2 Shapes: (a) Flat cylindrical; (b) flat square; and (c) flat rectangular.

4.3 Dimensions and weights.

4.3.1 Dimensions: Height: approximately 8 to 15 cm.

4.3.2 Weights: 2 to 6 kg.

4.3.2.1 Weights of "Danablu": Flat cylindrical: 2.75 to 3.25 kg; flat square and flat rectangular: approximately 4 kg.

[1] "Code of Principles Concerning Milk and Milk Products, International Standards and Standard Methods of Sampling and Analysis for Milk Products," 7th ed.

4.4 Rind.

4.4.1 Consistency: No actual rind, but a semihard surface.

4.4.2 Appearance: Greasy to dry.

4.4.3 Color: Whitish.

4.5 Body.

4.5.1 Texture: Suitable for cutting and spreading.

4.5.2 Color: White to yellowish with blue-green veins of mold.

4.6 Holes.

4.6.1 Distribution: Scarce.

4.6.2 Shape: Irregular.

4.6.3 Size: Various.

4.6.4 Appearance: With blue-green molds.

4.7/4.8 Minimum fat content in dry matter and maximum moisture content:

[Percent]

	A	B	C
Minimum fat in dry matter	50	60	45
Maximum moisture content	48	48	55
Minimum dry matter content	52	52	45

The minimum fat content in dry matter and maximum moisture content for Danablu are restricted to those given under A and B.

4.9 Other principal characteristics: Cheese has distinct piquant flavor resulting from fat breakdown. Not to be sold to the consumer at less than 6 weeks of age.

METHOD OF MANUFACTURE

5.1 Method of coagulation: Rennet or other suitable coagulating enzymes; addition of a lactic acid starter.

5.2 Heat treatment: None, or slightly heated after cutting, ladled out in bags or molds.

5.3 Fermentation procedure: Lactic acid and mold fermentation.

5.4 Maturation procedure: Pierced with needles to develop growth of molds; stored humid at a temperature from 2° to 12° C; some surface mold.

5.5 Other principal characteristics: None.

SAMPLING AND ANALYSIS

6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.2(b), "Sampling by means of a trier"; reference is made to clauses 7.2.2.3 and 7.2.2.5.

6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."

MARKING AND LABELING

Only cheese conforming with this standard may be designated: (a) "Danablu," or "Edelpilzkase," or "Blue Cheese," or "Adelost," or (b) a combination of the designation "Blue-veined cheese" with the designations given in (a), e.g., "Adelost—blue-veined cheese."

It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese" except that Danablu not produced in the country of origin must be marked with the name of the producing country even when sold in the home market.

The cheese mentioned under "B" and "C" in 4.7/4.8 may be designated as mentioned under (a) or (b) above provided that the designation is accompanied by the prefix or suffix corresponding to the fat percentage, e.g., "Edelpilzkase 45%."

The use of food colors shall be indicated on the label.

STANDARD No. C-1 (1966)

INTERNATIONAL INDIVIDUAL STANDARD FOR CHEDDAR

1. *Designation of cheese:* Cheddar.

2. *Depositing country:* United Kingdom (country of origin).

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions.

3.2.1 Necessary additions: Cultures of harmless lactic acid producing bacteria (starter); rennet or other suitable coagulating enzymes; and sodium chloride.

3.2.2 Optional additions: Calcium chloride, maximum 200 mg/kg of the milk used; annattoo* and beta carotene, singly or in combination, maximum 600 mg/kg of cheese; sorbic acid and its sodium and potassium salts, maximum 1,000 mg/kg calculated as sorbic acid; a preparation of safe and suitable enzymes of animal or plant origin capable of aiding in the curing or development of flavor of Cheddar cheese may be added during the procedure, in such quantity that the weight of the solid of such preparation is not more than 1,000 mg/kg of the milk used.

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type (consistency): Hard pressed.

4.2 Shape: Cylindrical or block (cuboid).

4.3 Dimensions and weights: Various.

4.4 Rind.

4.4.1 Consistency: Hard.

4.4.2 Appearance: Smooth, may be coated with wax or cloth wrapped.

4.4.3 Color: Pale straw through dark straw to orange; rindless blocks may be in airtight, flexible film.

4.5 Body.

4.5.1 Texture: Firm, smooth, and waxy.

4.5.2 Color: Uniform, pale straw through dark straw to orange.

4.6 Holes: Gas holes should be absent; none to few mechanical openings.

4.7 Minimum fat content in dry matter: 48 percent.

4.8 Maximum moisture content: 39 percent. Minimum dry matter content: 61 percent.

4.9 Other principal characteristics: Normally consumed mild from 3 months or mature up to 12 months or more. Flavor typical of the variety, varying in intensity from mild to sharp and typical of ripening controlled by lactic acid producing bacteria.

5. *Method of manufacture.*

5.1 Method of coagulation: Rennet or other suitable coagulating enzymes.

5.2 Heat treatment.

5.2.1 Heat treatment of the milk: Milk for cheesemaking may be raw, heat treated or pasteurized to 161° F (71.7° C) for 15 seconds.

5.2.2 Heat treatment of the coagulum: The curd is subsequently cut and scalded to 100°-106° F (37.5°-40° C) depending on the season.

5.3 Fermentation procedure: 1.0-2.5 percent lactic starter is added to the milk, to give a ripening period of up to 2 hours before rennetting.

5.4 Maturation procedure: After scalding the curd, it is stirred until slight acid development, customarily 0.18 or 0.19 percent expressed as lactic acid, is reached.

*Temporarily endorsed.

The whey is run off and the process of "cheddaring" (which may take place in a separate container) continues, during which the curd is cut into blocks, which are turned and progressively piled. During this process the curd is kept warm and the drainage of whey, together with the development of acidity, results in the curd becoming compressed, smooth, and elastic. When a substantial acidity which may reach 0.90 percent expressed as lactic acid has been reached, the curd is milled.

About 2.0-2.5 percent salt is added to the curd to give 1.5-1.8 percent salt in the cheese.

The curd is then mixed and molded. The cheeses are stored and subsequently graded. They may mature in store for 3-12 months according to temperature of the store and degree of maturity required.

6. *Sampling and analysis.*

6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," paragraph 7, "Sampling of Cheese."

6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."

7. *Marking and labeling.* Only cheese conforming with this standard may be designated "Cheddar." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese."

STANDARD No. C-4 (1966)

INTERNATIONAL INDIVIDUAL STANDARD FOR EDAM

1. *Designation of cheese:* Edam.[1]

2. *Depositing country:* The Netherlands (country of origin).

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions: Cultures of harmless lactic acid producing bacteria (starter); rennet or other suitable coagulating enzymes; sodium chloride; calcium chloride, maximum 200 mg/kg of the milk used; annatto* and beta carotene, singly or in combination maximum 600 mg/kg of cheese; sodium and potassium nitrate, maximum 200 mg/kg of the milk used**; and water.

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type (consistency): Semihard.

4.2 Shape: (a) Spherical, slightly flattened at the top and the bottom, and (b) flat block with square and/or rectangular side (not being a loaf) and with or without rind.

4.3 Dimensions and weights.

4.3.1 Dimensions: Depend on the shapes (4.2) and weights (4.3.2).

4.3.2 Weights: (a) Spherical (as under 4.2.a) 1.7 to 2.5 kg, and (b) flat block (as under 4.2.b) not less than 10 kg.

4.4 Rind.

4.4.1 Consistency: Hard.

4.4.2 Appearance: Dry, often coated with paraffin, wax, plastic, or a film of vegetable oil; coatings yellow or red.

4.4.3 Color: Yellowish.

4.5 Body.

4.5.1 Texture: Firm, suitable for cutting.

[1] Or such other synonym (e.g., Edamski) derived from the name Edam as will clearly indicate this variety.

*Temporarily endorsed.

**Subject to endorsement.

4.5.2 Color: Yellowish.

4.6 Holes.

4.6.1 Distribution: Few, all over the interior of the cheese, distributed regularly as well as irregularly.

4.6.2 Shape: More or less round.

4.6.3 Size: Varying from rice to pea.

4.6.4 Appearance: Not defined.

4.7 Minimum fat content in the dry matter: 40 percent.

4.8 Maximum moisture content: 46 percent. Minimum dry matter content: 54 percent.

4.9 Other principal characteristics: Edam cheese is not normally consumed before it is 5 weeks old.

5. *Baby Edam, loaf Edam,* baby loaf Edam.*

5.1 *Baby Edam.* Small cheeses complying with the requirements for Edam cheese, except those under 4.3.2, 4.8, and 4.9, may be designated as "Baby Edam" provided they comply with the following:

5.1.1 Weights: From 0.840 to 1.100 kg.

5.1.2 Maximum moisture content: 47 percent. Minimum dry matter content: 53 percent.

5.1.3 Other principal characteristics: "Baby Edam" is not normally consumed before it is 3 weeks old.

5.2 *Loaf Edam.* Loaf-shaped cheeses, complying with the requirements for Edam cheese, except those under 4.2 and 4.3.2, may be designated as "Loaf Edam" provided they comply with the following:

5.2.1 Shape: Loaf shaped, length of the long side more than twice that of the shortest.

5.2.2 Weights: 2.0 to 5.0 kg.

5.3 *Baby Loaf Edam.* Loaf-shaped cheeses, complying with the requirements for Edam cheese, except those under 4.2, 4.3.2, 4.8, and 4.9 may be designated as "Baby Loaf Edam" provided they comply with the following:

5.3.1 Shape: Loaf shaped, length of the long side more than twice that of the shortest.

5.3.2 Weights: 0.400 to 1.100 kg.

5.3.3 Maximum moisture content: 47 percent. Minimum dry matter content: 53 percent.

5.3.4 Other principal characteristics: "Baby Loaf Edam" is not ready for consumption before it is 3 weeks old.

6. *Method of manufacture.*

6.1 Method of coagulation: Rennet or other suitable coagulating enzymes.

6.2 Heat treatment: The curd is heated with or without addition of warm water.

6.3 Fermentation procedure: Chiefly lactic acid.

6.4 Maturation procedure: Maturation during storage at a temperature preferably between 10° and 20° C.

6.5 Other principal characteristics: Salted in brine after manufacture.

7. *Sampling and analysis.*

7.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clauses 7.2(a) and 7.2.1, "Sampling by cutting." To obtain the required representativity in the case of Edam in loaf form, special attention should be paid—when cutting the slice—to the proportions of rind, heart, etc.

7.2 Preparation of the sample: According to FAC/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.4, "Treatment of samples."

7.3 Determination of fat content: According to FAO/WHO Standard B.3, "Determi-

nation of the Fat Content of Cheese and Processed Cheese Products."

8. *Marking and labelling.* Only cheese con-

4.7 Minimum fat content in the dry matter: 48 percent.

4.8 Maximum moisture content: 43 per-

bacteria; rennet or other suitable coagulating enzymes; sodium chloride; and water.

3.2.2 Optional additions: None.

4. *Principal characteristics of the cheese*

STANDARD No. C-12 (1968)

INTERNATIONAL INDIVIDUAL STANDARD FOR LIMBURGER

5.2 Heat treatment: Little or no heat applied during the manufacturing procedure.

5.3 Fermentation procedure: Lactic acid

smoked cheese. Minimum dry matter content: 53 percent for unsmoked cheese; 55 percent for smoked cheese.

nation of the Fat Content of Cheese and Processed Cheese Products."

8. *Marking and labelling.* Only cheese conforming with this standard may be designated "Edam." It shall be labelled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese." The cheese mentioned under 5.1 may be designated "Edam," *Provided,* That the designation is accompanied by the prefix "Baby." The cheese mentioned under 5.2 may be designated "Edam," *Provided,* That the designation is accompanied by the prefix "Loaf." The cheese mentioned under 5.3 may be designated "Edam," *Provided,* That the designation is accompanied by the prefix "Baby Loaf."

STANDARD No. C-5 (1966)

INTERNATIONAL INDIVIDUAL STANDARD FOR GOUDA

1. *Designation of cheese:* Gouda.[1]

2. *Depositing country:* The Netherlands (country of origin).

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions: Cultures of harmless lactic acid producing bacteria (starter); rennet or other suitable coagulating enzymes; sodium chloride; water; calcium chloride, maximum 200 mg/kg of the milk used; annatto* and beta carotene, singly or in combination; maximum 600 mg/kg of cheese; sodium and potassium nitrate, maximum 200 mg/kg of the milk used.**

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type (consistency): Semihard.

4.2 Shape: (a) Cylindrical, with convex sides, curving smoothly into the flat top and bottom; the rate height/diameter varying from one-fourth to one-third; (b) flat block with square and/or rectangular sides (not being a loaf) and with or without rind; and (c) loaf, the length of the long side more than twice that of the shortest.

4.3 Dimensions and weights.

4.3.1 Dimensions: (a) Cylindrical, with convex sides (as under 4.2.a): Fixed by prescribed shape (4.2.a) and weights (4.3.2.a); (b) flat block (as under 4.2.b) fixed by prescribed shape (4.2.b) and weight (4.3.2.b); and (c) loaf (as under 4.2.c) fixed by prescribed shape (4.2.c) and weights (4.3.2.c).

4.3.2 Weights: (a) Cylindrical, with convex sides (as under 4.2.a): From 2.5 to 30 kg; (b) flat block (as under 4.2.b): Not less than 10 kg; and (c) loaf (as under 4.2.c): From 2.5 to 5 kg.

4.4 Rind.

4.4.1 Consistency: Hard.

4.4.2 Appearance: Dry or coated with either wax, a suspension of plastic, or a film of vegetable oil.

4.4.3 Color: Yellowish.

4.5 Body.

4.5.1 Texture: Firm, suitable for cutting.

4.5.2 Color: Straw colored.

4.6 Holes.

4.6.1 Distribution: From few to plentiful, all over the interior of the cheese, distributed regularly as well as irregularly.

4.6.2 Shape: More or less round.

4.6.3 Size: Varying from a pin's head to a pea.

4.6.4 Appearance: Not defined.

4.7 Minimum fat content in the dry matter: 48 percent.

4.8 Maximum moisture content: 43 percent. Minimum dry matter content: 57 percent.

4.9 Other principal characteristics: Gouda cheese is not normally consumed before it is 5 weeks old.

5. *Baby Gouda.* Small cheeses complying with the requirements for Gouda cheeses—except those under 4.2, 4.3, 4.8, and 4.9—may be designated as "Baby Gouda," provided they comply with the following:

5.1 Shape: Cylindrical with convex sides, curving smoothly into the flat top and bottom; the rate height/diameter is about one-half.

5.2 Dimensions and weights.

5.2.1 Dimensions: Fixed by prescribed shape (5.1) and weights (5.2.2).

5.2.2 Weights: From 0.180 to 1.500 kg.

5.3 Maximum moisture content: 45 percent. Minimum dry matter content: 55 percent.

5.4 Other principal characteristics: Baby Gouda is not normally consumed before it is 3 weeks old.

6. *Method of manufacture.*

6.1 Method of coagulation: Rennet or other suitable coagulating enzymes.

6.2 Heat treatment: The curd is heated with or without the aid of warm water.

6.3 Fermentation procedure: Chiefly lactic acid.

6.4 Maturation procedure: Maturation during storage at a temperature preferably between 10° and 20° C.

6.5 Other principal characteristics: Salted in brine after manufacture.

7. *Sampling and analysis.*

7.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clauses 7.2(a) and 7.2.1, "Sampling by cutting." To obtain the required representativity in the case of Gouda in loaf form and other rectangular blocks, special attention should be paid—when cutting the slice—to the proportions of rind, heart, etc.

7.2 Preparation of the sample: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.4, "Treatment of samples."

7.3 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."

8. *Marking and labelling.*

Only cheese conforming with this standard may be designated "Gouda." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese." The cheese mentioned under 5 may be designated "Gouda," *Provided,* That the designation is accompanied by the prefix "Baby."

STANDARD No. C-10 (1967)

INTERNATIONAL INDIVIDUAL STANDARD FOR GRUYERE

1. *Designation of cheese:* Gruyere, Greyerzer, Gruviera.

2. *Depositing countries:* Switzerland and France (countries of origin).

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions.

3.2.1 Necessary additions: Cultures of harmless lactic acid producing bacteria (starter) and of proprionic acid-producing bacteria; rennet or other suitable coagulating enzymes; sodium chloride; and water.

3.2.2 Optional additions: None.

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type (consistency): Hard.

4.2 Shape: Round loaf or blocks.

4.3 Dimensions and weight.

4.3.1 Dimensions: Diameter: 40–65 cm, and height: 9–13 cm.

4.3.2 Weight: Minimum 20 kg.

4.4 Rind.

4.4.1 Consistency: Hard.

4.4.2 Appearance: Covered with smear.

4.4.3 Color: Golden yellow to brown.

4.5 Body.

4.5.1 Texture: Sliceable.

4.5.2 Color: Ivory to light yellow.

4.6 Holes.

4.6.1 Distribution: Regular, scarce to plentiful.

4.6.2 Shape: Round.

4.6.3 Diameter: Mainly from 0.5 to 1.0 cm.

4.6.4 Appearance: Mat to brilliant.

4.7 Minimum fat content in the dry matter: 45 percent.

4.8 Maximum moisture content: 38 percent. Minimum dry matter content: 62 percent.

4.9 Other principal characteristics.

4.9.1 Taste and flavor: More or less tangy.

4.9.2 Ready for consumption: The cheese is ready for consumption at a minimum age of 80 days from the day of manufacture.

4.9.3 Storing ability: The cheese should normally maintain its characteristics for a minimum of 1 month at a temperature of 15° C from the time it is ready for consumption.

5. *Method of manufacture.*

5.1 Method of coagulation: Rennet or other suitable coagulating enzymes.

5.2 Heat treatment: After cutting the curd to particles about the size of wheat grains, heating to 50° C as a minimum.

5.3 Fermentation procedure: Lactic acid fermentation and propionic acid fermentation taking place throughout the cheese at 14° C minimum for a minimum of 4 weeks.

5.4 Maturation procedure: Proteolysis due to action of enzymes of lactic acid bacteria and smear organisms at succeeding temperatures between 10° and 20° C.

5.5 Other principal characteristics.

5.5.1 Treatment of milk: Use of raw milk.

5.5.2 Treatment with cooking salt: The cheeses are salted by immersion in salt solution and/or dry-salted on the surface. During maturation, the surface of the cheeses is salted and smeared at intervals.

6. *Sampling and analysis.*

6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.2(b), "Sampling by means of a trier." Reference is made to clauses 7.2.2.1 and 7.2.2.5.

6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."

7. *Marking and labeling.* Only cheese conforming with the standard may be designated "Gruyere," "Greyerzer," or "Gruviera." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese," except that Gruyere not produced in the countries of origin must be marked with the name of the producing country even when sold on the home market.

[1] Or such other synonym (e.g., Goudycki) derived from the name Gouda as will clearly indicate this variety.

* Temporarily endorsed.

** Subject to endorsement.

STANDARD No. C-12 (1968)

INTERNATIONAL INDIVIDUAL STANDARD FOR LIMBURGER

1. *Designation of cheese:* Limburger.[1]

2. *Depositing countries:* Federal Republic of Genmany, United States of America. (Country of origin: Belgium.)

3. *Raw materials.* 3.1 Kind of milk: Cow's milk.

3.2 Authorized additions.

3.2.1 Necessary additions: Cultures of harmless lactic acid producing bacteria (starter) and cultures of Bacterium linens; rennet or other suitable coagulating enzymes; and sodium chloride.

3.2.2 Optional additions: Calcium chloride, maximum 200 mg/kg of the milk used; beta carotene, maximum 600 mg/kg of the cheese; sodium and potassium nitrate, maximum 200 mg/kg of the milk used.** riboflavin (Lactoflavin); and safe and suitable enzymes to assist in flavor development.

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type.

4.1. Consistency: Soft.

4.1.2 Short description: A soft surface ripened cheese carrying a rather intensive aromatic flavor. Usually consumed at 3-6 weeks.

4.2 Shape (usual): Cubical or rectangular.

4.3 Dimensions and weight.

4.3.1 Dimensions (usual): Approximately 6x6 cm and varying in height.

4.3.2 Weight (usual): Maximum 1 kg.

4.4 Rind.

4.4.1 Consistency: Elastic.

4.4.2 Appearance: Smear developed by red and yellow smear organisms.

4.4.3 Color: Reddish-brown.

4.5 Body.

4.5.1 Texture: Soft but still sliceable.

4.5.2 Color: Ivory to yellow.

4.6 Holes.

4.6.1 Distribution: Few, irregularly distributed.

4.6.2 Shape: Irregular.

4.6.3 Size: Up to the size of a barley grain.

4.6.4 Appearance: Shiny.

4.7/4.8 Limits for fat in dry matter, moisture and dry matter contents:

Limburger

[Percent]

	A	B	C	D	E
		20	30	40	45
Minimum fat in dry matter	50	20	30	40	45
Maximum moisture content	50	65	62	58	53
Minimum dry matter content	50	35	38	42	47 47

4.9 Other principal characteristics: Typical flavor developed by red and yellow smear-producing bacteria during the ripening period of at least 2 weeks.

5. *Method of manufacture.*

5.1 Method of coagulation: Rennet or other suitable coagulating enzymes.

5.2 Heat treatment: Little or no heat applied during the manufacturing procedure.

5.3 Fermentation procedure: Lactic acid fermentation with subsequent smear development.

5.4 Maturation procedure: Ripened at 12-16° C for approximately 2 weeks.

5.5 Other principal characteristics: cheese is melted from the surface before curing or salted in brine. The rind is regularly rubbed with brine during curing.

6. *Sampling and analysis.*

6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clauses 7.2 (a), "Sampling by cutting," or 7.2 (c), "Taking a complete cheese as a sample."

6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and of Processed Cheese Products."

7. *Marking and labeling.* Only cheese conforming with this standard may be designated "Limburger"; it shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese."

The cheese mentioned under B, C, D, and E in 4.7 and 4.8 may be designated "Limburger" provided that the designation is accompanied by a prefix corresponding to the fat percentage, e.g., 30 percent Limburger.

STANDARD No. C-15 (1968)

INTERNATIONAL INDIVIDUAL STANDARD FOR PROVOLONE

1. *Designation of cheese:* Provolone.

2. *Depositing countries:* Italy (county or origin). United States of America.

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions.

3.2.1 Necessary additions: Cultures of harmless lactic acid-producing bacteria (starter); rennet (calf, lamb, or kid, liquid or paste) or other suitable coagulating enzymes; and sodium chloride.

3.2.2 Optional additions: Smoke**; hexamethylenetetramine, maximum 600 mg/kg of the liquid used to work the curd**; calcium chloride, maximum 200 kg/kg of the milk used; fast green FCF (Color Index 42053)**; brilliant blue FCF (Color Index 42090)**; indigotine FCF (Color Index 73015)**; safe and suitable enzymes to assist in flavor development; and benzoyl peroxide as a bleach.**

4. *Principal characteristics of the cheese ready for consumption.*

4.1 Type: Provolone is a "pasta filata" cheese which is used as a table or grating cheese and may be consumed either fresh or aged.

4.2 Shape: Various.

4.3 Dimensions and weights: Various.

4.4 Rind.

4.4.1 Appearance: Commonly covered with vegetable fat and/or oil, paraffin and/or plastic film.

4.4.2 Color: Natural color rind yellow to brown.

4.5 Body.

4.5.1 Texture: Fibrous or smooth.

4.5.2 Color: White to yellow straw.

4.6 Holes: A few holes and splits permitted.

4.7 Minimum fat content in the dry matter: 45 percent.

4.8 Maximum moisture content: 47 percent for unsmoked cheese; 45 percent for smoked cheese. Minimum dry matter content: 53 percent for unsmoked cheese; 55 percent for smoked cheese.

4.9 Other principal characteristics: Sweetish, buttery taste after ripening 2 to 3 months, strong or piquant taste after aging when rennet from kid is used.

5. *Method of manufacture.*

5.1 Method of coagulation: Calf's rennet for "sweet curd" and lamb or kid's rennet for "strong cheese," or other suitable coagulating enzymes.

5.2 Heat treatment of the coagulum: Curd is placed in hot water or hot whey and kneaded and stretched until smooth and free from lumps.

5.3 Fermentation procedure: The milk is subjected to the action of lactic acid produced by bacteria present in the milk or added as a starter thereto. After the proper ripening period is reached, rennet or another suitable enzyme is added to coagulate the milk.

5.4 Maturation procedure: The coagulated curd is cut, stirred, and heated to promote and regulate the separation of whey from the curd. The whey is drained off, the curd is matted and cut, immersed in hot water and kneaded and stretched until it is smooth and free from lumps. The curd is then cut and placed in molds. During molding the surface is kept warm to properly seal the surface. The molded curd is then firmed by immersion in cold water before salting.

5.5 Other principal characteristics: Cheese is salted by immersion in brine. Some shapes may be encased in ropes or twine before drying. The surface may be paraffined or waxed. The cheese may be smoked.

6. *Sampling and analysis.*

6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," paragraph 7, "Sampling of Cheese."

6.2 Determination of fat content: According to FAO/WHO Standard B.3 "Determination of the Fat Content of Cheese and of Processed Cheese Products."

7. *Marking and labeling.* Only cheese conforming with this standard may be designated "Provolone." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese."

STANDARD No. C-7 (1966)

INTERNATIONAL INDIVIDUAL STANDARD FOR SAMSOE

1. *Designation of cheese:* Samsoe (in Danish: Samso).

2. *Depositing country:* Denmark (country of origin).

3. *Raw materials.*

3.1 Kind of milk: Cow's milk.

3.2 Authorized additions.

3.2.1 Necessary additions: Cultures of harmless lactic acid-producing bacteria (starter); rennet or other suitable coagulating enzymes; and sodium chloride.

3.2.2 Optional additions: Calcium chloride, maximum 200 mg/kg of the milk used; annatto* and beta carotene, singly or in combination, maximum 600 mg/kg of cheese; sodium and potassium nitrate, maximum 200 mg/kg of the milk used**; water; and cumin seed.

4. *Principal characteristics of the cheese ready for consumption.*

[1] Or such synonyms derived from this name as will clearly indicate this variety.

** Subject to endorsement.

* Temporarily endorsed.

** Subject to endorsement.

4.1 Type (consistency): Hard.

4.2 Shape: (a) Flat cylindrical; (b) flat square; and (c) rectangular.

The cheese mentioned under 4.7/4.8B may be designated "Samsoe," *Provided,* That the designation is accompanied by the prefix 30

4.9.1 Taste and flavor: Mild, nutlike, more or less pronounced.

4.9.2 Ready for consumption: Minimum

levels than provided for in the existing standards for these foods are currently produced and marketed in the

Further, the Commissioner is not proposing to accept Codex maximum moisture levels where such levels are

§ 133.3 Definitions.

(a) "Milk" means the lacteal secretion, practically free from colostrum,

4.1 Type (consistency): Hard.
4.2 Shape: (a) Flat cylindrical; (b) flat square; and (c) rectangular.
4.3 Dimensions and weights.
4.3.1 Dimensions: (a) Flat cylindrical: Diameter 44 cm approximately; (aa) "Mini-Samsoe": Diameter 9 cm approximately; (b) flat square: side 38 cm approximately; and (c) rectangular: Various.
4.3.2 Weights: (a) Flat cylindrical: 14 kg approximately; (aa) "Mini-Samsoe": 0.25 kg approximately; (b) flat square: 14 kg approximately; and (c) rectangular: Various.
4.4 Rind.
4.4.1 Consistency: Hard.
4.4.2 Appearance: Dry, with or without wax or plastic coating.
4.4.3 Color: Yellow.
4.5 Body.
4.5.1 Texture: Firm, suitable for cutting.
4.5.2 Color: Yellowish.
4.6 Holes.
4.6.1 Distribution: From few to plentiful, evenly distributed.
4.6.2 Shape: Round.
4.6.3 Size: Varying from pea to cherry.
4.6.4 Appearance: Smooth.
4.7/4.8 Limits for fat in dry matter, moisture and dry matter contents:

Samsoe

[Percent]

	A	B	C
		30	Mini
Minimum fat in dry matter...	45	30	45
Maximum moisture content..	44	52	48
Minimum dry matter content	56	48	52

4.9 Other principal characteristics: Samsoe cheese is normally not exported or sold to consumers before it is at least 6 weeks old. "Mini-Samsoe" is normally not exported or sold before it is at least 3 weeks old.
5. *Method of manufacture.*
5.1 Method of coagulation: Rennet or other suitable coagulating enzymes; addition of a lactic acid starter.
5.2 Heat treatment: Slightly heated after cutting.
5.3 Fermentation procedure: Chiefly lactic acid and slightly prepressed.
5.4 Maturation procedure: Humid to dry, at a temperature between 10° and 20° C.
5.5 Other principal characteristics: Salted, normally in brine.
6. *Sampling and analysis.*
6.1 Sampling: According to FAO/WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.2(b), "Sampling by means of a trier"; reference is made to clauses 7.2.2.3 and 7.2.2.5. "Mini-Samsoe" is sampled according to clause 7.2(c), "Taking a complete cheese as a sample."
6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."
7. *Marking and labeling.* Only cheese conforming with this standard may be designated "Samsoe." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese," except that Samsoe not produced in the country of origin must be marked with the name of the producing country even when sold on the home market.

The cheese mentioned under 4.7/4.8B may be designated "Samsoe," *Provided,* That the designation is accompanied by the prefix 30 percent. The cheese mentioned under 4.3.1(aa) and 4.3.2(aa) and 4.7/4.6C may be designated "Samsoe," *Provided,* That the designation is accompanied by the prefix "Mini."

The name "30 percent Samsoe" may only be used to designate cheeses which are both manufactured and marketed in countries where it is traditional and whose legislation provides for the use of the same designation for cheeses for which different minimum fat contents are specified, *Provided,* That one of the minimum fat contents so specified is above 45 percent.

STANDARD NO. C-9 (1967)

INTERNATIONAL INDIVIDUAL STANDARD FOR EMMENTALER

1. *Designation of cheese:* Emmentaler, Emmental.
2. *Depositing countries:* Switzerland (country of origin), Finland, France, United States of America.
3. *Raw materials.*
3.1 Kind of milk: Cow's milk.
3.2 Authorized additions.
3.2.1 Necessary additions: Cultures of harmless lactic acid-producing bacteria (starter) and of propionic acid producing bacteria; rennet or other suitable coagulating enzymes; sodium chloride; and water.
3.2.2 Optional additions: Calcium chloride, maximum 200 mg/kg of the milk used, and cupric sulphate, maximum 15 mg/kg cheese expressed as copper.
4. *Principal characteristics of the cheese ready for consumption.*
4.1 Type: 4A (round loaf)—Hard cheese; 4B (block)—Hard cheese; 4C (rindless block)—Hard cheese.
4.2 Shape: 4A (round loaf)—Round loaf; 4B (block)—Rectangular block; 4C (rindless block)—Rectangular block.
4.3 Dimensions and weights.
4.3.1 Height: 4A (round loaf)—12 to 30 cm; 4B (block)—12 to 30 cm; 4C (rindless block)—12 to 30 cm.
4.3.2 Diameter: 4A (round loaf)—70 to 100 cm.
4.3.3 Weight: 4A (round loaf)—minimum 50 kg; 4B (block)—minimum 30 kg; 4C (rindless block)—minimum 30 kg.
4.4 Rind.
4.4.1 Consistency: 4A (round loaf)—Hard; 4B (block)—Hard; 4C (rindless block)—Soft.
4.4.2 Appearance: 4A (round loaf)—Dry; 4B (block)—Dry; 4C (rindless block)—Like inside.
4.4.3 Color: 4A (round loaf)—Golden yellow to brown; 4B (block)—Golden yellow to brown; 4C (rindless block)—Ivory to light yellow.
4.5 Body.
4.5.1 Texture: Sliceable.
4.5.2 Color: Ivory to light yellow.
4.6 Holes.
4.6.1 Distribution: Regular, scarce to plentiful.
4.6.2 Shape: Round.
4.6.3 Diameter: Mainly 1-3 cm.
4.6.4 Appearance: Mat to brilliant.
4.7 Minimum fat content in dry matter: 45 percent.
4.8 Maximum moisture content: 40 percent. Minimum dry matter content: 60 percent.
4.9 Other principal characteristics.
4.9.1 Taste and flavor: Mild, nutlike, more or less pronounced.
4.9.2 Ready for consumption: Minimum of 60 days from day of manufacture.
4.9.3 Storing ability: The cheese should normally maintain its characteristics for a minimum of 1 month at a temperature of 15° C from the time it is ready for consumption.
5. *Method of manufacture.*
5.1 method of coagulation: Rennet or other suitable coagulating enzymes.
5.2 Heat treatment: After cutting the curd to particles about the size of wheat grains, heating to 50° C as a minimum.
5.3 Fermentation procedure: Lactic acid fermentation and propionic acid fermentation taking place throughout the cheese at 20° C minimum, for a minimum of 3 weeks.
5.4 Maturation procedure: Proteolysis due to action of microbial enzymes at succeeding temperatures between 10° and 25° C.
5.5 Other principal characteristics: Treatment with cooking salt; the cheeses are salted by immersion in salt solution and/or dry-salted on the surface; during maturation, except in the case of rindless block, the surface of the cheese is washed, cleaned and salted at intervals.
6. *Sampling and analysis.*
6.1 Sampling: According to FAO-WHO Standard B.1, "Sampling Methods for Milk and Milk Products," clause 7.2(b) "Sampling by means of a trier." Reference is made to clauses 7.2.2.1 and 7.2.2.5.
6.2 Determination of fat content: According to FAO/WHO Standard B.3, "Determination of the Fat Content of Cheese and Processed Cheese Products."
7. *Marking and labeling.* Only cheese conforming with this standard may be designated "Emmentaler" or "Emmental." It shall be labeled in conformity with the appropriate sections of Article 4 of FAO/WHO Standard A.6, "General Standard for Cheese," except that Emmentaler not produced in the country of origin must be marked with the name of the producing country even when sold on the home market.

The following discussion sets forth the significant differences between the Codex standards and U.S. standards with proposed revisions. Following each point is the Commissioner's proposed action. The Commissioner is of the opinion that the proposed changes are reasonable, will benefit international trade, and will promote honesty and fair dealing in the interest of consumers.

1. *Variable fat levels.* Codex standards for blue cheese (C-32), limburger cheese (C-12), and samsoe cheese (C-7) provide for variable fat levels within each standards. These standards require that the fat content, on a dry basis, accompany the name of the food.

The Commissioner recognizes the desirability of providing for lower-fat cheeses, thus giving consumers more choices in the marketplace. He therefore proposes to adopt the Codex provisions for variable fat levels for blue cheese limburger cheese, and samsoe cheese. In addition, he is aware that cheddar cheese and swiss cheese having higher moisture and lower fat

levels than provided for in the existing standards for these foods are currently produced and marketed in the United States as "imitation" foods. Therefore, he also is proposing variable fat levels for these cheeses. If interest in providing for variable fat levels in the other cheese standards included in this proposal exists, the Commissioner would like to receive comments to this effect, accompanied by information and/or data in support of suggested fat levels for each cheese. Elsewhere in this document the Commissioner is proposing that a declaration of milk fat content, by weight, accompany the name of the food.

2. *Optional ingredients.* Many of the Codex standards provide for the use of such optional ingredients as sodium and potassium nitrates, sodium dihydrogen phosphate, disodium hydrogen phosphate, cupric sulfate, and hexamethylenetetramine.

The Commissioner is unaware of the need in cheese manufacturing practice in the United States for the above-named chemicals.

The Codex standards list all permitted optional ingredients individually, rather than by a functional group designation.

The Commissioner believes that the proposed revision of the U.S. standards to provide for the use of functional groups of safe and suitable ingredients rather than individually naming each approved ingredient from the functional group simplifies the standards and eliminates the need to amend the standards each time a food additive petition is submitted and approved which is applicable to a standard of identity for a cheese variety.

3. *Minimum milk fat and maximum moisture levels.* In certain instances, the minimum milk fat or maximum moisture levels permitted by the Codex standards differ from those in the U.S. standards.

Wherever the minimum, milk fat level is higher in the Codex standard than in the corresponding U.S. standard, the Commissioner is proposing retention of the latter. The Commissioner understands that milk now produced in the United States is not as high in milk fat as the milk of several years ago. To meet higher milk fat minimums, cheese manufacturers would have to use increased amounts of milk fat, the higher cost being borne by consumers. Since consumer interest seems to be directed to lower-fat foods and the minimum milk fat levels specified in the U.S. standards would not hinder a manufacturer from producing a higher-fat cheese, the Commissioner finds no justification for proposing acceptance of the higher milk fat minimums set by the Codex standards.

Further, the Commissioner is not proposing to accept Codex maximum moisture levels where such levels are higher. He believes this action would have the effect of lowering the quality of the cheeses, because water would displace more valuable constitutents such as milk fat and milk solids-not-fat.

4. *Phenol equivalent value.* The Codex standards do not include maximum phenol equivalent values to be used as indicators of effective pasteurization.

As discussed earlier, the Commissioner proposes to retain or to provide for maximum allowable phenol equivalent values in each standard. When pasteurized milk products are used, he is of the opinion that the phenol equivalent value, as determined by the phosphatase test described in the proposed § 133.5, serves as an indicator of effective pasteurization procedures.

In a notice published in the FEDERAL REGISTER of June 9, 1978 (43 FR 25296), the Food and Drug Administration, the U.S. Department of Agriculture, and the Federal Trade Commission announces a series of five public hearings to discuss several issues related to food labeling, including ingredient labeling, nutrition labeling, and imitation foods. The last of these hearings is scheduled for October 25-26, 1978. Because the Commissioner intends to take into consideration all relevant information presented at the hearings in developing a regulation based upon this proposal, the Commissioner has scheduled the comment period on this proposal to extend beyond the last of the hearings; comments may be sumbitted on or before November 27, 1978.

The Commissioner proposes that all products initially introduced into interstate commerce on or after 1 year following the date of issuance of a regulation based upon this proposal shall comply with the regulation, except for any provisions that may be stayed by the filing of proper objections.

The Commissioner has considered the environmental effects of the issuance or amendment of food standards and has concluded in § 25.1(d)(4) (21 CFR 25.1(d)(4)) that food standards are not major agency actions significantly affecting the quality of the human environment. Therefore, an environmental impact statement is not required for this amendment.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 401, 701(e), 52 Stat. 1046 as amended, 70 Stat. 919 as amended (21 U.S.C. 341, 371(e))) and under authority delegated to him (21 CFR 5.1), the Commissioner proposes that part 133 be amended as follows:

1. By revising § 133.3 to read as follows:

§ 133.3 Definitions.

(a) "Milk" means the lacteal secretion, practically free from colostrum, obtained by the complete milking of one or more healthy cows; concentrated milk, reconstituted milk, and dry whole milk. Water, in a sufficient quantity to reconstitute concentrated and dry forms, may be added.

(b) "Nonfat milk" means skim milk, concentrated skim milk, reconstituted skim milk, and nonfat dry milk. Water, in a sufficient quantity to reconstitute concentrated and dry forms, may be added.

(c) "Cream" means cream, reconstituted cream, dry cream, and plastic cream. Water, in a sufficient quantity to reconstitute concentrated and dry forms, may be added.

(d) "Pasteurized" when used to describe a dairy ingredient means that every particle of such ingredient shall have been heated in properly operated equipment to one of the temperatures specified in the table of this paragraph and held continuously at or above that temperature for the specified time (or other time/temperature relationship which has been demonstrated to be eqivalent thereto in microbial destruction):

Temperature:	Time
145° F[1]	30 min.
161° F[1]	15 s.
191° F	1 s.
204° F	0.05 s.
212° F	0.01 s.

[1]If the dairy ingredient has a fat content of 10 percent or more, the specified temperature shall be increased by 5° F.

(e) "Ultrapasteurized" when used to describe a dairy ingredient means that such ingredient shall have been thermally processed at or above 280° F for at least 2 seconds.

2. By adding new § 133.5, to read as follows:

§ 133.5 Methods of analysis.

Moisture, milk fat, and phosphatase levels in cheeses will be determined by the following methods of analysis from "Official Methods of Analysis of the Association of Official analytical Chemists," 12th ed., 1975.[2]

(a) Moisture content—"Moisture, Method I—Official Final Action," § 16.217.

(b) Milk fat content—"Fat—Official Final Action," § 16.230.

(c) Phenol equivalent value—"Residual Phosphatase—Official Final Action," § 16.245.

3. By revising § 133.106, to read as follows:

§ 133.106 Blue cheese.

(a) *Description.* (1) Blue cheese is the food prepared by the procedure

[2]Copies may be obtained from the Association of Official Analytical Chemists, P.O. Box 540, Benjamin Franklin Station, Washington, D.C. 20044.

set forth in paragraph (a)(4) of this section, or by any other procedure which produces a finished cheese

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

and maximum moisture contents, by weight, shall conform to either of the fat/moisture combinations in para-

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to

(d) If a salt substitute as provided for in paragraph (a) of this section is used, the label shall bear the statement "_____ added as a salt substi-

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount

V 43 / 182 SEP 1978

set forth in paragraph (a)(4) of this section, or by any other procedure which produces a finished cheese having the same physical and chemical properties. It is characterized by the presence of bluish-green mold throughout the cheese. The minimum milk fat and maximum moisture contents, by weight, shall conform to any one of the fat/moisture combinations in paragraph (a)(2) of this section. Each minimum fat/maximum moisture content combination will result in the maximum percent moisture on a fat-free basis by weight, and minimum percent total solids by weight, indicated. The dairy ingredients used may be pasteurized. Blue cheese is at least 60 days old.

(2) Any one of the following minimum milk fat/maximum moisture combinations may be used:

[Figures in percent]

Minimum fat	31	26	20
Maximum moisture	48	48	55
Moisture on a fat-free basis	70	65	69
Total solids	52	52	45

(3) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of blue cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(4) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be bleached, warmed, and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is cut into smaller portions and allowed to stand for a time. The mixed curd and whey is placed in forms permitting further drainage. While being placed in forms, spores of the mold *Penicillium roquefortii* are added. The forms are turned several times during drainage. When sufficiently drained, the shaped curd is removed from the forms and salted with dry salt or brine. Perforations are then made in the shaped curd, and it is held at a temperature of approximately 50° F, at 90 to 95 percent relative humidity, until the characteristic mold growth has developed. During storage the surface of the cheese may be scraped to remove surface growth of undesirable microorganisms. Antimycotics may be applied to the surface of the whole cheese. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Blue or green color in an amount to neutralize the natural yellow color of the curd.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages or to the surface of the bulk cheese during curing.

(v) Benzoyl peroxide or a mixture of benzoyl peroxide with potassium alum, calcium sulfate, and magnesium carbonate used to bleach the dairy ingredients. The weight of the benzoyl peroxide is not more than 0.002 percent of the weight of the milk being bleached, and the weight of the potassium alum, calcium sulfate, and magnesium carbonate, singly or combined, is not more than six times the weight of the benzoyl peroxide used. If milk is bleached in this manner, vitamin A is added to the curd in such quantity as to compensate for the vitamin A or its precursors destroyed in the bleaching process, and artificial coloring is not used.

(c) *Nomenclature.* (1) The name of the food is "blue cheese."

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

4. By revising § 133.113, to read as follows:

§ 133.113 Cheddar cheese.

(a) *Description.* (1) Cheddar cheese is the food prepared by the procedure set forth in paragraph (a)(4) of this section, or by any other procedure which produces a finished cheese having the same physical and chemical properties. The minimum milkfat and maximum moisture contents, by weight, shall conform to either of the fat/moisture combinations in paragraph (a)(2) of this section. Each minimum fat/maximum moisture content combination will result in the maximum percent moisture on a fat-free basis by weight, and minimum percent total solids by weight, indicated. If the dairy ingredients used are not pasteurized, the cheese is cured at a temperature of not less than 35° F for at least 60 days.

(2) Either of the following minimum milkfat/maximum moisture combinations may be used:

[Figures in percent]

Minimum fat	31	24
Maximum moisture	39	41
Moisture on a fat-free basis	57	54
Total solids	61	59

(3) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of cheddar cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(4) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be warmed and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is so cut, stirred, and heated with continued stirring, as to promote and regulate the separation of whey and curd. The whey is drained off, and the curd is matted into a cohesive mass. The mass is cut into slabs, which are so piled and handled as to promote the drainage of whey and the development of acidity. The slabs are then cut into pieces, which may be rinsed by sprinkling or pouring water over them, with free and continuous drainage; but the duration of such rinsing is so limited that only the whey on the surface of such pieces is removed. The curd is salted, stirred, further drained, and pressed into forms. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(c) *Nomenclature.* (1) The name of the food is "cheddar cheese".

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content by weight of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

5. By revising § 133.114, to read as follows:

§ 133.114 Cheddar cheese for manufacturing.

Cheddar cheese for manufacturing conforms to the definition and standard of identity prescribed for cheddar cheese by § 133.113, except that the milk is not pasteurized, curing is not required, and the provisions of paragraph (b)(3)(iv) of that section do not apply.

6. By revising § 133.116, to read as follows:

§ 133.116 Low sodium cheddar cheese.

Low sodium cheddar cheese is the food prepared from the same ingredients and in the same manner prescribed in § 133.113 for cheddar cheese and complies with all the provisions of § 133.113, including the requirements for label statement of ingredients, except that:

(a) Salt is not used. Any safe and suitable ingredient or combination of ingredients that contains no sodium and that is recognized as a salt substitute may be used.

(b) It contains not more than 96 milligrams of sodium per pound of finished food.

(c) The name of the food is "low sodium cheddar cheese". The letters in the words "low sodium" shall be of the same size and style of type as the letters in the words "cheddar cheese", wherever such words appear on the label.

(d) If a salt substitute as provided for in paragraph (a) of this section is used, the label shall bear the statement "———— added as a salt substitute", the blank being filled in with the common name or names of the ingredient or ingredients used as a salt substitute.

(e) Low sodium cheddar cheese is subject to § 105.69 of this chapter.

7. By revising § 133.138, to read as follows:

§ 133.138 Edam cheese.

(a) *Description.* (1) Edam cheese is the food prepared by the procedure set forth in paragraph (a)(3) of this section or by any other procedure which produces a finished cheese having the same physical and chemical properties. The minimum milkfat content is 22 percent by weight, and the maximum moisture content is 45 percent by weight. At these milkfat and moisture levels, the maximum moisture on a fat-free basis will be 58 percent by weight, and the minimum total solids will be 55 percent by weight. If the dairy ingredients used are not pasteurized, the cheese is cured at a temperature of not less than 35° for at least 60 days.

(2) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of edam cheese is not more than 3 micrograms, as determined by the method described in § 133.5.

(3) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be warmed and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. After coagulation the mass is cut into small cube-shaped pieces with sides approximately three-eighths-inch long. The mass is stirred and heated to about 90° F, and so handled by further stirring, heating, dilution with water or salt brine, and salting as to promote and regulate the separation of curd and whey. When the desired curd is obtained, it is transferred to forms permitting drainage of whey. During drainage the curd is pressed and turned. After drainage the curd is removed from the forms and is salted and cured. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedures.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clothing enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(c) *Nomenclature.* (1) The name of the food is "edam cheese."

(2) The following phrase, in letters not less than one-half the height of the letters used for the name of the food, shall accompany the name of the food wherever it appears on the principal display panel of panels: "Contains — percent fat," the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat," as appropriate.

8. By revising § 133.142, to read as follows:

§ 133.142 Gouda cheese.

Gouda cheese conforms to the definition and standard of identity and complies with the requirements for label declaration of ingredients prescribed for edam cheese by § 133.138, except that the minimum milkfat content is 25 percent by weight and the maximum moisture content is 45 percent by weight. At these milkfat and moisture levels, the maximum moisture on a fat-free basis will be 60 percent by weight, and the minimum total solids will be 55 percent by weight.

9. By revising § 133.149, to read as follows:

§ 133.149 Gruyere cheese.

(a) *Description.* (1) Gruyere cheese is the food prepared by the procedure set forth in paragraph (a)(3) of this section or by any other procedure which produces a finished cheese having the same physical and chemical properties. It contains small holes or eyes. It has a mild flavor, due in part to the growth of surface-curing agents. The minimum milkfat content is 27 percent by weight, and the maxi-

mum moisture content is 39 percent by weight. At these milkfat and moisture levels, the maximum moisture on

the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat," as appropriate.

10. By revising § 133.150, to read as follows:

§ 133.150 Havarti cheese.

(a) *Description.* (1) Havarti cheese is the food prepared by the procedure set forth in paragraph (a)(3) of this section or by any other procedure which produces a finished cheese having the same physical and chemical properties. The minimum milkfat content is 25 percent by weight, and the maximum moisture content is 44 percent by weight. At these milkfat and moisture levels, the maximum moisture on a fat-free basis will be 60 percent by weight, and the minimum total solids will be 55 percent by weight. If the dairy ingredients used are not pasteurized, the cheese is cured at a temperature of not less than 35° F for at least 60 days.

(2) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of havarti cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(3) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be warmed and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. After coagulation the mass is cut into small cube-shaped pieces with sides approximately three-eighths-inch long. The mass is stirred and heated to about 90° F, and so handled by further stirring, heating, dilution with water or salt brine, and salting as to promote and regulate the separation of curd and whey. When the desired curd is obtained, it is transferred to forms permitting drainage of whey. During drainage the curd is pressed and turned. After drainage the curd is removed from the forms and is salted and cured. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedures.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(c) *Nomenclature.* (1) The name of the food is "havarti cheese."

(2) The following phrase, in letters not less than one-half the height of the letters used for the name of the food, shall accompany the name of the food wherever it appears on the principal display panel of panels: "Contains — percent fat," the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat," as appropriate.

V 43 / 182 SEP 1978 V 4

mum moisture content is 39 percent by weight. At these milkfat and moisture levels, the maximum moisture on a fat-free basis will be 53 percent by weight, and the minimum total solids will be 61 percent by weight. The dairy ingredients used may be pasteurized. The cheese is at least 90 days old.

(2) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of gruyere cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(3) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be warmed and is subjected to the action of lactic acid-producing and propionic acid-producing bacterial cultures. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is cut into particles similar in size to wheat kernels. For about 30 minutes the particles are alternately stirred and allowed to settle. The temperature is raised to about 126° F. Stirring is continued until the curd becomes firm. The curd is transferred to hoops or forms, and pressed until the desired shape and firmness are obtained. The cheese is surface-salted while held at a temperature of 48° to 54° F for a few days. It is soaked for 1 day in a saturated salt solution. It is then held for 3 weeks in a salting cellar and wiped every 2 days with brine cloth to insure growth of biological curing agents on the rind. It is then removed to a heating room and held at progressively higher temperatures, finally reaching 65° F with a relative humidity of 85 to 90 percent, for several weeks, during which time small holes, or so-called eyes, form. The cheese is then stored at a lower temperature for further curing. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Calcium chloride in an amount not more than 0.002 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid.

(ii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iii) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(c) *Nomenclature.* (1) The name of the food is "Gruyere cheese".

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

10. By revising § 133.152, to read as follows:

§ 133.152 Limburger cheese.

(a) *Description.* (1) Limburger cheese is the food prepared by one of the procedures set forth in paragraph (a)(4) of this section, or by any other procedure which produces a finished cheese having the same physical and chemical properties. The minimum milkfat and maximum moisture contents, by weight, shall conform to any one of the fat/moisture combinations in paragraph (a)(2) of this section. Each minimum fat/maximum moisture content combination will result in the maximum percent moisture on a fat-free basis by weight, and minimum percent total solids by weight, indicated. If the dairy ingredients used are not pasteurized, the cheese is cured at a temperature of 35° F for at least 60 days.

(2) Any one of the following minimum milkfat/maximum moisture combinations may be used.

[Figures in percent]

Minimum fat	25	21	17	11	7
Maximum moisture	50	53	58	62	65
Moisture on a fat-free basis	67	67	70	70	70
Total solids	50	47	42	38	35

(3) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of Limburger cheese is not more than 4 micrograms as determined by the method described in § 133.5.

(4) One of the following procedures may be followed for producing Limburger cheese:

(i) One or more of the dairy ingredients, unpasteurized, specified in paragraph (b)(1) of this section is warmed to about 92° F and subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is cut into cubes with sides approximately one-half inch long. After a few minutes the mass is stirred and heated, gradually raising the temperature to 96° to 98° F. The curd is then allowed to settle, most of the whey is drained off, and the remaining curd and whey dipped into molds. During drainage the curd may be pressed. It is turned at regular intervals. After drainage the curd is cut into pieces of desired size and dry-salted at intervals for 24 to 48 hours. The cheese is then cured with frequent applications of a weak brine solution to the surface, until the proper growth of surface-curing organisms is obtained. It is then wrapped and held in storage for development of as much additional flavor as is desired. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(ii) One or more of the dairy ingredients specified in paragraph (b)(1) of this section is pasteurized, brought to a temperature of 89° to 90° F after pasteurization, and is subjected to the action of a lactic acid-producing bacterial culture. The procedure is then the same as in paragraph (a)(4)(i) of this section, except that heating is to 94° F. After most of the whey is drained off, salt brine at a temperature of 66° to 70° F is added, so that the pH of the curd is about 4.8. The mixed curd, whey, and brine is dipped into molds, and the remaining procedure specified in paragraph (a)(1)(i) of this section is followed.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) by weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(c) *Nomenclature.* (1) The name of the food is "Limburger cheese".

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with

the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of Part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declard as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

11. By revising § 133.181, to read as follows:

§ 133.181 Provolone cheese.

(a) *Description.* (1) Provolone, a pasta filata or stretched curd-type cheese, is the food prepared by the procedure set forth in paragraph (a)(3) of this section, or by any other method which produces a finished cheese having the same physical and chemical properties. It has a stringy texture. The minimum milkfat content is 25 percent by weight, and the maximum moisture content is 45 percent by weight. At these milkfat and moisture levels, the maximum moisture on a fat-free basis will be 60 percent by weight, and the minimum total solids will be 55 percent by weight. If the dairy ingredients used are not pasteurized, the cheese is cured at a temperature of 35° F for at least 60 days.

(2) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of Provolone cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(3) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be bleached, warmed, and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is cut, stirred, and heated so as to promote and regulate the separation of whey from the curd. The whey is drained off, and the curd is matted and cut, immersed in hot water, and kneaded and stretched until it is smooth and free from lumps. Antimycotics may be added to the curd during the kneading and stretching process. Then it is cut and molded. During the molding the curd is kept sufficiently warm to cause proper sealing of the surface. The molded curd is then firmed by immersion in cold water, salted in brine, and dried. It is given some additional curing. Provolone cheese may be smoked, and one or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Blue or green color in an amount to neutralize the natural yellow color of the curd.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) by weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages or added to the curd during the kneading and stretching process.

(v) Benzoyl peoxide or a mixture of benzoyl peroxide with potassium alum, calcium sulfate, and magnesium carbonate used to bleach the dairy ingredients. The weight of the benzoyl peroxide is not more than 0.002 percent of the weight of the milk being bleached, and the weight of the potassium alum, calcium sulfate, and magnesium carbonate, singly or combined, is not more than six times the weight of the benzoyl peroxide used. If milk is bleached in this manner, vitamin A is added to the curd in such quantity as to compensate for the vitamin A or its precursors destroyed in the bleaching process, and artificial coloring is not used.

(c) *Nomenclature.* (1) The name of the food is "provolone cheese". The name of the food may include the common name of the shape of the cheese, such as "salami provolone".

(2) The following words or phrases, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels:

(i) "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(ii) "Smoked" if the food has been smoked.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

12. By revising § 133.185, to read as follows:

§ 133.185 *Samsoe cheese.*

(a) *Description.* (1) Samsoe cheese is the food prepared by the procedure set forth in paragraph (a)(4) of this section or by any other procedure which produces a finished cheese having the same physical and chemical properties. It has a small amount of eye formation of approximately uniform size of about five-sixteenths inch (8 millimeters). The minimum milkfat and maximum moisture contents, by weight, shall conform to either of the fat/mositure combinations in paragraph (a)(2) of this section. Each minimum fat/maximum moisture content combination will result in the maximum percent moisture on a fat-free basis by weight, and minimum percent total solids by weight, indicated. The dairy ingredients used may be pasteurized. Samsoe is cured at not less than 35° F for at least 60 days.

(2) Either of the following minimum milkfat/maximum moisture combinations may be used:

[Figures in percent]

Minimum fat	27	14
Maximum moisture	41	52
Moisture on a fat-free basis	56	60
Total solids	59	48

(3) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of samsoe cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(4) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be warmed and is subjected to the action of a lactic acid-producing bacterial culture. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. After coagulation the mass is cut into small cube-shaped pieces with sides approximately three-eighths inch (1 centimeter). The mass is stirred and heated to about 102° F, and so handled by further stirring, heating, dilution with water, and salting as to promote and regulate the separation of curd and whey. When the desired curd is obtained, it is transferred to forms permitting drainage of whey. During drainage, the curd is pressed. After drainage, the curd is removed from the forms and is further salted by immersing in a concentrated salt solution for about 3 days. The curd is then cured at a temperature of from 60° to 70° F for 3 to 5 weeks to obtain the desired eye forma-

tion. Further curing is conducted at a lower temperature. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may

solids content by weight, indicated. The dairy ingredients used may be pasteurized. Swiss cheese is at least 60 days old.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to

comments, and shall be identified with the hearing clerk docket number found in brackets in the heading of

ing this determination is on file with the hearing clerk, Food and Drug Administration.

V 4 3 / 1 8 2

tion. Further curing is conducted at a lower temperature. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) by weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(c) *Nomenclature.* (1) The name of the food is "Samsoe cheese".

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "notfat milk and milkfat", as appropriate.

13. By revising § 133.195, to read as follows:

§ 133.195 Swiss and emmentaler cheese.

(a) *Description.* (1) Swiss cheese, Emmentaler cheese, is the food prepared by the procedure set forth in paragraph (a)(4) of this section, or by any other procedure which produces a finished cheese having the same physical and chemical properties. It has holes or eyes developed throughout the cheese. The minimum milkfat and maximum moisture contents, by weight, shall conform to any one of the milkfat/moisture combinations in paragraph (a)(2) of this section. Each minimum fat/maximum moisture combination will result in the maximum percent moisture on a fat-free basis by weight, and minimum total solids content by weight, indicated. The dairy ingredients used may be pasteurized. Swiss cheese is at least 60 days old.

(2) Any one of the following minimum milkfat/maximum moisture combinations may be used:

[Figures in percent]

Minimum fat	25	20	15
Maximum moisture	41	44	47
Moisture on a fat-free basis	55	55	55
Total solids	59	56	53

(3) If pasteurized dairy ingredients are used, the phenol equivalent value of 0.25 gram of Swiss cheese is not more than 3 micrograms as determined by the method described in § 133.5.

(4) One or more of the dairy ingredients specified in paragraph (b)(1) of this section may be bleached, warmed, and is subjected to the action of lactic acid-producing and propionic acid-producing bacterial cultures. One or more of the clotting enzymes specified in paragraph (b)(2) of this section is added to set the dairy ingredients to a semisolid mass. The mass is cut into particles similar in size to wheat kernels. For about 30 minutes the particles are alternately stirred and allowed to settle. The temperature is raised to about 126° F. Stirring is continued until the curd becomes firm. The acidity of the whey at this point, calculated as lactic acid, does not exceed 0.13 percent. The curd is transferred to hoops or forms and pressed until the desired shape and firmness are obtained. The cheese is then salted by immersing it in a saturated salt solution for about 3 days. It is then held at a temperature of about 50° to 60° F for a period of 5 to 10 days, after which it is held at a temperature of about 75° F until it is approximately 30 days old, or until the so-called eyes form. Salt, or a solution of salt in water, is added to the surface of the cheese at some time during the curing process. The cheese is then stored at a lower temperature for further curing. One or more of the other optional ingredients specified in paragraph (b)(3) of this section may be added during the procedure.

(b) *Optional ingredients.* The following safe and suitable ingredients may be used:

(1) *Dairy ingredients.* Milk, nonfat milk, or cream, as defined in § 133.3, used alone or in combination.

(2) *Clotting enzymes.* Rennet and/or other clotting enzymes of animal, plant, or microbial origin.

(3) *Other optional ingredients.* (i) Coloring.

(ii) Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) by weight of the dairy ingredients, used as a coagulation aid.

(iii) Enzymes of animal, plant, or microbial origin, used in curing or flavor development.

(iv) Antimycotic agents, applied to the surface of slices or cuts in consumer-sized packages.

(v) Benzoyl peroxide or a mixture of benzoyl peroxide with potassium alum, calcium sulfate, and magnesium carbonate used to bleach the dairy ingredients. The weight of the benzoyl peroxide is not more than 0.002 percent of the weight of the milk being bleached, and the weight of the potassium alum, calcium sulfate, and magnesium carbonate, singly or combined, is not more than six times the weight of the benzoyl peroxide used. If milk is bleached in this manner, vitamin A is added to the curd in such quantity as to compensate for the vitamin A or its precursors destroyed in the bleaching process, and artificial coloring is not used.

(c) *Nomenclature.* (1) The name of the food is "Swiss cheese", or alternatively, "Emmentaler cheese".

(2) The following phrase, in letters not less than one-half the height of the letters used in the name of the food, shall accompany the name of the food wherever it appears on the principal display panel or panels: "Contains —% fat", the blank being filled in with the whole number closest to the actual fat content, by weight, of the food.

(d) *Label declaration.* The common or usual name of each of the ingredients used in the food shall be declared on the label as required by the applicable sections of part 101 of this chapter, except that:

(1) Enzymes of animal, plant, or microbial origin may be declared as "enzymes"; and

(2) The dairy ingredients may be declared, in descending order of predominance, by the use of the terms "milkfat and nonfat milk" or "nonfat milk and milkfat", as appropriate.

14. By revising § 133.196, to read as follows:

§ 133.196 Swiss cheese for manufacturing.

Swiss cheese for manufacturing conforms to the definition and standard of identity prescribed for Swiss cheese by § 133.195, except that the holes, or eyes, have not developed throughout the entire cheese, and the provisions of paragraph (b)(3)(v) of that section do not apply; however, the labeling requirements of paragraph (d) of that section do apply.

Interested persons may, on or before November 27, 1978, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of

SEP 19 78

comments, and shall be identified with the hearing clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order. A copy of the regulatory analysis assessment supporting this determination is on file with the hearing clerk, Food and Drug Administration.

Dated: September 8, 1978.

JOSEPH P. HILE,
Associate Commissioner for Regulatory Affairs.

NOTE.—Incorporation by reference provisions approved by the Director of the Office of the Federal Register on March 11, 1976. Material incorporated is on file in the FEDERAL REGISTER library.

AGENCY: Department of Labor.

ACTION: Final rules.

SUMMARY: These final rules revise the regulations contained in Part 801, Establishment and Operation of the Board, and Part 802, Rules of Practice and Procedure, to reflect changes in definitions and requirements of these parts and to reflect the Benefits Review Board's current review authority in view of enactment of the Black Lung Benefits Reform Act of 1977 and the Black Lung Benefits Revenue Act of 1977.

EFFECTIVE DATE: This amendment takes effect October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

David Gerson, Senior Board Attorney, Benefits Review Board, U.S. Department of Labor, 1111 20th Street NW., Washington, D.C. 20036, telephone 202-653-5106.

SUPPLEMENTARY INFORMATION: These amended regulations are issued pursuant to Secretary's Order No. 38-72 and are applicable to all appeals from decisions or orders with respect to claims under (1) the Longshoremen's and Harbor Workers' Compensation Act (33 U.S.C. 901 et seq.), (2) the Defense Base Act (42 U.S.C. 1651 et seq.), (3) the District of Columbia Workmen's Compensation Act (36 D.C. Code 501 et seq.), (4) the Outer Continental Shelf Lands Act (43 U.S.C. 1331), (5) the Nonappropriated Fund Instrumentalities Act (5 U.S.C. 8171 et seq.), and (6) title IV, section 415 and part C of the Federal Mine Safety and Health Act of 1977 (Pub. L. 95-164, 91 Stat. 1290) (formerly the Federal Coal Mine Health and Safety Act, hereinafter, FCMHSA, of 1969) as amended by the Black Lung Benefits Reform Act of 1977 (92 Stat. 95), and the Black Lung Benefits Revenue Act of 1977 (92 Stat. 11).

Inasmuch as the revised regulations contained herein consist of rules of practice and procedure, the relevant provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, opportunity for public participation and delay in effective date are inapplicable. However, to afford interested persons adequate notice, the effective date is delayed until October 19, 1978.

The revisions of parts 801 and 802 clarify the requirements of particular sections, add provisions to fill gaps in the former rules, and establish additional procedures which have developed informally since these parts were originally promulgated. Additionally, changes have been made to reflect the Benefits Review Board's authority in black lung benefits appeals. The major changes concern the filing of notices of appeal with the Board, provisions for cross-appeals and protective appeals, fee request requirements, motion requirements including motion for reconsideration, computation of time periods, and relaxation of rules for unrepresented parties. Specifically, the changes in part 801 and part 802 are, among others, as follows:

1. Sections 801.2(a)(10) and 802.201(a) have been clarified to confirm the standing of the Secretary in appeals before the Board.

2. The prohibition in § 802.201(a) with respect to the adjudication of claims filed under the Federal Coal Mine Health and Safety Act prior to July 1, 1973, has been deleted to conform to provisions of section 15 of the Black Lung Benefits Reform Act of 1977.

3. The language of paragraphs (a) and (b) of § 802.203 has been amplified to make clear that fees for services may be approved only where the pursuit of an appeal or a defense is successful. Additionally, new paragraphs (c), (d), and (e) of this section have been added specifying the contents of fee applications, and a new paragraph (f) has been added which prohibits contracts pertaining to fees.

4. Section 802.204 has been amended so as to require that all notices of appeal be filed with the Benefits Review Board rather than the deputy commissioner. This change, it is expected, will reduce the overall appeal time by permitting the Board to immediately process appeals without waiting for the deputy commissioner to forward the notice of appeal and the record in the case. Petitioners are required to send a copy of the notice of appeal to the deputy commissioner.

5. Paragraph (a) of § 802.205 adds new provisions for cross-appeals and protective appeals, and paragraph (b) of that section provides timeframes for such cross-appeals and protective appeals. Paragraph (c) has been modified to accommodate cross-appeals and protective appeals.

6. A new § 802.205A has been added. This section provides that a timely motion to reconsider renders an appeal premature and subject to dismissal. Under this new section, appeal time will begin anew upon action by the administrative law judge on a request for reconsideration and the filing of a new notice of appeal. This new section clears up procedural problems which have arisen when an administrative law judge's decision has been followed both by a motion to reconsider that decision and an appeal to the Board.

7. A new § 802.218 sets forth requirements for the filing of motions generally and responses thereto.

8. A new § 802.219 provides procedural rules and requirements when parties are not represented by counsel.

9. Additional provisions establish office hours for the submission of documents and for public inspection of records (§ 801.304), provide the manner in which the date of mailing of a notice of appeal is established (§ 802.206(b)), provide for more detailed information to be set forth in a notice of appeal (§ 802.207), clarify who may intervene (§ 802.213), and specify the manner of service and the form of papers submitted to the Board (§ 802.215).

10. Changes in § 802.216 relating to the waiver of time limitations have been made so as, among other things, to limit the number of enlargements in ordinary cases to one extension per party.

11. A new § 802.220 specifies the manner in which time periods are computed.

12. Section 802.401 clarifies that the Board may, but is not compelled to, grant a petitioner's motion to dismiss, and that the granting of such motion shall be with prejudice.

13. Sections 802.304, 802.305, 802.307, 802.308 clarify and modify procedures relating to oral argument.

14. Paragraph (b) has been added to § 802.217 providing for show cause orders when a petition for review has not been timely submitted, a new § 802.404(b) provides for per curiam decisions, and a new § 802.303(c) allows the Board to advance an appeal on the docket without waiting for a request by a party.

Accordingly, pursuant to 5 U.S.C. 301, Reorganization Plan No. 6 of 1950, 15 FR 3174, 33 U.S.C. 901 et seq., 30 U.S.C. 901 et seq., part 801 and part 802 of title 20 of the Code of Federal Regulations, as amended to date, are hereby revised and read as set forth below.

Signed this 25th day of August 1978 at Washington, D.C.

SAMUEL J. SMITH,
Chairman, Benefits Review Board.
JULIUS MILLER,
Member, Benefits Review Board.
ISMENE M. KALARIS,
Member, Benefits Review Board.

Approved this 11th day of September 1978 at Washington, D.C.

ROBERT J. BROWN,
Under Secretary of Labor.

INTRODUCTORY

§ 801.1 Purpose and scope of this part.

This part 801 describes the establishment and the organizational structure of the Benefits Review Board of the Department of Labor, sets forth the general rules applicable to operation of the Board, and defines terms used in this chapter.

§ 801.2 Definitions and use of terms.

(a) For purposes of this chapter, except where the content clearly indicates otherwise, the following definitions apply:

(1) "Acts" means the several Acts listed in §§ 801.102 and 802.101 of this chapter, as amended and extended, unless otherwise specified.

(2) "Board" means the Benefits Review Board established by section 21 of the LHWCA (33 U.S.C. 921) as described in § 801.101, and as provided in this part and Secretary of Labor's Order No. 38-72 (38 FR 90).

(3) "Chairman" or "Chairman of the Board" means Chairman of the Benefits Review Board.

(4) "Secretary" means the Secretary of Labor.

(5) "Department" means the Department of Labor.

(6) "Judge" means an administrative law judge appointed as provided in 5 U.S.C. 3105 and subpart B of 5 C.F.R. part 930 (see 37 FR 16787), who is qualified to preside at hearings under 5 U.S.C. 557 and is empowered by the Secretary to conduct formal hearings whenever necessary in respect of any claim for benefits or compensation arising under the Acts. The term also includes a hearing officer appointed pursuant to Pub. L. 94-504 who is authorized to conduct formal hearings and adjudicate claims for benefits under title IV of the Federal Mine Safety and Health Act, as amended; except that a person appointed pursuant to Pub. L. 94-504 shall not be considered an administrative law judge for any period after March 1, 1979.

(7) "Chief Administrative Law Judge" means the Chief Administrative Law Judge of the Department of Labor.

(8) "Director" means the Director of the Office of Workers' Compensation Programs of the Department of Labor (hereinafter OWCP).

(9) "Deputy commissioner" means a person appointed as provided in sections 39 and 40 of the LHWCA or his designee, authorized by the Director to make decisions and orders in respect to claims arising under the Acts.

(10) "Party" or "Party in Interest" means the Secretary or his designee and any person or business entity directly affected by the decision or order from which an appeal to the Board is taken.

(11) "Day" means calendar day.

(b) The definitions contained in this part shall not be considered to derogate from the definitions of terms in the respective Acts.

(c) The definitions pertaining to the Acts contained in the several parts of chapter VI of this title 20 shall be applicable to this chapter as is appropriate.

§ 801.3 Applicability of this part to 20 CFR Part 802.

Part 802 of title 20, Code of Federal Regulations, contains the rules of practice and procedure of the Board. This part 801, including the definitions and usages contained in § 801.2, is applicable to part 802 of this chapter as appropriate.

ESTABLISHMENT AND AUTHORITY OF THE BOARD

§ 801.101 Establishment.

By Pub. L. 92-576, 86 Stat. 1251, in an amendment made to section 21 of the Longshoremen's and Harbor Workers' Compensation Act (33 U.S.C. 921), there was established effective November 26, 1972, a Benefits Review Board, which is composed of members appointed by the Secretary of Labor.

§ 801.102 Review authority.

The Board is authorized, as provided in 33 U.S.C. 921(b), as amended, to hear and determine appeals raising a substantial question of law or fact taken by any party in interest from decisions or orders with respect to claims for compensation or benefits arising under the following Acts, as amended and extended:

(1) The Longshoremen's and Harbor Workers' Compensation Act (LHWCA), 33 U.S.C. 901 et seq.;

(2) The Defense Base Act (DBA), 42 U.S.C. 1651 et seq.;

(3) The District of Columbia Workmen's Compensation Act (DCWCA), 36 D.C. Code 501 et seq.;

(4) The Outer Continental Shelf Lands Act (OCSLA), 43 U.S.C. 1331 et seq.;

(5) The Nonappropriated Fund Instrumentalities Act (NFIA), 5 U.S.C. 8171 et seq.;

(6) Title IV, Section 415 and Part C of the Federal Mine safety and Health Act of 1977 (Pub. L. 95-164, 91 Stat. 1290) (formerly the FCMHSA of 1969) as amended by the Black Lung Benefits Reform Act of 1977 (92 Stat. 95), and the Black Lung Benefits Revenue Act of 1977, Pub. L. 95-227, 92 Stat. 11.

§ 801.103 Organizational placement.

As prescribed by the statute, the functions of the Benefits Review Board are quasi-judicial in nature and involve review of decisions made in the course of the administration of the above statutes by the Employment Standards Administration in the Department of Labor. It is accordingly found appropriate for organizational purposes to place the Board in the Office of the Under Secretary and it is hereby established in that Office,

which shall be responsible for providing necessary funds, personnel, supplies, equipment, and records services

him or her. Notice of any objection which a party may have to any Board member who will participate in the

insurance carrier, and specify the nature and extent of the injury.

Subpart B—Prereview Procedures

which shall be responsible for providing necessary funds, personnel, supplies, equipment, and records services for the Board.

§ 801.104 Operational rules.

The Under Secretary may promulgate such rules and regulations as may be necessary or appropriate for effective operation of the Benefits Review Board as an independent quasi-judicial body in accordance with the provisions of the statute.

MEMBERS OF THE BOARD

§ 801.201 Composition of the Board.

(a) The Board is composed of three members appointed by the Secretary from among individuals who are especially qualified to serve thereon.

(b) The member designated by the Secretary as Chairman of the Board shall serve as chief administrative officer of the Board.

(c) The two remaining members shall be the associate members of the Board.

(d) All members of the Board shall serve indefinite terms to be determined in the discretion of the Secretary.

§ 801.202 Interim appointments.

(a) *Acting Chairman.* In the event that the Chairman of the Board is temporarily unavailable to perform his or her duties as prescribed in this chapter VII, he, she, or the Board shall designate one associate member to serve as Acting Chairman for the duration of the Chairman's absence.

(b) *Temporary members.* In the event that a member of the Board is temporarily unable to carry out his or her responsibilities because of disqualification, illness, or for any other reason, the Under Secretary of Labor may, in his or her discretion, appoint a qualified individual to serve in the place of such member for the duration of that member's inability to serve.

§ 801.203 Disqualification of Board members.

(a) During the period in which the Chairman or the other members serve on the Board, they shall not consider any matter in which they were involved prior to such period nor shall they be involved, other than as Board members, in any matter being considered by the Board. After completion of their service on the Board, they shall not become involved in any matter which had been considered by them as Board members.

(b) No Board member shall conduct or participate in any proceeding in a case in which he or she is prejudiced or partial with respect to any party, or where he or she has any interest in the matter pending for decision before him or her. Notice of any objection which a party may have to any Board member who will participate in the proceeding shall be made by such party at the earliest opportunity. The Board member shall consider such objection and shall, in his or her discretion, either proceed with the case or withdraw.

ACTION BY THE BOARD

§ 801.301 Quorum; votes.

For the purpose of carrying out its functions under the Acts, two members of the Board shall constitute a quorum, and official action can be taken only on the concurring vote of at least two members.

§ 801.302 Procedural rules.

Procedural rules for performance by the Board of its review functions and for insuring an adequate record for any judicial review of its orders, and such amendments to the rules as may be necessary from time to time, shall be promulgated by the Benefits Review Board with the approval of the Under Secretary. Such rules shall incorporate and implement the procedural requirements of section 21(b) of the Longshoremen's and Harbor Workers' Compensation Act.

§ 801.303 Location of Board's proceedings.

The Board shall hold its proceedings in Washington, D.C., unless for good cause the Board orders that proceedings in a particular matter be held in another location.

§ 801.304 Business hours.

The office of the Clerk of the Board at Washington, D.C., shall be open from 9 a.m. to 5:30 p.m. on all days, except Saturdays, Sundays, and legal holidays, for the purpose of receiving notices of appeal, petitions for review, other pleadings, motions, and other papers.

REPRESENTATION

§ 801.401 Representation before the Board.

On any issues requiring representation of the Secretary, the Director, Office of Workers' Compensation Programs, a deputy commissioner, or an administrative law judge before the Board, such representation shall be provided by attorneys designated by the Solicitor of Labor. Representation of all other persons before the Board shall be as provided by the rules of practice and procedure promulgated under § 801.302 (see part 802 of this chapter).

§ 801.402 Representation of Board in court proceedings.

Except in proceedings in the Supreme Court of the United States, any representation of the Benefits Review Board in court proceedings shall be by attorneys designated by the Solicitor of Labor.

PART 802—RULES OF PRACTICE AND PROCEDURE

Subpart A—General Provisions

INTRODUCTORY

Sec.
802.101 Purpose and scope of this part.
802.102 Applicability of part 801 of this chapter.
802.103 Powers of the Board.
802.104 Consolidation; severance.
802.105 Stay of payment pending appeal.

Subpart B—Prereview Procedures

COMMENCING APPEAL: PARTIES

802.201 Who may file an appeal.
802.202 Appearances, attorney, legal counsel.
802.203 Fees for services.

802.204 Place for filing notice of appeal.
802.205 Time for filing.
802.205A Effect of motion for reconsideration on time for appeal.
802.206 When a notice of appeal is considered to have been filed in the office of the Clerk of the Board.
802.207 Contents of notice of appeal.
802.208 Transmittal of record to the Board.

INITIAL PROCESSING

802.209 Acknowledgment of notice of appeal.
802.210 Petition for review.
802.211 Response to petition for review.
802.212 Reply briefs.
802.213 Intervention.
802.214 Additional briefs.
802.215 Service and form of papers.
802.216 Waiver of time limitations for filing.
802.217 Failure to file papers; order to show cause.
802.218 Motions to the Board.
802.219 Party not represented by an attorney; informal procedure.
802.220 Computation of time.

Subpart C—Procedure for Review

ACTION BY THE BOARD

802.301 Scope of review.
802.302 Docketing of appeals.
802.303 Decision; no oral argument.

ORAL ARUGMENT BEFORE THE BOARD

802.304 Purpose of oral argument.
802.305 Request for oral argument.
802.306 Action on request for oral argument.
802.307 Notice of oral argument.
802.308 Conduct of oral argument.
802.309 Absence of parties.

Subpart D—Completion of Board Review

DISMISSALS

802.401 Dismissal by application of party.
802.402 Dismissal by abandonment.

DECISION OF THE BOARD

802.403 Issuance of decisions; service.
802.404 Scope and content of Board decisions.
802.405 Remand.
802.406 Finality of Board decisions.

RECONSIDERATION

802.407 Reconsideration of Board decisions—generally.
802.408 Notice of request for reconsideration.
802.409 Grant or denial of request.

JUDICIAL REVIEW

802.410 Judicial review of Board decisions.
802.411 Certification of record for judicial review.

AUTHORITY: 5 U.S.C. 301, Reorganization Plan No. 6 of 1950, 15 FR 3174, 33 U.S.C. 901 et seq., 30 U.S.C. 901 et seq.

Subpart A—General Provisions

INTRODUCTORY

§ 802.101 Purpose and scope of this part.

(a) The purpose of part 802 is to establish the rules of practice and procedure governing the operation of the Benefits Review Board.

(b) Except as otherwise provided, the rules promulgated in this part apply to all appeals taken by any party from decisions or orders with respect to claims for compensation or benefits under the following Acts:

(1) The Longshoremen's and Harbor Workers' Compensation Act (LHWCA), 33 U.S.C. 901 et seq.;

(2) The Defense Base Act (DBA), 42 U.S.C. 1651 et seq.;

(3) The District of Columbia Workmen's Compensation Act (DCWCA), 36 D.C. Code 501 et seq.;

(4) The Outer Continental Shelf Lands Act (OCSLA), 43 U.S.C. 1331 et seq.;

(5) The Nonappropriated Fund Instrumentalities Act (NFIA), 5 U.S.C. 8171 et seq.;

(6) Title IV, section 415 and part C of the Federal Mine Safety and health Act of 1977 (Pub. L. 95-164, 91 Stat. 1290) (formerly the FCMHSA of 1969), as amended by the Black Lung Benefits Reform Act of 1977 (92 Stat. 95) and the Black Lung Benefits Revenue Act of 1977 (92 Stat. 11).

§ 802.102 Applicability of part 801 of this chapter.

Part 801 of this chapter VII sets forth rules of general applicability covering the composition, authority, and operation of the Benefits Review Board and definitions applicable to this chapter. The provisions of part 801 of this chapter are fully applicable to this part 802.

§ 802.103 Powers of the Board.

(a) *Conduct of proceedings.* Pursuant to section 27(a) of the LHWCA, the Board shall have power to preserve and enforce order during any proceedings for determination or adjudication of entitlement to compensation or benefits or for liability for payment thereof, and to do all things in accordance with law which may be necessary to enable the Board to effectively discharge its duties.

(b) *Contumacy.* Pursuant to section 27(b) of the LHWCA, if any person in proceedings before the Board disobeys or resists any lawful order or process, or misbehaves during a hearing or so near the place thereof as to obstruct the same, the Board shall certify the facts to the Federal district court having jurisdiction in the place in which it is sitting (or to the U.S. District Court for the District of Columbia if it is sitting in the District) which shall thereupon in a summary manner hear the evidence as to the acts complained of, and, if the evidence so warrants, punish such person in the same manner and to the same extent as for a contempt committed before the court, or commit such person upon the same conditions as if the doing of the forbidden act had occurred with reference to the process or in the presence of the court.

§ 802.104 Consolidation; severance.

(a) Cases may be consolidated for purposes of an appeal upon the motion of any party or upon the Board's own motion where there exist common parties, common questions of law or fact or both, or in such other circumstances as justice and the administration of the Acts require.

(b) Upon its own motion, or upon motion of any party, the Board may, for good cause, order any proceeding severed with respect to some or all issues or parties.

§ 802.105 Stay of payment pending appeal.

As provided in section 14(f) of the LHWCA and sections 415 and 422 of the Black Lung Benefits Act, the payment of the amounts required by an award of compensation or benefits shall not be stayed or in any way delayed pending final decision in any proceeding before the Board unless so ordered by the Board. No stay shall be issued unless irreparable injury would otherwise ensue to the employer, coal mine operator or insurance carrier. Any order of the Board permitting any stay shall contain a specific finding, based upon evidence submittted to the Board and identified by reference thereto, that irreparable injury would result to such employer, operator or insurance carrier, and specify the nature and extent of the injury.

Subpart B—Prereview Procedures

COMMENCING APPEAL: PARTIES

§ 802.201 Who may file an appeal.

(a) *A party.* Any party adversely affected by a decision or order issued pursuant to one of the Acts may appeal that decision or order to the Board by filing a notice of appeal pursuant to this subpart. (See § 802.205 (b) and (c) for exceptions to this general rule.) A party who files a notice of appeal shall be deemed the petitioner.

(b) *Representative parties.* In the event that a party has not attained the age of 18, is not mentally competent, or is physically unable to file and pursue or defend an appeal, the Board may permit any legally appointed guardian, committee, or other appropriate representative to file and pursue or defend the appeal, or it may in its discretion appoint such representative for purposes of the appeal. The Board may require any legally appointed representative to submit evidence of that person's authority.

§ 802.202 Appearances, attorneys, legal counsel.

(a) Any party or intervenor or any representative duly authorized pursuant to § 802.201(b) may appear before and/or submit written argument to the Board by attorney or any other duly authorized person, including any representative of an employee organization. For each instance in which appearance before the Board is made by some person other than the party or his legal guardian, committee, or representative, there shall be filed with the Chairman of the Board a statement in writing, signed by the party to be represented, authorizing such assistance or representation.

(b) Any individual petitioner or respondent or his duly authorized representative pursuant to § 802.201(b) or an officer of any corporate party or a member of any partnership or joint venture which is a party may participate in the appeal on his or her own behalf, or on behalf of such business entity.

§ 802.203 Fees for services.

(a) No fee for services rendered on behalf of a claimant in the successful pursuit or successful defense of an appeal shall be valid unless approved pursuant to 33 U.S.C. 928, as amended.

(b) All fees for services rendered in the successful pursuit or successful defense of an appeal on behalf of a claimant shall be subject to the provisions and prohibitions contained in 33 U.S.C. 928, as amended.

(c) A fee application shall be complete in all respects, containing all of the following specific information:

appeal by filing a notice of appeal within 14 days of the date on which the first notice of appeal was filed, or within the time prescribed by para-

ministrative law judge or deputy commissioner is filed, any appeal to the Board, whether filed prior to or subse-

(8) The name and address of the attorney or other person, if any, who is representing the petitioner.

§ 802.211 Response to petition for review.

Within 30 days after the receipt of a petition for review, each party upon

or prior to the date on which the paper is due.

(c) Any request for an enlargement

(c) A fee application shall be complete in all respects, containing all of the following specific information:

(1) A complete statement of the extent and character of the necessary work done;

(2) The professional status of each person who performed services on behalf of the claimant (e.g., attorney; law clerk; or paralegal);

(3) The number of hours devoted by each person who performed services on behalf of the claimant and the dates on which such services were performed in each category of work;

(4) The normal billing rate for each person who performed services on behalf of the claimant. This rate shall be based on what is reasonable and customary in the area where the services were rendered for a person of that particular professional status.

(d) Any fee approved shall be reasonably commensurate with the necessary work done and shall take into account the quality of the representation, the complexity of the legal issues involved, the amount of benefits awarded, and when the fee is to be assessed against the claimant, shall also take into account the financial circumstances of the claimant. A fee shall not necessarily be computed by multiplying time devoted to work by an hourly rate.

(e) No contract pertaining to the amount of a fee shall be recognized.

(f) A fee application shall be served on all other parties. Any party may respond to the application within 10 days of his receipt of the application. The response shall be filed with the Board and served on all other parties.

NOTICE OF APPEAL

§ 802.204 Place for filing notice of appeal.

Any notice of appeal shall be sent by mail or otherwise presented to the Clerk of the Board in Washington, D.C. A copy shall be served on the deputy commissioner who filed the decision or order being appealed and on all other parties by the party who files a notice of appeal. Proof of service of the notice of appeal on the deputy commissioner and other parties shall be included with the notice of appeal.

§ 802.205 Time for filing.

(a) A notice of appeal, other than a cross-appeal or a protective appeal, must be filed within 30 days from the date upon which a decision or order has been filed in the office of the deputy commissioner pursuant to section 19(e) of the LHWCA or in such other office as may be established in the future (see §§ 702.349 and 725.478 of this title).

(b) (1) If a timely notice of appeal is filed by a party, any other party may initiate a cross-apppeal or protective appeal by filing a notice of appeal within 14 days of the date on which the first notice of appeal was filed, or within the time prescribed by paragraph (a) of this section, whichever period last expires.

(2) When a decision or order is favorable to a party (i.e., the prevailing party), but contains findings of fact or conclusions of law, or both, which are adverse to him or her, the prevailing party may become potentially aggrieved when the other party, who is in fact aggrieved, files a notice of appeal pursuant to paragraph (a) of this section. Therefore, the prevailing party may file an appeal pursuant to paragraph (b) of this section to protect its right to challenge the adverse findings of fact or conclusions of law, or both, in the same proceeding.

(c) Failure to file within the period specified in paragraph (a) or (b) of this section (whichever is applicable) shall foreclose all rights to review by the Board with respect to the case or matter in question. Any untimely appeal will be summarily dismissed by the Board for lack of jurisdiction.

§ 802.205A. Effect of motion for reconsideration on time for appeal.

(a) A timely motion for reconsideration of a decision or order of an administrative law judge or deputy commissioner shall suspend the running of the time for filing a notice of appeal.

(b) (1) In a case involving a claim filed under the Longshoremen's and Harbor Workers' Compensation Act or its extensions (see § 802.101(b)(1)–(5)), a timely motion for reconsideration for purposes of paragraph (a) of this section is one which is filed not later than 10 days from the date the decision or order was filed in the office of the deputy commissioner.

(2) In a case involving a claim filed under title IV of the Federal Mine Safety and Health Act, as amended (see § 802.101(b)(6)), a timely motion for reconsideration for purposes of paragraph (a) of this section is one which is filed not later than 30 days from the date the decision or order was served on all parties by the administrative law judge and considered filed in the office of the deputy commissioner (see §§ 725.478 and 725.479 (b), (c) of this title).

(c) If a motion for reconsideration is granted, the full time for filing an appeal commences on the date the subsequent decision or order on reconsideration is filed as provided in § 802.205.

(d) If a motion for reconsideration is denied, the full time for filing an appeal commences on the date the order denying reconsideration is filed as provided in § 802.205.

(e) If a timely motion for reconsideration of a decision or order of an administrative law judge or deputy commissioner is filed, any appeal to the Board, whether filed prior to or subsequent to the filing of the timely motion for reconsideration, shall be dismissed as premature. Following final action by the administrative law judge or deputy commissioner pursuant to either paragraph (c) or (d) of this section, a new notice of appeal shall be filed with the Clerk of the Board by any party who wishes to appeal.

§ 802.206 When a notice of appeal is considered to have been filed in the office of the Clerk of the Board.

(a) *Date of receipt.* (1) Except as otherwise provided in this section, a notice of appeal is considered to have been filed only as of the date it is received in the office of the Clerk of the Board.

(2) Notices of appeal submitted to any other agency or subdivision of the Department of Labor or of the U.S. Government or any State government shall be promptly forwarded to the office of the Clerk of the Board. The notice shall be considered filed with the Clerk of the Board as of the date it was received by the other governmental unit if the Board finds that it is in the interest of justice to do so.

(b) *Date of mailing.* If the notice of appeal is sent by mail and the fixing of the date of delivery as the date of filing would result in a loss or impairment of appeal rights, it will be considered to have been filed as of the date of mailing. The date appearing on the postmark (when available and legible) shall be prima facie evidence of the date of mailing. If there is no postmark or it is not legible, other evidence, such as, but not limited to, certified mail receipts, certificate of service and affidavits, may be used to establish the mailing date.

§ 802.207 Contents of notice of appeal.

(a) A notice of appeal shall contain the following information:

(1) The full name and address of the petitioner;

(2) The full name of the injured, disabled, or deceased employee;

(3) The full names and addresses of all other parties, including, among others, beneficiaries, employers, coal mine operators, and insurance carriers where appropriate;

(4) The case file number which appears on the decision or order of the administrative law judge;

(5) The claimant's OWCP file number;

(6) The date of filing the decision or order being appealed;

(7) Whether a motion for reconsideration of the decision or order of the administrative law judge has been filed by any party (see § 802.209); and

(8) The name and address of the attorney or other person, if any, who is representing the petitioner.

(b) Paragraph (a) of this section notwithstanding, any written communication which reasonably permits identification of the decision from which an appeal is sought and the parties affected or aggrieved thereby, shall be sufficient notice for purposes of § 802.205.

(c) In the event that identification of the case is not possible from the information submitted, the Clerk of the Board shall so notify the petitioner and shall give the petitioner a reasonable time to produce sufficient information to permit identification of the case. For purposes of § 802.205, the notice shall be deemed to have been filed as of the date the insufficient information was received.

§ 802.208 Transmittal of record to the Board.

Upon receipt of a copy of the notice of appeal or upon request of the Board, the deputy commissioner or other office having custody of such record shall immediately forward to the Clerk of the Board the official record of the case, which record includes the transcript or transcripts of all formal proceedings with exhibits, all decisions and orders rendered in the case.

INITIAL PROCESSING

§ 802.209 Acknowledgement of notice of appeal.

Upon receipt by the Board of a notice of appeal, the Clerk of the Board shall as expeditiously as possible notify the petitioner and all other parties and the Solicitor of Labor, in writing, that a notice of appeal has been filed.

§ 802.210 Petition for review.

(a) Within 30 days after the receipt of an acknowledgment of a notice of appeal issued pursuant to § 802.209, the petitioner shall submit a petition for review to the Board and shall serve copies of it, together with accompanying documents, on all parties and the Solicitor of Labor. A petition for review shall contain a statement indicating the specific contentions of the petitioner and describing with particularity the substantial questions of law or fact to be raised by the appeal. Failure to submit a petition for review within the 30-day period described in this section may, in the discretion of the Board, cause the appeal to be deemed abandoned (see § 802.402).

(b) Each petition for review shall be accompanied by supporting brief, memorandum of law, or other statement.

§ 802.211 Response to petition for review.

Within 30 days after the receipt of a petition for review, each party upon whom it was served may submit to the Board a brief, memorandum, or other statement in response to it.

§ 802.212 Reply briefs.

Within 20 days after the receipt of a brief, memorandum, or statement submitted in response to the petition for review pursuant to § 802.211, any party upon whom it was served may file a brief, memorandum, or other statement in reply to it.

§ 802.213 Intervention.

(a) If a person or legal entity shows in a written petition to intervene that his, her, or its rights are affected by any proceeding before the Board, the Board may permit that person or legal entity to intervene in the proceeding and to participate within limits prescribed by the Board.

(b) The petition to intervene shall state precisely (1) the rights affected, and (2) the nature of any argument he, she, or it intends to make.

§ 802.214 Additional briefs.

Additional briefs may be filed or ordered in the discretion of the Board and shall be submitted within time limits specified by the Board.

§ 802.215 Service and form of papers.

(a) All papers filed with the Board, including notices of appeal, petitions for review, briefs and motions, shall be secured at the top and shall have a caption, title, signature of the party (or his attorney or other representative), date of signature, and certificate of service.

(b) For each paper filed with the Board, the original and three legible copies shall be submitted.

(c) A copy of any paper filed with the Board shall be served on each party and the Solicitor of Labor, by the party submitting the paper.

(d) Any paper required to be given or served to or by the Board or any party shall be served by mail or otherwise presented. All such papers served shall be accompanied by a certificate of service.

§ 802.216 Waiver of time limitations for filing.

(a) The time periods specified for submitting papers described in this part, except that for submitting a notice of appeal, may be enlarged for a reasonable period when in the judgment of the Board an enlargement is warranted.

(b) Any request for an enlargement of time pursuant to this section shall be directed to the Clerk of the Board and must be received by the Clerk on or prior to the date on which the paper is due.

(c) Any request for an enlargement of time pursuant to this section shall be submitted in writing in the form of a motion, shall specify the reasons for the request, and shall specify the date to which an enlargement of time is requested.

(d) Absent exceptional circumstances, no more than one enlargement of time shall be granted to each party.

(e) Absent a timely request for an enlargement of time pursuant to this section and the Board's granting that request, any paper submitted to the Board outside the applicable time period specified in this part shall be accompanied by a separate motion stating the reasons therefore and requesting that the Board accept the paper although filed out of time.

(f) When a paper filed out of time is accepted by the Board, the time for filing a response shall begin to run from the date of a party's receipt of the Board's order disposing of the motion referred to in paragraph (e) of this section.

§ 802.217 Failure to file papers; order to show cause.

(a) Failure to file any paper when due pursuant to this part, may, in the discretion of the Board, constitute a waiver of the right to further participation in the proceedings.

(b) When a petition for review and brief has not been submitted to the Board within the time limitation prescribed by § 802.210, or within an enlarged time limitation granted pursuant to § 802.216, the petitioner shall be ordered to show cause to the Board why his or her appeal should not be dismissed pursuant to § 802.402.

§ 802.218 Motions to the Board.

(a) An application to the Board for an order shall be by motion in writing. A motion shall state with particularity the grounds therefor and shall set forth the relief or order sought.

(b) A motion shall be a separate document and shall not be incorporated in the text of any other paper filed with the Board, except for a statement in support of the motion. If this paragraph is not complied with, the Board will not consider and dispose of the motion.

(c) If there is no objection to a motion in whole or in part by another party to the case, the absence of an objection shall be stated on the motion.

(d) The rules applicable to service and form of papers, § 802.215, shall apply to all motions.

(e) Within 10 days of the receipt of a copy of a motion, a party may file a written response with the Board.

(f) As expeditiously as possible following receipt of a response to a

with any pending case shall refer to the docket number of that case.

V 43 / 182 SEP 1978

(f) As expeditiously as possible following receipt of a response to a motion or expiration of the response time provided in paragraph (e) of this section, the Board shall issue a dispositive order.

§ 802.219 Party not represented by an attorney: informal procedure.

If a party to an appeal is not represented by an attorney, the Board may prescribe an informal procedure in such case to be followed by such party.

§ 802.220 Computation of time.

(a) In computing any period of time prescribed or allowed by these rules, by direction of the Board, or by any applicable statute which does not provide otherwise, the day from which the designated period of time begins to run shall not be included. The last day of the period so computed shall be included, unless it is a Saturday, Sunday, or legal holiday, in which event the period runs until the end of the next day which is not a Saturday, Sunday, or legal holiday.

(b) Whenever a paper is served on the Board or on any party by mail, paragraph (a) of this section will be deemed complied with if the envelope containing the paper is postmarked within the time period allowed, computed as in paragraph (a) of this section. If there is no postmark, or it is not legible, other evidence, such as, but not limited to, certified mail receipts, certificate of service and affidavits, may be used to establish the mailing date.

(c) A waiver of the time limitations for filing a paper, other than a notice of appeal, may be requested by proper motion filed in accordance with §§ 802.216 and 802.218.

Subpart C—Procedure for Review

Action by the Board

§ 802.301 Scope of review.

The Benefits Review Board is not empowered to engage in a de novo proceeding or unrestricted review of a case brought before it. The Board is authorized to review the findings of fact and conclusions of law on which the decision or order appealed from was based. Such findings of fact and conclusions of law may be set aside only if they are not, in the judgment of the Board, supported by substantial evidence in the record considered as a whole or in accordance with law.

§ 802.302 Docketing of appeals.

(a) *Maintenance of dockets.* A docket of all proceedings shall be maintained by the Board. Each proceeding shall be assigned a number in chronological order upon the date on which a notice of appeal is received, Correspondence or further applications in connection with any pending case shall refer to the docket number of that case.

(b) *Inspection of docket; publication of decision.* The docket of the Board shall be open to public inspection. The Board shall publish its decisions in a form which is readily available for inspection, and shall allow the public to inspect its decisions at the permanent location of the Board.

Oral Argument Before the Board

§ 802.303 Decision; no oral argument.

(a) In the event that no oral argument is ordered pursuant to § 802.306, the Board shall proceed to review the record of the case as expeditiously as possible after all briefs, supporting statement, and other pertinent documents have been received.

(b) Each case shall be considered in the order in which it becomes ready for decision, regardless of docket number, although for good cause shown, upon the filing of a motion to expedite by a party, the Board may advance the order in which a particular case is to be considered.

(c) The Board may advance an appeal on the docket on its own motion if the interests of justice would be served by so doing.

§ 802.304 Purpose of oral argument.

Oral argument may be held by the Board in any case:

(a) When there is a novel issue not previously considered by the Board; or

(b) When in the interests of justice oral argument will serve to assist the Board in carrying out the intent of any of the Acts; or

(c) To resolve conflicting decisions by administrative law judges on a substantial question of law.

§ 802.305 Request for oral argument.

(a) During the pendency of an appeal, but not later than the expiration of 20 days from the date of receipt of the response brief provided by § 802.211, any party may request oral argument. The Board on its own motion may order oral argument at any time.

(b) A request for oral argument shall be submitted in the form of a motion, specifying the issues to be argued and justifying the need for oral argument (see § 802.218).

(c) The party requesting oral argument shall set forth in the motion suggested dates and alternate cities convenient to the parties when and where they would be available for oral argument.

§ 802.306 Action on request for oral argument.

As expeditiously as possible after the date upon which a request for oral argument is received, the Board shall determine whether the request shall be granted or denied.

§ 802.307 Notice of oral argument.

(a) In cases where a request for oral argument has been approved or where oral argument has been ordered, the Board shall give all parties a minimum of 30 days' notice, in writing, by mail, of the scope of argument and of the time when, and place where, oral argument will be held.

(b) Once oral argument has been scheduled by the Board, continuances shall not be granted except for good cause shown by a party, such as in cases of extreme hardship or where attendance of a party or his or her representative is mandated at a previously scheduled judicial proceeding. Unless the ground for the request arises thereafter, requests for continuances must be received by the Board at least 15 days before the scheduled date of oral argument, must be served upon the other parties and must specify good cause why the requesting party cannot be available for oral argument.

(c) The Board may cancel or reschedule oral argument on its own motion at any time.

§ 802.308 Conduct of oral argument.

(a) Oral argument shall be held in Washington, D.C., unless the Board orders otherwise, and shall be conducted at a time reasonably convenient to the parties. For good cause shown, the Chairman or Acting Chairman may, in his or her discretion, postpone an oral argument to a more convenient time.

(b) The proceedings shall be conducted under the supervision of the Chairman or Acting Chairman, who shall regulate all procedural matters arising during the course of the argument.

(c) Within the discretion of the Board, oral argument shall be open to the public and may be presented by any party, representative, or duly authorized attorney. Presentation of oral argument may be denied by the Board to a party who has not significantly participated in the appeal prior to oral argument.

(d) The Board shall determine the scope of any oral argument presented and shall so inform the parties in its notice scheduling oral argument pursuant to § 802.307.

(e) The Board in its discretion shall determine the amount of time allotted to each party for argument and rebuttal.

§ 802.309 Absence of parties.

The unexcused absence of a party or his or her authorized representative at the time and place set for argument shall not be the occasion for delay of

the proceeding. In such event, argument on behalf ot other parties may be heard and the case shall be regarded as submitted on the record by the absent party. The Chairman or Acting Chairman may, with the consent of the parties present, cancel the oral argument and treat the appeal as submitted on the written record.

Subpart D—Completion of Board Review

Dismissals

§ 802.401 Dismissal by application of party.

(a) At any time prior to the issuance of a decision by the Board, the petitioner may move that the appeal be dismissed. If granted, such motion for dismissal shall be granted with prejudice to the petitioner.

(b) At any time prior to the issuance of a decision by the Board, any party or representative may move that the appeal be dismissed.

§ 802.402 Dismissal by abandonment.

(a) Upon motion by any party or representative or upon the Board's own motion, an appeal may be dismissed upon its abandonment by the party or parties who filed the appeal. Within the discretion of the Board, a party may be deemed to have abandoned an appeal if neither the party nor his representative participates significantly in the review proceedings.

(b) An appeal may be dismissed on the death of a party only if the record affirmatively shows that there is no person who wishes to continue the action and whose rights may be prejudiced by dismissal.

Decision of the Board

§ 802.403 Issuance of decisions; service.

(a) The Board shall issue written decisions as expeditiously as possible after the completion of review proceedings before the Board. The transmittal of the decision of the Board shall indicate the availability of judicial review of the decision under section 21(c) of the LHWCA when appropriate.

(b) The original of the decision shall be filed with the Clerk of the Board. A copy of the Board's decision shall be sent by certified mail or otherwise presented to all parties to the appeal and the Director. The record on appeal, together with a transcript of any oral proceedings, any briefs or other papers filed with the Board, and a copy of the decision shall be returned to the appropriate deputy commissioner for filing.

(c) Proof of service of Board decisions shall be certified by the Clerk of the Board or by another employee in the office of the Clerk of the Board who is authorized to certify proof of service.

§ 802.404 Scope and content of Board decisions.

(a) In its decision the Board shall affirm, modify, or set aside the decision or order appealed from, and may remand the case for action or proceedings consistent with the decision of the Board. The consent of the parties shall not be a prerequisite to a remand ordered by the Board.

(b) In appropriate cases, such as where the issues raised on appeal have been thoroughly discussed and disposed of in prior cases by the Board or the courts, or where the findings of fact and conclusions of law are both correct and adequately discussed, the Board in its discretion may issue a brief, summary decision in writing, disposing of the appeal.

(c) In cases which cannot be disposed of as in paragraph (b) of this section, a full, written decision discussing the issues and applicable law shall be issued.

802.405 Remand.

(a) *By the Board.* Where a case is remanded such additional proceedings shall be initiated and such other action shall be taken as is directed by the Board. Upon completion of all action deemed appropriate, a decision in writing shall be issued by the administrative law judge or deputy commissioner to whom the case was remanded as expeditiously as possible which contains findings of fact and conclusions of law, or when so directed by the Board, the case shall be returned to the Board by the administrative law judge with a recommended decision. A copy of the recommended decision shall be mailed by the Board to each party at his or her last known address. When a recommended decision is issued, each party shall be notified of his or her right to file with the Board within 20 days from the date of mailing of the recommended decision, briefs, or other written statements of exceptions and allegations as to applicable fact and law. Upon request of any party made within such 20-day period, a reasonable enlargement of time for filing such briefs or statements may be granted and upon a showing of good cause such period may be extended, as appropriate.

(b) *By a court.* Where a case has been remanded by a court, the Board may proceed in accordance with the court's mandate to issue a decision or it may in turn remand the case to an administrative law judge or deputy commissioner with instructions to take such action as is ordered by the court and any additional necessary action and upon completion thereof to return the case with a recommended decision to the Board for its action.

§ 802.406 Finality of Board decisions.

A decision rendered by the Board pursuant to this subpart shall become final 60 days after the issuance of such decision unless a written petition praying that the order be modified or set aside, pursuant to section 21(c) of the LHWCA, is filed in the appropriate U.S. court of appeals prior to the expiration of the 60-day period herein described, or unless a timely request for reconsideration by the Board has been filed as provided in § 802.407.

Reconsideration

§ 802.407 Reconsideration of Board decisions—generally.

(a) Any party in interest may, within 10 days from the filing of a decision pursuant to § 802.403(b), request reconsideration of such decision.

(b) Failure to file a request for reconsideration shall not be deemed a failure to exhaust administrative remedies.

§ 802.408 Notice of request for reconsideration.

(a) In the event that a party requests reconsideration of a decision or order, he or she shall do so in writing, in the form of a motion, stating the supporting rationale for the request, and include any material pertinent to the request.

(b) The request shall be sent by mail, or otherwise presented, to the Clerk of the Board. Copies shall be served on all other parties.

§ 802.409 Grant or denial of request.

All requests for reconsideration shall be reviewed by the Board and shall be granted or denied in the discretion of the Board.

Judicial Review

§ 802.410 Judicial review of Board decisions.

(a) Within 60 days after a decision by the Board has been filed pursuant to § 802.403(b), any party adversely affected or aggrieved by such decision may file a petition for review with the appropriate U.S. court of appeals pursuant to section 21(c) of the LHWCA.

(b) The Director, OWCP, as designee of the Secretary of Labor responsible for the administration and enforcement of the statutes listed in § 802.101, shall be deemed to be the proper party on behalf of the Secretary of Labor in all review proceedings conducted pursuant to section 21(c) of the LHWCA.

§ 802.411 Certification of record for judicial review.

The record of a case including the record of proceedings before the Board shall be transmitted to the appropriate court pursuant to the rules of such court.

ENVIRONMENTAL PROTECTION AGENCY

ELECTRIC UTILITY STEAM GENERATING UNITS

Proposed Standards of Performance and Announcement of Public Hearing on Proposed Standards

[6560-01]

ENVIRONMENTAL PROTECTION

This proposal sets forth the full, or uniform control alternative and sets forth other alternatives for comment mulgated rule and EPA responses to significant comments, the contents of the docket will serve as the record in

opacity levels higher than 20 percent, while at the same time demonstrating compliance with the particulate costs, energy requirements, and environmental impacts. EPA has concluded that the proposed emission limits chosen cheaper high-sulfur coal if the same control equipment were required for all coals. In such a case, a partial

[6560-01]

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 60]

[FRL 967-1]

STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

Electric Utility Steam Generating Units

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The proposed standards of performance would limit emissions of sulfur dioxide (SO_2), particulate matter, and nitrogen oxides (NO_x) from new, modified, and reconstructed electric utility steam generating units capable of combusting more than 73 megawatts (MW) heat input (250 million Btu/hour) of fossil fuel. A new reference method for determining continuous compliance with SO_2 and NO_x standards is also proposed. The Clean Air Act Amendments of 1977 require EPA to revise the current standards of performance for fossil fuel-fired stationary sources. The intended effect of this proposal is to require new, modified, and reconstructed electric utility steam generating units to use the best demonstrated systems of continuous emission reduction and to satisfy the requirements of the Clean Air Act Amendments of 1977.

The principal issue associated with this proposal is whether electric utility steam generating units firing low-sulfur-content coal should be required to achieve the same percentage reduction in potential SO_2 emissions as those burning higher sulfur content coal. Resolving this question of full versus partial control is difficult because of the significant environmental, energy, and economic implications associated with each alternative. The Administrator has not made a decision on which of the alternatives should be adopted in the final standard and solicits additional data on these impacts before promulgating the final regulation.

The conference report for the Clean Air Act Amendments of 1977 says in pertinent part:

> • • • In establishing a national percent reduction for new fossil fuel-fired sources, the conferees agreed that the Administrator may, in his discretion, set a range of pollutant reduction that reflects varying fuel characteristics. Any departure from the uniform national percentage reduction requirement, however, must be accompanied by a finding that such a departure does not undermine the basic purposes of the House provision and other provisions of the act, such as maximizing the use of locally available fuels.

This proposal sets forth the full, or uniform control alternative and sets forth other alternatives for comment as well. It should be noted that the Clean Air Act provides that new source performance standards apply from the date they are proposed and it would be easier for powerplants that start construction during the proposal period to scale down to partial control than to scale up to full control should the final standard differ from the proposal.

The final decision on the appropriate level of control will be made only after analyses are completed and public comments evaluated. Because the decision will require a careful balancing of environmental, energy, and economic impacts, the Administrator believes that extensive public involvement is essential. Comments on the factual basis for the standards and suggestions on the interpretation of data are actively solicited.

DATES: *Comments.* Comments must be received on or before November 20, 1978.

Public hearing. A separate notice is published in today's FEDERAL REGISTER announcing the time and place of a public hearing on the proposed standards.

ADDRESSES: *Comments.* Comments should be submitted to Jack R. Farmer, Chief, Standards Development Branch (MD-13), Emission Standards and Engineering Division, Environmental Protection Agency, Research Triangle Park, N.C. 27711.

Background information. The background information documents (refer to section on studies) for the proposed standards may be obtained from the U.S. EPA Library (MD-35), Research Triangle Park N.C. 27711, telephone 919-541-2777. In addition, a copy is available for inspection in the Office of Public Affairs in each Regional Office, and in EPA's Central Docket Section in Washington, D.C.

Docket. Docket No. OAQPS-78-1, containing all supporting information used by EPA in developing the proposed standards, is available for public inspection and copying between 8 a.m. and 4 p.m., Monday through Friday, at EPA's Central Docket Section, room 2903B, Waterside Mall, 401 M Street SW., Washington, D.C. 20460.

The docket is an organized and complete file of all the information submitted to or otherwise considered by EPA in the development of this proposed rulemaking. The docketing system is intended to allow members of the public and industries involved to readily identify and locate documents so that they can intelligently and effectively participate in the rulemaking process. Along with the statement of basis and purpose of the promulgated rule and EPA responses to significant comments, the contents of the docket will serve as the record in case of judicial review (section 307(d)(a)).

FOR FURTHER INFORMATION CONTACT:

Don R. Goodwin, Director, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Research Triangle Park, N.C. 27711, telephone 919-541-5271.

SUPPLEMENTARY INFORMATION: Summary of proposed standards; rationale; background; applicability; SO_2 standards; particulate matter standards; NO_x standards; studies; performance testing; and miscellaneous.

Summary of Proposed Standards

APPLICABILITY

The proposed standards would apply to electric utility steam generating units that are capable of firing more than 73 MW (250 million Btu/hour) heat input of fossil fuel and for which construction is commenced after September 18, 1978.

SO_2 EMISSIONS

The proposed SO_2 standards would limit SO_2 emissions to 520 ng/J (1.2 lb/million Btu) heat input for solid fuel (except for 3 days per month) and 340 ng/J (0.80 lb/million Btu) for liquid and gaseous fuel (except for 3 days per month). Also, uncontrolled SO_2 emissions from solid, liquid, and gaseous fuel would be required to be reduced by 85 percent. Compliance with the SO_2 emission limitation and percent reduction would be determined on a 24-hour daily basis. The 85-percent requirement would apply at all times except for 3 days per month, when only a 75-percent SO_2 reduction requirement would apply. The percent reduction requirement would not apply if SO_2 emissions into the atmosphere are less than 86 ng/J (0.20 lb/million Btu) heat input.

The percent reduction would be computed on the basis of overall SO_2 removed by all types of SO_2 and sulfur removal technology including flue gas desulfurization (FGD) systems and fuel pretreatment systems (such as coal cleaning, coal gasification, and coal liquefaction). Sulfur removed by a coal pulverizer or in bottom ash and flyash would also be included in the computation.

PARTICULATE MATTER EMISSIONS

The proposed particulate matter emission standard would limit emissions to 13 ng/J (0.030 lb/million Btu) heat input. The proposed opacity standard would limit the opacity of emissions to 20 percent (6-minute average). If an affected facility exhibits opacity levels higher than 20 percent, while at the same time demonstrating compliance with the particulate matter standard, then a source-specific opacity standard may be established under 40 CFR 60.11(e).

NO_x EMISSIONS

The proposed NO_x emission standards vary according to fuel characteristics as follows:

(1) 210 ng/J (0.50 lb/million Btu) heat input from the combustion of subbituminous coal, shale oil, or any solid, liquid, or gaseous fuel derived from coal.

(2) 260 ng/J (0.60 lb/million Btu) heat input from the combustion of bituminous coal.

In addition, separate standards are being proposed for gaseous and liquid fuels not derived from coal, lignite from certain areas, and coal refuse.

Rationale

SO_2 STANDARDS

Under section 111(a) of the Act, a standard of performance must reflect the degree of emission limitation and percentage reduction achievable through the application of the best technological system of continuous emission reduction taking into consideration cost and any nonair quality health and environmental impacts and energy requirements. In addition, credit is to be given for any cleaning of the fuel, or reduction in pollutant characteristics of the fuel, after mining and prior to combustion.

The 1977 amendments substantially changed the criteria for regulating new powerplants by requiring the application of technological methods of control to minimize SO_2 emissions and to maximize the use of locally available coals. Under the statute, these goals are to be achieved through revision of the standards of performance for new fossil fuel-fired stationary sources to specify (1) an emission limitation and (2) a percentage reduction requirement. According to legislative history accompanying the amendments, the percentage reduction requirement should be applied uniformly on a nationwide basis, unless the Administrator finds that varying requirements applied to coals of differing characteristics will not undermine the objectives of the House bill and other Act provisions.

The principal issue to be resolved in this rulemaking is whether a plant burning low-sulfur coal should be required to achieve the same percentage reduction in potential SO_2 emissions as those burning higher sulfur content coals.

Prior to framing alternative SO_2 standards, EPA evaluated control technology in terms of performance, costs, energy requirements, and environmental impacts. EPA has concluded that the proposed emission limits and control efficiencies are achievable with well-designed, maintained, and operated flue gas desulfurization systems but has not determined whether uniform application of these requirements is necessary to satisfy section 111 of the Act. EPA's final decision on this issue must be based on an assessment of the national, regional, and local environmental (air, water, and solid waste), economic, and energy impacts of both the uniform percentage reduction requirement and the other alternatives under consideration.

Toward this end, EPA performed extensive analyses of the potential impacts associated with each of the alternatives at the national, regional, and plantsite levels. Economic models were used for the purpose fo forecasting the nature of the utility industry in future years. Evaluation of the data revealed that the results predicted by the model were very sensitive to such assumptions as the rate of growth predicted for the industry, coal and oil prices, and transportation costs. Forecasts which assume low growth in electricity demand and high oil and rail transportation prices resulted in modeled estimates which show relatively small differences in the impacts of the alternatives at the national level. On the other hand, if assumptions of high growth in demand for electricity are combined with low oil and rail transportation prices, more significant economic, energy, and environmental impacts are predicted.

The Agency believes that it would be inappropriate to make a decision on the choice between the full and partial control alternatives without additional analyses of the modeling results. The model is being refined, with particular emphasis being placed on the assumptions used. Comment on the appropriateness of the selected assumptions and the relative significance of environmental, energy, and economic impacts are invited.

At the plant level, the partial control alternative would result in substantiallymore SO_2 emissions than full control when low-sulfur coal is fired. For example, a Western plant burning low-sulfur coal could emit as much as four times as much SO_2 under the partial control alternative as under full control. However, there are many plant locations where the cost of mandated emission control equipment can be an important factor in the utility's choice of coal to be fired. If partial control is permitted when low-sulfur coal is burned, the lower capital and operating costs associated with the control equipment may justify a decision to use more expensive low-sulfur coal. The same plant might have chosen cheaper high-sulfur coal if the same control equipment were required for all coals. In such a case, a partial control approach could result in lower emissions than a full control approach. For example, a 500 MW low-sulfur coal plant with partial control might emit 10,000 tons per year while the same plant burning high-sulfur coal under full control might emit some 15,000 tons per year.

The benefits of such shifts from high- to low-sulfur coal must be compared to the costs associated with foregoing increased local coal production. When considering local coal impacts, it must be noted that coal production will increase over current levels in all areas of the country under all control aternatives. This means local coal production impacts will affect the level of new production rather than displace existing production. The Administrator seeks comment on the relative significance of new coal production versus existing coal production as it pertains to the consideration of coal impacts in the final decision.

The economic impact of the standard can be viewed in a number of ways, depending on the economic measures selected and the manner in which they are used. While the capital and operating costs of control can be shown to be significant in absolute terms (e.g., billions of dollars), they can also be shown to be relatively small when compared to the hundreds of billions of dollars in new capital investment planned by the industry or to the approximately $100 billion annual revenue requirement projected for 1990. If the impact is considered in terms of monthly cost to the average consumer, the alternatives do not appear to have a major impact. However, when computed as a total cost to an average family over a 30- to 40-year period, the impacts can appear much more significant. In view of this, the Administrator solicits comments on which economic indicators are most appropriate and how the comparisons should be made.

A consideration in establishing the new source performance standards for powerplants is their relationship to the prevention of significant deterioration (PSD) program. Since virtually all new powerplants will have to comply with both the standards of performance and PSD requirements, concern has been expressed that the case-by-case best available control technology review under PSD creates the potential for prolonged public debate as to the adequacy of the control proposed for a given source. The likelihood of such debate, and the associated delays, would increase if a less stringent standard of performance is adopted. Consideration must also be given to the impact that a source complying

with the revised standard of performance will have on the air quality increment. A source with lower emissions

ing the use of scrubbers is that a single scrubber may be able to control both SO_2 and particulate matter.

plants are expected to be built. The recently promulgated limitations for lignite combustion (43 FR 9276) have

amended, require EPA to revise the standards of performance for fossil-fuel-fired electric utility steam gener-

more than one-third of its maximum electrical generating capacity. Any steam that could be sold to produce

for the purpose of selling more than one-third of its electrical output capacity to the general public. Electric

with the revised standard of performance will have on the air quality increment. A source with lower emissions will use less of the available increment, thus providing a greater margin for growth. As mentioned above, the impact of this standard can be either to increase or to decrease emission rates for a given plant depending on the selection of the coal to be fired. In view of the above, the Administrator solicits comments as to how much weight should be given to PSD considerations when establishing the final standard of performance requirement.

PARTICULATE MATTER STANDARDS

The proposed standards would limit the emissions of particulate matter to 13 ng/J (0.03 lb/million Btu) heat input and would require a 99-percent reduction in uncontrolled emissions from solid fuels and a 70-percent reduction for liquid fuels. No particulate matter control would be necessary for units firing gaseous fuels alone, and thus a percent reduction would not be required. The 20-percent opacity (6-minute average) standard that is currently applicable to steam electric generating units (40 CFR Part 60, Subpart D) would be retained under the proposed standard to insure proper operation and maintenance of the particulate matter control system.

The proposed standards are based on the performance of a well designed and operated baghouse or electrostatic precipitator (ESP). EPA has determined that these control systems are the best adequately demonstrated systems of continuous emission reduction (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact, and energy requirements).

This determination was reached after analyzing emission test results from steam generators firing both high- and low-sulfur coal and employing either ESP's or baghouses. Although the baghouse data were based on units of less than 44 MW, EPA has concluded that there are no technological barriers that would preclude their application on larger units. In addition, a number of large instalations are now under construction, and a 350-MW facility equipped with a baghouse for particulate emission control recently began operation.

EPA considered a standard of 21 ng/J (0.05 lb/million Btu) which could be met by wet particulate matter scrubbers in addition to baghouses and ESPs, but rejected this option because using scrubbers could increase emissions of fine particulate matter. A 21 ng/J standard would result in 60 percent higher emissions which could have an adverse effect on visibility. On the other hand, an advantage to allowing the use of scrubbers is that a single scrubber may be able to control both SO_2 and particulate matter.

It should be noted that there were no plants available for testing at which a well designed ESP or baghouse was followed by an FGD system; thus, the proposed standards are based on emission measurements taken at the particulate matter control device discharge prior to any FGD unit. Since there is the potential for an FGD system to affect particulate emissions, EPA is continuing to assess this situation. Of particular concern is the potential contribution of sulfuric acid mist to the measured particulate matter emissions. This issue is discussed in more detail under the particulate matter standards section of this preamble. EPA solicits comments and available data on this matter.

The proposed limit of 13 ng/J (0.03 lb/million Btu) will effectively preclude the use of ESPs on facilities using low sulfur coal and require baghouse control. DOE and the utility industry believe that baghouse technology has not been demonstrated sufficiently to require its use on utility size facilities. Because of this, DOE recommends that the standard be no less than 21 ng/J (0.05 lb/million Btu) while the industry recommends a standard of 34 ng/J (0.08 lb/million Btu). EPA requests comments on this this recommendation as well as on EPA's proposal.

NO_x STANDARDS

The proposed NO_x standards for different fuels are based on the emission limitations achievable through combustion modification techniques. Combustion modification limits NO_x formation in the boiler by reducing flame temperatures and by minimizing the availability of oxygen during combustion. The levels to which NO_x emissions can be reduced with combustion modification depend upon the type of fuel burned, boiler design, and boiler operating practice.

When considering these factors, EPA concluded that a uniform standard could not be applied to all fossil fuels or boiler types. In addition, EPA took into consideration the adverse side effects of low NO_x operation such as boiler tube wastage. As a result, different requirements were developed for bituminous and subbituminous coals.

The limitations for coal-derived liquid and gaseous fuels and shale oil are based on limits achievable with subbituminous coals. The limitations for liquid and gaseous fuels are the same as those promulgated in 1971 under 40 CFR part 60 subpart D for large steam generators. These requirements were not reexamined since few, if any, new oil- or gas-fired power plants are expected to be built. The recently promulgated limitations for lignite combustion (43 FR 9276) have been incorporated into these regulations without change because no new data have become available since their promulgation. Similarly, the exemption for combustion of coal refuse has also been retained.

BACKGROUND

In December 1971, under section 111 of the Clean Air Act, the Administrator promulgated standards of performance to limit emissions of SO_2, particulate matter, and NO_x from new, modified, and reconstructed fossil-fuel-fired steam generators (40 CFR 60.40 et seq.). Since that time, the technology for controlling these emissions has improved, but emissions of SO_2, particulate matter, and NO_x continue to be a national problem. In 1976, steam electric generating units contributed 24 percent of the particulate matter, 65 percent of the SO_2, and 29 percent of the NO_x emissions on a national basis.

The utility industry is expected to have continued and significant growth; approximately 300 new fossil-fuel-fired power plant boilers are to begin operation within the next 10 years. Associated with utility growth is the continued long-term increase in utility coal consumption from some 650 million tons/year in 1975 to between 1,400 and 1,800 million tons/year in 1990. Under the current performance standards for power plants, national SO_2 emissions are projected to increase approximately 15 to 16 percent between 1975 and 1990.

Impacts will be more dramatic on a regional basis. For example, in the absence of more stringent controls, utility SO_2 emissions are expected to increase tenfold to over 2 million tons by 1990 in the West South Central region of the country (Texas, Oklahoma, Arkansas, and Louisiana).

EPA was petitioned on August 6, 1976, by the Sierra Club and the Oljato and Red Mesa Chapters of the Navaho Tribe to revise the SO_2 standard so as to require a 90 percent reduction in SO_2 emissions from all coal-fired power plants. The petition included information to support the claim that advances in technology since 1971 called for a revision of the standard, and EPA agreed to investigate the matter thoroughly. On January 27, 1977 (42 FR 5121), EPA announced that it had initiated a study to complete the technological, economic, and other documentation needed to determine to what extent the SO_2 standard for fossil-fuel-fired steam generators should be revised.

On August 7, 1977, President Carter signed into law the Clean Air Act Amendments of 1977. The provisions under section 111(b)(6) of the Act, as amended, require EPA to revise the standards of performance for fossil-fuel-fired electric utility steam generators within 1 year after enactment.

After the Sierra Club petition of August 1976, EPA initiated studies to review the advancement made on pollution control systems at power plants. These studies were continued following the amendment of the Clean Air Act. In order to meet the schedule established by the Act, a preliminary assessment of the ongoing studies was made in late 1977. A National Air Pollution Control Techniques Advisory Committee (NAPCTAC) meeting was held on December 13 and 14, 1977, to present EPA preliminary data. The meeting was open to the public and comments were solicited.

The Clean Air Act Amendments of 1977 required the standards to be revised by August 7, 1978. When it appeared that EPA would not meet this schedule, the Sierra Club filed a complaint on July 14, 1978, with the U.S. District Court for the District of Columbia requesting injunctive relief to require, among other things, that EPA propose the revised standards by August 7, 1978. A consent order was developed and issued by the court requiring the EPA Administrator to (1) deliver the proposal package to the office of the Federal Register by September 12, 1978, and (2) promulgate the final standards within 6 months after proposal

The purpose of this proposal is to respond to the petition of the Navaho Tribe and Sierra Club, and to initiate the rulemaking required under section 111(b)(6) of the Act.

APPLICABILITY

The proposed standards would apply to all electric utility steam generating units (1) capable of firing more than 73 MW (250 million Bty/per hour) heat input of fossil fuel (approximately 25 MW of electrical energy output) and (2) for which construction is commenced after September 18, 1978.

On December 23, 1971, EPA promulgated, under subpart D of 40 CFR Part 60, standards of performance for fossil-fuel-fired steam generators used in electric utility and large industrial applications. The proposed standards will not apply to electric utility steam generating units originally subject to those standards (subpart D) unless the affected facilities are modified or reconstructed.

ELECTRIC UTILITY STEAM GENERATING UNITS

An electric utility steam generating unit is defined as any steam electric generating unit that is physically connected to a power distribution system and is constructed for the purpose of selling for use by the general public more than one-third of its maximum electrical generating capacity. Any steam that could be sold to produce electrical power for sale is also included when determining applicability of the standard.

INDUSTRIAL FACILITIES

Industrial steam electric generating units with heat input above 73 MW that are constructed for the purpose of selling more than one-third of their maximum electrical generation capacity (or steam generating capacity used to produce electricity for sale) would be covered under the proposed standards. Industrial steam generating units with a heat input above 73 MW that produce only steam or that were constructed for the purpose of selling less than one-third of their electric generation capacity are not covered by the proposed standards, but will continue to be covered under subpart D.

COGENERATION

Electric cogeneration units (steam generating units that would produce steam used for electric generation and process heat) would be considered electric utility steam generating units if they: (1) Were capable of combusting more than 73 MW of fossil fuel and (2) would be physically connected to a power distribution system for the purpose of selling for use by the general public more than one-third of their maximum electrical generating capacity. Cogeneration facilities that would produce power only for "in-house" industrial use would be considered industrial boilers and would be covered under subpart D if applicable.

RESOURCE RECOVERY UNITS

Steam electric generating units that combust nonfossil fuels such as wood residue, sewage sludge, waste material, or municipal refuse (either aone or in combination with fossil fuel) would only be covered by the proposed standards if the steam generating unit is capable of firing more than 73 MW of fossil fuel. If only municipal refuse were fired and the unit was not capable of being fired with more than 73 MW of fossil fuel, the unit would be considered an incinerator and the standards under subpart E would apply. Similarly, the standards under subpart O for sewage treatment plants would apply if only sewage sludge were burned.

COMBINED-CYCLE GAS TURBINES

The proposed standards would cover boiler emissions from electric utility combined-cycle gas turbines that are capable of being fired with more than 73 MW (250 million Btu-hour) heat input of fossil fuel in the steam generator, and where the unit is constructed for the purpose of selling more than one-third of its electrical output capacity to the general public. Electric utility combined-cycle gas turbines that use only turbine exhaust gas to heat a steam generator (waste heat boiler) or that are not capable of being fired with more than 73 MW of fossil fuel in the steam generator would not be covered by the proposed standards.

ISSUES ON APPLICABILITY

Noncontinental areas. There are several island areas that would be affected by the proposed standards. Because ot the unique characteristics of these areas, it is expected that all of their future power plants will use oil rather than coal. The issue is whether these new oil-fired units should be subject to the proposed 85 percent reduction, which would effectively require the use of FGD or equivalent systems, or to allow the use of low sulfur oil. After considering the costs of requiring FGD systems in light of the limited land area available for sludge disposal, EPA has decided to propose an exeption for these facilities from the 85 percent reduction requirement. They would have to comply with the proposed SO_2 limit for oil-fired facilities of 340 ng/J (0.80 lb/million Btu) as well as all other proposed standards (see section 4.4 of EPA 450/2-78-007a-1).

Anthracite coal and Alaskan coal. The proposed standards would cover facilities combusting low sulfur anthracite coal or Alaskan coal in the same manner as all other coals.

EPA realizes, however, there are arguments in favor of allowing less stringent standards because of unique factors for both coals.

With respect to Alaskan coal, it is argued that the unique climatic conditions in Alaska coupled with the very low sulfur content of the coal makes it unreasonable to apply the same percent reduction requirement for SO_2 emissions to power plants located in that State. Anthracite is also low in sulfur content, but it is more expensive to produce than other locally available coals. In view of this, proponents of anthracite argue that if control cost were reduced through a less stringent standard, anthracite could then compete with locally available high sulfur content bituminous coal (see section 4.7.2 of EPA 450/2-78-007a-1).

Emerging technologies. Various groups expressed concern that if the proposed standards were rigidly applied, the development of new and promising technologies might be discouraged. They suggested that the innovative technology waiver provisions under the Clean Air Act Amendments of 1977 are not adequate to encourage certain capital-intensive, front-end

control technologies. Under the innovative technology waiver provisions (section 111(j) of the Act) the Admin-

Technology	Pollutant	MW Equivalent
4. Maximum control level of 86 ng/J (0.20 lb/million Btu) heat input 24-hour average.		

docket for review (see listing set forth later in this preamble).

ponents, proper selection of construction materials, appropriate sparing, good operating practices, and good

equipped with at least one spare module. The proposed standards would not require plants having capac-

control technologies. Under the innovative technology waiver provisions (section 111(j) of the Act) the Administrator may grant waivers for a period of up to 7 years from the date of issuance of the waiver or up to 4 years from the start of operation of a facility, whichever is less. Although this amount of time may be sufficient to amortize the cost of tail-gas control devices that do not achieve their design control level, it does not appear to be sufficient for amortization of high-capital-cost, front-end control technologies. For most front-end control technologies, modification or retrofit may be economically unreasonable.

To mitigate the potential impact on emerging front-end technologies, EPA proposes to establish slightly less stringent requirements for initial full-scale demonstration plants. This should insure that these standards do not preclude the development of new front-end technologies and should compensate for problems that may arise when applying them to commercial-scale facilities. The 85 percent SO_2 control requirement and the 210-ng/J NO_x standard will provide developers of new technologies a clear environmental control objective for commercial facilities. However, if the Administrator subsequently finds that a given emerging technology (taking into consideration all areas of environmental impact, including air, water, solid waste, toxics, and land use) offers superior overall environmental performance, alternative standards would then be established by the Administrator.

Under the proposal, the Administrator (in consultation with the Department of Energy) would issue commercial demonstration permits for the first three full scale demonstration facilities of each of the technologies listed in the following table. These technologies have been shown to have the potential to achieve the standards established for commercial facilities. Under such permits, an 80 percent SO_2 control level (24-hour average) or a 300 ng/J (0.70 lb/million Btu) NO_x emission limitation for liquid fuel derived from bituminous coals would be established. If the Administrator (in consultation with the Department of Energy) finds that additional demonstration of a given technology is necessary, additional permits may be issued. No more than 15,000 MW equivalent electrical capacity would be allocated for the purpose of commercial demonstrations under this proposal. This capacity would be allocated as follows:

Technology	Pollutant Equivalent	MW electrical capacity
Solvent-refined coal	SO_2	6,000–10,000
Fluidized bed combustion (atmospheric).	SO_2	400–3,000
Fluidized bed combustion (pressurized).	SO_2	200–1,200
Coal liquefaction	NO_x	750–10,000

The capacity is presented in ranges because of uncertainty as to the amount that will be required for any one technology. This use of ranges should not be construed to mean that more than 15,000 MW would be allocated for purposes of commercial demonstration permits.

It should be noted that these permits would only apply to the application of this standard and would not supercede the new source review procedures and prevention of significant deterioration requirements under section 110 of the Act.

Finally, concern has been expressed as to whether emerging technologies should be required to comply with the proposed particulate standard. Since this concern is based on the same arguments that have been offered in regard to conventional technologies, consideration of special provisions will be tied to the final decision on the particulate emission limitation.

Modifications. The question has been raised whether the use of shale oil coal-based fuels such as coal/oil mixtures or solvent-refined coal in a boiler originally designed for oil firing is considered a modification under 40 CFR 60.14(c). In response, EPA proposes that shifting an existing oil-fired steam generator to coal/oil mixtures, shale oil, or coal-derived fuels, would not be considered a modification and the facility would not be subject to the proposed standards.

SO_2 Standards

General Requirements. The proposed standards for SO_2 emissions would require:

1. Reduction of potential SO_2 emissions for solid, liquid, and gaseous fuels by 85 percent (24-hour average control efficiency) except for 3 days per month when no less than 75 percent is allowed.
2. Maximum allowable emissions from solid fuel of 520 ng/J (1.2 lb/million Btu) heat input 24-hour average except for the 3 days per month when the 75 percent is allowed.
3. Maximum allowable emissions from liquid or gaseous fuels of 340 ng/J (0.80 lb/million Btu) heat input 24-hour average except for 3 days per month.
4. Maximum control level of 86 ng/J (0.20 lb/million Btu) heat input 24-hour average.

DISCUSSION

The proposed standards are based on emission levels and the percentage reduction achievable with a well designed, operated, and maintained flue gas desulfurization (FGD) system. EPA believes the following types of FGD systems are capable of achieving the proposed standards: lime, limestone, Wellman-Lord, magnesium oxide, and double alkali. In determining that FGD is the best system of continuous emission reduction that has been adequately demonstrated for removal of SO_2, EPA assessed the costs of achieving the proposed standards and the nonair quality health and environmental impacts and energy requirements. Although the proposed standards are based on the performance of FGD systems, the use of other systems should not be discouraged. In this regard, a number of emerging technologies show promise.

The proposed percentage reduction requirement would apply to the combustion of all fossil fuels unless the emission level of 86 ng/J (0.20 lb/million Btu) is constantly attained (24-hour average basis). In effect, this means that all coal-fired and residual-oil-fired plants would be required to install FGD or equivalent SO_2 emission control systems. On the other hand, the emission level of 86 ng/J would permit certain clean fuels, such as wood waste, to be burned without FGD or at a very low percentage of reduction.

The emission limitations of 520 ng/J (1.2 lb/million Btu) for solid fuels and 340 ng/J (0.80 lb/million Btu) for liquid and gaseous fuels would place a maximum limit on SO_2 emissions regardless of percentage of SO_2 reduction attained and thus restrict the amount of sulfur in the fuel fired.

In determining that FGD systems were adequately demonstrated and that they could attain the proposed limitations, EPA has conducted a number of studies either directly or through consultants. To evaluate the relative performance of FGD systems, EPA has conducted tests at various sites. Several absorber designs and absorbents were tested at the Shawnee 10-MW test facility, emission tests were performed at various full-scale operations, and performance results from other test facilities and scrubber installations were surveyed, both in the United States and Japan. A detailed summary of the results from these studies is provided in section 4.2 of the supplement to the Background Information document for SO_2 (EPA 450/2-78-007a-1). In addition, all of the study reports are available in the docket for review (see listing set forth later in this preamble).

PERCENTAGE REDUCTION REQUIREMENT

In establishing the percentage reduction requirement for potential SO_2 emissions for solid, liquid, and gaseous fuels, EPA considered the SO_2 removal efficiency of prototype, pilot-scale, and commercial-scale FGD systems. EPA's considerations included measured variability of percentage reduction, effects of scrubber and coal sulfur variability on performance, effects of a spare module on scrubber reliability, and effects of design changes and maintenance practices on scrubber reliability.

To establish the variation of FGD system removal efficiency and the effects of varying sulfur content of coal on measured 24-hour-average SO_2 removals, EPA obtained continuous monitoring data from the Cane Run and Bruce Mansfield powerplants. These data were analyzed to establish the geometric standard deviations. Based on these analyses, EPA projected the mean SO_2 removal needed to comply with the proposed percentage reduction requirement. At the 99.99 percent confidence level, EPA concluded that an FGD system that could achieve a 92 percent long-term (30 days or more) mean SO_2 removal would comply with the proposed 85 percent (24-hour average) requirement.

With respect to long-term SO_2 removal efficiency, EPA has concluded that with certain practical changes in design, operation, and maintenance practices, lime/limestone FGD systems can achieve long-term SO_2 removal of 92 percent. FGD technologies employing more reactive absorbents such as magnesium oxide, additive magnesium-oxide-enriched lime, and sodium-based liquors can achieve SO_2 removal levesls of greater than 92 percent. For a more detailed discussion of these findings, please refer to section 4.2 of EPA 450/2-78-007a-1.

FGD AVAILABILITY

With respect to conditions that may affect FGD availability, EPA has investigated such problems as:

1. Formation of scale in the absorber and associated equipment in lime and limestone systems leading to plugging and reduced capacity.
2. Plugging of mist eliminators, lines, and some types of absorbers.
3. Failure of ancillary equipment such as pumps, piping, pH-sensing equipment, reheaters, centrifuges, fans, and duct and stack linings.
4. Inadequate absorbent make-up preparation.

EPA has concluded that these problems can and have been solved through the improved design of components, proper selection of construction materials, appropriate sparing, good operating practices, and good maintenance. As a result, the availability of full-scale scrubbing facilities has increased steadily. (See EPA 600/7-78-032b.) When determining FGD availability, one must recognize that FGD systems are composed of FGD modules, each of which is a separate scrubbing system. Because FGD modules are not generally manufactured in sizes over 125-MW capacity, large powerplants use multiple FGD modules in parallel. When FGD modules, even those averaging 90 percent availability, are integrated into an FGD system, the probability that all modules in the system will be simultaneously available diminishes in proportion to the number of modules; therfore, spare FGD modules will be needed in most instances. Such spares were included in EPA's estimates of FGD costs. Even when high FGD module availabilities are attained, the FGD module will not be in service some of the time because of regularly scheduled maintenance operations or repairs needed to restore loss of scrubbing efficiency. Although the amount of time for such maintenance can be considerable (even continuous), there should be little adverse impact on plant operation. With spares, a module can be rotated out of operation for maintenance even at full electrical load conditions. Several plants now in operation employ such a system. At reduced electrical loads, all FGD modules will not be needed for SO_2 control. Periodically, the entire plant is taken out of service for servicing non-FGD system related components providing an opportunity for scheduled FGD maintenance.

EPA acknowledges that even with a good maintenance program and use of spare FGD modules it may not be possible to maintain complete FGD system control for a portion of a plant's operating hours. At these times, the proposed standards would require that the electric generating load be shifted to an alternative electric generating plant. This procedure is necessary to prevent bypassing of uncontrolled SO_2 emissions to the atmosphere.

Load shifting is normally feasible, but it will not be possible when emergency conditions exist. Emergency conditions are considered to be periods when a powerplant and other electrical generating equipment owned by the associated utility company are being operated at full operating capacity less the capacity equal to the largest single unit in the system. Under emergency conditions, the proposed standards would allow flue gas to be bypassed around an inoperable FGD module provided the facility is equipped with at least one spare module. The proposed standards would not require plants having capacity of less than 125 MW to have a spare module. Bypassing an FGD unit except under emergency conditions would be a violation of the standards.

The emergency condition provisions are necessary to maintain the electric utility's capability to meet electric demand when excess generating reserves are not available. A minimal amount of spinning reserves must be kept separate from the load shifting procedures to prevent "blackouts." Please refer to section 4.6 of EPA 450/2-78-007a-1 for a more detailed discussion of this matter.

ENVIRONMENTAL IMPACTS

A major consideration with respect to nonregenerable FGD systems is the disposal of sludge and contamination from wastewater; therefore, EPA had its consultants examine these potential problems in detail.

With respect to sludge disposal, the consultant examined a number of parameters including the quantification of solid wastes that would be generated by different regulatory options, plant sizes, coal sulfur contents, and scrubbing processes. In addition, untreated wastes were characterized by effects of scrubbing process variables on sludge chemistry, trace element content, and physical and chemical properties. Finally, the environmental impacts and costs of various disposal processes and practices were assessed. ("Controlling SO_2 Emissions from Coal-Fired Steam Electric Generators: Solid Waste Impact," EPA 600/7-78-044.)

From a companion analysis ("Review of New Source Standards for SO_2 Emissions from Coal-Fired Utility Boilers," vol. 1, sec. 3), it is estimated that under the 85-percent reduction requirement the quantity of sludge generated will increase from some 12 million metric tons dry basis (current standard) to some 55 million metric tons dry basis in 1995. These figures are conservative since they assume a high-growth rate in electrical demand (5.8 percent through 1985, and 5.5 percent thereafter). The quantity of sludge generated would be less under regulatory options that do not require a uniform application of the 85-percent reduction requirement.

To estimate the cost of sludge disposal, EPA assumed that dewatered sludge would be fixed with lime and fly ash and be impounded in a clay-lined pond. Based on this assumption, EPA estimates that the cost of disposal would be some $19 per dry metric ton including land costs.

In addition, a field disposal study, which has been underway for 3 years at TVA's Shawnee powerplant site,

has not revealed any significant problems from impoundment of treated FGD wastes

option for reducing SO_2, depending on the particular characteristics of the coal being used.

day exemption coincident with the 3 days of 75-percent control in the percent reduction standard. However, the

less expensive than applying full scrubbing to high-sulfur coal and that emissions from a plant burning low-sulfur coal would be up to four times

has not revealed any significant problems from impoundment of treated FGD wastes.

EPA has concluded from these studies that sludge can be disposed of in an environmentally sound manner at reasonable costs. EPA will continue to evaluate the costs and effectiveness of alternative disposal methods as part of the economic analyses to be conducted during the proposal period. Comments on alternative control methods are invited.

With respect to the potential water pollution impact, EPA's consultant examined alternative standards in terms of their effects on the quality and quantity of powerplant waste-water effluents, and the amount of water consumption. In addition, alternative SO_2 control systems were examined relative to their impact on the above. The potential environmental effects of SO_2 control on effluents were also examined, and alternative treatment processes were evaluated.

The water pollution impact report "Controlling SO_2 Emissions from Coal-Fired Steam Electric Generators: Water Pollution Impact," EPA 600/7-78-045, concluded that in the aggregate the volume and quality of waste streams from SO_2 control systems are affected very little by alternative standards and that all effluent streams can be treated to acceptable levels using proven, commercially available technologies. Similarly, a more stringent standard would have little effect on water demand when compared to total plant consumptive water use.

ALTERNATIVE TECHNOLOGY

A potential alternative to wet FGD systems is dry SO_2 scrubbing. One of the more effective designs incorporates the use of a spray dryer and baghouse. In this system a spray dryer (similar to a wet SO_2 scrubber) is used with lime, soda ash, or other reactants to scrub SO_2 from the flue gases. Because of the minimal use of water in the spray dryer (by design), no additional reheating is required. Following the spray dryer, a baghouse is used to collect all particulate matter (including SO_2 reactants).

Spray drying has been tested at pilot plants, and it may be capable of achieving 85 percent removal with lime, soda ash, and other reactants. Due to cost considerations, the system is principally limited to coals with less than 1.5-percent sulfur if lime is used. Full-sized spray-drying units for powerplant application have been ordered and are expected to begin operation in the early 1980's. (Refer to sec. 4.3 of EPA 450/2-78-007a-1.)

In addition, a combination of physical cleaning of the fuel in conjunction with FGD systems may be a viable option for reducing SO_2, depending on the particular characteristics of the coal being used.

MAXIMUM ALLOWABLE EMISSION LIMITATION

In selecting the proposed maximum allowable emission limitation, EPA had to take into consideration two primary factors: FGD performance and the impact of the limitation on high-sulfur coal reserves. In effect, FGD performance determines the maximum sulfur content of coals that can be fired in achieving compliance with the maximum allowable emission limitation. To estimate coal sulfur content which can be used, EPA projected SO_2 emissions based upon minimum FGD system performance (i.e., 75 percent SO_2 removal 3 days per month) and maximum daily average sulfur content. Two alternative maximum allowable emission levels were considered: (a) 520 ng/J with three exemptions per month that would be coincident with the proposed percentage reduction requirement, and (b) 520 ng/J with no exemptions.

An analysis of national and regional coal production in 1990 was performed for each option. There would be no significant differences in total national production with either option. The analysis included use of cleaned, midwestern coal when coal cleaning would be necessary to attain compliance with the limitation. Sufficient reserves would be available to satisfy national demand with either option. However, on a regional basis a limitation without exemptions could have the potential of dislocating some coal production in the Midwest.

Under either option, midwestern coal production would increase to about 300 million tons; however, the use of some coal reserves in this area would be restricted by the limitation without exemptions. In the States of Ohio, Illinois, and in western Kentucky, 60 or more percent of reserves might be restricted even if coal cleaning were used.

On the other hand, this analysis may overstate the potential impacts since coal mixing or other methods of reducing the maximum daily average coal sulfur content were not fully considered. In view of this, the Agency will continue to examine the need for exemptions and the appropriateness of more stringent maximum emission levels such as 410 ng/J (1.0 lb/million Btu) or 340 ng/J (0.80 lb/million Btu) during the comment period. (See section 4.7.1 of EPA 450/2-78-007a-1 for a more detailed discussion.)

Based on our present estimates of the potential impact upon midwestern coal reserves and production, EPA has proposed that the maximum allowable emission limitation should have a 3-day exemption coincident with the 3 days of 75-percent control in the percent reduction standard. However, the Agency specifically requests comments on the level of the emission limit and the appropriateness of the 3-day exemption.

MAXIMUM CONTROL LEVEL

Under the proposed SO_2 standard, a maximum control level would be established. Compliance with that control level would constitute compliance with the percentage reduction requirement. In developing the proposed standard, EPA has considered two alternatives. The first would establish the level of 86 ng/J (0.20 lb/million Btu). The second would establish a higher level. Values from 215 ng/J (0.50 lb/million Btu) to 340 ng/J (0.80 lb/million Btu) have been considered.

In essence, these options focus on the question of whether a powerplant burning low-sulfur coal should be required to achieve the same percentage reduction as those burning high-sulfur coal. The emission level of 86 ng/J would require virtually all coal-fired plants to reduce potential emissions by 85 percent. In addition, it would require the installation of FGD systems on oil-fired powerplants. Therefore, this option is commonly referred to as full scrubbing or full control. On the other hand, an emission level in the range of 215-340 ng/J would permit plants firing low-sulfur coal to reduce their emissions by less than 85 percent, hence the term partial scrubbing.

Proponents of partial scrubbing have argued that adoption of a limitation in the range of 215-340 ng/J would reduce scrubber costs and permit bypassing of a portion of the flue gas and thus alleviate the need for plume reheat and associated energy costs. since low-sulfur coal inherently emits less SO_2, proponents of partial scrubbing maintain that these benefits can be obtained by partial scrubbing without a significant increase in emissions nationally. Finally, it is argued that since coal-fired units would be cheaper to build and operate if partial scrubbing were allowed, less dependence would be placed on existing oil-fired units and turbines, and a significant saving of oil would be realized.

On the other hand, proponents of full control have maintained that plants firing low-sulfur coal should be subject to the same reduction requirement as those burning high-sulfur coal. They argue that the statutory requirements and legislative history of section 111 of the Clean Air Act Amendments of 1977 require a uniform percentage reduction requirement. They also point out that applying full scrubbing to low-sulfur coal is technologically less demanding and less expensive than applying full scrubbing to high-sulfur coal and that emissions from a plant burning low-sulfur coal would be up to four times greater under partial scrubbing than under full control. Finally, it is argued that adoption of full control will tend to promote the use of locally available, higher sulfur content coals, particularly in the Midwest.

ALTERNATIVE SO_2 STANDARDS

The following alternative standards for SO_2 have been suggested by DOE:

1. Eighty-five percent reduction of potential SO_2 emissions during each calendar month.

2. A maximum control level of 340 ng/J (0.80 lb SO_2/million Btu), not to be exceeded during any 24-hour period.

3. A minimum of 33-percent reduction of potential SO_2 emissions. The alternative standards would have the following operational characteristics:

Monthly averaging. There would be no daily restriction on the percent reduction in potential SO_2 emissions. The requirement would be that the total sulfur emissions summed over each calendar month be no more than 15 percent of the total sulfur content of the coal consumed. There would be no restriction on bypassing some or all of the flue gas, so long as the monthly percent reduction requirement is met. If the monthly requirement is not met, enforcement penalties would be applied on the basis of the number of individual 24-hour periods during which the percent reduction was less than 85 percent.

Maximum control level of 340 ng/J (0.80 lb SO_2/million Btu). Under this alternative, a sliding-scale-percent reduction would be required; the full 85-percent reduction would be required only when high-sulfur coals were used. Only the minimum percent reduction requirement would be enforced for 24-hour periods when SO_2 emissions would be 340 ng/J or less. Any 24-hour period when emissions are greater than 340 ng/J and reduction is less than 85 percent will be a violation of the percent reduction requirement. There would be no waivers or exemption for this daily requirement.

Minimum percent reduction requirement of 33 percent. Regardless of whether the resulting emissions would be lower than the 340 ng/J (0.80 lb/million Btu) emissions requirement, 33-percent reduction in potential SO_2 emissions would be required. This would assure that continuous emissions reduction technology is applied to all coals, including those with the lowest naturally occurring sulfur content.

In addition to the DOE proposal, the utility industry, through the Utility Air Regulatory Group (UARG), has also suggested an alternative SO_2 standard. The industry proposal contemplates a sliding scale percentage production standard for sulfur-dioxide emissions under which the required percent reduction declines as sulfur content in the coal declines. Under the industry proposal, there would be a ceiling of 1.2 pounds of sulfur dioxide and the required percent reduction would range between 85-percent removal on a coal with uncontrolled emissions[1] of 8 pounds to 20-percent removal on coals with uncontrolled emissions of 1 pound or less. Specifically, for coals with uncontrolled emissions of 5.0 pounds of sulfur dioxide or greater, the constraining emissions limit would be 1.2 pounds of sulfur dioxide. For coals with uncontrolled sulfur-dioxide emissions of 5 pounds of sulfur dioxide, percent removal would be 76 percent and, in the range between 5 pounds and 4 pounds of uncontrolled emissions, percent removal would decline by 0.1 percentage point for each 0.1-pound decrease in uncontrolled emissions. For coals with uncontrolled emissions of 4 pounds of sulfur dioxide, percent removal would be 75 percent and, between 4 pounds and 3 pounds of uncontrolled emissions, percent removal would decline by 0.9 percentage point for each 0.1 pound decrease in uncontrolled emissions. For coals with 3 pounds of uncontrolled emissions, percent removal would be 66 percent, and between 3 pounds of sulfur dioxide and 2 pounds of sulfur dioxide, percent removal would decline by 1.3 percentage points for each 0.1-pound decrease in uncontrolled emissions. At 2 pounds of uncontrolled emissions percent removal would be 53 percent, and between 2 pounds and 1 pound of uncontrolled emissions, percent removal would decline by 3.3 percentage points for each 0.1 pound decline in uncontrolled emissions. For coals with 1 pound or less of uncontrolled emissions percent removal would be 20 percent.

Compliance with these sulfur-dioxide standards would be determined on a 30-day average. Industry has also recommended that consideration be given to establishing an emission ceiling of 1.5 pounds for coal with uncontrolled emissions over 8 pounds.

Comments on these alternative standards are invited.

ANALYSES OF ALTERNATIVES

In order to determine the appropriate form and level of control for the proposed standards, EPA has performed extensive analyses of the potential national impacts associated with the alternative standards. The Agency employed economic models to forecast the structure and operating characteristics of the utility industry in future years. These models project the environmental, economic, and energy impacts of alternative standards for the electric utility industry. The major analytical efforts were a preliminary analysis completed in April 1978 and a revised assessment completed in August 1978. While these analyses are preliminary and subject to change, the issues examined and the results obtained are summarized in this section and in the following tables. Further details of the analyses can be found in "Background Information for Proposed SO_2 Emission Standards-Supplement," EPA 450/2-78-007a-1.

Impacts analyzed. The environmental impacts of the alternative standards were examined by projecting pollutant emissions. The emissions were estimated nationally and by geographic region for each plant type, fuel type, and age category. The Agency is also evaluating the significance of waste products generated by the control technologies and their environmental impacts.

The economic and financial effects of the alternatives were examined. This assessment included an estimation of the utility capital expenditures for new plant and pollution control equipment as well as the fuel costs and operating and maintenance expenses associated with the plant and equipment. These costs were examined in terms of annualized costs and annual revenue requirements. The impact on consumers was determined by analyzing the effect of the alternatives on average consumer costs and average monthly residential bills. The alternatives were also examined in terms of cost per ton of SO_2 removal. Finally, the present value costs of the alternatives were calculated.

The effects of the alternative proposals on energy production and consumption were also analyzed. National coal use was projected and broken down in terms of production by geographic region and consumption by region. The amount of western coal shipped to the Midwest and East was also estimated. In addition, utility consumption of oil and gas was analyzed.

Major assumptions. Two types of assumptions have an important effect on the results of the analyses. The first group involves the model structure and characteristics. The second group includes the assumptions used to specify future economic conditions.

[1] Uncontrolled emissions of sulfur dioxide are defined as twice the sulfur content of the coal measured in pounds per million Btu. For the purposes of this standard, sulfur content of the coal can be measured at the plant for unwashed coals and at the mine prior to washing, for washed coals. In calculating percent removal, sulfur content of the flue gas as it leaves the stack is compared with the uncontrolled emissions of the coal.

The utility model selected for this analysis can be characterized as a cost minimizing economic model. In meeting demand, it determines the most

studies. The August analysis used a lower growth projection which is more in line with current estimates of demand growth.

maximum control level required on a 24-hour basis.

The projected SO_2 emissions from utility boilers are shown by plant type

the new plants. The latter figures are shown to illustrate the effect of changes in the amount of new capacity and variations in the utilization of

creases under all but the 340 ng/J (0.80 lb/million Btu) option. Western coal shipped east is lower under all options than under the current standard.

This increase varies, depending on the assumptions modeled, from $300 million to $2 billion or a 1- to 2-percent

The utility model selected for this analysis can be characterized as a cost minimizing economic model. In meeting demand, it determines the most economic mix of plant capacity and electric generation for the utility system, based on a consideration of construction and operating costs for new plants and variable costs for existing plants. It also determines the optimum operating level for new and existing plants. This economic-based decision criteria should be kept in mind when analyzing the model results. These criteria imply, for example, that all utilities base decisions on lowest costs and that neutral risk is associated with alternative choices.

Such assumptions may not represent the utility decisionmaking process in all cases. For example, the model assumes that a utility bases supply decisions on the cost of constructing and operating new capacity versus the cost of operating existing capacity. Environmentally, this implies a tradeoff between emissions from new and old sources. The cost minimization assumption implies that in meeting the standard a new powerplant will fully scrub high-sulfur coal if this option is cheaper than fully or partially scrubbing low-sulfur coal. Often the model will have to make such a decision, especially in the midwest where utilities can choose between burning local high or imported western low-sulfur coal. The assumption of risk neutrality implies that a utility will always choose the low-cost option. Utilities, however, may perceive full scrubbing as involving more risks and pay a premium to be able to partially scrub the coal. On the other hand, they may perceive risks associated with long-range transportation of coal, and thus opt for full control even though partial control is less costly. Comments are solicited regarding the use of a cost optimization model to simulate utility decisions.

The assumptions used in the analyses to represent economic conditions in a given year have a significant impact on the final results reached. The major assumptions used in the EPA analyses are shown in table 1 and the significance of these parameters is summarized below. Comments are solicited regarding the assumptions used.

The growth rate in demand for electric power is very important since this rate determines the amount of new capacity which will be needed and thus directly affects the emission estimates and the projections of pollution control costs. A high electric demand growth rate results in a larger emission reduction associated with the proposed standards and also results in higher costs. The April analysis used a relatively high-growth rate consistent with last year's national energy policy studies. The August analysis used a lower growth projection which is more in line with current estimates of demand growth.

The nuclear capacity assumed to be installed in a given year is also important to the analysis. Because nuclear power is less expensive, the model will predict construction of new nuclear plants rather than new coal plants. Hence, the nuclear capacity assumption affects the amount of new coal capacity which will be required to meet a given electric demand level. In practice, there are a number of constraints which limit the amount of nuclear capacity which can be constructed. The assumptions used in the EPA analyses assume high (April) and moderate (August) growth in nuclear capacity.

The oil price assumption has a major impact on the amount of predicted new coal capacity, emissions, and oil consumption. Since the model makes generation decisions based on cost, a low oil price relative to the cost of building and operating a new coal plant will result in more oil-fired generation and less coal utilization. This results in less new coal capacity which reduces capital costs but increases oil consumption and fuel costs because oil is more expensive per Btu than coal. This shift in capacity utilization also affects emissions, since an existing oil plant generally has a higher emission rate than a new coal plant even when only partial control is allowed on the new plant.

Coal transportation and mine labor rates both affect the delivered price of coal. The assumed transportation rate is generally more important to the predicted consumption of low-sulfur coal since that is the coal type which is most often shipped long distances. The assumed mining labor cost is more important to eastern coal costs and production estimates since this coal production is generally much more labor intensive than western coal. The model does not incorporate the Agency's PSD regulations or forthcoming requirements to protect and enhance visibility. These requirements may be important factors for new powerplants.

Summary of results. The results of the EPA analyses which were completed in April and August 1978 are presented in tables 2 through 8 and discussed below. Four alternative standards were evaluated. Each of the options presented includes 85-percent control of inlet SO_2 (24-hour average), except for 3 days per month, a maximum SO_2 emission limit of 520 ng/J (1.2 lb/million Btu) except for 3 days per month, a particulate matter standard of 13 ng/J (0.03 lb/million Btu), and the proposed NO_x standards. The partial control options in the tables represent alternative levels for the maximum control level required on a 24-hour basis.

The projected SO_2 emissions from utility boilers are shown by plant type and geographic region in tables 2 through 5. Table 2 details the 1990 national SO_2 emissions resulting from different plant types and age groups. As is expected, the proposed standards result in a significant reduction of SO_2 emissions as compared to the current standards. This reduction ranges from 10 to 12 percent depending on the alternative examined and the assumptions used. The emissions from new plants directly affected by the standards are reduced by up to 73 percent. However, the model predicts that the proposed standards will delay the construction of new plants (note the total coal capacity changes) causing existing coal- and oil-fired plants to be utilized more than they would have been without the proposed standards. This causes an increase in emissions from existing plants which offsets part of the reduction achieved by new plants. As discussed above, this shift in capacity utilized is predicted by the costs minimiization model as a result of increased pollution control cost for new coal-fired plants. This shift in the generation mix has important implications for the decisionmaking process. For example, if a national energy policy phases out oil use for electric power generation, then the April study's prediction (table 6) of increased oil use in 1990 (over 1975 levels) will not be allowed to occur. With such a policy, oil consumption impacts would be similar to those shown for the August analysis in table 6.

A summary of the projected 1990 regional SO_2 emissions under the alternative control levels is shown in table 3. The combined emissions in the East and Midwest are reduced about 7 percent as compared to predictions under the current standards. These emissions are not affected greatly by the various control options, although there is a slight increase shown under the 340 ng/J (0.80 lb/million Btu) option in the April analysis. The combined emissions in the west south-central and west regions show a greater variation on a percentage basis. In the analysis, the full control and 210 ng/J (0.50 lb/million Btu) options both result in a 36-percent reduction from emission levels under the current standards, while the 340 ng/J (0.80 lb/million Btu) option results in a 28-percent decrease.

Regional emissions from the new plants directly affected by the proposed standards are shown for the years 1990 and 1995 in tables 4 and 5. These tables also project the coal consumption and emission factors (million tons of SO_2 per quadrillion Btu) for

the new plants. The latter figures are shown to illustrate the effect of changes in the amount of new capacity and variations in the utilization of the new capacity. As noted above, the 1990 emissions from new plants drop dramatically under the proposed standards to a level only about one-third that which would result under the current standards. This emission reduction is due in part to lower emission factors and in part to reduced coal consumption predicted by the model. Coal consumption in the East is virtually unchanged, but in the Midwest coal consumption in new plants drops by one-third as a result of the proposed standards. In the west south-central and west regions coal consumption drops 5 to 10 percent which is about the same as the decline in national coal consumption at new plants. The reduced coal consumption in new plants results from a delay in new plant construction due to the increased cost of generation from new coal plants. Reduced coal consumption by new plants means a shift to more coal and oil burned in existing plants or new turbines, and this causes the increase in emissions from existing and oil-fired plants which was mentioned earlier. Table 5 shows that in 1995 the emission reduction due to the proposed standards is still of the same magnitude as the 1990 reduction. Also, since coal capacity is similar under all options by 1995, the coal consumption impact of the proposed standards is less pronounced. Changes in coal consumption in 1995 are almost entirely due to variations in the utilization of the new plants.

Table 6 illustrates the effect of the proposed standards on 1990 national coal production, western coal shipped east, and utility oil and gas consumption. This table shows some large differences between the two analyses which are caused by different model assumptions. For example, in the model, higher oil prices decrease oil demand and increase coal use. Increasing transportation costs increases the delivered price of western coal and reduces demand. These two factors along with the lower growth rate account for most of the difference in fuel use estimates between the April and August results. However, the conclusions drawn from the analyses are similar. For example, in terms of coal production, both analyses show that total production will increase in all regions of the country as compared to 1975 levels.

Compared to production under the current standards, the April analysis predicts an increase in eastern coal production under all but the 340 ng/J (0.80 lb/million Btu) option. Midwestern production increases under all options, and western production decreases under all but the 340 ng/J (0.80 lb/million Btu) option. Western coal shipped east is lower under all options than under the current standard, but is still 14 to 20 times higher than 1975 levels. Finally, the April analysis projects that oil consumption by utilities would be increased by the proposed standards. The increase varies from 300,000 barrels per day for the full control option to 100,000 barrels per day for the 210 ng/J (0.50 lb/million Btu) and 340 ng/J (0.80 lb/million Btu) options.

The August figures predict a smaller increase in 1990 eastern coal production than would be expected under the current standards. Midwestern production increases by 15 to 43 million tons and western production decreases up to 56 million tons. The amount of western coal shipped east is reduced by 30 million tons by both full control and 210 ng/J (0.50 lb/million Btu) options, and is essentially unchanged by the higher options. Due to the high assumed oil price, oil consumption is reduced from current levels, but the 1990 difference between the options and the current standards is still an increase of 200,000 to 300,000 barrels per day. This increased oil consumption results from the predicted shift toward existing oil-fired plants and turbines as a result of higher pollution control costs for new coal plants. Table 8 shows that as high oil prices are assumed (August analysis), there is no difference in 1995 oil consumption among the options. Finally, the DOI/DOE coal leasing study (see "Other Studies") shows a difference of about 50,000 barrels per day in 1990 between full and partial scrubbing.

The economic effects of the proposed standards are shown in table 7 for 1990. Utility capital expenditures between 1979 and 1990 increase under all options as compared to the $500 to $750 billion estimated to be required in the absence of a change in the standard. The capital estimates in tables 7 and 8 are increments over the expenditures under the current standard and include both plant capital (for new capacity) and pollution control expenditures. As shown in table 2, the model estimates total industry capacity is to be 10 GW to 15 GW greater under the partial control option, and the cost of this extra capacity makes the total utility capital expenditures higher under the 210 ng/J (0.50 lb/million Btu) and 340 ng/J (0.80 lb/million Btu) options, even though pollution control capital is lower than under the full control option.

Annualized cost includes a levelized capital charge, fuel costs, and operation and maintenance costs associated with utility equipment. All of the options cause an increase in annualized cost over the current standards. This increase varies, depending on the assumptions modeled, from $300 million to $2 billion or a 1- to 2-percent increase over the $90 to $100 billion.

The average monthly residential electric bill is predicted to increase only slightly by any of the options, up to a maximum 2-percent increase shown for full control in the April analysis. The large total increase in the monthly bill over 1975 levels is due in large part to a more than 50-percent increase in the amount of electricity used by each customer. Pollution control expenditures, including those to meet the current standards, account for about 15 percent of the increase in the average monthly bill while the remainder of the cost increase is due to capacity expansion and general cost escalations.

The average monthly bill is determined by estimating utility revenue requirements which are a function of capital expenditures, fuel costs, and operation and maintenance costs. Therefore, due to changes in the pattern of expenditures, the selection of the specific year examined has an impact on the costs shown. For example, the August analysis shows slightly higher cost in 1990 for the partial control options as compared to full control. This is due to the larger amount of new capacity and the higher associated capital costs under these options. By 1995, the amount of new coal capacity under each option has approximately equalized, and the estimates show full control to be most expensive but by only 12 cents a month over the average bill under the 340 ng/J (0.80 lb/million Btu) option (table 8).

The incremental costs per ton of SO_2 removal are also shown in table 7. The figures are determined by dividing the change in annualized cost by the change in annual emissions, as compared to the current standards. These ratios are a measure of the cost effectiveness of the options, where lower ratios represent a more efficient resource allocation. All the options result in higher cost per ton than the current standards with the full control option being the most expensive.

Another measure of cost effectiveness is the average dollar-per-ton cost at the plant level. This figure compares total pollution control cost with total SO_2 emission reduction for a model plant. This average removal cost varies depending on the level of control and the coal sulfur content. The range for full control is from $260 per ton on high-sulfur coal to $1,600 per ton on low-sulfur coal. The partial scrubbing range is from $900 per ton on low-sulfur coal to $2,000 per ton on very low sulfur coal.

The economic analysis also estimated the present value cost in order to facilitate comparison of the options by

reducing the streams of capital, fuel, and operation and maintenance expenses to one number. A present value

tion, depreciation, interest, taxes, and other indirect flows were excluded. This second type of present value

use, control, equipment, and variation in capacity utilization. In general, full control results in slightly lower emis-

Table 1. COMPARISON OF ASSUMPTIONS

April 1978 and August 1978

V 43 / 182

reducing the streams of capital, fuel, and operation and maintenance expenses to one number. A present value estimate allows expenditures occurring at different times to be evaluated on a similar basis by discounting the expenditures back to a fixed year. Two types of present value costs have been estimated in the analysis.

First, an estimate was made of the present value of costs which will be faced by the consumers. Essentially, this represents the present value of utility revenue requirements. This calculation for the August results shows a 1990 present value of $26 billion for the full control option and $15 billion for the 340 ng/J (0.80 lb/million Btu) option as compared to the current standards.

Second, an "economic" or "real resource" present value was estimated. Real resource present value is designed to measure the level of national resources committed to the standards. In computing this resource commitment, construction costs, labor costs, and other resource costs were considered, but financing flows and transfer payments were excluded. Thus, allowance for funds during construction, depreciation, interest, taxes, and other indirect flows were excluded. This second type of present value figure gives an estimate of the costs to society of the options. The calculation of this value based on the August analysis results in a 1990 present value of $9.8 billion for full control and $10.4 billion for the 340 ng/J (0.80 lb/million Btu) option. Both types of present value costs were estimated as an increment over the current standards for the years 1990 and 1995. These figures include capital costs of plants installed through that date and operation and maintenance costs for 30 years after the cutoff date. Comments are solicited regarding the calculation and use of present values for this decision. Comments are also solicited on the appropriateness of using present value costs to the utility or present value resources costs to society.

A summary of the 1995 impacts of the proposed standards is shown in table 8 based on the August analysis. The total coal capacity figure shows that by 1995 all the options have equal capacity. Thus, the options reflect differences in amount of low-sulfur coal use, control, equipment, and variation in capacity utilization. In general, full control results in slightly lower emissions, less Western coal shipped East, higher capital expenditures, and slightly higher average residential bills than would result under the partial control options.

Other studies. In addition to the studies described above, EPA is aware of three other major studies of the impacts resulting from several recommended standards for powerplants. One of these studies was performed as a joint effort of the Departments of the Interior and Energy for studying coal leasing policies. Another analysis was done by the Department of Energy, and the third study was sponsored by a segment of the electric utility industry. These studies were performed for the purpose of analyzing the impacts of their respective recommended standards along with the EPA options discussed above. The results of these studies have been considered by EPA in developing the proposed standards. More detail on the results of these studies is given in the supplement to the background document (EPA 450/2-78-007a-1).

SEP 19 1978

Table 1. COMPARISON OF ASSUMPTIONS
April 1978 and August 1978

Assumption	April	August
Growth rates	1975-1985: 5.8%/yr 1985-1995: 5.5%	1975-1985: 4.8%/yr 1985-1995: 4.0%
Nuclear capacity	1985: 108 GW 1990: 177 1995: 302	1985: 97 GW 1990: 167 1995: 230
Oil prices ($ 1975)	1985: $13/bbl 1990: $13 1995: $13	1985: $15/bbl 1990: $20 1995: $28
General inflation rate	5.5%/yr	5.5%/yr
Annual emissions @ 0.5 floor	0.5 lb SO_2/million Btu	0.32 lb SO_2/million Btu
Coal transportation	Increases at general inflation rate	Increases at general inflation rate plus 1%
Coal mining labor costs	Increases at general inflation rate	Increases at general inflation rate plus 1%
Miscellaneous	A number of miscellaneous changes were made between the April 1978 study and the August 1978 study. These changes were either corrections or refinements of values used in the April study. Examples of these changes included revisions to the level of SIP control assumed in the model, revisions to the scrubbing costs, changes in the assumptions regarding industrial coal consumption, and changes to the coal supply curves used in the April study.

Table 7. SUMMARY OF 1990 ECONOMIC IMPACTS[a]

Particulate Matter Standards

The proposed standards would limit the emissions of particulate matter to 13 ng/J (0.03 lb/million Btu) heat input. This level is based on the performance of a well-designed and well-operated electrostatic precipitator (ESP) firing coal with a sulfur content greater than 1 percent and had a hot side ESP with a specific collection area greater than 89 square meters per actual cubic meter per second (452 ft²/1000 acfm). The Agency is currently conducting a test program to test a 350-MW powerplant controlled with a baghouse which recently began operation. Since baghouses are designed and constructed in modules rather than as one single unit,

[a]Plants subject to the revised standards.

PARTICULATE MATTER STANDARDS

The proposed standards would limit the emissions of particulate matter to 13 ng/J (0.03 lb/million Btu) heat input and would require a 99-percent reduction in uncontrolled emissions from solid fuels and a 70-percent reduction for liquid fuels. No particulate matter control would be necessary for units firing gaseous fuels alone, and thus a percent reduction would not be required for gaseous fuels. The 20-percent opacity (6-minute average) standard that is currently applicable to steam electric generating units (40 CFR Part 60, Subpart D) would be retained under the proposed standards. An opacity standard is proposed to insure proper operation and maintenance of the particulate matter control system. If an affected facility were to comply with all applicable standards except opacity, the owner or operator may request the Administrator under 40 CFR 60.11(e) to establish a source specific opacity standard for that affected facility.

The proposed standards are based on the performance of a well designed and operated baghouse or electrostatic precipitator (ESP). EPA has determined that these control systems are the best adequately demonstrated systems of continuous emission reduction (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact and energy requirements).

EPA has evaluated data from more than 50 emission test runs conducted at eight baghouse-equipped, coal-fired steam generating units. The data from two tests exceeded the proposed standard, however, it is EPA's judgment that the emission levels at the two units which had measured emission levels above the proposed standards could be reduced to below the proposed standards through an improved maintenance program. EPA believes that baghouses with an air-to-cloth ratio of 0.6 actual cubic meters per minute per square meter (2 ACFM/ft²) would achieve the proposed standards at pressure drops of less than 1.25 kilopascals (5 in. H_2O). EPA has concluded that this air/cloth ratio and pressure drop are reasonable when considering cost, energy, and nonair quality impacts.

EPA collected emission data from 21 ESP-equipped, coal-fired steam generating units. The nominal sulfur content of the coals being fired ranged from 0.4 percent to 1.9 percent. None of the 21 units tested were designed to achieve an emission level equal to or below the proposed standard of 13 ng/J (0.03 lb/million Btu) heat input; however, emissions from 9 of the 21 units were below the proposed standard. All of the units tested which were firing coal with a sulfur content greater than 1 percent and had a hot side ESP with a specific collection area greater than 89 square meters per actual cubic meter per second (452 ft²/1,000 ACFM), or a cold side ESP with a specific collection area greater than 85 square meters per actual cubic meter per second (435 ft²/1,000 ACFM), had emission levels below the proposed standards. EPA evaluated emission levels from units burning relatively low-sulfur coal because it is more difficult for an ESP to collect particulate matter emissions generated by the combustion of low-sulfur coal than high-sulfur coal. ESP's require a larger specific collection area when applied to units buring low-sulfur coal than to units burning high-sulfur coal, because the resistivity of the fly ash is higher with low-sulfur coal. To meet the proposed standard, EPA believes that an ESP used on low-sulfur coal would have to have a specific collection area from around 130 (hot side) to 200 (cold side) square meters per actual cubic meter per second (650 to 1,000 ft² per 1,000 ACFM) while an ESP used on high-sulfur coal (3.5 percent sulfur) would only require around 72 square meters per actual cubic meter per second (360 ft² per 1,000 ACFM).

ESP's have been traditionally used to control particulate emissions from powerplants. High-sulfur coal produces fly ash with a low electrical resistivity which can be readily collected with an ESP. However, low-sulfur coal produces fly ash with high electrical resistivity, which is more difficult to collect. The problem of high electrical resistivity fly ash can be reduced by using a hot side ESP (ESP located before combustion air preheater) when firing low-sulfur coal. Higher fly ash collection temperatures improve ESP performance by reducing fly ash resistivity for most types of low-sulfur coal (for example, increasing the fly ash collection temperature from 177° C (350° F) to 204° C (400° F) can reduce electrical resistivity of fly ash from low-sulfur coal by approximately 50 percent).

While EPA believes that ESP's can be applied to high-sulfur coal at reasonable costs to meet the proposed standards, it recognizes that applying a large, high efficiency ESP to a facility using low-sulfur coal to meet the proposed standards will be more expensive. In view of this, EPA believes that a baghouse control system could be applied on utility-size facilities firing low-sulfur coal at a lower cost than an ESP. Although the largest baghouse-controlled coal-fired steam generator for which EPA has particulate matter emission data is 44 MW, several larger installations are currently under construction, and EPA plans to test a 350-MW powerplant controlled with a baghouse which recently began operation. Since baghouses are designed and constructed in modules rather than as one larger unit, there should be no technological barriers to scaling them up to a utility sized facility. Twenty-four baghouse-equipped coal-fired utility steam generators are scheduled to be operating by the end of 1978 and an additional 30 units are planned to start operation after 1978. About two-thirds of these planned units will be larger than 150-MW electrical output capacity, and more than one-third of these planned baghouse systems will be for units being fired with coal containing more than 3 percent sulfur. EPA therefore believes that baghouses have been adequately demonstrated for even the largest utility-sized facility.

EPA collected emission test data from seven coal-fired steam generators controlled by wet particulate matter scrubbers. Data from five of the seven resulted in emission levels less than 21 ng/J heat input (0.05 lb/million Btu). Data from only one of the seven were less than 13 ng/J (0.02 lb/million Btu) heat input. In view of this, EPA believes that wet particulate matter scrubbers would not be capable of complying with the proposed standards under most conditions.

EPA considered proposing the standard at a level of 21 ng/J (0.05 lb/million Btu) in order to allow the application of wet particulate matter scrubbers in addition to baghouses and ESP's. This option was rejected, because EPA believes that allowing scrubbers would cause an increase in the emissions of fine particulate matter without compensating advantages. In addition to 60 percent higher emissions, a particulate matter scrubber would require three times as much energy to operate as a dry control system, and would also increase water consumption and waste water treatment requirements. An increase in fine particulate emissions would have an adverse effect on visibility. The primary suggested advantage to allowing the use of scrubbers for particulate matter control would be to allow a single scrubber to control both SO_2 and particulate matter emissions which would result in a cost savings.

The Department of Energy (DOE) and others believe that the proposed standard of 3 ng/J (0.03 lb/million Btu) will preclude the use of ESP's on facilities using low-sulfur coal and require baghouse control which they believe has not been demonstrated on utility-size facilities. Because of this, DOE recommends that the standard be no less than 21 ng/J (0.05 lb/million Btu). The Utility Air Regulatory Group (UARG) also maintains that baghouses have not been adequately

demonstrated, particularly when firing high-sulfur coal. They further believe that ESP's cannot achieve the proposed standard of 13 ng/J at reasonable costs. They also believe that the proposed standard would require the use of flue gas conditioning systems to control acid mist formation. However, if sulfuric acid mist is formed in the flue gases, there is a potential for its interference with the particulate matter

EPA is requesting comments on the proposed level of the particulate matter standard and the basis for the standard.

cluded in the proposed standards as a result of provisions in the 1977 Amendments. As with the proposed particulate matter standard, the per-

proposed level of 260 ng/J heat input for Eastern bituminous coals would be reasonable even though emission data alone would tend to support a lower

used for coal could also be used to limit NO_x emissions from shale oil combustion. Consequently, EPA proposes to limit NO_x emissions from

demonstrated, particularly when firing high-sulfur coal. They further believe that ESP's cannot achieve the proposed standard of 13 ng/J at reasonable cost. In view of this, UARG recommends an emission limitation of 34 ng/J (0.08 lb/million Btu). In doing so, they maintain a 34-ng/J standard would encourage baghouses but not eliminate precipitators from use.

EPA has investigated the possibility that FGD control systems affect particulate matter emissions. Three possible mechanisms were investigated: (1) FGD system sulfate carryover from the scrubber slurry, (2) particulate matter removal by the FGD system, and (3) particulate matter generation by the FGD system through condensation of sulfuric acid mist (H_2SO_4).

To address the first mechanism, EPA obtained data from three different steam generators that were all equipped with FGD systems and that had low particulate matter emission levels at the FGD inlet. The data from all three facilities indicated that particulate emissions did not increase through the FGD system. Proper mist eliminator design and maintenance is important in preventing scrubber liquid entrainment which could cause the outlet particulate loading to exceed inlet particulate loading.

In relation to the second mechanism, FGD system removal of particulate matter, the data from the three FGD systems available to EPA indicated that particulate matter emissions were reduced by the FGD systems in all three cases. That is, the particulate matter discharge concentration from the FGD system was less than the concentration at the FGD inlet. This property has been particularly noted at steam generators equipped with ESP's upstream of FGD systems.

The third mechanism is the potential condensation of sulfuric acid mist (H_2SO_4) from sulfur trioxide (SO_3) in the flue gas. At a typical steam generator, 97 to 99 percent of the fuel sulfur is converted to SO_2 and 1 to 3 percent is converted to SO_3. Typical stack gas temperatures at a coal-fired steam generator without an FGD system are between 150° C and 200° C (300° F to 400° F). At these temperatures, most SO_3 remains in a gaseous state and does not form sulfuric acid. At lower temperatures, water vapor condenses and combines with SO_3 to form sulfuric acid. The dewpoint temperature for sulfuric acid ranges between 120° C (250° F) and 175° C (350° F). The lower temperature would correspond to low-sulfur coal and higher temperature would correspond to high-sulfur coal.

Available test data indicate that an FGD system would remove about 50 percent of the SO_3 in the flue gas and thus reduce the potential for sulfuric acid mist formation. However, if sulfuric acid mist is formed in the flue gases, there is a potential for its interference with the particulate matter performance test. Under method 5, a sample is extracted at a probe temperature of about 160° C (320° F). This assures that SO_3 does not condense on the sampling filter when sampling powerplants that do not have FGD systems. However, when sampling powerplants with FGD systems (particularly when combusting high-sulfur coal), there is a potential for sulfuric acid mist to form at the reduced flue gas temperatures. If acid mist forms, it may interact within the sampling train to form sulfate compounds that are not vaporized at the 160° C (320° F) sampling temperature. Also, sulfuric acid mist may remain deposited within the test probe itself. In either case, the net result could be a high measurement of particulate matter.

EPA obtained data from three FGD equipped powerplants to determine acid mist formation potential. All of these plants were firing low-sulfur coal. The data indicate that SO_3 conversion to sulfuric acid mist is not a problem. EPA believes these data support the conclusion that an FGD system on low-sulfur coal-fired powerplants does not increase particulate emissions through sulfuric acid formation. Thus, EPA believes compliance with the proposed particulate matter standard is demonstrated to be achievable when firing low-sulfur coal.

In a case where an FGD system is used with higher sulfur coal, sufficient data have not become available to fully assess the effect of sulfuric acid formation on measured particulate matter. The proposed standard is based on emission test data at the particulate matter control device discharge prior to any FGD system. EPA plans to continue investigating this subject and will consider any data availabale on the impact of sulfuric acid mist on the particulate matter standard.

The 1977 amendments require that EPA specify, in addition to an emission limitation, a percent reduction in uncontrolled emission levels for fossil fuel-fired stationary sources. The proposed standard would require a 99-percent reduction for solid fuels and a 70-percent reduction for liquid fuels. Because of the difficulty of sampling particulate matter upstream of the control device (due to the complex particulate matter sampling conditions), the proposed standard would not require direct performance testing for the particulate matter emission reduction level. The percent reduction is not controlling, and performance testing for the emission limitation would satisfy the requirements for performance testing.

EPA is requesting comments on the proposed level of the particulate matter standard and the basis for the standard.

NO_x

The proposed NO_x emission standards are based on emission levels achievable with a properly designed and operated steam generator which utilizes combustion modification techniques to reduce NO_x formation. The proposed standards are as follows:

(1) 86 ng/J heat input (0.20 lb/million Btu) from the combustion of any gaseous fuel, except gaseous fuel derived from coal;

(2) 130 ng/J heat input (0.30 lb/million Btu) from the combustion of any liquid fuel, except shale oil and liquid fuel derived from coal;

(3) 210 ng/J heat input (0.50 lb/million Btu) from the combustion of subbituminous coal, shale oil, or any solid, liquid, or gaseous fuel derived from coal;

(4) 340 ng/J (0.80 lb/million Btu) from the combustion in a slag tap furnace of any fuel containing more than 25 percent, by weight, lignite which has been mined in North Dakota, South Dakota, or Montana;

(5) Combustion of a fuel containing more than 25 percent, by weight, coal refuse would be exempt from the NO_x standards and monitoring requirements;

(6) 260 ng/J (0.60 lb/million Btu) from the combustion of any solid fuel not specified under (3), (4), or (5);

(7) Percent reductions in uncontrolled NO_x emission levels would be required; however, the percent reduction would not be controlling, and compliance with the NO_x emission limits (ng/J) would assure compliance with the percent reduction requirements. the National Appeals Board

Most new electric utility steam generating untis are expected to burn pulverized coal. Consequently, the NO_x studies used to develop the propcsed standards have concentrated on the combustion of pulverized coal. The proposed standards for pulverized coal are based on the application of combustion modification techniques (i.e., staged combustion, low excess air, and reduced heat release rate) which EPA has concluded represent the best demonstrated system of continuous emission reduction (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact, and energy requirements) for electric utility power plants.

The proposed standards would require continuous compliance (based on a 24-hour average), except during periods of startup, shutdown, or malfunction as provided under 40 CFR 60.8. Percent reduction requirements are included in the proposed standards as a result of provisions in the 1977 Amendments. As with the proposed particulate matter standard, the percent reductions for NO_x are not controlling, and compliance testing for the NO_x emission limitations (ng/J) would satisfy all compliance testing requirements for NO_x.

Combustion modification techniques limit the formation of NO_x in the boiler by reducing flame temperatures and by minimizing the availability of oxygen during combustion. Elevated temperatures and high oxygen levels would otherwise enhance the formation of NO_x. The levels to which NO_x emissions can be reduced with combustion modifications depend on the type of fuel burned, the boiler design, and boiler operating practices. All four of the major boiler manufacturers utilize combustion modification techniques in their modern units; however, some manufacturers' techniques may be more effective than others.

EPA has conducted NO_x emmission tests at six modern electric utility steam generating units which burn pulverized coal, representing two of the major boiler manufacturers. These tests indicate that during low NO_x operation of modern units, emission levels below 210 ng/J heat input (0.50 lb/million Btu) are easily attainable. If the potential side effects associated with low NO_x operation were not considered, it would be reasonable to establish an NO_x emission limit for pulverized coal-fired units at 210 ng/J heat input.

The side effects EPA has considered include: Boiler tube wastage (corrosion); slagging; increased emissions of particulates, carbon monoxide, polycyclic organic matter, and other hydrocarbons; boiler efficiency losses; carbon loss in the ash; low steam temperatures; and possible operating hazards (including boiler explosions). In EPA's judgment only boiler tube wastage could be a potential problem at NO_x emission levels necessary to meet a standard of 210 ng/J.

Tube wastage is the deterioration of boiler tube surfaces due to the corrosive effects of ash in the presence of a reducing atmosphere. A reducing atomsphere often results from operation of a boiler under conditions required to minimize NO_x emissions. The severity of tube wastage is believed to vary with several factors, but especially with the quality of the coal burned. For example, high sulfur Eastern coal generally causes more of a tube wastage problem than low sulfur Western coal. Serious tube wastage can shorten the life of a boiler and result in expensive repairs.

Because of the potential problem from tube wastage, EPA does not believe that an emission limit below the proposed level of 260 ng/J heat input for Eastern bituminous coals would be reasonable even though emission data alone would tend to support a lower limit. For low rank Western coals, however, there is a much smaller tube wastage potential at low NO_x levels, and a lower emission limit is justified. Hence, EPA is proposing an emission limit of 210 ng/J heat imput for units burning low rank Western coals. These coals are classified in the proposed standards as subbituminous, according to ASTM methods. EPA believes that the proposed distinction made between low rank Western (subbituminous) coal and other coals represents the best method for distinguishing between coals with low and high tube wastage potentials.

Although most new utility power plants will fire pulverized coal, other fuels may also be burned. Emission limits for these fuels are also proposed.

The proposed NO_x emission limits for units which burn liquid and gaseous fuels are at the same levels as the emission limits originally promulgated in 1971 under subpart D for large steam generators which burn oil and gas. EPA did not conduct a detailed study of combustion modification or NO_x flue gas treatment for oil- or gas-fired boilers because few, if any, oil- or gas-fired electric utility power plants are expected to be built in the future.

Several studies have been conducted which indicate that emissions from the combustion of liquid and gaseous fuels which are derived from coal, such as solvent refined coal and low Btu synthetic gas, may exceed the proposed emission limits for liquid fuels (130 ng/J) and gaseous fuels (86 ng/J). The reason is because fuels derived from coal will have fuel bound nitrogen contents which approach the levels found in coal rather than in natural gas and oil. Based on limited emission data from pilot-scale facilities and on the known emission characteristics of coal, EPA believes that an achievable emission limit for solid, liquid, of gaseous fuels derived from coal would be 210 ng/J (0.50 lb/million Btu). Tube wastage of other boiler problems are not expected to occur from boiler operation at levels as low as 210 ng/J when firing these fuels because of their low sulfur and ash contents.

Very little is known about the emission characteristics of shale oil. However, since shale oil typically has a higher fuel-bound nitrogen content than fuel oil, it may be impossible for a well-controlled unit burning shale oil to achieve the proposed NO_x emission limit for liquid fuels. Shale oil does have a similar nitrogen content to coal, and it is reasonable to expect that the emission control techniques used for coal could also be used to limit NO_x emissions from shale oil combustion. Consequently, EPA proposes to limit NO_x emissions from units burning shale oil to 210 ng/J, the same limit proposed for subbituminous coal. There is no evidence that tube wastage or other boiler problems would result from operation of a boiler at 210 ng/J when shale oil is burned.

The combustion of coal refuse was exempted from the subpart D standards because the only furnace design believed capable of burning coal refuse, the slag tap furnace, inherently produces NO_x emissions in excess of the NO_x standard. Since no new information has become available, EPA would continue the coal refuse exemption under the proposed standards.

The proposed emission limits for lignite combustion were developed earlier as amendments to the original standards under subpart D. Since no new information on NO_x emission rates resulting from lignite combustion in electric utility power plants has become available, the lignite limits have been incorporated into these proposed standards without revision.

While EPA believes that the proposed emission limitations for bituminous and subbituminous coals can be achieved without adverse effects, UARG recommends that the present NO_x emission limitation of 300 ng/J (0.7 lb/million Btu) be retained. In so doing, they argue that the potential adverse side effects that may result from operating a boiler under conditions required to meet the proposed standards have not been adequately studied over the long term. They also expressed concern that the proposed standards could have an anticompetitive effect, since they believe there may be only one boiler vendor who could meet the proposed standards on a continuous basis. Finally, they question whether there is sufficient continuous monitoring experience to warrant basing compliance on continuous monitoring results.

Studies

The background information including environmental and economic assessments for the proposed standards is divided into 4 documents, each with a title and a document number as follows:

"Electric Utility Steam Generating Units: Background Information for Proposed NO_x Emission Standards," EPA 450/2-78-006a;

"Electric Utility Steam Generating Units: Background Information for proposed Particulate Matter Emission Standards," EPA 450/2-78-006a;

"Electric Utility Steam Generating Units: Background Information for Proposed SO_2 Emission Standards," EPA 450/2-78-007a; and

"Electric Utility Steam Generating Units: Background Information for Proposed SO_2

Emission Standards—Supplement," EPA 450/2-78-007a-1.

Emission Standards—Supplement," EPA 450/2-78-007a-1.

Much of the supporting information within the background information documents was obtained from consultant studies sponsored by EPA. Reports covering these studies are included in the docket at EPA headquarters and are available for inspection during normal office hours at each EPA regional office. The titles of the consultant studies are as follows:

1. "Flue Gas Desulfurization Systems: Design and Operating Parameters, SO_2 Removal Capabilities, Coal Properties and Reheat."
2. "Flue Gas Desulfurization System Capabilities for Coal-Fired Steam Generators."
3. "Boiler Design and Operating Variables Affecting Uncontrolled Sulfur Emissions from Pulverized Coal-Fired Steam Generators."
4. "Effects of Alternative New Source Performance Standards on Flue Gas Desulfurization System Supply and Demand."
5. "Evaluation of Physical Coal Cleaning as an SO_2 Emission Control Technique."
6. "The Impact of Modification/Reconstruction of Steam Generators on SO_2 Emissions."
7. "The Energy Requirements for Controlling SO_2 Emissions from Coal-Fired Steam/Electric Generators."
8. "The Solid Waste Impact of Controlling SO_2 Emissions from Coal-Fired Steam-Electric Generators."
9. "Water Pollution Impact of Controlling SO_2 Emissions from Coal-Fired Steam/Electric Generators."
10. "Particulate and Sulfur Dioxide Emission Control Costs for Large Coal-Fired Boilers."
11. "Review of New Source Performance Standards for SO_2 Emissions from Coal-Fired Utility Boilers."
12. "The Effect of Flue Gas Desulfurization Availability on Electric Utilities."
13. "Effects of Alternative New Source Performance Standards for Coal-Fired Electric Utility Boilers on the Coal Markets and Utility Capacity Expansion Plans."
14. "Flue Gas Desulfurization System Manufacturers Survey."
15. "Assessment of Manufacturer Capacity to Meet Requirements for Particulate Control in Utility and Industrial Boilers."
16. "Flue Gas Desulfurization Cost for Large Coal-Fired Boilers, August 10, 1978."
17. "The Ability of Electric Utilities with FGD to Meet Energy Demands."

In addition to the consultant studies, EPA studies were performed. One study involved the installation and operation of continuous SO_2 monitors on the inlet and outlet of commercial-scale FGD units. The purposes of the study were to determine: (1) The statistical characteristics of coal-fired boiler and FGD operation, (2) the variability of SO_2 inlet concentrations, (3) the ability of FGD to "damp out" SO_2 variability, and (4) SO_2 emissions as a function of averaging period.

A second EPA study included a diffusion modeling analysis to estimate the maximum ground-level concentration of SO_2 that would occur around small, medium, and large power plants for emission rates with and without flue gas reheat. The study also examined the estimated SO_2 concentrations that would occur around multi-boiler facilities. Surface and upper-air meteorological data for eight different geographical areas were used in the study.

EPA has also supplemented the economic, energy, and environmental impact assessment set forth in the background information document for the SO_2 standard (EPA 450/2-78-007a) by conducting two additional analyses. The first was initiated in February 1978, and results became available in late April. The second, which was completed in August, used revised assumptions pertaining to utility growth rates, oil prices, etc. The results of these studies are presented in sections 2 and 3 of the "Electric Utility Steam Generating Units: Background Information for Proposed SO_2 Emission Standards—Supplement," EPA 450/2-78-007a-1.

EPA has also taken into consideration studies prepared by other Governmental Agencies. One study is "The Demand for Western Coal and its Sensitivity to Key Uncertainties," draft report, 2nd edition, June 1978, which assessed the potential impact of this proposal on coal demand. This report was prepared by a consultant for the Department of Interior and the Department of Energy. In addition the analysis of alternative standards prepared by the Department of Energy, and transmitted to EPA by Mr. John F. O'Leary, Deputy Secretary, on July 6 and August 11, 1978, was also considered.

A task force of American experts in scrubber technology visited Japan to evaluate Japanese scrubber performance. The findings (Maxwell, Elder and Morasky, "Sulfur Oxides Control Technology in Japan," June 30, 1978) were also considered by EPA.

Performance Testing

PARTICULATE STANDARDS

Compliance with the proposed particulate matter standards would be determined by using EPA method 5 operated at a filter temperature up to 160°C (320°F). As an option, EPA method 17 may be used for stack gas temperature less than 160°C. EPA method 3 would be used to determine oxygen or carbon dioxide concentrations. These concentration measurements would then be used to compute particulate emissions in units of the standard as specified in proposed EPA method 19.

Compliance with opacity standards could be determined at any time by visual observations using EPA method 9. Except during startups, shutdowns, and malfunctions, all data from visual observations would be ued for determining compliance with the proposed opacity standard.

A continuous monitoring system for opacity would be required in the stack except when firing only gaseous fuels. The opacity data from the continuous monitor would not be used to determine compliance with the opacity standard. It would be used to assist in assuring the particulate matter control system is properly operated and maintained.

SO_2 AND NO_x STANDARDS

Performance tests. Compliance with the proposed SO_2 and NO_x standards would be determined using the data obtained from the required continuous monitoring systems. If an FGD system were used for SO_2 control, continuous SO_2 emission monitors would be required both upstream and downstream of the FGD system and used to determine compliance with the proposed 85 percent SO_2 reduction. As an option, compliance with the proposed SO_2 standards could be determined using both an "as fired" fuel sampler to determine the sulfur content and heating value of the fuel fired to the boiler, and a continuous SO_2 emission monitor after the FGD system to measure SO_2 emissions discharged into the atmosphere. In addition to crediting the SO_2 removed by the FGD system, this option would provide credit for sulfur removed by coal pulverizers and by the bottom ash and fly ash. The SO_2 percent reduction requirement and emission limitation would both be based on emission levels averaged over a 24-hour (daily) period. If fuel is treated prior to combustion to reduce SO_2 emissions, a sulfur removal credit would also be allowed. Procedures for determining sulfur removal credits are proposed under § 60.48a with EPA method 19.

Performance testing to determine compliance with the NO_x emission limitation (ng/J) would be determined on a continuous basis through the use of a continuous NO_x emission monitor. NO_x emission data would be averaged over a 24-hour (daily) period. Performance testing to determine compliance with the percent reduction requirements for NO_x would not be required. An affected facility would be assumed to be in compliance with the NO_x reduction requirements provided the facility is in compliance with the applicable NO_x emission limitation.

When the NO_x or SO_2 continuous monitoring system fails to operate properly, the source owner or operator would obtain emission data by:

1. Operation of a second monitoring system, or
2. Conducting manual tests using EPA reference methods during the period the continuous monitoring system is inoperative.

Operation of a second monitoring system would mean that the source owner would have a second system in operation at all times. Conducting the manual tests would mean that the source owner would have trained manpower available on an immediate basis to collect samples while the continuous monitoring system is inoperative. Manual test runs would be required on an hourly basis.

Since compliance with the proposed SO_2 and NO_x standards would be determined by continuous monitors, EPA is currently developing additional quality assurance procedures. These procedures would not change the present performance specifications for continuous monitoring systems, but would provide additional periodic field tests to assure the accuracy of the monitoring data. Appendix E under 40 CFR Part 60 is being reserved for these additional quality assurance procedures. Electric utility powerplants that would be subject to the proposed standard would be subject to the quality assurance procedures under appendix E when completed. This should not pose a problem since new sources affected by this proposed action are not expected to begin operation until about 1984.

Fuel pretreatment. Pretreatment of a fuel to remove sulfur or increase heat content would be credited toward the SO_2 percent reduction requirement. For example, by pretreatment of a 2.3 percent sulfur fuel (equivalent to 1,000 ng/J) to 1.7 percent sulfur (750 ng/J; 25 percent sulfur removal), the FGD system SO_2 control requirement would be reduced from 85 percent to 80 percent (750 ng/J reduced to 150 ng/J). An 85 percent emission reduction (1,000 ng/J to 150 ng/J) would be necessary for an FGD system if the fuel were fired untreated.

Fuel pretreatment credits would be given for removal of sulfur from fuel, including the resulting increase in fuel heat content. Examples of the type of equipment or processes for which credit would be given are:

1. Physical coal cleaning.
2. Solvent-refining of coal.
3. Liquification of coal.
4. Gasification of coal.

Rotary breakers or coarse screens used to separate rock and other material from raw coal prior to processing or shipment are considered an integral part of the coal mining process and would not be considered as fuel pretreatment (see section 4.5.2.2 of EPA 450/2-78-007a-1).

The proposed standard would not require fuel to be pretreated before firing but would allow credit for pretreatment if used. The amount of sulfur removed by a fuel pretreatment process would be determined following procedures in EPA method 19 (appendix A). The owner or operator of the electric utility who would use the credit would be responsible for insuring that the EPA method 19 procedures are followed in determining SO_2 removal credit for pretreatment equipment.

Miscellaneous

As prescribed by section 111, establishment of standards of performance for electric utility steam generating units was preceded by the Administrator's determination that these sources contribute significantly to air pollution which causes or contributes to the endangerment of public health or welfare. In accordance with section 117 of the Act, publication of this proposal was preceded by consultation with appropriate advisory committees, independent experts, and Federal departments and agencies. The Administrator will welcome comments on all aspects of the proposed regulation, including economic and technological issues, and on the proposed test methods.

Under EPA's "new" sunset policy for reporting requirements in regulations, the reporting requirements in this regulation will automatically expire 5 years from the date of promulgation unless EPA takes affirmative action to extend them. To accomplish this, a provision automatically terminating the reporting requirements at that time will be included in the text of the final regulations.

It should be noted that standards of performance for new fossil fuel fired stationary sources established under section 111 of the Clean Air Act reflect:

> • • • application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated. [Section 111(a)(1)]

Although there may be emission control technology available that can reduce emissions below those levels required to comply with standards of performance, this technology might not be selected as the basis of standards of performance due to costs associated with its use. Accordingly, standards of performance should not be viewed as the ultimate in achievable emission control. In fact, the Act requires (or has potential for requiring) the imposition of a more stringent emission standard in several situations.

For example, applicable costs do not play as prominent a role in determining the "lowest achievable emission rate" for new or modified sources located in nonattainment areas, i.e., those areas where statutorily-mandated health and welfare standards are being violated. In this respect, section 173 of the act requires that a new or modified source constructed in an area which exceeds the National Ambient Air Quality Standard (NAAQS) must reduce emissions to the level which reflects the "lowest achievable emission rate" (LAER), as defined in section 171(3), for such category of source. The statute defines LAER as that rate of emission which reflects:

> (A) The most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable, or
>
> (B) The most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event can the emission rate exceed any applicable new source performance standard (section 171(3)).

A similar situation may arise under the prevention of significant deterioration of air quality provisions of the Act (part C). These provisions require that certain sources (referred to in section 169(1)) employ "best available control technology" (as defined in section 169(3)) for all pollutants regulated under the Act. Best available control technology (BACT) must be determined on a case-by-case basis, taking energy, environmental and economic impacts, and other costs into account. In no event may the application of BACT result in emissions of any pollutants which will exceed the emissions allowed by any applicable standard established pursuant to section 111 (or 112) of the Act.

In all events, State implementation plans (SIPs) approved or promulgated under section 110 of the Act must provide for the attainment and maintenance of national Ambient Air Quality Standards designed to protect public health and welfare. For this purpose, SIPs must in some cases require greater emission reductions than those required by standards of performance for new sources.

Finally, States are free under section 116 of the Act to establish even more stringent emission limits than those established under section 111 or those necessary to attain or maintain the NAAQS under section 110. Accordingly, new sources may in some cases be subject to limitations more stringent than EPA's standards of performance under section 111, and prospective owners and operators of new sources should be aware of this possibility in planning for such facilities.

EPA will review this regulation 4 years from the date of promulgation. this review will include an assessment of such factors as the need for integration with other programs, the exis-

tence of alternative methods, enforceability, and improvements in emission control technology.

Subpart Da—Standards of Performance for Electric Utility Steam Generating Units for Which Construction is Commenced After September 18, 1978

(b) "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-

ment which is owned by the utility company and which is being operated or is capable of being operated (includ-

§ 60.42a Standard for particulate matter.

(a) On and after the date on which the performance test required to be

(2) The affected facility is located in a noncontinental area.

(3) The affected facility is operated under an SO commercial demonstra-

tence of alternative methods, enforceability, and improvements in emission control technology.

Executive Order 12044, dated March 24, 1978, whose objective is to improve Government regulations, requires executive branch agencies to prepare regulatory analyses for regulations that may have major economic consequences. The proosed standards meet the criteria for preparation of a regulatory analysis as outlined in the Executive order. Therefore, a regulatory analysis has been prepared as required. The analysis is contained in the background information documents for the proposed standards. The regulatory analysis is not being published as a separate document because the work was begun before the President's Executive order was published. However, in order to present a better understanding of the analyses contained in the background information documents, a summary of the analyses is included in the preamble. The summary discusses in detail the alternatives considered.

Section 317 of the Clean Air Act requires the Administrator to prepare an economic impact assessment for revisions determined by the Administrator to be substantial. The Administrator has determined that the proposed amendments are substantial and has prepared an economic impact assessment and included the required information in thebackground information documents.

Dated: September 11, 1978.

DOUGLAS M. COSTLE,
Administrator.

It is proposed that 40 CFR Part 60 be amended by revising the heading and § 60.40 of Subpart D, by adding a new Subpart Da, by adding a new reference method to Appendix A, and by reserving Appendix E as follows:

1. The heading for Subpart D is revised to read as follows:

Subpart D—Standards of Performance for Fossil-Fuel-Fired Steam Generators Constructed After August 17, 1971

2. Section 60.40 is amended by adding paragraph (a)(3) as follows:

§ 60.40 Applicability and designation of affected facility.

(a) • • •

(3) Is not subject to the provisions of Subpart Da.

• • • • • •

(Sec. 111, 301(a) of the Clean Air Act as amended (42 U.S.C. 7411, 7601(a)).)

3. A new Subpart Da is added as follows:

Subpart Da—Standards of Performance for Electric Utility Steam Generating Units for Which Construction is Commenced After September 18, 1978

Sec.

60.40a Applicability and designation of affected facility.
60.41a Definitions.
60.42a Standard for particulate matter.
60.43a Standard for sulfur dioxide.
60.44a Standard for nitrogen oxides.
60.45a Commercial demonstration permit.
60.46a Compliance provisions.
60.47a Emission monitoring.
60.48a Compliance determination procedures and methods.
60.49a Reporting requirements.

AUTHORITY: Sec. 111, 301(a) of the Clean Air Act as amended (42 U.S.C. 7411, 7601(a)), and additional authority as noted below.

Subpart Da—Standards of Performance for Electric Utility Steam Generating Units for Which Contruction Is Commenced After September 18, 1978

§ 60.40a Applicability and designation of affected facility.

(a) The affected facility to which this subpart applies is each electric utility steam generating unit:

(1) Which is capable of combusting more than 73 megawatts (250 million Btu/hour) heat input of fossil fuel (either alone or in combination with any other fuel); and

(2) For which construction or modification is commenced after September 18, 1978.

(b) This subpart applies to electric utility combined cycle gas turbines that are capable of combusting more than 73 megawatts (250 million Btu/hour) heat input of fossil fuel in the steam generator. Only emissions resulting from combustion of fossil fuel in the steam generator are subject to this subpart. (The gas turbine emissions are subject to Subpart GG.)

§ 60.41a Definitions.

As used in this subpart, all terms not defined herein shall have the meaning given them in the Act and in subpart A of this part.

(a) "Steam generating unit" means any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam (including fossil fuel-fired steam generators associated with combined cycle gas turbines; nuclear steam generators are not included). A steam generating unit includes the following systems:

(1) Fuel combustion system (including bunker, coal pulverizer, crusher, stoker, and fuel burners, as applicable).

(2) Combustion air system.

(3) Steam generating system (firebox, boiler tubes, etc.).

(4) Draft system (excluding the stack).

(b) "Electric utility steam generating unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its maximum design electrical output capacity to an electrical distribution system for sale. Any steam distribution system that is constructed for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

(c) "Fossil fuel" means natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such material for the purpose of creating useful heat.

(d) "Subbituminous coal" means coal that is classified as subbituminous A, B, or C according to the American Society of Testing and Materials' (ASTM) Standard Specification for Classification of Coals by Rank D388–66.

(e) "Lignite" means coal that is classified as lignite A or B according to the American Society of Testing and Materials' (ASTM) Standard Specification for Classification of Coals by Rank D388–66.

(f) "Coal refuse" means waste products from coal mining, physical coal cleaning, and coal refining operations (e.g. culm, gob, or other rejects) containing coal, ash matrix material, clay, and organic and inorganic material.

(g) "Potential combustion concentration" means the theoretical emissions (ng/J, lb/million Btu) that would result from combustion of a fuel in an uncleaned state (without emission control systems) and:

(1) For particulate matter is:

(i) 3,000 ng/J heat input (7.0 lb/million Btu) for solid fuel; and

(ii) 75 ng/J heat input (0.17 lb/million Btu) for liquid fuels.

(2) For sulfur dioxide is determined under § 60.48a(b).

(3) For nitrogen oxides is:

(i) 290 ng/J heat input (0.67 lb/million Btu) for gaseous fuels;

(ii) 310 ng/J heat input (0.72 lb/million Btu) for liquid fuels; and

(iii) 990 ng/J heat input (2.3 lb/million Btu) for solid fuels.

(h) "Combined cycle gas turbine" means a stationary gas turbine system where heat is recovered from the exhaust gases by passing the exhaust gases through a steam generating unit. fossil fuel may also be combusted in the steam generating unit.

(i) "Utility company" means the largest organization, business, or governmental entity that owns the affected facility (e.g. a holding company with operating subsidiary companies).

(j) "System capacity" means the sum of the rated electrical output capacity of all electric generating equipment which is owned by the utility company and which is being operated or is capable of being operated (including fossil-fuel-fired steam generators, internal combustion engines, gas turbines, and nuclear power plants). The electrical generating capacity of electric generating equipment under multiple ownership is prorated based on ownership.

(k) "System emergency reserves" means the rated capacity of the single largest steam electric generating unit (including fossil-fuel-fired steam generators, internal combustion engines, gas turbines, and nuclear power plants) owned by the utility company. The electric generating capacity of electric generation equipment under multiple ownership is prorated based on ownership.

(l) "Available system capacity" means the capacity determined by subtracting the system load and the system emergency reserves from the system capacity.

(m) "Spinning reserve" means the sum of the unutilized capacity of all units of the utility company that are synchronized to the power distribution system and that are capable of immediately accepting additional load. The electrical generating capacity of electric generation equipment under multiple ownership is prorated based on ownership.

(n) "Emergency condition" means that period of time:

(1) When the electric generation load on an affected facility with a malfunctioning flue gas desulfurization system cannot be shifted because all available system capacity is being operated, or

(2) When all available system capacity is not being utilized and electric generation load is being shifted as quickly as possible from the affected facility to:

(i) One or more electric generating units held in spinning reserve, or

(ii) Another electrical generation system through the purchase of electric power.

(o) "Noncontinental areas" means the State of Hawaii, the Virgin Islands, Guam, American Samoa, and the Commonwealths of Puerto Rico and the Northern Mariana Islands.

(p) "Commercial demonstration plant" means:

(1) An affected facility commercially demonstrating an emerging technology, or

(2) Any of the affected facilities that combust the coal-derived fuel produced at a commercial demonstration coal conversion plant, demonstrating an emerging technology.

(q) "24-hour period" means the period of time between 12:01 a.m. and 12:00 midnight.

§ 60.42a Standard for particulate matter.

(a) On and after the date on which the performance test required to be conducted under § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility any gases which contain particulate matter in excess of:

(1) 13 ng/J heat input (0.03 lb/million Btu) derived from the combustion of solid, liquid, or gaseous fuel;

(2) 1 percent of the potential combustion concentration (99 percent reduction) when combusting solid fuel; and

(3) 30 percent of potential combustion concentration (70 percent reduction) when combusting liquid fuel.

(b) On and after the date the particulate matter performance test required to be conducted under § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility any gases which exhibit greater than 20 percent opacity, except for one 6-minute period per hour of not more than 27 percent opacity.

§ 60.43a Standard for sulfur dioxide.

(a) On and after the date on which the initial performance test required to be conducted under § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility any gases which contain sulfur dioxide in excess of:

(1) 340 ng/J heat input (0.80 lb/million Btu) derived from the combustion of any liquid or gaseous fuel;

(2) 520 ng/J heat input (1.2 lb/million Btu) derived from the combustion of any solid fuel except as provided under paragraph (b) of this section; and

(3) 15 percent of the potential combustion concentration (85 percent reduction) when combusting solid, liquid, or gaseous fuel, except as provided under paragraphs (b) and (c) of this section.

(b) The sulfur dioxide emissions allowed under paragraph (a) of this section may be exceeded up to three 24-hour periods during any calendar month, however, the sulfur dioxide emissions must be reduced to less than 25 percent of the potential combustion concentration (75 percent reduction) at all times.

(c) The requirements under paragraph (a)(3) of this section do not apply when any of the following conditions are met:

(1) The sulfur dioxide emitted to the atmosphere is less than 86 ng/J heat input (0.20 lb/million Btu).

(2) The affected facility is located in a noncontinental area.

(3) The affected facility is operated under an SO_2 commercial demonstration permit issued by the Administrator in accordance with the provisions of § 60.45a.

(d) For purposes of determining compliance with provisions of paragraph (a)(3) of this section, any reduction in potential sulfur dioxide emissions resulting from the following may be credited in accordance with § 60.48a(b):

(1) Fuel pretreatment.

(2) Coal pulverizers.

(3) Bottom ash and fly ash interaction.

(e) When different fuels are combusted simultaneously, the applicable standard is determined by proration using the following formula:

$$PS_{so_2} = \frac{x(340) + y(520)}{100}$$

where:

PS_{so_2} is the prorated standard for sulfur dioxide when combusting different fuels simultaneously (ng/J heat input).

x is the percentage of total heat input derived from the combustion of gaseous and liquid fuel.

y is the percentage of total heat input derived from the combustion of solid fuel.

§ 60.44a Standard for nitrogen oxides.

(a) On and after the date on which the initial performance test required to be conducted under § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility any gases which contain nitrogen oxides in excess of:

(1) 86 ng/J heat input (0.20 lb/million Btu) derived from the combustion of any gaseous fuel, except gaseous fuel derived from coal;

(2) 130 ng/J heat input (0.30 lb/million Btu) derived from the combustion of any liquid fuel, except shale oil and liquid fuel derived from coal;

(3) 210 ng/J heat input (0.50 lb/million Btu) derived from the combustion of:

(i) Subbituminous coal,

(ii) Shale oil, or

(iii) Any solid, liquid, or gaseous fuel derived from coal; except as provided under paragraph (c) of this section.

(4) 260 ng/J heat input (0.60 lb/million Btu) derived from the combustion of any solid fuel not specified under paragraphs (a)(3), (a)(5) or (b) of this section;

(5) 340 ng/J heat input (0.80 lb/million Btu) derived from the combustion in a slag tap furnace of any fuel containing more than 25 percent, by weight, lignite which has been mined in North Dakota, South Dakota, or Montana;

(6) 75 percent of the potential combustion concentration (25 percent re-

V 43 / 182 SEP 19 78

duction) when combusting gaseous fuel;

(7) 70 percent of the potential combustion concentration (30 percent reduction) when combusting liquid fuel; and

(8) 35 percent of the potential combustion concentration (65 percent reduction) when combusting solid fuel.

(b) Combustion of a fuel containing more than 25 percent, by weight, coal refuse is exempt from both the provisions of § 60.47a(a)(3) and paragraph (a) of this section.

(c) The requirements under paragraph (a) of this section do not apply when an affected facility is operated under an NO_x commercial demonstration permit issued by the Administrator in accordance with the provisions of § 60.45a.

(d) When two or more fuels, except as provided under paragraphs (a)(5) or (b) of this section, are combusted simultaneously, the applicable standard is determined by proration using the following formula:

$$PS_{NO_x} w(86)+x(130)+y(210)+z(260)/100$$

where:

PS_{NO_x} is the applicable standard for nitrogen oxides when multiple fuels are combusted simultaneously (ng/J heat input);
w is the percentage of total heat input derived from the combustion of fuels subject to the 86 ng/J heat input standard;
x is the percentage of total heat input derived from the combustion of fuels subject to the 130 ng/J heat input standard;
y is the percentage of total heat input derived from the combustion of fuels subject to the 210 ng/J heat input standard; and
z is the percentage of total heat input derived from the combustion of fuels subject to the 260 ng/J heat input standard.

§ 60.45a Commercial demonstration permit.

(a) An owner or operator of an affected facility proposing to demonstrate an emerging technology may apply to the Administrator for a commercial demonstration permit. The Administrator will issue a commercial demonstration permit in accordance with paragraph (d) of this section. Commercial demonstration permits may only be issued by the Administrator, and this authority will not be delegated.

(b) An owner or operator who is issued an SO_2 commercial demonstration permit by the Administrator is not subject to the SO_2 control requirements under § 60.43a(a)(3) but must, as a minimum, reduce SO_2 emissions to 20 percent of the potential combustion concentration (80 percent SO_2 control on a 24-hr basis)

(c) An owner or operator who is issued an NO_x commercial demonstration permit by the Administrator is not subject to the NO_x control requirements under § 60.44a but must, as a minimum, reduce NO_x emissions to 300 ng/J heat input (0.70 lb/million Btu; 24-hour average).

(d) Commercial demonstration permits may not exceed the following equivalent MW electrical generation capacity for any one technology category, and the total equivalent MW electrical generation capacity for all commerical demonstration plants may not exceed 15,000 MW.

Technology	Pollutant	Equivalent MW electrical capacity
Solvent refined coal (I)	SO_2	6,000-10,000
Fluidized bed combustion (atmospheric).	SO_2	400-3,000
Fluidized bed combustion (pressurized).	SO_2	400-1,200
Coal liquifaction	NO_x	750-10,000
Total allowable for all technologies.		15,000

§ 60.46a Compliance provisions.

(a) Compliance with the particulate matter emission limitation under § 60.42(a)(1) constitutes compliance with the percent reduction requirements for particulate matter under § 60.42a(a) (2) and (3).

(b) Compliance with the nitrogen oxides emission limitation under § 60.44a(a)(1), (2), (3), (4), and (5) as applicable, constitutes compliance with the percent reduction requirements under §60.44a(a)(6), (7), and (8).

(c) Following the initial performance tests for sulfur dioxide and nitrogen oxides required under §60.8, each 24-hour period constitutes a separate performance test. The nitrogen oxides emission standards under §60.44a apply at all time except during periods of startup, shutdown, or malfunction. The sulfur dioxide emission standards under §60.43a apply at all times except during periods of startup, shutdown, or when both emergency conditions exist and the procedures under paragraph (d) of this section are implemented.

(d) During emergency conditions an affected facility with a malfunctioning flue gas desulfurization system may continue operation if sulfur dioxide emissions are minimized by:

(1) Continued operation of all operable flue gas desulfurization system modules,

(2) Only by-passing flue gases around totally inoperable flue gas desulfurization system modules, and

(3) Designing, constructing, and operating a spare flue gas desulfurization system module in affected facilities larger than 365 MW heat input (1,250 million Btu/hr).

§60.47a Emission monitoring.

(a) The owner or operator of an affected facility shall install, calibrate, maintain, and operate a continuous monitoring system for measuring the opacity of emissions discharged to the atmosphere, except where gaseous fuel is the only fuel combusted. If opacity interference exists in the stack (for example, from the use of an FGD system), the opacity is monitored upstream of the interference (at the inlet to the FGD system). If opacity interference is experienced at all locations (both at the inlet and outlet of the sulfur dioxide control system), alternate parameters indicative of the particulate matter control system's performance are monitored (subject to the approval of the Administrator).

(b) The owner or operator of an affected facility shall install, calibrate, maintain, and operate a continuous monitoring system for measuring sulfur dioxide emissions, except where natural gas is the only fuel combusted, as follows:

(1) Sulfur dioxide emissions are monitored at both the inlet and outlet of the sulfur dioxide control device.

(2) For a facility which qualifies under the provisions of §60.43a(c), sulfur dioxide emissions are only monitored as discharged to the atmosphere.

(3) An "as fired" fuel monitoring system (upstream of coal pulverizers) meeting the requirements of method 19 (Appendix A) may be used to determine potential sulfur dioxide emissions in place of a continuous sulfur dioxide emission monitor at the inlet to the sulfur dioxide control device as required under paragraph (b)(1) of this section.

(4) If a facility which complies with §60.43a(a) solely through the provisions under §60.43a(d), then sulfur dioxide emissions are only monitored at the outlet of the sulfur dioxide contol device.

(c) The owner or operator of an affected facility shall install, calibrate, maintain, and operate a continuous monitoring system for measuring nitrogen oxides emissions discharged to the atmosphere.

(d) The owner or operator of an affected facility shall install, calibrate, maintain, and operate an oxygen or carbon dioxide monitoring system to measure the oxygen or carbon dioxide content of the flue gas at each location where sulfur dioxide or nitrogen oxides emissions are monitored.

(e) The owner or operator of an affected facility shall operate continuous emission monitoring systems during all periods the affected facility is operated except for the following:

(1) A maximum of sixty (60) minutes each day for daily zero and calibration checks or adjustments.

(2) A maximum of eight (8) hours per month for routine maintenance.

(f) During periods of operation of the affected facility when continuous monitoring systems (and spare monitoring systems if used) are not operable, the owner or operator of the affected facility shall conduct performance tests consisting of manual testing each hour until the continuous monitor system is returned to service. Each hourly test is performed as follows:

(1) Reference methods 3, 6, and 7, as applicable, are used. The sampling location(s) are the same as those used for the continuous monitoring system.

(2) For method 6, the minimum sampling time shall be 20 minutes and the minimum sampling volume 0.02 dscm (0.71 dscf) for each sample. The arithmetic mean of two samples taken at approximately 30-minute intervals constitutes one run. The arithmetic mean of the runs obtained during a 24-hour period is reported as the average for that period. For determination of FGD removal efficiency, inlet and outlet sampling is conducted simultaneously.

(3) For method 7, each run consists of at least four grab samples taken at approximately 15-minute intervals. The arithmetic mean of the four samples constitutes the 1-hour run. The arithmetic mean of the runs obtained during a 24-hour period is reported as the average for that period.

(4) For method 3, the oxygen or carbon dioxide sample is obtained simultaneously at the same location in the duct as the samples collected using methods 6 and 7. For method 7, the oxygen sample is obtained using the grap sampling and analysis procedures of method 3.

(5) For each run using method 19 in appendix A to this part, the emissions expressed in ng/J (lb/million Btu) are determined. The arithmetic mean of the runs performed during a 24-hour period is reported as the average for that period.

(g) The following procedures are used for monitoring system performance evaluations under §60.13(c) and calibration checks under §60.13(d):

(1) Reference method 6 or 7, as applicable, is used for conducting performance evaluations of sulfur dioxide and nitrogen oxides continuous monitoring systems.

(2) Sulfur dioxide or nitrogen oxides, as applicable, is used for preparing calibration gas mixtures under performance specification 2 of appendix B to this part.

(3) For affected facilities burning only fossil fuel, the span value for a continuous monitoring system for measuring opacity is between 60 and 80 percent and for a continuous monitoring system measuring nitrogen oxides is determined as follows:

[Parts per million]

Fossil fuel	Span value for nitrogen oxides
Gas	500
Liquid	500
Solid	1,000
Combinations	500 $(x+y)$+1,000z

where:

x=the fraction of total heat input derived from gaseous fossil fuel,
y=the fraction total heat input derived from liquid fossil fuel, and
z=the fraction of total heat input derived from solid fossil fuel.

(4) All span values computed under paragraph (b)(3) of this section for burning combinations of fossil fuels are rounded to the nearest 500 ppm.

(5) For affected facilities burning fossil fuel, alone or in combination with non-fossil fuel, the span value of the sulfur-dioxide continuous monitoring system at the inlet to the sulfur-dioxide-control device is 200 percent of the potential emissions of the fuel fired, and at the outlet of the sulfur-dioxide-control device is 50 percent of potential emissions. When the percent fuel sulfur content changes by 0.5 (24-hour average) or more, the continuous monitoring system shall be respanned.

(Sec. 114, Clean Air Act as amended (42 U.S.C. 7414).)

§ 60.48a Compliance determination procedures and methods.

(a) The following procedures and reference methods are used to determine compliance with the standards for particulate matter under § 60.42a:

(1) Method 3 is used for gas analysis when applying method 5 or method 17.

(2) Method 5 is used for determining particulate matter emissions and associated moisture content. Method 17 may be used for stack gas temperatures less than 160° C (320° F).

(3) For method 5 or method 17, method 1 is used to select the sampling site and the number of traverse sampling points. The sampling time for each run is at least 120 minutes and the minimum sampling volume is 1.7 dscm (60 dscf) except that smaller sampling times or volumes, when necessitated by process variables or other factors, may be approved by the Administrator.

(4) For method 5, the probe and filter holder heating system in the sampling train is set to provide a gas temperature no greater than 160° C (320° F).

(5) For determination of particulate emissions, the oxygen or carbon-dioxide sample is obtained simultaneously with each run of method 5 or method 17 by traversing the duct at the same sampling location. Method 1 is used for selection of the number of traverse points except that no more than 12 sample points are required.

(6) For each run using method 5 or method 17, the emission rate expressed in ng/J is determined using the oxygen or carbon-dioxide results and particulate results obtained under this section, and using the dry F-factor and dry basis emission rate calculation procedure contained in method 19 (appendix A).

(b) The following procedures and methods are used to determine compliance with the sulfur dioxide standard under § 60.43a:

(1) Determine the percent of potential combustion concentration (percent PCC) emitted to the atmosphere as follows:

(i) Determine the percent sulfur reduction achieved by any fuel pretreatment using the procedures in method 19 (appendix A; optional procedure). Calculate the average percent reduction on a quarterly basis using fuel analysis data.

(ii) Determine the percent sulfur dioxide reduction achieved by any sulfur dioxide control system using continuous sulfur dioxide emission monitors or an "as fired" fuel monitor (optional procedure) in conjunction with a continuous sulfur-dioxide-emission monitor and following the procedures in method 19 (appendix A). If 24 hours of data are not available (such as during startup or shutdown), all available valid data are averaged for each 24-hour period.

(iii) Determine atmospheric sulfur dioxide emissions as a percent of the potential combustion concentration (percent PCC) as follows: Use the results obtained in paragraphs (b)(1) (i) (optional) and (ii) of this section and the procedures in method 19 (appendix A) to calculate the overall percent reduction (percent R_o) of the potential sulfur dioxide emissions. Results are calculated for each 24-hour period using the quarterly average percent sulfur reduction determined for fuel pretreatment from the previous quarter and the sulfur dioxide reduction for each 24-hour period determined for each day in the current quarter. Calculate the percent of potential combustion concentration emitted to the atmosphere using the following equation:

$$\text{Percent PCC} = 100 - \text{percent } R_o$$

(2) Determine sulfur dioxide and nitrogen oxides emission rates using method 19 (appendix A). Emission rates are calculated for each 24-hour period and shall be considered to constitute a three-run performance test. If 24 hours of data are not available in a 24-hour period (such as during startup or shutdown), all available valid data for the period are averaged.

(c) The procedures and methods outlined in method 19 (appendix A) are

used in conjunction with the 24-hour nitrogen-oxides emission data collected under § 60.47a to determine compli-

(1) Indicating if conditions of §§ 60.41a(n) and 60.46a(d) were met during each period; and

(2) Listing the:

analyzed for sulfur and heat content, and the percent sulfur dioxide (ng/Joule, lb/million Btu) reduction is calculated on a dry basis. (Optional procedure.)

2.2.1 Sample collection. Use ASTM D 270* following the practices outlines for continuous sampling for each gross sample representing each fuel lot.

3.1 Sampling. Determine SO_2 and CO_2 or O_2 oxygen concentrations at the inlet and outlet of the sulfur dioxide control system according to methods specified in the appli-

$$I_s = \frac{2.0(\%S_f)}{GCV} \times 10^7 \quad \text{for S.I. units.}$$

used in conjunction with the 24-hour nitrogen-oxides emission data collected under § 60.47a to determine compliance with the applicable nitrogen oxides standard under § 60.44a.

(d) Electric utility combined cycle gas turbines are performance tested for particulate matter, sulfur dioxide, and nitrogen oxides using the procedures of method 19 (appendix A). The sulfur dioxide and nitrogen oxides emission rates from the gas turbine used in method 19 (appendix A) calculations are determined when the gas turbine is performance tested under subpart GG. The potential uncontrolled particulate matter emission rate from a gas turbine is defined as 17 ng/J (0.04 lb/million Btu) heat input.

(Sec. 114, Clean Air Act as amended (42 U.S.C. 7414).)

§ 60.49a Reporting requirements.

(a) For sulfur dioxide, nitrogen oxides, and particulate matter emissions, the performance test data from the initial performance test and from the performance evaluation of continuous monitors are submitted to the Administrator.

(b) For sulfur dioxide and nitrogen oxides, all emission data (24-hour daily average) collected subsequent to the initial performance test are submitted to the Administrator. The required data include the following information for each 24-hour period:

(1) Calendar date;

(2) Sulfur dioxide and nitrogen oxides emission rates (ng/J or lb/million Btu, 24-hour average);

(3) Percent reduction of the potential combustion concentration of sulfur dioxide (24-hour average) (not required for nitrogen oxides);

(4) Number of hours of valid emission data collected during each 24-hour daily period;

(5) Identification of periods when emissions exceed the applicable standards under either § 60.43a or § 60.44a;

(6) Identification of periods of startup or shutdown that resulted in emissions exceeding the applicable standards under either § 60.43a or § 60.44a;

(7) Identification of periods when control system malfunction resulted in emissions in excess of applicable nitrogen oxides standards under § 60.44a;

(8) Identification of "F" factor used for calculations, and type of fuel combusted; and

(9) Identification of periods when any continuous monitoring systems are not operating and identification of pollutant to be monitored.

(c) If any standards under § 60.43a are exceeded during emergency conditions because of control system malfunction, the owner or operator of the affected facility shall submit a signed statement:

(1) Indicating if conditions of §§ 60.41a(n) and 60.46a(d) were met during each period; and

(2) Listing the:

(i) Time periods the emergency condition existed;

(ii) Electrical output and demand on the owner's or operator's electric utility system and the affected facility;

(iii) Amount of power purchased from the interconnected reliability council during the emergency period;

(iv) Percent reduction in emissions achieved;

(v) Atmospheric emission rate (ng/J) of the pollutant discharged; and

(vi) Actions taken to correct control system modification.

(d) If fuel pretreatment credit toward the sulfur dioxide emission standard under § 60.43a is claimed, the owner or operator of the affected facility shall submit a signed statement:

(1) Indicating what percentage cleaning credit was taken for the calendar quarter, and whether the credit was determined in accordance with the provisions of § 60.48a and method 19 (appendix A); and

(2) Listing the quantity heat content and date each pretreated fuel shipment was received during the previous quarter, the name and location of the fuel pretreament facility, and the total quantity and total heat content of all fuels received at the affected facility during the previous quarter.

(e) For the purposes of the reports required under § 60.7, periods of excess emissions are defined as all 6-minute periods during which the average opacity exceeds the applicable opacity standard under § 60.42a(b). Opacity levels in excess of the applicable opacity standard and the date of such excesses are submitted to the Administrator each calendar quarter.

(f) The owner or operator of an affected facility shall submit the written reports required under this section and subpart A to the Administrator for every calendar quarter. All quarterly reports shall be postmarked by the 30th day following the end of each calendar quarter.

(Sec. 114, Clean Air Act as amended (42 U.S.C. 7414).)

4. Appendix A to part 60 is amended by adding new reference method 19 as follows:

APPENDIX A—REFERENCE METHODS

• • • • • •

METHOD 19. DETERMINATION OF SULFUR-DIOXIDE REMOVAL EFFICIENCY AND PARTICULATE, SULFUR DIOXIDE AND NITROGEN OXIDES EMISSION RATES FROM ELECTRIC UTILITY STEAM GENERATORS

1. Principle and applicability.

1.1 Principle.

1.1.1 Fuel samples from before and after fuel pretreatment systems are collected and analyzed for sulfur and heat content, and the percent sulfur dioxide (ng/Joule, lb/million Btu) reduction is calculated on a dry basis. (Optional procedure.)

1.1.2 Sulfur dioxide and oxygen or carbon dioxide concentration data obtained from sampling emissions upstream and downstream of sulfur-dioxide-control devices are used to calculate sulfur-dioxide removal efficiencies. (Minimum requirement.) As an alternative to sulfur-dioxide monitoring upstream of sulfur-dioxide-control devices, fuel samples may be collected in an as-fired condition and analyzed for sulfur and heat content. (Optional procedure.)

1.1.3 An overall sulfur dioxide emission reduction efficency is calculated from the efficiency of fuel pretreatment systems and the efficiency of sulfur dioxide control devices.

1.1.4 Particulate, sulfur dioxide, nitrogen oxides, and oxygen or carbon dioxide concentration data obtained from sampling emissions downstream from sulfur dioxide control devices are used along with F factors to calculate particulate, sulfur dioxide, and nitrogen-oxides emission rates. F factors are values relating combustion gas volume to the heat content of fuels.

1.2 Applicability. This method is applicable for determining sulfur removal efficiencies of fuel pretreatment and sulfur-dioxide-control devices and the overall reduction of potential sulfur dioxide emissions from electric utility steam generators. This method is also applicable for the determination of particulate, sulfur dioxide, and nitrogen oxides emission rates.

2. *Determination of sulfur-dioxide removal efficiency of fuel pretreatment systems* (optional).

2.1 Solid fossil fuel.

2.1.1 Sample increment collection. Use ASTM D 2234,* type I, conditions A, B, or C, and systematic spacing. Determine the number and weight of increments required per gross sample representing each coal lot according to table 2 or paragraph 7.1.5.2 of ASTM D 2234.* Collect one gross sample for each raw coal lot and one gross sample for each product coal lot.

2.1.2 ASTM lot size. For the purpose of section 2.1.1, the product coal lot size is defined as the weight of product coal produced from one type of raw coal. The raw coal lot size is the weight of raw coal used to produce one product coal lot. Typically, the lot size is the weight of coal processed in a 1-day (24 hours) period. If more than one type of coal is treated and produced in 1 day, then gross samples must be collected and analyzed for each type of coal. A coal lot size equaling the 90-day quarterly fuel quantity for a specific powerplant may be used if representative sampling can be conducted for the raw coal and product coal.

NOTE.—Alternate definitions of fuel lot sizes may be specified subject to prior approval of the Administrator.

2.1.3 Gross sample analysis. Determine the percent sulfur content (percent S) and gross calorific value (GCV) of the solid fuel on a dry basis for each gross sample. Use ASTM 2013* for sample preparation, ASTM D 3177* for sulfur analysis, and ASTM D 3173* for moisture analysis. Use ASTM D 3176* or D 2015* for gross calorific value determination.

2.2 Liquid fossil fuel.

*Use the most recent revision or designation of the ASTM procedure specified.

2.2.1 Sample collection. Use ASTM D 270* following the practices outlines for continuous sampling for each gross sample representing each fuel lot.

2.2.2 Lot size. For the purposes of section 2.2.1, the weight of product fuel from one pretreatment facility and intended as one shipment (shipload, bargeload, etc.) is defined as one product fuel lot. The weight of each crude liquid fuel type used to produce one product fuel lot is defined as one inlet fuel lot.

NOTE.—Alternate definitions of fuel lot sizes may be specified subject to prior approval of the Administrator.

2.2.3 Sample analysis. Determine the percent sulfur content (percent S) and gross calorific value (GVC). Use ASTM D 240* for the sample analysis. This value can be assumed to be on a dry basis.

2.3 Calculation of sulfur-dioxide removal efficency due to fuel pretreatment. Calculate the percent sulfur dioxide reduction due to fuel pretreatment using the following equation:

$$\%R_f = 100\left[1 - \frac{\%S_o/GCV_o}{\%S_i/GCV_i}\right]$$

Where:

$\%R_f$=Sulfur dioxide removal efficiency due pretreatment; percent.
$\%S_o$=Sulfur content of the product fuel lot on a dry basis; weight percent.
$\%S_i$=Sulfur dioxide content of the inlet fuel lot on a dry basis; weight percent.
GCV_o=Gross calorific value for the outlet fuel lot on a dry basis; kJ/kg (Btu/lb).
GCV_i=Gross calorific value for the inlet fuel lot on a dry basis; kJ/kg (Btu/lb).

NOTE.—If more than one fuel type is used to produce the product fuel, use the following equation to calculate the sulfur content per unit of heat content of the total fuel lot, %S/GCV:

$$\%S/GCV = \sum_{k=1}^{n} Y_k\,(\%S_k/GCV_k)$$

Where:

Y_k=The fraction of total mass input derived from each type, k, of fuel.
$\%S_k$=Sulfur content of each fuel type, k, on a dry basis; weight percent.
GCV_k=Gross calorific value for each fuel type, k, on a dry basis; kJ/kg (Btu/lb).
n=The number of different types of fuels.

3. *Determination of sulfur removal efficiency of the sulfur dioxide control device.*

3.1 Sampling. Determine SO_2 and CO_2 or O_2 oxygen concentrations at the inlet and outlet of the sulfur dioxide control system according to methods specified in the applicable subpart of the regulations.

(NOTE.—The downstream data are used to calculate the SO_2 emission rate. See section 5.) The inlet sulfur dioxide concentration may be determined through fuel analysis (optional, see section 3.3).

3.2 Calculation. Calculate the percent removal efficiency using the following equations as applicable:

$$\%R_{g(O_2)} = 100\left[1 - \frac{SO_{2do}}{SO_{2di}}\left(\frac{20.9 - \%O_{2di}}{20.9 - \%O_{2do}}\right)\right]$$

$$\%R_{g(CO_2)} = 100\left[1 - \left(\frac{SO_{2do}}{SO_{2di}} \times \frac{\%CO_{2di}}{\%CO_{2do}}\right)\right]$$

Where:

$\%R_s(O_2)$=Sulfur dioxide removal efficiency of the sulfur dioxide control device, O_2-based calculation; percent.
$\%R_s(CO_2)$=Sulfur dioxide removal efficiency of the sulfur dioxide control device, CO_2-based calculation; percent.
SO_{2d}=SO_2 concentration, dry basis; ppmv.
$\%CO_{2d}$=CO_2concentration, dry basis; bolume percent.
$\%O_{2d}$=CO_2 concentration, dry basis; volume percent.
i=Inlet.
o=Outlet.

NOTE.—For devices measuring concentration on a wet basis, appropriate equations which account for moisture differences are approved in principle. See the appropriate paragraph in section 5.3. Methods for measuring moisture content are subject to approval of the Administrator.

3.3 As-fired fuel analysis (optional procedure). If the owner or operator of an electric utility steam generator chooses to determine the sulfur dioxide input rate at the inlet to the sulfur dioxide control device through an as-fired fuel analysis in lieu of data from a sulfur dioxide control system inlet gas monitor, fuel samples must be collected in accordance with the applicable paragraph in section 2. The sampling can be conducted upstream of any fuel processing, e.g., plant coal pulverization. For the purposes of this section, fuel lot size is defined as the weight of fuel consumed on one day (24 hours) and is directly related to the exhaust gas monitoring data at the outlet of the sulfur dioxide control system.

3.3.1 Fuel analysis. Fuel samples must be analyzed for sulfur content and gross calorific value. The ASTM procedures for determining sulfur content are defined in the applicable paragraphs of section 2.

3.3.2 Calculation of sulfur dioxide input rate. The sulfur dioxide input rate determined from fuel analysis is calculated by:

$$I_s = \frac{2.0(\%S_f)}{GCV} \times 10^7 \qquad \text{for S.I. units.}$$

$$I_s = \frac{2.0(\%S_f)}{GCV} \times 10^4 \qquad \text{for English units.}$$

Where:

I_s=Sulfur dioxide input rate from as-fired fuel analysis, ng/J (lb/million Btu).
$\%S_f$=Sulfur content of as-fired fuel, on a dry basis; weight percent.
GCV=Gross calorific value for as-fired fuel, on a dry basis; kJ/kg (Btu/lb).

3.3.3 Calculation of sulfur dioxide emission reduction using as-fired fuel analysis. The sulfur dioxide emission reduction efficiency is calculated using the sulfur input rate from paragraph 3.3.2 and the sulfur dioxide emission rate, E_{so2}, determined in the applicable paragraph of Section 5.3. The equation for sulfur dioxide emission reduction efficiency is:

$$\%R_{g(f)} = 100 \times \left(1.0 - \frac{E_{SO_2}}{I_s}\right)$$

Where:

$\%R_{g(f)}$=Sulfur dioxide removal efficiency of the sulfur dioxide control system using as-fired fuel analysis data; percent.
E_{so2}=Sulfur dioxide emission rate from sulfur dioxide control system; ng/J (lb/million Btu).
I_s=Sulfur dioxide input rate from as-fired fuel analysis; ng/J (lb/million Btu).

4. *Calculation of overall reduction in potential sulfur dioxide emission.*

4.1 The overall percent sulfur dioxide reduction calculation uses the sulfur dioxide concentration at the inlet to the sulfur dioxide control device as the base value. Any sulfur reduction realized through fuel cleaning is introduced into the equation as an average percent reduction, $\%R_f$.

4.2 Calculate the overall percent sulfur reduction as:

$$\%R_o = 100[1.0 - (1.0 - \tfrac{\%R_f}{100})\,(1.0 - \tfrac{\%R_g}{100})]$$

Where:

$\%R_o$=Overall sulfur dioxide reduction; percent.
$\%R_f$=Sulfur dioxide removal efficiency of fuel pretreatment from Section 2; percent. Refer to applicable subpart for definition of applicable averaging period.

$\%R_o$=Sulfur dioxide removal efficiency of sulfur dioxide control device either O_2 or CO_2-based calculation or calculated from fuel analysis and emission data, from

carbon dioxide generated to the calorific value of the fuel combusted. When pollutant and oxygen concentrations have been determined in section 5.1, wet or dry F fac-

$\%R_g$ = Sulfur dioxide removal efficiency of sulfur dioxide control device either O_2 or CO_2-based calculation or calculated from fuel analysis and emission data, from Section 3; percent. Refer to applicable subpart for definition of applicable averaging period.

5. *Calculation of particulate, sulfur dioxide, and nitrogen oxides emission rates.*

5.1 Sampling. Use the outlet SO_2 and O_2 or CO_2 concentrations data obtained in section 3.1. Determine the particulate, NO_x, and O_2 or CO_2 concentrations according to methods specified in an applicable subpart of the regulations.

5.2 Determination of an *F* factor. Select an average *F* factor (section 5.2.1) or calculate an applicable *F* factor (section 5.2.2). If combined fuels are fired, the selected or calculated *F* factors are prorated using the procedures in section 5.2.3. *F* factors are ratios of the gas volume released during combustion of a fuel divided by the heat content of the fuel. A dry *F* factor (F_d is the ratio of the volume of dry flue gases generated to the calorific value of the fuel combusted; a wet *F* factor (F_w) is the ratio of the volume of wet flue gases generated to the calorific value of the fuel combusted; and the carbon *F* factor (F_c) is the ratio of the volume of carbon dioxide generated to the calorific value of the fuel combusted. When pollutant and oxygen concentrations have been determined in section 5.1, wet or dry *F* factors are used. (F_o factors and associated emission calculation procedures are not applicable and may not be used after wet scrubbers; F_c or F_d factors and associated emission calculation procedures are used after wet scrubbers.) When pollutant and carbon dioxide concentrations have been determined in section 5.1, F_c factors are used.

5.2.1 Average F factors. Table 1 shows average F_d, F_w, and F_c factors (scm/J, scf/million Btu) determined for commonly used fuels. For fuels not listed in table 1, the F factors are calculated according to the procedures outlined in Section 5.2.2 of this section.

5.2.2 Calculating an F factor. If the fuel burned is not listed in table 1 or if the owner or operator chooses to determine an F factor rather than use the tabulated data, F factors are calculated using the equations below. The sampling and analysis procedures followed in obtaining data for these calculations are subject to the approval of the Administrator and the Administrator should be consulted prior to data collection. For SI Units:

$$F_d = \frac{227.0(\%H) + 95.7(\%C) + 35.4(\%S) \times 8.6(\%N) - 28.5(\%O)}{GCV}$$

$$F_w = \frac{347.4(\%H)+95.7(\%C)+35.4(\%S)+8.6(\%N)-28.5(\%O)+13.0(\%H_2O)^{**}}{GCV_w}$$

$$F_c = \frac{20.0(\%C)}{GCV}$$

For English Units:

$$F_d = \frac{10^6[3.64(\%H)+1.53(\%C)+0.57(\%S)+0.14(\%N)-0.46(\%O)]}{GCV}$$

** The $\%H_2O$ term may be omitted if %H and %O include the unavailable hydrogen and oxygen in the form of H_2O.

ppm	lb/scf	$1.660 \times 10^{-10} M$

(i) B_{ws} = 0.027. This factor may be used as a constant value at any location.

(ii) B_{ws} = Highest monthly average of B_{ws} which occurred within a calendar year at the nearest Weather Service Station.

5.3.2 Carbon Dioxide-Based F Factor Procedure.

5.3.2.1 Dry Basis. When both the percent carbon dioxide ($\%CO_{wd}$) and the pollutant rate from the steam generator is calculated as:

ards of performance for electric utility steam generating units which are proposed in this issue of the FEDERAL REG-

$$F_w = \frac{10^6[5.57(\%H)+1.53(\%C)+0.57(\%S)+0.14(\%N)-0.46(\%O)+0.21(\%H_2O)^*]}{GCV_w}$$

$$F_c = \frac{10^6[0.321(\%C)]}{GCV}$$

Where:

F_d, F_w, and F_c have the units of scm/J or scf/million Btu; %H, %C, %S, %N, %O, and %H_2O are the concentrations by weight (expressed in percent) of hydrogen, carbon, sulfur, nitrogen, oxygen, and water from an ultimate analysis of the fuel; and GCV is the gross calorific value of the fuel in kJ/kg or Btu/lb and consistent with the ultimate analysis. Follow ASTM D 2015* for solid fuels, D 240* for liquid fuels, and D 1826* for gaseous fuels as applicable in determining GCV.

5.2.3 Combined fuel firing F factor. For affected facilities firing combinations of fossil fuels or fossil fuels and wood residue, the F_d, F_w, and F_c factors determined by Sections 5.2.1 or 5.2.2 of this section shall be prorated in accordance with the applicable formula as follows:

$$F_d = \sum_{k=1}^{n} x_k F_{dk} \text{ or}$$

$$F_w = \sum_{k=1}^{n} x_k F_{wk} \text{ or}$$

$$F_c = \sum_{k=1}^{n} x_k F_{ck}$$

*The %H_2O term may be omitted if %H and %O include the unavailable hydrogen and oxygen in the form of H_2).

Where:

x_k=The fraction of total heat input derived from each type of fuel, k.
n=The number of fuels being burned in combination.

5.3 Calculation of emission rate. Select from the following paragraphs the applicable calculation procedure and calculate the particulate, SO_2, and/NO_x emission rate. The values in the equations are defined as:

E=Pollutant emission rate, ng/J(lb/million Btu).
C=pollutant concentration, ng/scm(lb/scf).

NOTE.—It is necessary in some cases to convert measured concentration units to other units for these calculations. Use the following table for such conversions:

CONVERSION FACTORS FOR CONCENTRATION

From—	To—	Multiply by—
g/scm	ng/scm	10^9
mg/scm	ng/scm	10^6
lb/scf	ng/scm	1.602×10^{13}
ppm(SO_2)	ng/scm	2.660×10^6
ppm(NO_2)	ng/scm	1.912×10^6
ppm(SO_2)	lb/scf	1.660×10^{-7}
ppm(NO_2)	lb/scf	1.194×10^{-7}

5.3.1 Oxygen-based F factor procedure.

5.3.1.1 Dry basis. When both percent oxygen (%O_{2d}) and the pollutant concentration (C_d) are measured in the flue gas on a dry basis, the following equation is applicable:

$$E = C_d F_d \left[\frac{20.9}{20.9 - \%O_{2d}}\right]$$

5.3.1.2 Wet basis. When both the percent oxygen (%O_{2w}) and the pollutant concentration (C_w) are measured in the flue gas on a wet basis, the following equations are applicable: (NOTE.—F_w factors are not applicable after wet scrubbers.)

(a) $$E = C_w F_w \left[\frac{20.9}{20.9(1 - B_{wa}) - \%O_{2w}}\right]$$

where:

B_{wa}=Proportion by volume of water vapor in the ambient air. Approval may be given for determination of B_{wa} by on-site instrumental measurement provided that the absolute accuracy of the measurement technique can be demonstrated to be within +0.7 percent water vapor. In lieu of actual measurement, B_{wa} may be estimated as follows:

NOTE.—The following estimating factors are selected to assure that any negative error introduced in the term

$$\left(\frac{20.9}{20.9(1 - B_{wa}) - \%O_{2ws}}\right)$$

will not be larger than −1.5 percent. However, positive errors, or over-estimation of emissions, of as much as 5 percent may be introduced depending upon the geographic location of the facility and the associated range of ambient moisture.

(i) B_{wa}=0.027. This factor may be used as a constant value at any location.
(ii) B_{wa}=Highest monthly average of B_{wa} which occurred within a calendar year at the nearest Weather Service Station.
(iii) B_{wa}=Highest daily average of B_{wa} which occurred within a calendar month at the nearest Weather Service Station, calculated from the data for the past 3 years. This factor shall be calculated for each month and may be used as an estimating factor for the respective calendar month.

(b) $$E = C_w F_d \left[\frac{20.9}{20.9 (1 - B_{ws}) - \%O_{2w}}\right]$$

where:

B_{ws}=Proportion by volume of water vapor in the stack gas.

This equation is approved in principle. Approval for actual practice is contingent upon demonstrating the ability to accurately determine B_{ws} such that any absolute error in B_{ws} will not cause an error of more than ± 1.5 percent in the term:

$$\left(\frac{20.9}{20.9(1 - B_{ws}) - \%O_{2ws}}\right)$$

5.3.1.3. Dry/Wet basis. When the pollutant concentration (C_w) is measured on a wet basis and the oxygen concentration (%O_{2d}) or measured on a dry basis, the following equation is applicable:

$$E = \left[\frac{C_w F_d}{(1 - B_{ws})}\right]\left[\frac{20.9}{20.9 - \%O_{2d}}\right]$$

NOTE.—See section 5.3.1.2 on the usage of B_{ws}. When the pollutant concentration (C_d) is measured on a dry basis and the oxygen concentration (%O_{2d}) is measured on a wet basis, the following equation is applicable:

$$E = C_d F_d \left[\frac{20.9}{20.9 - \frac{\%O_{2w}}{(1 - B_{ws})}}\right]$$

5.3.2 Carbon Dioxide-Based F Factor Procedure.

5.3.2.1 Dry Basis. When both the percent carbon dioxide (%CO_{2d}) and the pollutant concentration (C_d) are measured in the flue gas on a dry basis, the following equation is applicable:

$$E = C_d F_c \left(\frac{100}{\%CO_{2d}}\right)$$

5.3.2.2 Wet basis. When both the percent carbon dioxide (%CO_{2w}) and the pollutant concentration (C_w) are measured on a wet basis, the following equation is applicable:

$$E = C_w F_c \left(\frac{100}{\%CO_{2w}}\right)$$

5.3.2.3 Dry/Wet basis. When the pollutant concentration (C_w) is measured on a wet basis and the percent carbon dioxide (%CO_{2d}) is measured on a dry basis, the following equation is applicable:

$$E = \left[\frac{C_w F_c}{(1 - B_{ws})}\right]\left[\frac{100}{\%CO_{2d}}\right]$$

NOTE.—See section 5.3.1.2 on the limitation on the usage of B_{ws}.

When the pollutant concentration (C_d) is measured on a dry basis and the percent carbon dioxide (%CO_{2w}) is measured on a wet basis, the following equation is applicable:

$$E = C_d (1 - B_{ws}) F_c \left(\frac{100}{\%CO_{2w}}\right)$$

5.4 Calculation of emission rate from combined cycle-gas turbine systems. For gas turbine-steam generator combined cycle systems, the emissions from supplemental fuel fired to the steam generator or the percentage reduction in potential SO_2) emissions cannot be determined directly. Using measurements from the gas turbine exhaust (performance test, subpart GG) and the combined exhaust gases from the steam generator, calculate the emission rates for these two points following the appropriate paragraphs in section 5.3 (NOTE.—F_w factors shall not be used to determine emission rates from gas turbines because of the injection of steam or to calculate emission rates after wet scrubbers; F_d or F_c factor and associated calculation procedures are used to combine effluent emissions according to the procedure in paragraph 5.2.3.) The emission rate from the steam generator is calculated as:

$$E_{sg} = \frac{E_c - X_{gt} E_{gt}}{X_{sg}}$$

where

E_{sg}=Pollutant emission rate from steam generator effluent, ng/J (lb/million Btu).
E_c=Pollutant emission rate in combined cycle effluent; ng/J (lb/million Btu).
E_{gt}=Pollutant emission rate from gas turbine effluent; ng/J (lb/million Btu).
X_{sg}=Fraction of total heat input from supplemental fuel fired to the steam generator.
X_{gt}=Fraction of total heat input from gas turbine exhaust gases.

NOTE.—The total heat input to the steam generator is the sum of the heat input from supplemental fuel fired to the steam generator and the heat input to the steam generator from the exhaust gases from the gas turbine.

5.5 Effect of wet scrubber exhaust, direct-fired reheat fuel burning. Some wet scrubber systems require that the temperature of the exhaust gas be raised above the moisture dew-point prior to the gas entering the stack. One method used to accomplish this is direct-firing of an auxiliary burner into the exhaust gas. The heat required for such burners is from 1 to 2 percent of total heat input of the steam generating plant. The effect of this fuel burning on the exhaust gas components will be less than ± 1.0 percent and will have a similar effect on emission rate calculations. Because of this small effect, a determination of effluent gas constituents from direct-fired reheat burners for correction of stack gas concentrations is not necessary.

APPENDIX E—[RESERVED]

5. Appendix E is added to part 60 and reserved.

(Sec. 111, 114, and 301(a), Clean Air Act as amended (42 U.S.C. 7411, 7414, and 7601(a)).

STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

Public hearing on Proposed Standards for Electric Utility Steam Generating Units

AGENCY: Environmental Protection Agency.

ACTION: Hearing on proposed rule.

SUMMARY: This document announces a public hearing on the standards of performance for electric utility steam generating units which are proposed in this issue of the FEDERAL REGISTER.

DATES: Hearing date: November 29-30, 1978. See Supplementary Information for additional information.

ADDRESSES: Hearing held: GSA Auditorium, 18th and F Streets NW., Washington, D.C. See Supplementary Information for additional information.

FOR FURTHER INFORMATION CONTACT:

Mr. Don R. Goodwin, Director, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Research Triangle Park, N.C. 27711, telephone 919-541-5271.

SUPPLEMENTARY INFORMATION: In accordance with section 307(d)(5) of the Clean Air Act, a public hearing on the standards of performance for electric utility steam generating units which are proposed in this issue of the FEDERAL REGISTER will be held as follows:

Date: November 29-30, 1978.

Place: GSA Auditorium, 18th and F Streets NW., Washington, D.C.

Time: 9 a.m. to 4 p.m.

Persons wishing to make oral presentations, which will be limited to 15 minutes each, should notify EPA by November 17, 1978, by contacting Ms. Shirley Tabler, Emission Standards and Engineering Division (MD-13), U.S. Environmental Protection Agency, Research Triangle Park, N.C. 27711, telephone 919-541-5421. Any member of the public may file a written statement with EPA before, during, or within 30 days after the hearing. Written statements should be addressed to Jack R. Farmer, Chief, Standards Development Branch (MD-13), Emission Standards and Engineering Division, Environmental Protection Agency, Research Triangle Park, N.C. 27711.

A verbatim transcript of the hearing and written statements will be available for public inspection and copying during normal working hours at the U.S. Environmental Protection Agency's Central Docket Section, Room 2903B, Waterside Mall, 401 M Street SW., Washington, D.C. 20460 (Docket No. OAQPS-78-1).

PURPOSE

As a result of a suit brought by the Sierra Club, the Agency is under a

V 43 N 182 SE 19 78

V 43/182 SE 19 78

court order to promulgate final regulations within 6 months of today's proposal. This is also the maximum period of time for promulgation permitted by section 307(d)(1) of the Clean Air Act. To comply with the schedule set forth in the court's order, but at the same time to maximize the public's involvement in the rulemaking, the Agency will provide over 14 weeks for public input.

The public involvement period will be structured as follows: Written comments may be submitted by any interested member of the public for a period of 60 days. Following the public comment period, 2 days of hearings will be held. The hearings will be legislative in nature with Agency officials empaneled to receive testimony and ask questions of all witnesses. Persons interested in testifying at the hearing should advise the Agency as instructed above. Though no cross-examination will take place at the hearings, written questions directed at witnesses testifying at the hearing may be submitted to the panel by members of the audience.

It is the expectation of the Agency that the hearing testimony will concentrate on clarifying, supplementing, and rebutting previously submitted written statements. The Agency recognizes that interested persons will require a period of time prior to the hearing to read the written submissions of other interested parties so that an informed comment may be made at the public hearing. In addition, all written comments received will be placed in the docket (docket No. OAQPS-78-1) as soon after receipt as practicable. All comments received will be on file no later than 2 calendar days after the close of the 60-day comment period. The docket is available for public inspection and copying between 8 a.m. and 4 p.m., Monday through Friday, at EPA's Central Docket Section, Room 2903B, Waterside Mall, 401 M Street SW., Washington, D.C. 20460.

As required by section 307(d)(5)(iv), the record of the public hearing will remain open for 30 days after completion of the hearing to provide an opportunity for any member of the public to submit rebuttal and supplementary information on the data presented at the hearing. Upon completion of this 30-day period, the record will be closed in order to provide sufficient time for the Administrator to carefully weigh all evidence submitted and to make the final decision on the basis of the formal record.

Dated: September 11, 1978.

DAVID G. HAWKINS,
Assistant Administrator for Air, Noise, and Radiation.

[FRL 915-5]

STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

Primary Aluminum Industry

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule and notice of public hearing.

SUMMARY: The proposed amendments would require primary aluminum plant performance tests to be conducted at least once each month, allow potroom emissions to be above the level of the current standard (but not above a higher limit of 1.25 kg/Mg (2.5 lb/ton)) if an owner or operator can establish that the emission control system was properly operated at the time the excursion above the current standard occurred, revise the reference method for determining fluoride emissions from potroom roof monitors, and clarify some provisions in the existing standard. These amendments are being proposed in response to arguments raised by four aluminum companies who filed petitions for review of the standard of performance. The intended effect of the proposed amendments is to account for the inherent variability of fluoride emissions from the aluminum reduction process and to require monitoring of fluoride emissions to insure proper operation and maintenance of the pollution control systems.

A public hearing will be held to provide interested persons an opportunity for oral presentation of data, views, or arguments concerning the proposed standards.

DATES: *Comments.* Comments must be received on or before November 20, 1978. *Public hearing.* The public hearing will be held on October 16, 1978, beginning at 9:30 a.m. and ending at 4:30 p.m. *Request to speak at hearing.* Persons wishing to attend the hearing or present oral testimony should contact EPA by October 11, 1978.

ADDRESSES: *Comments.* Comments should be submitted to Jack R. Farmer, Chief, Standards Development Branch (MD-13), Emission Standards and Engineering Division, Environmental Protection Agency, Research Triangle Park, N.C. 27711.

Public hearing. The public hearing will be held at Waterside Mall, Room 3906, 401 M Street SW., Washington, D.C. 20460. Persons wishing to present oral testimony should notify Mary Jane Clark, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Research Triangle Park, N.C. 27711, telephone 919-541-5271.

Standard support document. The support document for the proposed amendments may be obtained from the U.S. EPA Library (MD-35), Research Triangle Park, N.C. 27711, telephone 919-541-2777. Please refer to Primary Aluminum Background Information: Proposed Amendments (EPA-450/2-78-025a).

Docket. The docket, number OAQPS-78-10, is available for public inspection and copying at the EPA Central Docket Section (A-130), Room 2903B, Waterside Mall, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Don R. Goodwin, Director, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Research Triangle Park, N.C. 27711, telephone 919-541-5271.

SUPPLEMENTARY INFORMATION:

Proposed Amendments

It is proposed to amend Subpart S—Standards of Performance for Primary Aluminum Plants by requiring that performance tests be performed at least once each month during the life of an affected facility. Previously, performance tests were required only as provided in 40 CFR 60.8(a) (i.e., within 60 days after achieving the maximum production rate, but not later than 180 days after initial start- up and at other times as may be required by the Administrator under section 114 of the Clean Air Act). The proposed amendments would also allow potroom emissions to be above the level of the current standard (0.95 kg/Mg (1.9 lb/ton) for prebake plants and 1.0 kg/Mg (2.0 lb/ton) for Soderberg plants), but not above 1.25 kg/Mg (2.5 lb/ton), if an owner or operator can establish that the emission control system was properly operated and maintained at the time the excursion above the current standard occurred. Emissions may not be above 1.25 kg/Mg under any condition. Other amendments would (1) clarify Reference Method 14 procedures; (2) clarify the definition of "potroom group;" (3) replace English and metric units of measure with the International System of Units (SI); (4) allow the owner or operator of a new facility to apply to the Administrator for an exemption from the monthly testing requirement for primary and anode bake plant emissions; and (5) clarify the procedure for determining the rate of aluminum production for fluoride emission calculations.

Background

A standard of performance for new primary aluminum plants was promulgated on January 26, 1976 (41 FR 3826), and shortly thereafter petitions for review were filed by four U.S. aluminum companies. The principal argument raised by the petitioners was that the standard was too stringent and could not be consistently complied with by modern, well-controlled facilities. (Facilities which commenced construction prior to October 23, 1974, are not affected by the standard.) Following discussions with the petitioning aluminum companies, EPA conducted an emission test program at the Anaconda Aluminum Co. plant in Sebree, Ky. The Sebree plant is the newest primary aluminum plant in the United States, and its emisssion control system conforms with what EPA has defined as the best technological system of continuous emission reduction for new facilities. The purpose of the test program was to aid EPA in its reevaluation of the standard by expanding the emission data base. The test results were available in August of 1977 and indicated that there is some probability that the result of a performance test conducted at a modern, well-controlled plant would be above the existing standard. EPA has concluded that this justifies revising the standard.

Rationale

EPA's decision to amend the existing standard is based primarily on the results of the Sebree test program. The test results may be summarized as follows: (1) The measured emissions were variable, ranging from 0.43 to 1.37 kg/Mg (0.85 to 2.74 lb/ton) for single test runs; and (2) emission variability appeared to be inherent in the production process and beyond the control of plant personnel. Since the Sebree plant represents the latest technology for the aluminum industry, EPA expects that new plants covered by the standard may also exhibit emission variability.

An analysis performed by EPA on the results of the nine Sebree test runs indicates that there is about an 8-percent probability that a performance test would violate the current standard. (A performance test is defined in 40 CFR 60.8(f) as the arithmetic mean of three separate test runs, except in situations where a run must be discounted or canceled and the Administrator approves using the arithmetic mean of two runs.) The petitioners have estimated chances of violation ranging from about 2.5 to 10 percent. Although the Sebree data base is not large enought to permit a thorough statistical analysis, EPA believes it is adequate to demonstrate a need for revising the current standard.

EPA considered a number of possible solutions to the emission variability problem including raising the level of the current standard, allowing a certain number of monthly tests to exceed the current standard based on an expected failure rate, and specifying an equipment standard in place of the current emission standard. These and other possible solutions were rejected because they did not satisfy the following criteria: The revised standard (1) must be enforceable, (2) must provide for the variability of emissions, and (3) must not allow emission levels to be higher than indicated by the Sebree plant, which employs the best system of emission reduction.

The solution EPA proposes is to amend Subpart S to allow a performance test to be above the current standard provided the owner or operator submits to EPA a report clearly demonstrating that the emission control system was properly operated and maintained during the excursion above the standard. The report would be used as evidence that the high emission level resulted from random and uncontrollable emission variability, and that the emission variability was entirely beyond the control of the owner or operator of the affected facility. Under no circumstances, however, would performance test results be allowed above 1.25 kg/Mg (2.5 lb/ton). EPA believes that emissions from a plant equipped with the proper control system which is properly operated and maintained would be below 1.25 kg/Mg at all times.

Within 15 days of receipt of the results of a performance test which fall between the current standard and 1.25 kg/Mg, the owner or operator of the affected facility would be required to submit a report to the Enforcement Division of the appropriate EPA Regional Office indicating that all necessary control devices were on-line and operating properly during the performance test, describing the operation and maintenance procedures followed, and setting forth any explanation for the excess emissions. EPA requests comments on additional criteria to be used by the Regional Offices to determing whether the control devices were properly operated and maintained during the performance test.

The proposed amendments would also require, following the initial performance test required under 40 CFR 60.8(a), additional performance testing at least once each month during the life of the affected facility. During visits to existing plants, EPA personnel have observed that the emission control systems are not always operated and maintained as well as possible. EPA believes that good operation and maintenance of control systems is essential and expects the monthly testing requirement to help achieve this goal. The Administrator has the authority under section 114 of the Clean Air Act to require additional testing if necessary.

It is important to emphasize that the following operating and maintenance procedures are exemplary of good control of emissions and should be implemented at all times: (1) Hood covers should fit properly and be in good repair; (2) if equipped with an adjustable air damper system, the hood exhaust rate for individual pots should be increased whenever hood covers are removed from a pot (the exhaust system should not be overloaded by placing too many pots on high exhaust); (3) hood covers should be replaced as soon as possible after each potroom operation; (4) dust entrainment should be minimized during materials handling operations and sweeping of the working aisles; (5) only tapping crucibles with functional aspirator air return systems (for returning gases under the collection hooding) should be used; and (6) the primary control system should be regularly inspected and properly maintained. EPA believes that the proposed amendments are clearly achievable provided the control system is properly designed and installed and, as a minimum, the six procedures noted above are emplemented.

The proposed amendments affect not only prebake designs, such as the Sebree plant, but also Soderberg plants. Available data for existing plants indicate that Soderberg and prebake plants have similar emission variability. Thus, EPA feels justified in extrapolating its conclusions about the Sebree prebake plant to cover Soderberg designs. It is unlikely that any new Soderberg plant will be built due to the high cost of emission control for these designs. However, existing Soderberg plants may be modified to such an extent that they would be subject to these regulations.

Under the proposed amendments anode bake plants would be subject to the monthly testing requirement, but emissions would not be allowed under any circumstances to be above the level of the current bake plant standard. Since there is no evidence that bake plant emissions are as variable as potroom emissions, there is no need to excuse excursions above the bake plant standard.

The proposed amendments would allow the owner or operator of a new plant to apply to the Administrator for an exemption from the monthly testing requirement for the primary control system and the anode bake plant. EPA believes that the testing of these systems as often as once each month may be unreasonable given that (1) The contribution of primary and bake plant emissions to the total emission rate is minor, averaging about 2.5 and 5 percent, respectively; (2) primary and bake plant emissions are much less variable than secondary emissions; and (3) the cost of primary and bake plant emissions sampling is high. An application to the Administrator for an exemption from monthly testing would be required to include (1) evidence that the primary and bake plant emissions have low variability; (2) an alternative testing schedule; and (3) a representative value for primary emissions to be used in total fluoride emission calculations.

EPA estimates the costs associated with monthly performance testing to average about $4,000 for primary tests, $5,000 for secondary tests, and $4,000 for bake plant tests. These estimates assume that (1) Testing would be performed by plant personnel; (2) each monthly performance test would consist of the average of 3 24-hour runs; (3) sampling would be performed by two crews working 13-hour shifts; (4) primary control system sampling would be performed at a single point in the stack; and (5) Sebree inhouse testing costs would be representative of average costs for other new plants. Although these assumptions may not hold for all situations, EPA believes they provide a representative estimate of what testing costs would be for new plants.

Also amended is the procedure for determining the rate of aluminum production. Previously, the rate was based on the weight of metal tapped during the test period. However, since the weight of metal tapped does not always equal the weight of metal produced, undertapping or overtapping during a test period would result in erroneous porduction rates. EPA believes it would be more reasonable to judge the weight of metal produced according to the average weight of metal tapped during a 30-day period (720 hours) prior to and including the test date. The 3-day period would allow for overtapping and undertapping to average out, and this would give a more accurate estimate of the true production rate.

Other amendments would (1) clarify the definition of potroom group to cover situations where two potroom segments are ducted to a common control system; (2) incorporate use of the International System of Units (SI); and (3) make minor editorial changes in the regulations.

Method 14

The proposed amendments to Reference Method 14 would update the test method to reflect EPA's experiences at the Sebree test program. Also, the amendments would make Method 14 consistent with recent revisions of Methods 1 through 8 (42 FR 41754). The intended effect of the proposed amendments is to clarify testing proce-

dures and to improve the reliability of the test method.

The principal amendments would be

A verbatim transcript of the hearing and written statements will be available for public inspection and copying

emission control. In fact, the act requires (or has potential for requiring) the imposition of a more stringent

ly, new sources may in some cases be subject to limitations more stringent than EPA's standards of performance

3. Section 60.192 is amended by revising paragraph (a) and adding paragraph (b) to read as follows:

(d) By deleting the word "tons" in redesignated paragraph (g)(3) and inserting in its place "Mg;"

dures and to improve the reliability of the test method.

The principal amendments would be as follows: (1) More detailed anemometer specifications and calibration procedures would be delineated; (2) a performance check of each anemometer and each recorder (or counter) would be required following each test series (i.e., following each series of test runs as required for a performance test under 40 CFR 60.8(f)); (3) data adjustment procedures would be included for anemometers and recorders (or counters) that fail the performance check; (4) to be consistent with the new definition of "potroom group" more specific guidelines would be included for both the location of the sampling manifold and the number and location of the propeller anemometers; (5) for convenience, each Method 14 test run could be divided into "sub-runs"; (6) the use of a separate Method 13 train for each sub-run would be allowed, provided that the sampling nozzle size for all trains is the same; (7) a procedure would be included for calculating the fluoride concentration when more than one sampling train is used; (8) the tester would be allowed greater freedom as to the method by which velocity estimates are made for setting isokinetic flow; (9) the limits of acceptable isokinetic results would be more clearly defined, and a data adjustment procedure would be included for cases where the results are outside these limits; (10) the number and location of points for the Method 13 sampling runs would be determined according to the revised Method 1; (11) the use of a Type S pitot tube for making manifold intake nozzle adjustments would be disallowed; (12) the use of a differential pressure gauge conforming to the specifications of the revised Method 2 would be required for manifold intake nozzle velocity measurements; and (13) calibration of the thermocouple would be required after each test series, using the procedure outlined in the revised Method 2.

Due to the complexity of the amendments, the entire test method has been rewritten and is presented in revised form.

Public Hearing

A public hearing will be held to discuss the proposed standards in accordance with section 307(d)(5) of the Clean Air Act. Persons wishing to make oral presentations should contact EPA at the address above. Any member of the public may file a written statement with EPA before, during, or within 30 days after the hearing. Written statements should be addressed to Mr. Jack R. Farmer at the address above.

A verbatim transcript of the hearing and written statements will be available for public inspection and copying during normal working hours at EPA's Central Docket Section in Washington, D.C. (address same as above).

Miscellaneous

The docket is an organized and complete file of all the information submitted to or otherwise considered by EPA in the development of this rulemaking. The principal purposes of the docket are (1) to allow members of the public and industries involved to identify and participate in the rulemaking process, and (2) to serve as the record for judicial review. The docket is required under section 307(d) of the Clean Air Act, as amended, and is available for public inspection and copying at the address above.

The proposed amendments would not alter the applicability date of Subpart S. Subpart S applies to all new primary aluminum plants for which construction or modification began after the original proposal date (October 23, 1974).

As prescribed by section 111 of the Clean Air Act, promulgation of the original standard of performance (41 FR 3826) was preceded by the Administrator's determination that primary aluminum plants contribute significantly to air pollution which causes or contributes to the endangerment of public health or welfare. In accordance with section 117 of the act, publication of the original proposed standard (39 FR 37739) was preceded by consultation with appropriate advisory committees, independent experts, and Federal departments and agencies. The Administrator will welcome comments on all aspects of the proposed regulation, including economic and technological issues, and on the revised test method.

It should be noted that standards of performance for new sources established under section 111 of the Clean Air Act reflect:

> [T]he degree of emission limitation and the percentage reduction achievable through application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated (section 111(a)(1).)

Although there may be emission control technology available that can reduce emissions below those levels required to comply with standards of performance, this technology might not be selected as the basis of standards of performance due to costs associated with its use. Accordingly, standards of performance should not be viewed as the ultimate in achievable emission control. In fact, the act requires (or has potential for requiring) the imposition of a more stringent emission standard in several situations.

For example, applicable costs do not necessarily play as prominent a role in determining the "lowest achievable emission rate" for new or modified sources located in nonattainment areas, i.e., those areas where statutorily-mandated health and welfare standards are being violated. In this respect, section 173 of the act requires that a new or modified source constructed in an area which exceeds the National Ambient Air Quality Standard (NAAQS) must reduce emissions to the level which reflects the "lowest achievable emission rate" (LAER), as defined in section 171(3), for such category of source. The statute defines LAER as that rate of emissions which reflects:

> (A) The most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable or
>
> (B) The most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event can the emission rate exceed any applicable new source performance standard (section 171(3).)

A similar situation may arise under the prevention of significant deterioration of air quality provisions of the act (Part C). These provisions require that certain sources (referred to in section 169(1)) employ "best available control technology" (as defined in section 169(3)) for all pollutants regulated under the act. Best available control technology (BACT) must be determined on a case-by-case basis, taking energy, environmental and economic impacts, and other costs into account. In no event may the application of BACT result in emissions of any pollutants which will exceed the emissions allowed by any applicable standard established pursuant to section 111 (or 112) of the act.

In all events, State implementation plans (SIP's) approved or promulgated under section 110 of the act must provide for the attainment and maintenance of National Ambient Air Quality Standards designed to protect public health and welfare. For this purpose, SIP's must in some cases require greater emission reductions than those required by standards of performance for new sources.

Finally, States are free under section 116 of the act to establish even more stringent emission limits than those established under section 111 or those necessary to attain or maintain the NAAQS under section 110. Accordingly, new sources may in some cases be subject to limitations more stringent than EPA's standards of performance under section 111, and prospective owners and operators of new sources should be aware of this possibility in planning for such facilities.

The major costs incurred by the proposed amendments are associated with the periodic emission testing requirement. EPA believes that these costs are reasonable and would have a negligible impact on: (1) Potential inflationary or recessionary effects; (2) competition with respect to small business; (3) consumer costs; and (4) energy use. The Administrator has determined that the proposed amendments are not "substantial" and do not require preparation of an Economic Impact Assessment.

Dated: September 8, 1978.

DOUGLAS M. COSTLE,
Administrator.

It is proposed to amend Part 60 of Chapter I, Title 40 of the Code of Federal Regulations as follows:

Subpart A—General Provisions

1. Section 60.8 is amended by revising paragraph (d) to read as follows:

§ 60.8 Performance tests.

* * * * * *

(d) The owner or operator of an affected facility shall provide the Administrator 30 days prior notice of any performance test, except as specified under other subparts, to afford the Administrator the opportunity to have observers present.

* * * * * *

Subpart S—Standards of Performance for Primary Aluminum Plants

2. Section 60.191 is amended by deleting paragraph (i) and by revising paragraphs (d) and (f) as follows:

§ 60.191 Definitions.

* * * * * *

(d) "Potroom group" means an uncontrolled potroom, a potroom which is controlled individually, or a group of potrooms or potroom segments ducted to a common control system.

* * * * * *

(f) "Aluminum equivalent" means an amount of aluminum which can be produced from a Mg of anodes produced by an anode bake plant as determined by § 60.195(g).

* * * * * *

3. Section 60.192 is amended by revising paragraph (a) and adding paragraph (b) to read as follows:

§ 60.192 Standards for fluorides.

(a) On and after the date on which the initial performance test required to be conducted by § 60.8 is completed, no owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any affected facility any gases containing total fluorides, as measured according to § 60.8, above:

(1) 1.0 kg/Mg (2.0 lb/ton) of aluminum produced for potroom groups at Soderberg plants; except that emissions between 1.0 kg/Mg and 1.25 kg/Mg (2.5 lb/ton) will be considered in compliance if the owner or operator demonstrates that exemplary operation and maintenance procedures were used with respect to the emission control system and that proper control equipment was operating at the affected facility during the performance test;

(2) 0.95 kg/Mg (1.9 lb/ton) of aluminum produced for potroom groups at prebake plants; except that emissions between 0.95 kg/Mg and 1.25 kg/Mg (2.5 lb/ton) will be considered in compliance if the owner or operator demonstrates that exemplary operation and maintenance procedures were used with respect to the emission control system and that proper control equipment was operating at the affected facility during the performance test; and

(3) 0.05 kg/Mg (0.1 lb/ton) of aluminum equivalent for anode bake plants.

(b) Within 15 days of receipt of the results of a performance test which fall between the 1.0 kg/Mg and 1.25 kg/Mg levels in paragraph (a)(1) of this section or between the 0.95 kg/Mg and 1.25 kg/Mg levels in paragraph (a)(2) of this section, the owner or operator shall submit a report indicating whether all necessary control devices were on-line and operating properly during the performance test, describing the operation and maintenance procedures followed, and setting forth any explanation for the excess emissions, to the Director of the Enforcement Division of the appropriate EPA Regional Office.

4. Section 60.195 is amended as follows:

(a) By redesignating paragraphs (a) through (g) as (c) through (i) respectively;
